ITEM 5. OTHER ITEMS.

On July 30, 2003, Accelr8 Technology Corporation (the "Corporation") announced that it had filed a provisional patent application for microarraying methods to rapidly detect and quantitatively measure nucleic acids and proteins in a biological sample. The new technology, named YoDx(TM), complements and enhances the capabilities of the Corporation's QuanDx(TM) light scattering detection technology. Microarraying and related analyses are important in research for drug discovery, molecular diagnostics, food-borne pathogen detection and bio-defense. The Corporation's scientists expect the new technology to shorten analysis incubation times by rapidly agitating the sample mixture and rapidly concentrating sample target molecules into a reaction zone.
