FLIGHT SAFETY TECHNOLOGIES, INC. AND SUBSIDIARY

Notes To The Financial Statements

(Unaudited)

For The Three Months Ended August 31, 2004 and 2003

The financial statements presented herein are unaudited. In the opinion of our management, these financial statements included all adjustments necessary for a fair presentation of the financial position. Results for the three months ended August 31, 2004 and 2003 are not necessarily indicative of results for the entire year. The accompanying financial statements should be read in conjunction with our financial statements and related footnotes for the years ended May 31, 2004 and May 31, 2003 which are included in our annual report on Form 10-KSB filed on August 25, 2004.

Note 1. Summary of Significant Accounting Policies

:

Cash

Cash represents cash on hand of \$234,013 in checking accounts, \$501,773 in money market accounts and \$2,025,000 in mutual funds as of August 31, 2004. Money market accounts earn interest at approximately 1.05% and mutual funds at approximately 1.70% (per annum).

Income Taxes

As of May 31, 2004 we had federal and state net operating loss carryforwards of approximately \$1,900,000, to reduce future taxable income, if any. The federal operating losses expire in various years through 2024 and the state operating losses expire in various years through 2009. We also have state tax credit carryforwards of approximately \$10,000, which expire in the year 2009.

Research and Development

Our sponsored research and development costs, including proposal costs and unreimbursed expenditures for developmental activities are charged against income in the year incurred.

Revenue and Cost Recognition

We recognize income from contracts under the percentage of completion method of accounting for financial reporting purposes. Revenues are measured by the ratio of the costs incurred to date divided by the estimated total costs for each contract. Contracting costs include all direct material, labor and subcontracting costs. General and administrative costs are charged to expense as incurred. Provisions for estimated losses on uncompleted contracts are made in the period in which such losses are determined. Changes in job performance, job conditions and estimated profitability and final contract settlements may result in revisions to costs and income and are recognized in the period in which the revisions are determined. Revenue related to claims is recorded at the lesser of actual costs incurred or the amount expected to realized.

Intangible Assets

Intangible assets consist of patent costs totaling \$183,959 with accumulated amortization of \$36,909. Amortization expense for the three months ended August 31, 2004 was \$2,940. Amortization expense for each of the next five years is expected to be approximately \$11,760.

Note 2. Interim Financial Information (Unaudited):

Our interim financial statements for the three months ended August 31, 2004 and 2003, included herein, have been prepared by us, without audit, pursuant to the rules and regulations of the SEC. Certain information and footnote disclosures normally included in financial statements prepared in accordance with accounting principles generally accepted in the United States of America have been condensed or omitted pursuant to the rules and regulations relating to interim financial statements.

Note 3. Equity Transactions:

Edgar Filing: FLIGHT SAFETY TECHNOLOGIES INC - Form 10QSB

During the three months ended August 31, 2003, 850,000 common stock warrants were exercised at \$2.00 resulting in proceeds to us of \$1,700,000. As of June 27, 2003, we acquired 100% of the common and preferred stock of our subsidiary, FSTO and, effective that date, FSTO was merged into us pursuant to a short form merger under Delaware and Nevada law.

We completed a 3-for-1 reverse stock split effective December 31, 2003. On February 4, 2004, in conjunction with a public underwritten offering, we sold 1,350,000 units at \$6.00 per unit, each unit consisting of two shares of common stock and a warrant to purchase one share of common stock at \$3.30 a share. On February 13, 2004, we issued an additional 164,300 units at the request of the managing underwriter to cover over-allotments. As a result of these issuances, our common stock outstanding increased by 3,028,600 shares to 8,331,410 shares. We received gross proceeds of \$9,085,800 and had expenses for this issuance of \$1,491,482 resulting in net proceeds from the issuances of \$7,594,318. Below is a summary of shares issued.

6

Common stock on May 31, 2003	14,757,104
Common stock warrants exercised July 10 to August 8, 2003	850,000
Merger shares July 11, 2003 - minority shares tendered	294,129
Reverse stock split 3 for 1 - December 31, 2003	(10,598,423)
Common stock issuance - February 5, 2004	2,700,000
Common stock issuance - February 13, 2004	<u>328,600</u>
Total common stock issued as of August 31, 2004	<u>8,331,410</u>

Note 4. Investments Available-for-Sale:

We classify our debt and marketable equity securities into held-to-maturity, trading, or available-for-sale categories according to the provisions of Financial Accounting Standards Board Statement No. 115, "Accounting for Certain Investments in Debt and Equity Securities". Debt securities are classified as held-to-maturity when we have the positive intent and ability to hold the securities to maturity. Debt securities for which we do not have the intent or ability to hold to maturity are classified as available for sale. Held-to-maturity securities are recorded as either short-term or long-term on the balance sheet based on contractual maturity date and are stated at amortized cost. Marketable securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and are reported at fair value, with unrealized gains and losses recognized in earnings. Debt and marketable equity securities not classified as held-to-maturity or as trading are classified as available-for-sale and are carried at fair market value, with the unrealized gains and losses, net of tax, included in the determination of comprehensive income or loss and reported in shareholders' equity. A summary of these investments is as follows:

August 31, 2004			
Available for Sale			
<u>Description</u>	<u>Cost</u>	<u>Fair Value</u>	<u>Unrealized Holding Gain/(Losses)</u>
Mutual bond funds	<u>\$999,256</u>	<u>\$864,502</u>	<u>\$(134,754)</u>

Held to Maturity

<u>Description</u>	<u>Carrying Amount</u>	<u>Fair Value</u>	<u>Unrecognized Holding Gain/(Losses)</u>
Corporate bonds	\$4,978,125	\$4,982,210	\$ 4,085
U.S. Government Securities	<u>500.002</u>	<u>493.595</u>	<u>(6.407)</u>
	<u>\$5,478,127</u>	<u>\$5,475,805</u>	<u>\$(2,322)</u>

7

Contractual maturities of held-to-maturity securities at May 31, 2004 are as follows:

	<u>Carrying Amount</u>
Due in one year or less	\$4,978,125
Due in 2-5 years	<u>500.002</u>
	<u>\$5,478,127</u>

Note 5. Treasury Stock

During the period from June 2, 2004 to June 17, 2004 we purchased 116,300 shares of our common stock in the open market at an average price of \$1.71 for a total price of \$199,827. The repurchase was authorized pursuant to a stock repurchase plan approved by our Board of Directors.

Item 2. Management's Discussion and Analysis or Plan of Operation.

Cautionary Statement Pursuant to Safe Harbor Provisions of the Private Securities Litigation Reform Act of 1995:

Except for the historical information presented in this document, the matters discussed in this quarterly report on Form 10-QSB for the three month period ending August 31, 2004 or otherwise incorporated by reference into this document, contain "forward-looking statements" (as such term is defined in the Private Securities Litigation Reform Act of 1995). These statements are identified by the use of forward-looking terminology such as "believes", "plans", "intend", "scheduled", "potential", "continue", "estimates", "hopes", "goal", "objective", "could", "can", "expects", "may", "will", "should" or "anticipates" or the negative thereof or other variations thereon or comparable terminology, or by discussions of strategy that involve risks and uncertainties. The safe harbor provisions of Section 21E of the Securities Exchange Act of 1934, as amended, and Section 27A of the Securities Act of 1933, as amended, apply to forward-looking statements made by us. We caution you that no statements contained in this Form 10-QSB should be construed as a guarantee or assurance of future performance or results. Such statements are based on currently available information which management has assessed but which is dynamic and subject to rapid change due to risks

and uncertainties that affect our business, including, but not limited to, the outcome of an informal inquiry by the SEC that appears to be in connection with certain analysts reports about us and our press releases, the outcome of pending class action litigation alleging violations of federal securities laws, whether the government will implement WVAS at all or with the inclusion of a SOCRATES wake vortex sensor, the impact of competitive products and pricing, limited visibility into future product demand, slower economic growth generally, difficulties inherent in the development of complex

technology, new products sufficiency, availability of capital to fund operations, research and development, fluctuations in operating results, and other risks detailed from time to time in our filings with the Securities and Exchange Commission. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, goals, assumptions or future events or performance are not statements of historical fact and may be forward looking statements. Forward looking statements involve a number of risks and uncertainties which could cause actual results or events to differ materially from those presently anticipated. These forward-looking statements are based on current expectations, and, except as required by law, we assume no obligation to update this information whether as a result of new information, future events or otherwise. Readers are urged to carefully review and consider the various disclosures made by us in this Form 10-QSB and in our other reports filed with the Securities and Exchange Commission that attempt to advise interested parties of the risks and factors that may affect our business.

Overview

Our current operations have been funded substantially by U.S. Congressional appropriations resulting in three successive sole source contracts with agencies of the federal government for research, development, and testing of our SOCRATES wake vortex sensor and related work pertaining to a wake vortex advisory system, sometimes known as WVAS, that NASA is developing. We estimate the appropriations to the FAA totaled approximately \$9.6 million in U.S. fiscal years 1997 through 2000 for research and development of our SOCRATES wake vortex sensor; and NASA appropriations for research and development of our SOCRATES wake vortex sensor totaled approximately \$13.5 million in U.S. fiscal years 2001 through 2003. From these amounts, we have received three contracts aggregating approximately \$13 million. As of August 31, 2004, we have recognized an aggregate of approximately \$12.9 million of contract revenue, of which we have been paid \$12.3 million. Our current SOCRATES government contract backlog is approximately \$0.1 million.

We have entered into these contracts with the Volpe National Transportation Systems Center of the U.S. Department of Transportation ("Volpe"). Volpe funds our contracts when, as, and if it and other sponsoring federal agencies approve a statement of work and specific task orders under the statement of work. When funded, we invoice the federal government monthly based on our direct costs, including overhead and general and administrative plus a fixed fee for that month and typically receive payment by electronic wire transfer within two weeks of invoicing. Certain costs, such as lobbying, product development, and business development expenses that are not allowable under these contracts, R&D costs we incur over certain cost caps set by the U.S. government, or costs incurred while our contracts are not funded, are not reimbursable under our government contracts and have been funded primarily by proceeds of

offerings of our equity.

Without notice to, or opportunity for prior review by us, Volpe circulated a report in October 2001 which recommended curtailing further government expenditure on our SOCRATES wake vortex sensor due to a high risk assessment of achieving operational feasibility. Together with our major subcontractor, Lockheed Martin Corp., we vigorously disputed and extensively discussed its assertions with Volpe and NASA. Subsequent to these discussions, NASA requested and we submitted a proposal for \$2,221,068 of additional SOCRATES wake vortex sensor research, development and testing with an immediate objective of better characterizing the wake acoustics and background noise. In November 2002, Volpe approved and funded a new work order in the amount of \$1,229,650 for the first phase of this proposal and in March 2003, a second work order was approved and funded in the amount of \$991,418. Included in the funding was a 7% fixed fee over and above our research and development costs plus overhead, general and administrative costs. The statement of work continued our previous contract to develop and test our SOCRATES wake vortex sensor. This funding ended an 11-month period, from December 15, 2001 to November 19, 2002, without government funding to develop our SOCRATES wake vortex sensor.

On September 30, 2003, we received our third successive sole source contract from Volpe, titled Phase III SOCRATES, for an aggregate of \$3.975 million to continue work on developing our SOCRATES wake vortex sensor. We used these funds to expand our current SOCRATES wake vortex sensor from its present four beam configuration (which was tested at the Denver International Airport in September of 2003) to eight beams and began further expansion to sixteen beams. This contract is being funded from a U.S. fiscal year 2003 Omnibus Appropriation of \$4.5 million to the NASA budget for research, development and testing of our SOCRATES wake vortex sensor as part of a NASA/DOT/FAA development of WVAS for use at major airports.

For U.S. fiscal year 2004, an additional \$5 million NASA appropriation specifically for continued work on project SOCRATES has been enacted into law. If and when our sponsoring agencies approve an extension of our contract, statements of work, and appropriate work orders, we expect to receive a contract extension for a substantial portion of this funding which would complete the expansion to 16 beams and include an airport test of the expanded 16-beam SOCRATES wake vortex sensor. As of August 31, 2004, we believe our portion of the \$5 million will be approximately \$3.2 million and that the funding should be available before November 30, 2004.

On July 22, 2004 the US House of Representatives Committee on Appropriations recommend an additional \$5 million to be added to the U.S. fiscal year 2005 NASA budget for continued research and development on Project SOCRATES. The full House of Representatives and the US Senate have not yet acted on this appropriations bill and are not expected to do so until the U.S. Congress reconvenes after the November elections. If each chamber approves a bill, any differences would be reconciled in a House/Senate conference. Following Senate/House conference approval, the appropriations bill must then be passed in final form by each house and signed by the President into law. Thereafter, we must negotiate and execute a contract and obtain approval for specific work orders before we receive contract revenue from such funding. While we expect to receive a portion of these funds there is no assurance as to how much, if any, of these funds will be received by us.

We believe the federal government has indicated a long-term interest in the development of a wake vortex advisory system and our SOCRATES wake vortex sensor will be well positioned, successfully developed and tested, for inclusion in such a system. However, the federal government has in the past delayed or reduced and may in the future delay, reduce, or eliminate funding for research and development of our SOCRATES wake vortex sensor or the wake vortex advisory system as a result of, among other things, a reduction in support or opposition from supervising agencies or the U.S. Congress, changes in budgetary priorities, fiscal constraints caused by federal budget deficits, or decisions to fund competing systems or components of systems. Such delays or reductions will reduce our resources available for research and development of our proprietary technologies, new products or enhancements to SOCRATES or UNICORN technologies and to market our products. Reduction of or delays in contract funding from the federal government could delay achievement of or increase in profitability, if any, create a substantial strain on our liquidity, resources and product development, and have a material adverse effect on the progress of our research and development and our financial condition.

We also are pursuing development of a collision and ground proximity warning system for small aircraft we refer to as UNICORN. We believe that UNICORN may have application to unmanned air vehicles operated for a variety of private and governmental purposes. We have entered into three significant research and development contract commitments aggregating \$350,000 for different aspects of this project.

We have experienced significant losses since our inception. The net loss for our fiscal year ended May 31, 2004 was \$424,214 compared to the net loss of \$943,974 in fiscal year ended May 31, 2003. The loss for our fiscal year ended May 31, 2003 was caused primarily by three factors: (1) unallowable expenses under our government contract, (2) rate ceilings; and (3) expenses during unfunded periods for SOCRATES research and development. With the reinstatement of the government contract funding, the loss for our fiscal year ended May 31, 2004 was caused by the remaining two factors: (1) rate ceilings during the first six months and (2) unallowable expenses under our government contract.

Our third consecutive government contract that we received on September 30, 2003 does not include rate ceilings. If the government deems our allowable expenses to be reasonable, the absence of rate ceilings should eliminate a second significant source of losses in previous years. We will continue to incur certain unallowable expenses or could incur allowable expenses the government deems unreasonable, and we remain subject to the risk of further delay, reduction or elimination in federal contract funding. However, it is our view that the elimination of rate ceilings is a significant improvement to our historical contract terms.

Critical Accounting Policies and Estimates

The discussion and analysis of our financial condition and results of operations are based on our financial statements that have been prepared according to accounting principles generally accepted in the United States of America. In preparing these financial statements, we are required to make estimates and judgements that affect the reported amounts of assets, liabilities, revenues and expenses and related disclosures of contingent assets and liabilities. We evaluate these estimates on an on-going basis. We base these estimates on historical experiences and on various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making judgements about the carrying values of assets and liabilities. Actual results may differ from these estimates under different assumptions or conditions. Our management has discussed these estimates and assumptions with our finance and audit committee. At this point in our operations, subjective judgements do not have a material impact on our financial statements. However, the Federal Acquisitions Regulations require that, among other things, our reimbursable costs are reasonable. We have analyzed our actual overhead rate of 80% and general administrative rates of 35% for fiscal year 2004 and rates of 81% and 29% respectively for the three months ended August 31, 2004. We believe all component costs have been ordinary and necessary and are reasonable. The government, upon audit, may not support our view and may deem such expenses to be unreasonable for a company of our size. We have made certain adjustments to provide for such a contingency. Since there is a high degree of subjectivity in the judgment of what levels of cost are reasonable, we can make no assurance that the government will not require further adjustments. If any such adjustments are required, they would reduce the other receivables reflected on our balance sheet.

Results of Operations

For the periods ended August 31, 2004 and August 31, 2003

Revenues

. To date, our revenues have consisted almost entirely of revenues earned from our three successive SOCRATES wake vortex sensor research and development contracts with the federal government. Revenues under our government contracts are booked as contract sales when earned.

Contract revenue for the three month period ending August 31, 2004 was \$1,435,952. This is a 170% increase compared to the contract revenue of \$532,215 for the three month period ending August 31, 2003. These results principally reflect new government contract funding for SOCRATES and a larger amount of contract work that we completed and billed in our fiscal year 2004. As of August 31, 2004, our contract receivables against our government contracts are \$406,950.

Direct Contract Costs

. Subcontractor, consultant and direct labor expenses comprise our direct contract costs. Direct contract costs for the three month period ending August 31, 2004 were \$1,011,844, compared to \$358,884 for the three month period ending August 31, 2003. The three month results principally reflect the 170% increase in contract revenue and a 162% increase in subcontractor cost for the three months ended August 31, 2004 compared to the three months ended August 31, 2003.

When our government contract is funded, charges to direct costs do not generally impact our operating income because each contract covers its own direct costs. However, during periods when our government contract is not funded or the actual direct cost of a specific task order exceeds its budgeted funding and the government is not willing to reallocate direct costs between task orders, any such costs we may incur are not reimbursable and must be funded from our own resources. Total direct and indirect expenses during August 2004 that could not be billed on our contract totaled \$73,910.

Operating Expenses. Government contractors are required to categorize operating expenses as overhead expenses or general and administrative expenses. These two indirect "cost pools" are then divided by their appropriate "direct cost base" combinations of direct contract cost, which determines the contractors overhead and general and administrative rates. These rates, for our first two government contracts, were subject to ceilings, which were set at 70% for overhead and 20% for general and administrative. Our third contract is not limited by rate ceilings. Instead, we submitted provisional billing rates of 83% for overhead and 29% for general and administrative for our fiscal year ending May 31, 2005 which are based on forecasted direct and indirect costs and were audited by the Defense Contract Audit Agency and approved by Volpe on September 13, 2004. Under our present government contract for SOCRATES, our actual rates will be based on actual allowable costs incurred which we will submit to the government for audit at the end of our fiscal year. When our actual rates have been audited, we will adjust our government contract billings higher or lower to reflect the audited actual rates versus the previous estimated provisional billing rates. Our historical rates are shown below.

	For Year Ended <u>5-31-03</u>	For Year Ended <u>5-31-04</u>	For Three Months Ended <u>08-31-04</u>
Overhead Rates			
General and Admin. Rates	89%	80%	81%
	67%	35%	29%

The above rates for each of the previous periods include only allowable operating expenses and have been lower over the last three years due to increased contract funding and the increase in our direct cost base. We believe these rates will remain approximately equal to our current provisional billing rates of 83% for overhead and 29% for general administration during our fiscal year ending May 31, 2005, although we can make no assurance in this regard.

Unreimbursable non-contract costs include: 1) expenses considered unallowable per Federal Acquisition Regulations (FAR), such as lobbying and financing costs, 2) over ceiling expenses, and/or 3) operating expenses and direct costs incurred during unfunded periods or attributable to specific tasks that have reached funding limits set in the statement of work. These non-contract costs are not reimbursable under our U.S. government contracts and must be paid from other sources. To date, these sources consist primarily of proceeds from the public and private sales of our equity securities. Non-contract costs have been the primary use of this source of liquidity and have had a significant impact on our operating loss to date. Non-contract costs are detailed below:

	For the 3 Months Ending (Unaudited)	
	<u>08-31-04</u>	<u>08-31-03</u>
1. Unallowable expenses (1) & (2)	\$89,990	\$ 131,721
2. Over-ceiling expenses	0	99,735
3. Expenses during unfunded period	<u>73,910</u>	<u>0</u>
Total	<u>\$163,900</u>	<u>\$231,456</u>

Notes:

- (1) Includes \$15,741 of stock based compensation expense for the 3 months-ended 08-31-04.
- (2) Includes \$8,396 of stock based compensation expense for the 3 months-ended 08-31-03.

Our total selling, general and administrative expense consist of unallowable and allowable expenses and for the three month period ending August 31, 2004 was \$410,437 compared to \$353,711 for the same periods in 2003.

Unallowable selling, general and administrative expenses for the three month period ending August 31, 2004 were \$89,990 and decreased by \$41,731 over the three month period ended in 2003 primarily due to less expense for lobbying and marketing for the three months ending August 31, 2004.

Allowable selling, general, and administrative expenses for the three month period ended August 31, 2004 totaled \$320,447 compared to \$221,990 for the three month period ended August 31, 2003. The increase of \$98,457 for the three months ended August 31, 2004 over the three months ended August 31, 2003 was primarily due to an increase in expenses associated with having three additional full time employees and one additional office.

Expenses during unfunded period of \$73,910 for the three month period ending August 31, 2004 represents direct and indirect expenses on several tasks that reached their funding limit under our government contract and therefore could

not be billed. These tasks are ongoing and we have committed to continue to pay the costs of these tasks until we receive the next funding, which we expect will cover these tasks going forward.

Over-ceiling expenses and expenses during unfunded periods fluctuate from period to period due to the timing of unfunded periods. We expect to receive additional funding by the end of our second quarter, i.e., November 30, 2005, which should eliminate the expenses during unfunded period category for the third and fourth quarter of our fiscal year 2005. We are no longer subject to rate ceilings which eliminated the over-ceiling expense category during the second quarter of our fiscal year 2004 and we believe will eliminate the over-ceiling category for all of our fiscal year 2005.

Profit or Loss

Our net loss for the three month period ended August 31, 2004 was \$49,327. We also have reported an unrealized holding loss of \$15,253, and consequently our comprehensive loss for these three months is \$64,580, compared to a net loss of \$226,641 for the same period in 2003. In our previous two quarters ended February 29, 2004 and May 31, 2004, we were fully funded under our government contracts and earned a profit of \$6,411 and \$11,737, respectively. The loss for the three month period ended August 31, 2004 was caused by: (1) unallowable expenses under our government contract and (2) expenses during unfunded periods.

Liquidity and Capital Resources

Our sources of liquidity, which we define as our ability to generate cash to fund our operations, are primarily provided by revenue from our government contracts and proceeds from the sale of our equity securities.

Our funded contract backlog on our third contract as of August 31, 2004 is \$97,085 compared to \$604,796 for our fiscal quarter ended August 31, 2003 and \$1,514,315 at the end of our fiscal year ended May 31, 2004.

Our aggregate cash and investments were \$9,103,177 as of August 31, 2004 compared to \$2,261,736 on August 31, 2003 and \$9,552,289 as of May 31, 2004. The increase as of August 31, 2004 over August 31, 2003 was attributable to the sale of 3,028,600 shares of common stock with net proceeds of \$7,594,138, less the operating losses for the period from September 1, 2003 to August 31, 2004, capital additions during the twelve month period ending August 31, 2004 of \$127,709 and our purchase of our common stock at an aggregate cost of \$199,827 in June 2004. The capital addition consisted primarily of the purchase of one company car and computers and software for our new office and for other computers and software that needed to be replaced or upgraded. The decrease as of August 31, 2004 compared to May 31, 2004 was primarily due to a reduction in accounts payable of \$243,858, capital additions of \$56,510 and purchase of common stock.

As of August 31, 2004, we had other receivables of \$257,108 compared to \$55,649 as of August 31, 2003 and \$194,479 as of May 31, 2004. The increase relative to August 31, 2003 was primarily due to \$155,497 of unbilled government contract receivables. The \$155,497 increase represents the difference between overhead and general administrative rates billed using provisional rates of 73% and 28%, respectively, and the actual rates of 80% and 35%, for fiscal year 2004 and 81% and 29% for the three months ended August 31, 2004, applied to our direct costs incurred in our Phase III SOCRATES contract to date. At the end of each year, after our rates have been audited by the D.C.A.A., our final government billing for the period is adjusted to reflect the actual allowable overhead and general administrative cost incurred.

As of August 31, 2004, we had total current liabilities, including accounts payable, of \$513,312 compared to \$391,411 of current liabilities as of August 31, 2003 and \$757,170 as of May 31, 2004. Accounts payable as of August 31, 2004 were \$377,872, which included approximately \$265,000 to our subcontractor, Lockheed Martin Corporation, \$48,000 for legal expenses and \$65,000 in other expenses, compared to accounts payable as of August 31, 2003 of \$288,597, which included approximately \$131,000 to Lockheed Martin, \$22,000 for legal fees and \$135,000 in other expenses.

We anticipate that our funded contract balance for our third contract of \$97,085 as of August 31, 2004 will only partially fund our direct and indirect costs for September 2004 and that the government will not fund us in October and November 2004. For the quarter ending November 30, 2004, we have budgeted and expect to incur approximately \$550,000 in direct and indirect costs for SOCRATES research and development that will not be funded by our government contract, and approximately \$100,000 in unallowable expenses. Assuming we operate within budget, as to which we can make no guaranty or assurance, at the end of our fiscal quarter ending November 30, 2004, we estimate our available cash and investments should be approximately \$8,450,000. We have budgeted and expect to incur a total of \$250,000 of unallowable expenses in the third and fourth quarters of our fiscal year ending May 31, 2005, and assuming we operate within budget, as to which we can make no guaranty or assurance, at the end of our fiscal year ending May 31, 2005, we estimate our available cash and investments should be approximately \$8,200,000.

We expect to receive approximately \$3,200,000 of additional contract funding from a \$5 million appropriation to NASA for project SOCRATES contained in the recently enacted U.S. Fiscal Year 2004 Consolidated Appropriations Bill, if and when our sponsoring agencies extend our Phase III SOCRATES contract by issuing a contract modification which will include work orders to us. As of this date, we have received, from our sponsoring agency, the planned statement of work for the \$3.2 million and are waiting for their formal request to submit a cost and technical proposals for review and approval of the government. The timing for release of such request is not clear. However, we expect to receive the contract modification for additional funding of approximately \$3.2 million by November 30, 2004. Any delay in obtaining a contract extension also might require us to draw upon our cash during the third quarter of our current fiscal year to fund our operations.

From time to time, we may consider and execute strategic investments, acquisitions, or other transactions that we believe could benefit us and could require use of some or all of our liquidity. To facilitate such transactions and enhance our liquidity position for these and other purposes, such as working capital for research and development, we also may conduct from time to time various types of equity offerings, including, but not limited to, public or private offerings of common or preferred stock based on a negotiated fixed share value, or floating market price of our publicly traded shares. If we encounter delays in, or are unable to procure, contract funding from the U.S. government for further research development and testing of our SOCRATES wake vortex sensor, incur costs over budget, or make a strategic investment, our cash resources will be reduced more rapidly than we presently anticipate. In such event, we may need to obtain additional capital to maintain operations. There can be no guaranty or assurance of our future ability to obtain capital for any of the foregoing purposes and, if obtained, the terms and conditions of such capital may dilute our present shareholders' ownership.

Known Trends, Risks and Uncertainties

Our business and future success are subject to many risks. The following describes some of the general and specific trends, risks, and uncertainties to which our business is subject and should be read with care.

Risks Related to Our Business

Our limited operating history and lack of commercial operations make it difficult to evaluate our prospects.

Since we began operations in 1997, we have generated limited revenues solely from three SOCRATES technology research and development contracts with agencies of the federal government that fund, administer, and oversee these contracts. The federal government has funded these contracts from earmarked U.S. Congressional appropriations to agencies that have awarded these contracts to us on a sole source basis without competitive bidding. Under these contracts, we are reimbursed for certain allowable research and development costs and are paid a fee calculated as a percentage of costs.

We have not as yet received any revenue from the sale of any products. We do not anticipate receiving any such revenue unless and until our SOCRATES or UNICORN-based products become operational, which could take several years. Our estimates of the market size for the products we are developing are based on many assumptions and uncertainties. These estimates have not been evaluated by an independent party. The actual markets and price we can charge for our products, if and when we successfully complete their development, could be substantially less and our costs could be greater than our estimates. It therefore is difficult to assess our prospects for commercial sales, revenues and profitability.

We have incurred and, for the next several years, can be expected to incur operating losses.

To date, we have incurred significant net losses, including net losses of \$424,214 for our fiscal year ended May 31, 2003 and \$49,327 for the three months ended August 31, 2004 (compared to net income of \$6,411 for the three months ended February 29, 2004 and net income of \$11,737 for the three months ended May 31, 2004). On August 31, 2004, we had an accumulated deficit of \$2,933,564. We anticipate we may continue to incur operating losses for at least the next several years. We may never generate material revenues or achieve or maintain profitability. Substantially all our revenues have been devoted to payment of costs incurred in the research, development, and testing of our SOCRATES or UNICORN technology. Our ability to achieve, maintain, and/or increase profitability will depend in large part upon the successful further development and testing of our SOCRATES or UNICORN-based products, the continuation of Congressional appropriations and our ability to obtain additional federal research and development contracts for SOCRATES, our ability to obtain additional financing, approval of our SOCRATES or UNICORN-based products and systems by various agencies of the federal government, procurement of our products and systems by the FAA, airports and the aviation industry, and the availability of funding to finance such procurements.

Lack of future funding from the federal government to complete research and development of our SOCRATES wake vortex sensor could adversely affect our business.

Without notice to, or opportunity for prior review by us, the John A. Volpe National Transportation Systems Center of the U. S. Department of Transportation's Research and Special Programs Administration, or Volpe, circulated a report in October 2001 which recommended curtailing further government expenditure on our SOCRATES wake vortex sensor due to a high risk assessment of achieving operational feasibility. Because of this report and the events of September 11, 2001, the government did not fund our SOCRATES research and development contract from December 15, 2001 to November 19, 2002. Together with our major subcontractor, Lockheed Martin Corporation, we

vigorously disputed and extensively discussed its assertions with Volpe and NASA. Subsequently, Volpe and NASA requested and we submitted a proposal for approximately \$2.2 million of additional SOCRATES technology research, development and testing with an immediate objective of better characterizing the wake acoustics and background noise. We received contract funding for this proposal and subsequent proposals and we believe the federal government will continue to have a long-term interest in the development of a wake vortex advisory system and our SOCRATES wake vortex sensor for inclusion in such a system. However, the U.S. government may terminate our government contract at any time if it determines such termination is in the best interests of the government or may terminate, reduce or modify it because of budgetary constraints or any change in the government's requirements. Furthermore, the federal government has in the past delayed or reduced and may in the future delay, reduce, or eliminate funding for research and development of our SOCRATES wake vortex sensor or the wake vortex advisory system as a result of, among

other things, a reduction in support or opposition from supervising agencies or the U.S. Congress, changes in budgetary priorities, fiscal constraints caused by federal budget deficits, or decisions to fund competing systems or components of systems. If this occurs, it will reduce our resources available for research and development of our proprietary technologies, new products or enhancements to SOCRATES or UNICORN technologies and to market our products. Reduction of contract funding from the federal government could delay achievement of or increases in profitability, if any, create a substantial strain on our liquidity, resources and product development, and have a material adverse effect on the progress of our research and development and our financial condition.

The government will not pay us for SOCRATES research and development if we do not perform on our contract.

We perform our government contracts pursuant to specific work orders from the government. Such work orders include, but are not limited to, analysis of data, research, development of our SOCRATES technology, planning and conduct of testing, and preparation of various reports. If we do not perform the contracts in accordance with their terms, the government may withhold payment on our invoices that we submit monthly. Furthermore, if at any point the government considers a test to be a failure, it may cease to approve further work orders or fund further contracts. Loss of funding on our SOCRATES contract would have a material adverse effect on our business, financial condition, and results of operations.

Our success depends on our successful product development and testing.

Our future success will depend upon our ability to successfully complete the development, testing, and commercialization of our technologies and our ability to develop and introduce new products and services to meet industry, government, and client requirements. We are planning to eventually develop a number of products, based on our SOCRATES and UNICORN technologies. The process of developing such products contains significant technological and engineering hurdles and is extremely complex and expensive. In 2001, Volpe and associated federally funded research centers prepared reports which concluded it was unlikely SOCRATES would result in a sensor that could be used for any operational procedure and even for research because of technical unknowns relating to an understanding of wake vortices and the need to obtain acceptance of WVAS by controllers and pilots. We believe this conclusion was premature and based on an incomplete understanding of SOCRATES and its operational potential. In our opinion, the testing and analysis we have conducted has increasingly supported this potential and

resulted in the continuation of funding for our government contracts for research, development and testing of our SOCRATES technology. However, there still are technical, engineering and program integration hurdles we must meet to develop SOCRATES into an operational sensor, including, but not limited to, expanding the sensor to at least 16 and as many as 32 laser beams, integrating the sensor into and with the other components of WVAS, and developing operating protocols for WVAS that define how it would be used by air traffic controllers and pilots. In the case of UNICORN, we must successfully overcome development,

engineering and testing hurdles to produce an operational product and obtain FAA approval of this product. Furthermore, we will need to extend the term of the experimental license the FCC has granted us and, ultimately, obtain a permanent license from the FCC for the operation of UNICORN. We might not successfully complete the development of our SOCRATES or UNICORN technologies into operational products and our products may not be commercially viable. Our failure to complete development of any such products and achieve market acceptance would have a material adverse effect on our business, financial condition, and results of operations.

In addition, certain of our products will require customized installation to address unique characteristics of their environments. Customization could place an additional burden on our resources or delay the delivery or installation of products which, in turn, could have a material adverse effect on our relationship with clients, our business, financial condition, and results of operations.

Our success depends on federal government approval of our products and related systems.

The airport and aviation industry is subject to extensive government oversight and regulation. To introduce our SOCRATES and UNICORN-based products for commercial sale, we must successfully complete research, development, and testing and obtain necessary governmental approvals for their installation. Upon approval by the Federal Aviation Administration, or FAA, our SOCRATES wake vortex sensor would be part of a multi-component wake vortex advisory system that also will require government approvals before it can be deployed. Any factor that delays or adversely affects this approval process, including delays in development or inability to obtain necessary government approvals, could have a material adverse effect on our business, financial condition, and results of operations, and we can make no assurance when or if all such approvals will be obtained.

Our business relies on a strategic alliance with Lockheed Martin Corporation.

In May 1997, we signed a Teaming Agreement with Lockheed Martin Corporation to jointly develop and market SOCRATES-based products. This agreement will expire in May 2007, unless certain earlier termination provisions occur or the agreement is extended by mutual agreement. The agreement stipulates that we serve as prime contractor and Lockheed Martin Corporation as subcontractor in the development and any deployment of our SOCRATES wake vortex sensor. Although to date we have generally worked in close cooperation with Lockheed Martin Corporation, there is no assurance that this relationship will be sustained. Future disagreements as to work scope, revenue share, profit margins, ownership of intellectual property, or technical, marketing, or management philosophy, could adversely impact the relationship. Since we view our strategic relationship with Lockheed Martin Corporation as a vital element of our business plan, any erosion of this relationship could have a negative impact on our business and future value.

On April 26, 2004, in conjunction with the renewal of a nondisclosure agreement, we were advised by Lockheed Martin Corporation that it owns a certain patent which predates our SOCRATES patent and, according to Lockheed Martin Corporation, contains some intellectual property related to our SOCRATES patent. Lockheed Martin Corporation has told us that it was prevented from previously disclosing the patent to us because of a government secrecy order. After consultation with counsel, including our patent counsel, we strongly believe that the Lockheed Martin Corporation patent will not impair the value of our SOCRATES patent because our SOCRATES patent is aimed at improving air traffic safety, a use not contemplated by the Lockheed Martin Corporation patent. Furthermore, it is our position that Lockheed Martin Corporation acknowledged and accepted our invention of the SOCRATES technology in the Teaming Agreement between us in May 1997. We have met with Lockheed Martin Corporation to discuss the matter and potential opportunities relating to our SOCRATES patent. At the meeting, Lockheed Martin Corporation stated that it does not agree with our position. Nevertheless, management of both companies acknowledged the value and strength of the relationship and the desire to preserve it. We are conducting further discussions with Lockheed Martin Corporation on potential ways to expand and extend the relationship and believe the outcome of such discussions will resolve any intellectual property concerns. We cannot predict or provide any assurance on the outcome of these discussions and whether any outcome will be satisfactory to us.

We may need to raise additional capital.

While we completed a public offering in February of 2004 resulting in gross proceeds of approximately \$8.4 million (net of the underwriting discount), we cannot be certain that such financing will be adequate or sufficient for our future needs. We face many uncertainties with respect to research and development and the timing of commercialization of our SOCRATES and UNICORN-based products, the availability and level of government funding, the FAA approvals required for our products, and the long sales cycle from initial customer contact to actual, if any, revenue generation. Depending on the outcome of these uncertainties, we might not be able to generate sufficient, if any, revenue or investment capital to fund our operations over the period of years we believe are required to commercialize our products. In each of our last three fiscal years, we have incurred substantial operating losses which we have funded, in part, with equity capital that we raised from new investors.

We will continue to incur significant expenses for research and development and testing of our SOCRATES and UNICORN technology and may continue to experience such losses prior to commercialization and thereafter. If we cannot achieve commercialization of our SOCRATES and UNICORN technologies with the proceeds of our recent public offering or if we are unable to generate sufficient working capital from revenue from government funding or private contracts for these purposes, we would need to seek additional capital. In addition, other unforeseen costs and research and development costs of later generation SOCRATES and UNICORN-based products also could require us to seek additional capital. We do not have any

credit facilities in place and, should the need for additional capital arise, we may not be able to obtain sufficient, if any, additional capital or raise such capital on acceptable terms. If we need to obtain additional debt or equity capital, it may include our entry into joint ventures or issuance of additional securities, which may cause dilution to our

current capital structure and stockholders' ownership. Additional securities also could have a greater priority as to dividends, distributions and other rights than our common stock.

For the life of our public warrants, the underwriter's warrants issued pursuant to our recent public offering, and our existing unregistered warrants, the holders thereof are given the opportunity to profit from a rise in the market for our common stock, with a resulting dilution in the interest of all other stockholders. So long as these warrants are outstanding, the terms on which we could obtain additional capital may be adversely affected. The holders of these warrants might be expected to exercise them at a time when we would, in all likelihood, be able to obtain any needed capital by a new offering of securities on terms more favorable than those provided by these warrants.

Loss of key personnel could adversely affect our business.

Our future success depends to a significant degree on the skills, experience and efforts of our executive officers, Samuel A. Kovnat, Chairman of the Board and Chief Executive Officer, William B. Cotton, President and Director, Frank L. Rees, Executive Vice President and Director, David D. Cryer, Chief Financial Officer, Treasurer and Secretary, and Dr. Neal Fine, Senior Vice President for Technology. The sustained unavailability of any one or more of those individuals for any reason could have a material adverse impact on our operations and prospects.

We anticipate hiring additional executive officers in the future. We may not be able to complete the hiring of these additional officers in a timely manner or at all. We also depend on the ability of our executive officers and other members of senior management to continue to work effectively as a team.

Government regulation could adversely affect our business.

As a result of receiving contract funding from the federal government and our involvement in the field of aviation, our business and operations are subject to numerous government laws and regulations. In the near term, and for so long as we receive funding from the federal government, we will be subject to many procurement and accounting rules and regulations of the federal government. We are also subject to periodic audits by the Defense Contract Audit Agency, or DCAA. To date, we have incurred six audits by the DCAA, and reports have been issued to our government customer which have stated that we are performing in accordance with Federal Acquisitions Regulations. There is no assurance that any of the results or contents of any future audits will portray us favorably. These rules and regulations are complex in nature and sometimes difficult to interpret or apply. Adherence to these rules is reviewed by participating

agencies of the federal government. If such agencies suspect or believe that violations of procurement or accounting rules and regulations have occurred, they may refer such matters to other enforcement divisions of the federal government, such as the U.S. Attorney's Office or the Inspector General's office. If we violate these rules and regulations, even if unintentionally, we may have to pay fines and penalties or could be terminated from receiving further funding from the federal government. If we market, sell and install our products in foreign countries, the laws, rules and regulations of those countries, as well as certain laws of the United States, will apply to us. Existing as well as new laws and regulations of the United States and foreign countries which regulate aviation and airports could also adversely affect our business.

Our success depends on our ability to protect our proprietary technology.

Any failure by us to protect our intellectual property could harm our business and competitive position. For example, although we have sought patent protection for our technologies, the steps we have taken or intend to take with regard to protecting our technologies may not be adequate to defend and prevent misappropriation of our technology, including the possibility of reverse engineering and the possibility that potential competitors will independently develop technologies that are substantially equivalent or superior to our technology. Furthermore, any patent we have obtained or may obtain may subsequently be invalidated for any of a variety of reasons. In addition, even if we are issued a patent, we may not be able to gain any commercial advantage from such patent. Existing United States laws afford only limited intellectual property protection.

We intend to use a combination of patent, trade secret, copyright and trademark law, nondisclosure agreements, and technical measures to protect our proprietary technology. We intend to enter into confidentiality agreements with and obtain assignments of intellectual property from all of our employees, as well as with our clients and potential clients, and intend to limit access to and distribution of our technology, documentation and other proprietary information. However, the steps we take in this regard may not be adequate to deter misappropriation or independent third-party development of our technology. In addition, the laws of some foreign countries do not protect proprietary technology rights to the same extent as do the laws of the United States. If we resort to legal proceedings to enforce our intellectual property rights, the proceedings could be burdensome and expensive and could involve a high degree of risk to our proprietary rights if we are unsuccessful in such proceedings. Moreover, our financial resources may not be adequate to enforce or defend our rights in our technology. Additionally, any patents that we apply for or obtain may not be broad enough to protect all of the technology important to our business, and our ownership of patents does not in itself prevent others from securing patents that may block us from engaging in actions necessary to our business, products, or services.

Other companies may claim that we infringe their intellectual property or proprietary rights.

If our proprietary technology violates or is alleged to violate third party proprietary rights, we may be required to reengineer our technology or seek to obtain licenses from third parties to continue offering our technology without substantial reengineering. Any such efforts may not be successful or if successful could require payments that could have a material adverse effect on our profitability and financial condition. Any litigation involving infringement claims against us would be expensive and time-consuming, and an adverse outcome may result in payment of damages or injunctive relief that could materially and adversely affect our business.

Under certain circumstances, the federal government may be able to use our SOCRATES-related technologies without payment to us.

We have taken certain steps to preserve our rights in our SOCRATES-related technologies under our contracts with the federal government. However, as is the case with all research and development contracts funded by the federal government, the Federal Acquisition Regulations provide that, under certain circumstances, the federal government

may have paid-up rights to use, or have used on its behalf, our SOCRATES-related technologies. We do not expect that the federal government will attempt to use our SOCRATES-related technologies without compensating us. Nevertheless, if the federal government attempts to exercise these rights, it is difficult to predict what effect, if any, it may have on us. If the federal government succeeds in exercising these rights, it may have a material adverse effect on our business operations and financial performance, which could negatively affect the value of our stock.

Our future customers, including the FAA, may not accept the price of or be able to finance our products.

At present, we cannot precisely fix a price for the sale and installation of an initial SOCRATES wake vortex sensor at airports or UNICORN-based collision avoidance systems in small aircraft. We estimate that the cost of our SOCRATES wake vortex sensor will be \$6 million to \$15 million per airport installation, depending on, among other things, the number and configuration of runways, and the wholesale price of a UNICORN-based system will be approximately \$10,000 per aircraft at annual production quantities of 2,000 to 3,000 systems per year, of which there can be no guaranty or assurance. Because we have not completed the research, development, and testing of either product or received final approvals for either of them from the federal government, we have not commenced production or marketing efforts. We currently do not anticipate having these products ready for commercial sale for at least several years. We therefore are not yet in a position to gauge the reaction of potential customers to the pricing of these products or future products and whether such potential customers will be able to afford and finance our products.

We believe that the increase in efficiency and safety to airports, airlines, and private aircraft resulting from our products will justify the substantial anticipated cost of sales and installation of these products. However, our customers' ability to afford such costs will depend, in part, on the health of the overall economy, the financial condition and budget priorities of the federal government, particularly the FAA and NASA, profitability of airports, airlines, and aircraft manufacturers, and the availability of private and government sources of funding to finance the sales and acquisition of our products. While a variety of potential funding sources exist, inability of the FAA, airlines or airports to access or obtain funding for purchase and installation of our products could have a material adverse impact on sales of our SOCRATES or UNICORN-based products.

We may experience long sales cycles.

We expect to experience long time periods between initial sales contacts and the execution of formal contracts for our products and completion of product installations. The cycle from first contact to revenue generation in our business involves, among other things, selling the concept of our technology and products; developing and implementing a pilot program to demonstrate the capabilities and accuracy of our products; negotiating prices and other contract terms; and, finally, installing and implementing our products on a full-scale basis. We anticipate this cycle will entail a substantial period of time, on average between seven to twelve months, and the lack of revenue experienced during this cycle and the expenses involved in bringing new sales to the point of revenue generation would put a substantial strain on our resources.

Our success will depend on our ability to create effective sales, marketing, production and installation forces.

At present and for the near future, we will depend upon a relatively small number of employees and subcontractors to complete the research and development of our SOCRATES wake vortex sensor and pursue research and development of other SOCRATES and UNICORN-based products. The marketing and sales of these products will require us to find additional capable employees or subcontractors who can understand, explain, market, and sell our technology and products to airports, airlines, and airplane manufacturers. We also will need to assemble new personnel and/or contractors for production and installation of our products. Upon successful completion of research and development, these demands will require us to rapidly increase the number of our employees, vendors, and subcontractors. There is intense competition for capable personnel in all of these areas, and we may not be successful in attracting, integrating, motivating, or retaining new personnel, vendors, or subcontractors for these required functions.

Our business could be adversely affected if our products fail to perform properly.

Products and systems as complex as ours may contain undetected errors or "bugs," which result in system failures, or failure to perform in accordance with industry expectations. Despite our plans for quality control and testing measures, our products including any enhancements may contain such bugs or exhibit performance degradation, particularly during the early stages of installation, and deployment. Product or system performance problems could result in loss of or delay in revenue, loss of market share, failure to achieve market acceptance, adverse publicity, injury to our reputation, diversion of development resources and claims against us by governments, airlines, airline customers, and others.

We could be subject to liability claims relating to malfunction of our technology.

Sale of our products will depend on their ability to improve airport, airline, and airplane safety and efficiency. We will take great care to test our products and systems after installation and before actual operation to insure accuracy and reliability. The FAA acquires air traffic control equipment for U.S. airports, and typically assumes the principal product liability risk for such equipment. However, unforeseen problems, misuse, or changing conditions could cause our products and systems to malfunction or exhibit other operational problems. Such problems could cause, or be perceived to cause, airplane accidents, including passenger fatalities. We may receive significant liability claims if governments, airlines, airports, passengers and other parties believe that our systems have failed to perform their intended functions. Liability claims could require us to spend significant time and money in litigation, pay substantial damages, and increase insurance premiums, regardless of our responsibility for such failure. Although we plan to maintain liability insurance, such coverage may not continue to be available on reasonable terms or be available in amounts sufficient to cover one or more large claims, and the insurer may disclaim coverage as to any claim.

We face significant competition from other companies.

The air safety systems and air traffic control industries are already highly competitive. Other industry participants could develop or improve their own systems to achieve the cost efficiencies and value that we believe our products will provide upon successful completion of research and development. Additional companies may enter the market with competing systems as the size and visibility of the market opportunity increases. In addition, the government could cause us to compete against other companies for research and development or production and deployment of our SOCRATES wake vortex sensor, when and if we successfully complete its development. Many of our potential competitors have longer operating histories, greater name recognition, substantially greater financial, technical, marketing, management, service, support, and other resources than we do. Therefore, they may be able to respond more quickly than we can to new or changing opportunities, technologies, standards, or customer requirements. Competition could reduce our revenues and margins and have a material adverse effect on our operations.

New products or technologies will likely increase the competitive pressures that we face. Increased competition could result in pricing pressures, reduced margins, or the failure of our products to achieve or maintain market acceptance. The development of competing products or technologies by market participants or the emergence of new industry or government standards may adversely affect our competitive position. As a result of these and other factors, we may be unable to compete effectively with current or future competitors. Such inability would likely have a material adverse effect on our business, financial condition, or results of operations.

Rapid technological change could render our systems obsolete.

Our business in general is characterized by rapid technological change, frequent new product and service introductions and enhancements, uncertain product life cycles, changes in customer requirements, and evolving industry standards which make us susceptible to technological obsolescence. The introduction of new products embodying new technologies, the emergence of new industry standards, or improvements to existing technologies could render our products and systems obsolete or relatively less competitive. Our future success will depend upon our ability to continue to develop and introduce a variety of new products and to address the increasingly sophisticated needs of our customers. We may experience delays in releasing new products and systems or enhancements in the future. Material delays in introducing new products and systems or enhancements may cause customers to forego purchases of our products and systems and purchase products and systems of competitors instead.

Failure to properly manage growth could adversely affect our business.

To implement our strategy, we believe that we will have to grow rapidly. Rapid growth may strain our management, financial, and other resources. To manage any future growth effectively, we must expand our sales, marketing, production, installation, and customer support organizations, invest in research and development of new products or enhancements to existing systems that meet changing customer needs, enhance our financial and accounting systems and controls, integrate new personnel or contractors, and successfully manage expanded operations. We may not be able to effectively manage and coordinate our growth so as to achieve or maximize future profitability.

We must hire and retain skilled personnel.

Our success depends in large part upon our ability to attract, train, motivate, and retain highly skilled employees, particularly sales and marketing personnel, scientists, engineers, and other technical support personnel. Our failure to attract and retain the highly trained technical personnel that are integral to our direct sales, product development, installation, support, and professional services may limit the rate at which we can generate sales or develop new products or system enhancements, which could have a material adverse effect on our business, financial condition, or results of operations.

Any acquisition we make could disrupt our business and harm our financial condition.

We may attempt to acquire businesses or technologies that we believe are a strategic fit with our business. We currently have no commitments for any acquisition. Any future acquisition may result in unforeseen operating difficulties and expenditures, and may absorb significant management attention that would otherwise be available for ongoing development of our business. Since we may not be able to accurately predict these difficulties and expenditures, these costs may outweigh the value we realize from a future acquisition. Future acquisitions could result in issuances of equity securities that would reduce our stockholders' ownership interest, the incurrence of debt, contingent liabilities, amortization of expenses related to other intangible assets and the incurrence of large, immediate write-offs.

You should carefully read and evaluate this entire Form 10-QSB and our current SEC filings including the risks it describes and not consider or rely upon any statement, information or opinion about us that is not contained in this Form 10-QSB and our current SEC filings.

Certain statements, information and opinions about us have appeared and may continue to appear in published news reports, analysts reports, other media sources and our web site. Some of the information contained in these reports or sources may not be material to understanding our business or may be out of date, erroneous or inconsistent with that disclosed in this Form 10-QSB and our current SEC filings. In making a decision to invest in our securities, you should not rely upon any of these statements, information or opinions and should only rely upon, consider and carefully evaluate the information and risks contained in this Form 10-QSB and our current SEC filings.

We currently are involved in an informal SEC investigation.

The staff of the SEC is conducting an informal investigation that appears to be looking into certain analyst reports about us and our press releases. To date, the SEC staff has not asserted that we have acted improperly or illegally. We have voluntarily agreed to cooperate fully with the staff's informal investigation. We believe that we have acted properly and legally with respect to these analyst reports and our press releases. However, we can neither predict the length, scope, or results of the informal investigation nor its impact, if any, on us or our operations. An adverse outcome, which we cannot predict, could negatively impact the market value of our securities and could divert the efforts and attention of our management team from our ordinary business operations.

We may suffer losses from various investments that we make and related market risks.

From time to time, we may make various types of investments which include, but may not be limited to, acquisitions of other companies, strategic transactions and joint ventures, repurchase of our shares, and general investment of our available cash in various types of debt and equity securities. Some of these investments, such as acquisitions or joint ventures, may involve a high degree of risk and we could lose the entire amount of our investment. Other investments are intended to be conservative, e.g., investment of cash reserves in high quality bonds or equity funds, but are subject to judgments about many factors beyond our control which can adversely affect these types of investments. For example, a rise in such interest rates will adversely affect the value of fixed income securities we hold and we may incur a loss of principal if we have to sell under such conditions. A decline in interest rates may reduce our investment income. We attempt to be prudent in making any of the foregoing investments, which are reviewed and approved by management and our board of directors. These types of transactions are necessary and important for the success of our overall business and our efforts to create value for our shareholders. However, we have suffered losses on certain of these investments and can make no assurance that we will not suffer losses in the future. Any such losses could have a material adverse impact on our results of operations and cash available to support our operations and investment in research and development.

Risks Related to Investment in Our Securities

The price of our securities could be volatile and subject to wide fluctuations.

The market price of the securities of a pre-commercial, research and development stage aviation technology company, such as ours, can be especially volatile. Thus, the market price of our securities could be subject to wide fluctuations. In fact, the trading volume and price of our shares have fluctuated greatly. Subject to the information set forth in this Form 10-QSB, we are unaware of any specific reasons for this volatility and cannot predict whether or for how long it will continue.

If our revenues do not grow or grow more slowly than we anticipate, we are unable to procure federal contracts for our SOCRATES wake vortex sensor research and development, we encounter technical or engineering obstacles to the successful commercial development of SOCRATES or UNICORN, our operating or capital expenditures exceed our expectations and cannot be adjusted accordingly, or if some other event adversely affects us, the market price of our securities could decline. In addition, if the market for aviation technology stocks or the stock market in general experiences a loss in investor confidence or otherwise fails, the market price of our securities could fall for reasons unrelated to our business, results of operations, and financial condition. The market price of our securities also might decline in reaction to events that affect other companies in our industry even if these events do not directly affect us. Furthermore, the

sale in the open market of recently sold securities or newly issued securities, which we may sell from time to time to raise funds for various purposes, and securities issuable upon the exercise of purchase rights under existing options and warrants may place downward pressure on the market price of our securities.

Speculative traders may anticipate a decline in the market price of our securities and engage in short sales of our securities. Such short sales could further negatively affect the market price of our securities.

Litigation could adversely affect our operating results and financial condition.

Companies that have experienced volatility in the market price of their stock have been the subject of securities class action litigation. We and certain of our officers and current directors are defendants in pending litigation (as described in Item 1. Legal Proceedings of this Form 10-QSB) that alleges violations of federal securities laws. We firmly believe that the claims contained in the complaint are without merit and intend to conduct a vigorous defense in this matter. However, defending against existing and potential securities and class action litigation will likely require significant attention and resources and, regardless of the outcome, result in significant legal expenses, which will adversely affect our results unless covered by insurance or recovered from third parties. If our defenses are ultimately unsuccessful, or if we are unable to achieve a favorable resolution, we could be liable for damage awards that could materially adversely affect our results of operations and financial condition.

An active trading market for our securities may not be developed or sustained which could limit the liquidity of an investment in our securities.

There is a limited trading market for our securities. From January 2002 through January 29, 2004, our common stock traded on the OTC Bulletin Board, an inter-dealer automated quotation system for equity securities. The securities sold in our recent public offering, together with the shares that formerly traded on the OTC Bulletin Board, have been approved for listing and are currently trading on the American Stock Exchange. There is no assurance that we will be able to continue to meet the listing requirements and that our securities will remain listed on the American Stock Exchange. If we are delisted from the American Stock Exchange, an investor could find it more difficult to dispose of, or to obtain accurate quotations as to the market value of, our securities. Additionally, regardless of which exchange our securities may trade on, an active and liquid trading market may not develop or, if developed, may not be sustained, which could limit securityholders' ability to sell our securities at a desired price.

If any of our securities are delisted from the American Stock Exchange, we may be subject to the risks relating to penny stocks.

If any of our securities were to be delisted from trading on the American Stock Exchange and the trading price of such security remains below \$5.00 per share on the date such security was delisted, trading in such security would also be subject to the requirements of certain rules promulgated under the Securities Exchange Act of 1934. These rules require additional disclosure by broker-dealers in connection with any trades involving a security defined as a penny stock and impose various sales practice requirements on broker-dealers who sell penny stocks to persons other than established customers and accredited investors, generally institutions. The additional burdens imposed upon broker-dealers by such requirements may discourage broker-dealers from effecting transactions in our securities, which could severely limit the market price and liquidity of such securities and the ability of purchasers to sell our securities in the secondary market. A penny stock is defined generally as any non-exchange listed equity security that has a market price of less than \$5.00 per share, subject to certain exceptions.

A large number of shares may be sold in the market following our recent public offering which may cause the price of our securities to decline.

Sales of a substantial number of shares of our common stock or other securities in the public markets, or the perception that these sales may occur, could cause the market price of our common stock or other securities to decline and could materially impair our ability to raise capital through the sale of additional securities. We have 8,215,110 shares of our common stock outstanding. Of our outstanding shares, 7,001,642 are registered and eligible for public trading. Not included in the foregoing are 119,069 shares of our common stock that we may register for certain of our stockholders.

Based upon shares currently outstanding, and assuming no exercise of options or warrants outstanding, 1,137,628 shares are subject to contractual lock-up agreements with The Shemano Group, Inc., pursuant to which the holders of these shares have agreed not to sell their shares before April 28, 2005. Of the remaining restricted shares, 98,044 will be freely tradable after June 27, 2005.

Certain events could result in a dilution of your ownership of our common stock.

We currently have 8,215,110 shares of common stock outstanding and 2,653,327 common stock equivalents outstanding, including warrants and options. The exercise price of all of our common stock equivalents ranges from \$3.30 to \$6.00 per share of common stock. Some of these warrants and options may provide antidilution protection to their holders which would result in our issuance of shares in addition to those under the warrant or option, upon the occurrence of sales of our common stock below certain prices, stock splits, redemptions, mergers, and other

similar transactions. Furthermore, from time to time we may issue additional shares of common stock in private or public transactions to raise funds for working capital, research and development, acquisitions, or other purposes. If

one or more of these events occurs, the number of outstanding shares of our common stock would increase and dilute your percentage ownership of our common stock.

If we do not maintain an effective registration statement or comply with applicable state securities laws, you may not be able to exercise our public warrants.

For you to be able to exercise our public warrants, the shares of our common stock underlying the public warrants must be covered by an effective and current registration statement and qualify or be exempt under the securities laws of the state or other jurisdiction in which you live. We cannot assure you that we will continue to maintain a current registration statement relating to the shares of our common stock underlying our public warrants or that an exemption from registration or qualification will be available throughout their term. This may have an adverse effect on demand for our public warrants and the prices that can be obtained from reselling them.

Our public warrants may be redeemed on short notice. This may have an adverse impact on their price.

We may redeem our public warrants for \$0.25 per warrant, subject to adjustment in the event of a stock split, dividend or the like, upon 30 days' notice so long as the last reported sale price per share of our common stock as reported by the principal exchange or trading market on which our common stock trades equals or exceeds \$10.00 (subject to adjustment) for twenty consecutive trading days ending on the tenth day prior to the date we give notice of redemption. If we give notice of redemption, holders of our public warrants will be forced to sell or exercise the public warrants they hold or accept the redemption price. The notice of redemption could come at a time when, under specific circumstances or generally, it is not advisable or possible to sell or exercise our public warrants.

Our officers, directors and 5% stockholders will exercise significant control over us.

Our current officers, directors and 5% stockholders, in the aggregate, control approximately 26.4% of our outstanding common stock (including common stock issuable to such person or group within 60 days after October 8, 2004). As a result, these stockholders acting together will be able to exert significant control over matters requiring stockholder approval, including the election of directors, approval of mergers, and other significant corporate transactions. This concentration of ownership could delay, prevent, or deter a change in control, and could deprive our stockholders of an opportunity to receive a premium for their stock as part of a sale of us and could affect the market price of our stock.

We do not intend to pay cash dividends.

We have never paid cash dividends on our stock and do not anticipate paying any cash dividends in the foreseeable future.

We may spend our funds in ways with which our stockholders may not agree.

The use of proceeds description from our recent public offering reflected our then-current planning and was only an estimate that is subject to change in our discretion. Furthermore, a substantial portion of the net proceeds from our recent public offering was not allocated for specific uses. Consequently, our management can spend our funds in ways with which our stockholders may not agree. We cannot predict that our funds will be invested or otherwise utilized to yield a favorable return.

Item 3. Controls and Procedures.

(a) Evaluation of disclosure controls and procedures

. Our chief executive officer and chief financial officer have reviewed and evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15 and 15d-15 under the Securities Exchange Act of 1934 (the "Exchange Act")), as of a date within ninety days before the filing of this quarterly report. Based on that evaluation, the chief executive officer and chief financial officer have concluded that our current disclosure controls and procedures are effective to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act are recorded, processed, summarized, and reported within the time periods specified in the Securities and Exchange Commission rules and forms.

(b) Changes in internal controls

. There have not been any significant changes in our internal controls or in other factors that could significantly affect these controls subsequent to the date of their evaluation. There were no significant deficiencies or material weakness in the internal controls, and therefore no corrective actions were taken.

PART II - OTHER INFORMATION

Item 1. Legal Proceedings.

As of August 31, 2004, we were not a party to any pending legal proceeding. However, as previously reported, in December 2003, we learned that the SEC staff is conducting an informal investigation that appears to be looking into certain analyst reports about us, and our press releases. The SEC staff has not asserted that we have acted improperly or illegally. We have voluntarily agreed to cooperate fully with the staff's informal investigation. We believe that we have acted properly and legally with respect to these analyst reports and our press releases. We can neither predict the length, scope, or results of the informal investigation nor its impact, if any, on us or our operations.

In July and August 2004, several lawsuits were filed in the United States District Court for the District of Connecticut, by purchasers of our common stock naming us and certain of our executive officers and directors as defendants. The suits assert claims under Section 10b of the Securities Exchange Act of 1934 and Rule 10b-5 promulgated thereunder. The plaintiffs seek unspecified damages on behalf of a purported class of purchasers of our securities. We firmly believe that the claims contained in the complaints are without merit and intend to conduct a vigorous defense in these matters. These lawsuits could be time-consuming and costly and could divert the attention of our management personnel. These lawsuits or any future lawsuits filed against us could harm our business.

Item 6. Exhibits and Reports on Form 8-K.

(a) Exhibits

Edgar Filing: FLIGHT SAFETY TECHNOLOGIES INC - Form 10QSB

The following is a list of exhibits filed as part of this quarterly report on Form 10-QSB. Where so indicated by footnote, exhibits which were previously filed are incorporated by reference. For exhibits incorporated by reference, the location of the exhibit in the previous filing is indicated.

Exhibit

<u>No.</u>	<u>Description</u>
3.1	Amended and Restated Articles of Incorporation (1)
3.2	By-Laws (2)
10.1	Employment Agreement effective as of November 4, 2003, between Flight Safety Technologies, Inc.
10.2	and Samuel A. Kovnat (3)
10.3	Employment Agreement effective as of November 4, 2003, between Flight Safety Technologies, Inc.
10.4	and William B. Cotton (4)
10.5	Employment Agreement effective as of November 4, 2003, between Flight Safety Technologies, Inc.
10.6	and David D. Cryer (5)
10.7	Employment Agreement effective as of November 4, 2003, between Flight Safety Technologies, Inc.
10.8	and Frank L. Rees (6)
10.9	Teaming Agreement dated May 1, 1997, by and between FSTO and Lockheed Martin Corporation (7)
31.1	Share Exchange Agreement between Reel Staff, Inc. and Flight Safety Technologies, Inc., dated June 24, 2002, as amended July 15, 2002 (8)
31.2	Cost Reimbursement Research Project Agreement between Flight Safety Technologies, Inc. and Georgia Tech Applied Research Corporation (9)
32.1	Phase III Contract issued by U.S. Department of Transportation/RSPA/Volpe Center, dated September 30, 2003 (10)
32.2	Agreement between Flight Safety Technologies, Inc. and Advanced Acoustics Concepts, Inc., dated January 14, 2000 (11)
	*Chief Executive Officer Certification as Adopted Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. Section 1350).
	*Chief Financial Officer Certification as Adopted Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. Section 1350).
	*Chief Executive Officer Certification as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. Section 1350).
	*Chief Financial Officer Certification as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. Section 1350).

*Submitted herewith.

- (1) Incorporated by reference to Exhibit 3.1 on our Form 10-QSB, which was filed on April 6, 2004.
- (2) Incorporated by reference to Exhibit 3.2 on our Form SB-2, which was filed on August 9, 2001.
- (3) Incorporated by reference to Exhibit 10.1 on our Form SB-2/A, which was filed on January 29,
- (4) 2004.
- (5) Incorporated by reference to Exhibit 10.2 on our Form SB-2/A, which was filed on January 29,
- (6) 2004.
- (7) Incorporated by reference to Exhibit 10.3 on our Form SB-2/A, which was filed on January 29,
- (8) 2004.
- (9) Incorporated by reference to Exhibit 10.4 on our Form 10-QSB, which was filed on April 6, 2004.
- (10) Incorporated by reference to Exhibit 10.7 on our 8-KA, which was filed on November 6, 2002.
- (11) Incorporated by reference to Exhibit 10.1 on our Form 8-K, which was filed on July 18, 2002.
Incorporated by reference to Exhibit 10.7 on our Form SB-2/A, which was filed on November 26, 2003.
Incorporated by reference to Exhibit 10.8 on our Form SB-2/A, which was filed on November 26, 2003.
Incorporated by reference to Exhibit 10.9 on our Form SB-2/A, which was filed on November 26, 2003.

(b) Reports on Form 8-K

On August 2, 2004, we filed a Current Report on Form 8-K. The report contained an Item 5 Other Events and Regulation FD disclosure announcing that we had received notice that a purported class action lawsuit was filed against us.

On August 25, 2004, we filed a Current Report on Form 8-K. The report contained an Item 7.01 Regulation FD disclosure announcing that we had released on our website a newsletter to our shareholders.

SIGNATURES

In accordance with the requirements of the Securities Exchange Act of 1934, we caused this report to be signed on our behalf by the undersigned, thereunto duly authorized.
