The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you receive on the Stated Maturity Date and the resulting pre-tax rates of return will depend on the actual Ending Level.

How the Redemption Amount is calculated

The Redemption Amount will be determined as follows:

- If the Ending Level is greater than the Starting Level, the Redemption Amount will be equal to the lesser of:
 - (i) \$1,000 *plus*

 - (ii) the Capped Value

- If the Ending Level is less than or equal to the Starting Level, but greater than or equal to the Threshold Level, the Redemption Amount will be equal to \$1,000

- If the Ending Level is less than the Threshold Level, the Redemption Amount will be equal to \$1,000 *minus*

In such a case, you will lose up to 92.5% of your Principal Amount.

* The graph above sets forth the daily closing levels of the Index for the period from January 1, 2007 to December 29, 2017. The closing level on December 29, 2017 was 2673.61. The historical performance of the Index is not an indication of the future performance of the Index during the term of the securities.
