Performance highlights

Record underlying earnings^(a) of US\$15.5 billion, 11 per cent above 2010.

Net earnings^(a) of US\$5.8 billion, 59 per cent below 2010, primarily as a result of an impairment charge of US\$8.9 billion related to the Group's aluminium businesses.

Record underlying EBITDA^(a) of US\$28.5 billion, ten per cent above 2010.

Record cash flows from operations up 16 per cent to US\$27.4 billion.

Capital expenditure of US\$12.3 billion in 2011, compared with US\$4.6 billion in 2010. Total capital expenditure for 2012 projects approved at date of this report and sustaining capital is expected to be US\$16 billion. Further project approvals, mainly in the Pilbara, are likely to increase this level of investment as the growth programme continues.

Pilbara iron ore expansion to 283 million tonnes per annum (mtpa) now fully approved and on track to be in operation by end of 2013: second planned phase expansion of Pilbara capacity enhanced to 353 mtpa and completion brought forward by six months to first half of 2015.

Growth options enhanced in Mongolia, Mozambique and South Africa: Rio Tinto moves to majority stake in Ivanhoe, completes Riversdale acquisition providing entry to an emerging major coking coal resource and announces doubling of stake in Richards Bay Minerals.

34 per cent increase to full year dividend to 145 US cents per share, reflecting confidence in long-term outlook.

US\$7 billion share buy-back programme on track for completion by end of the first quarter 2012.

Twelve months to 31 December

(All amounts are US\$ millions unless otherwise stated)

	2011	2010	Change
Underlying EBITDA ^(a)	28,521	25,978	10%
Underlying earnings ^(a)	15,549	13,987	11%
Net earnings ^(a)	5,826	14,238	(59%)
Cash flows from operations	27,388	23,530	16%
Underlying earnings per share US cents	808.5	713.3	13%
Basic earnings per share from continuing operations US cents	303.5	731.0	(58%)
Ordinary dividends per share US cents	145.0	108.0	34%

The financial results are prepared in accordance with IFRS and EU IFRS.

(a)

Edgar Filing: RIO TINTO PLC - Form 20-F

Underlying earnings is the key financial performance indicator which management uses internally to assess performance. It is presented here to provide greater understanding of the underlying business performance of the Group's operations attributable to the owners of Rio Tinto. Net earnings and underlying earnings relate to profit attributable to owners of Rio Tinto. Underlying earnings is defined and reconciled to net earnings in note 2 to the 2011 financial statements. EBITDA is defined on page 212. Underlying EBITDA excludes the same items that are excluded from underlying earnings and is reconciled to the Income Statement in note 2 on page 154.

This *Annual report* and *Auditors' report* comply with Australian and UK reporting requirements.

Copies of Rio Tinto's shareholder documents are available on the website at www.riotinto.com. They can also be obtained free of charge from the Company. Some shareholders may prefer to receive the *Annual review* which contains the summary financial statements although shareholders should note that it does not allow as full an understanding of the Group.

Cautionary statement about

forward-looking statements

This document contains certain forward-looking statements with respect to the financial condition, results of operations and business of the Rio Tinto Group. These statements are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, and Section 21E of the Securities Exchange Act of 1934. The words "intend", "aim", "project", "anticipate", "estimate", "plan", "believes", "expects", "may", "should", "will", or similar expressions, commonly identify forward-looking statements.

Examples of forward-looking statements in this *Annual report* include those regarding estimated

ore reserves, anticipated production or construction dates, costs, outputs and productive lives of assets or similar factors. Forward looking statements involve known and unknown risks, uncertainties, assumptions and other factors set forth in this document that are beyond the Group's control. For example, future ore reserves will be based in part on market prices that may vary significantly from current levels. These may materially affect the timing and feasibility of particular developments. Other factors include the ability to produce and transport products profitably, demand for our products, the effect of foreign currency exchange rates on market prices and operating costs, and activities by governmental authorities, such as changes in taxation or regulation, and political uncertainty.

In light of these risks, uncertainties and assumptions, actual results could be materially different from projected future results expressed or implied by these forward looking statements which speak only as to the date of this report. Except as required by applicable regulations or by law, the Group does not undertake any obligation to publicly update or revise any forward looking statements, whether as a result of new information or future events. The Group cannot guarantee that its forward looking statements will not differ materially from actual results.

v

Table of Contents

Chairman's letter

Despite continuing global economic uncertainty and volatility, Rio Tinto has had a record year. We have also strengthened the Group to meet anticipated challenges – including those of growth and expansion.

Our overall safety performance indicators improved in 2011, although I was deeply saddened by the six fatalities at our managed operations and operations held for divestment.

Our underlying EBITDA rose ten per cent on 2010 to US\$28.5 billion reflecting, in particular, higher prices and strong iron ore sales despite production being adversely affected by the weather in the early part of the year. We also achieved record underlying earnings of US\$15.5 billion, up 11 per cent on 2010. However, our net earnings were US\$5.8 billion, a fall of 59 per cent reflecting a US\$8.9 billion impairment of some of our aluminium businesses.

Efficient capital management

Your board believes that the creation of long-term, sustainable shareholder value requires a prudent approach to investing in growth and returning excess capital to shareholders. We aim to do this by maintaining a strong balance sheet.

The board continues to see attractive and significant growth opportunities around the world, against a backdrop of short-term uncertainty in the financial markets, particularly in the eurozone. The anticipated doubling of demand over the next two decades will require unprecedented levels of investment across the mining and metals industry. With these prospects will come choices. Your board will dedicate a great deal of effort to screening opportunities. This will ensure we identify and progress the growth projects with the greatest potential to create value for shareholders over the longer term. However, the increasing capital intensity of growth projects is affecting the way we look at future projects and expansion.

We continue to balance the strategic driver of growth, wherever those opportunities may arise, with the equally important driver of financial and operational excellence – investing in the business and returning excess capital to shareholders. Therefore, whilst we are committed to a capital expenditure programme in 2012 of US\$16 billion, during 2011 we returned a total of US\$7.7 billion to shareholders through the progressive dividend and share buy-back programme. Our confidence in our long-term prospects is reflected in the 34 per cent dividend increase to 145 cents a share.

Global economic uncertainty

The world continues to face uncertainty and we believe this will contribute to ongoing volatility. The unresolved sovereign debt crisis in Europe has not only weakened demand there, it has the potential for contagion in other markets. The pace of recovery in the US is slow but there have been some signs that the situation is improving.

Growth in China is not accelerating at the same pace as we have seen in recent years, but the rate is still favourable in comparison to the growth in global gross domestic product of around 3.3 per cent.

In recent years we have strengthened our balance sheet. This will serve as a buttress for us in more volatile times ahead.

Focus for the board in 2011

Managing the risks in our markets was a priority for the board last year. In addition to experiencing high degrees of global volatility, we have been assessing our increased exposure to non-OECD countries and the challenges presented by escalating resource nationalism and sovereign risk in the sector.

We have today published a comprehensive analysis of the US\$10 billion in taxes we have paid worldwide during 2011. In recognition of our tax transparency initiative which we started in 2010, Rio Tinto was awarded the 2011 *PwC Building Public Trust* award for Tax Reporting in the FTSE100.

We have also retained our strong commitment to sustainable development which we believe gives us a competitive advantage. Not only does it reduce our environmental and community impact, but it helps us to attract high calibre individuals and ultimately deliver a better return to our shareholders.

As chairman of the board I have consistently felt it important to provide continuity through succession planning by ensuring the board is refreshed with new skills and greater diversity.

Edgar Filing: RIO TINTO PLC - Form 20-F

During the year, John Varley and Chris Lynch joined the board. We welcome the extensive experience they bring to board proceedings. John will succeed Andrew Gould as the senior independent non-executive director upon Andrew's retirement from the board at the conclusion of the Rio Tinto Limited annual general meeting in May. John has become chairman of the Remuneration committee, which I have also recently joined as a member. I would also like to take this opportunity to thank Andrew for his invaluable support provided to Rio Tinto since 2002.

Outlook

We believe the long-term outlook is strong. We have invested heavily, and continue to invest to meet the needs of emerging economies.

Despite the current volatility we are preserving our investment trajectory to meet the growing global demand for our metals and minerals. Our organic growth continues and we will make value-enhancing acquisitions as the opportunities arise. Where necessary we will refocus our activities to fit our strategic objectives of running large, low-cost operations.

During 2011, our people have again excelled. Their contribution to improvements in our operational and financial efficiency has made our record results possible and, on behalf of the board, I would like to thank them.

I would also like to thank our shareholders for their continued support. I extend my gratitude to the countries and communities that host our operations and for the opportunities they create for us to demonstrate our commitment to growing prosperity and operating sustainably.

Jan du Plessis

Chairman

5 March 2012

Chief executive's statement

We have achieved record results in challenging markets during 2011. We made good progress during market volatility despite our Australian operations being disrupted by severe flooding. It is to the credit of our people that, as well as helping their communities in the crisis, they brought production back on line safely and met or exceeded output targets.

Our record underlying earnings, mainly driven by an outstanding year for our Iron Ore business, have put us in a strong position to navigate the uncertain environment we face. As Jan has said in his letter, this focus has demonstrated our commitment to financial and operational excellence whilst pursuing growth opportunities consistent with our strategy to create long-term, sustainable returns for shareholders.

During 2011, we approved a number of major growth projects. These include a substantial expansion of our Pilbara operations, investment in some of the most exciting mining projects in the world, and a commitment to transform some of our existing assets.

Although our all injury frequency rate continued to improve with a two per cent reduction in 2011, the achievement is significantly overshadowed by the six fatalities at our managed sites (and operations held for divestment) during the year. In a period of prolonged growth within the sector, these tragedies remind us of the importance of maintaining safety as a primary focus at all times, particularly during expansion.

We will be placing even greater emphasis in 2012 on simplifying systems, identifying and managing critical safety risks and engaging frontline leaders more in communicating safety messages to their teams.

Strategy

We remain committed to our vision to be the leading global mining and metals company through a strategy of developing long-life, cost-competitive, expandable assets. To achieve this we focus on a portfolio of Tier 1 assets diversified by commodity, market and geography. Please see page 6 for more information on our strategy and business model.

We are a long-term business and our strategy has consistently served us well over the years and will continue to do so in the challenging times ahead. In 2011, to support our strategy, we concentrated on five strategic drivers: financial and operational excellence, globalising the business, technology and innovation, licence to operate, and growth. We made significant progress in all of these areas.

Globalising and growing the business

Through a combination of growing the business and expanding our current operations, we will soon start to harvest the fruits of our long-term growth trajectory: the first copper from the Oyu Tolgoi mine in Mongolia is part of our contribution to the 2012 London Olympic and Paralympic Games where we take great pride in supplying the metals for the winners' medals. We have increased our holding in Oyu Tolgoi by raising our stake in Ivanhoe, its major shareholder, to 51 per cent in January 2012: first commercial production is due in 2013.

The first coal from our Mozambican coalfields, acquired in 2011, will also be exported this year and our Simandou iron ore project is laying a path for sustainable, long-term growth. In buying the uranium exploration company Hathor and the proposal announced in February 2012 to double our stake in Richards Bay Minerals we have focused on acquisitions that add value and enhance our growth pipeline.

Our organic growth is also progressing: our iron ore capacity in the Pilbara, in Western Australia will increase to 230 million tonnes a year in the first quarter of 2012. Expansion plans to raise that to 283 mtpa have been approved and we have accelerated the target of 353 mtpa by six months to the first half of 2015, subject to board approval.

Licence to operate

While rising resource nationalism is creating investment uncertainty, we continue to believe that our strategy of improving our stakeholder engagement, transparency in tax payments and a focus on sustainable

development can assist us in gaining and maintaining our access to resources. Our aim is to be the developer of choice in an increasingly competitive environment.

When I meet with leaders around the world to discuss the challenges of resource nationalism and the opportunity presented by responsible mining, I convey to them how we earn our licence to operate through Rio Tinto's knowledge; the skills we can offer and our experience in both mining and marketing all of which can help bring prosperity to their regions. I also highlight the considerable contribution that we make to build the social and economic fabric in the communities where we operate and how we engage in environmental protection throughout our activities and regeneration when our mining is done.

Innovation and technology

Innovative technologies are making a substantial contribution to safety, operational and environmental efficiency and financial performance. For example, our Mine of the Future has brought us the Operations Centre in Perth controlling train, truck and shipping movements in the Pilbara, our autonomous truck programme and our recently announced AutoHaul™ automated train programme. Although innovation is not confined to technology: there are many parts of our business where innovative management plans, processes and work practices are also improving safety and efficiency.

Costs

As an industry, we are facing a period of historic cost inflation. Higher input costs and the strength of the Canadian and Australian dollars – currencies in which we incur many of our costs – are putting pressure on our margins.

Rising costs of exploration, development and extraction are, in part, a consequence of the lower ore grades that our industry faces. They also stem from the increasing remoteness of resources, difficult geographies, and increased social and economic commitments such as the Australian Minerals Resource Rent Tax and Australian carbon taxes.

The year ahead

During 2012 we have a clear objective to focus on controlling costs and improving productivity. We will achieve this whilst continuing to work on the transformation of the aluminium business through the disposal of assets that do not fit with our core strategy and continuing our efficiency measures. We will adapt our portfolio to concentrate on delivering our projects. We will also develop our marketing capability, improving our ability to react quickly and flexibly to our customers' requirements.

Our people

As a global company we have the opportunity to develop and rely on the skills and cultures of our international workforce. We are committed to engaging with our people to foster diversity and leadership; providing them with the best opportunities to learn and develop with an industry leader.

I express my appreciation to our employees for the contributions they have made during the course of 2011, to our shareholders for their ongoing support and to the communities and countries who host our operations.

I believe that with Rio Tinto's financial strength, its committed workforce and our long-term projects and operations, we have set the scene for exciting achievements in 2012 and beyond.

Tom Albanese

Chief executive

5 March 2012

Table of Contents

Group overview

Aluminium product group

We are a global leader in the aluminium industry. Our fully-integrated facilities include high-quality bauxite mines, large-scale alumina refineries, and some of the world's lowest-cost, most technologically-advanced primary aluminium smelters.

Products

Bauxite

Bauxite is the natural ore used to make aluminium. It is refined into alumina which is smelted into aluminium metal.

Alumina

Alumina (aluminium oxide) is extracted from bauxite via a refining process known as the Bayer process. Approximately four tonnes of bauxite are required to produce two tonnes of alumina, which in turn makes one tonne of aluminium metal.

Aluminium

Aluminium is light, strong, flexible, non-corrosive and infinitely recyclable. Aluminium is one of the most widely used metals and its largest markets are transportation, building and construction.

Key strengths

Largest bauxite producer in the industry.

Tier 1 operations across the value chain, from bauxite to alumina to aluminium.

The vast majority of Rio Tinto Alcan's operations draw on clean, renewable hydroelectric power.

Industry leading technologies including our proprietary AP Technology .
Full operating review on page 20.

Copper product group

With diverse assets and leading technology, our Copper group is uniquely positioned to supply growing global demand. In 2011, we produced 520 thousand tonnes of mined copper (Rio Tinto share), making us the world's seventh largest supplier. We also produced 669 thousand ounces of gold, 4,924 thousand ounces of silver and 14 thousand tonnes of molybdenum as by-products of our copper operations.

Products

Copper

Edgar Filing: RIO TINTO PLC - Form 20-F

The world uses more than 20 million tonnes of copper every year. Copper is found in nearly every home and vehicle, and in parts and appliances used in numerous aspects of infrastructure and technology. Copper's malleability, strength and resistance to corrosion make it useful in a broad range of building, construction and electrical applications.

Gold

Gold's conductivity and non-corrosive properties make it a vital fabrication material in technology, electronics, jewellery, space exploration and dentistry. Rio Tinto is currently one of the top 15 gold producers in the world, and the largest among the diversified miners. We have interests in two of the largest gold resources at Oyu Tolgoi and Grasberg; the latter contains the largest gold reserves in the world. Rio Tinto produces gold as a by-product of its copper production.

Silver

Silver is a good conductor of electricity and has non-corrosive properties. It is used in many electrical and electronic applications, such as photovoltaic cells, and is the principal ingredient of x-ray film. Silver is also a metal of beauty, used to make lasting products for the home and person. Rio Tinto produces silver as a by-product of its copper production.

Molybdenum

Molybdenum is a metallic element frequently used to produce stainless steel and other metal alloys. It enhances the metal's toughness, high temperature strength and corrosion resistance. We produce molybdenum as a by-product of our copper operations.

Key strengths

Participation in and ownership of several world-class operating assets. Management of the Oyu Tolgoi project, scheduled to be a top ten copper producer and a significant gold producer.

Investment in substantial growth projects.

Industry leading technology and innovation.
Full operating review on page 22.

Diamonds & Minerals product group

The Diamonds & Minerals group comprises mining, refining and marketing operations across three sectors. Rio Tinto Diamonds is one of the world's leading diamond producers, active in mining, sales and marketing. Rio Tinto Minerals is a world leader in borates, with mines, processing plants, commercial and research facilities. Rio Tinto Iron & Titanium is an industry leader in high grade titanium dioxide.

Products

Diamonds

Diamonds share a role with gold as an important component in jewellery that ranges from top end jewellery through to more affordable diamond jewellery accessories. Rio Tinto is able to service both established and emerging markets as it produces the full range of gem diamonds in terms of size, quality and colour distribution.

Borates

Refined borates are used in hundreds of products and processes. They are a vital ingredient of many home and automotive applications, and are essential nutrients for crops. They are commonly used in glass and ceramic applications including fibreglass, television screens, floor and wall tiles, and heat-resistant glass.

Titanium dioxide

The minerals ilmenite and rutile, together with titanium dioxide slag, can be transformed into a white titanium dioxide pigment or titanium metal. The white pigment is a key component in paints, plastics, paper, inks, textiles, food, sunscreen and cosmetics. Titanium metal's key properties of light weight, chemical

Edgar Filing: RIO TINTO PLC - Form 20-F

inertness and high strength make it ideal for use in medical applications and in the aerospace industry.

Other products include high purity iron, metal powders, zircon and rutile.

Key strengths

Poised to benefit from late-cycle demand growth.

Substantial brownfield and greenfield development pipeline.
Full operating review on page 24.

riotinto.com 3

Table of Contents

Group overview continued

Energy product group

We are a leading supplier of thermal and coking coal to the Asian seaborne market and are one of the world's largest uranium producers, serving electric power utilities worldwide. The Rio Tinto Energy product group has operations, exploration and development projects in Australia, Africa and Canada.

Products

Coal

Coal is abundant, relatively inexpensive, and safe and easy to transport. We are a large producer in the export thermal coal market. Thermal coal is used for electricity generation in power stations. We also produce higher-value coking, or metallurgical, coal which, when treated into coke, is used in furnaces with iron ore to produce steel.

Uranium

Uranium is one of the most powerful natural energy sources known, used in the production of clean, stable, base load electricity. After uranium ore is mined, it is milled into uranium oxide – the mine product that is sent away for further processing into fuel rods for nuclear power stations.

Key strengths

Strong customer relationships and high-quality assets located in close proximity to growing Asian markets.

Success in operating long-life, cost-competitive mines and businesses.

World class growth opportunities including brownfield expansion opportunities at our existing coal operations in Australia and recent acquisitions like Hathor Exploration in Canada.

Strong product stewardship strategy to ensure we contribute to the global solutions for the challenges our products raise.
Full operating review on page 26.

Iron Ore product group

We are the second-largest producer supplying the global seaborne iron ore trade. After a decade of dramatic expansion in Australia, and more recent growth in both Australia and Canada, we are well positioned to benefit from the continuing demand surge in China and other Asian markets. We are driving performance through effective project management and enhanced operational efficiency.

Products

Iron ore

Iron is the key ingredient in the production of steel, one of the most fundamental and durable products for modern-day living, with uses from railways to paperclips. Our mines are located in Australia and Canada with a major project under way in Guinea in West Africa.

Salt

Edgar Filing: RIO TINTO PLC - Form 20-F

Salt is one of the basic raw materials for the chemicals industry and is indispensable to a wide array of automotive, construction and electronic products, as well as for water treatment, food and healthcare.

Key strengths

Proximity of the expanded Pilbara operations in Australia to the world's largest and fastest-growing markets.

Success in increasing operational efficiency and controlling costs.

Vast potential of brownfield developments near existing infrastructure.
Full operating review on page 28.

4 [Rio Tinto 2011 Annual report](#)

Table of Contents

Strategic context

Global economy

During the past year we have witnessed significant change and volatility in the global economy as economic and political events increased the risk of a derailment by crisis for short periods of time; a pattern we continue to call the 'saw-tooth economy'. At any other time, the Japanese tsunami, the Arab Spring, and the US fiscal crisis and credit rating downgrade would have been major events, but when combined with the eurozone debt crisis, they provided a challenging environment for commodity markets. Despite these setbacks, during 2011 commodity prices generally averaged higher than in 2010. This was due to a combination of factors including: ongoing strong demand from China; commodity supply constraints coupled with weather and environmental disruption; and low interest rates facilitating direct investment in commodities.

Demand for commodities in 2012 will be supported by an improvement in global growth, although we cannot rule out periods of volatility similar to those in 2011. Consensus forecasts of economic growth around the world have moderated in recent months although global GDP is still forecast to grow at a rate of around 3.3 per cent in 2012. We expect Chinese economic growth to remain above eight per cent for 2012, while growth in other emerging markets is expected to remain relatively robust, albeit with weaker rates of growth than seen in recent years. It will be important to watch developments in the US where improvements in the labour market, manufacturing activity and equity markets are indicative of a strengthening recovery. The key concern for the global outlook continues to stem from the European sovereign debt crisis and the ability of the rest of the world to minimise contagion threats. However, central banks are vigilant to these risks and we believe they will continue to provide substantial liquidity to support the global financial system.

Over the longer term, global growth is expected to remain elevated as fast-growing emerging markets take up larger shares of the world economy. Our belief is that increasing prosperity in these countries, including China and India, with associated industrialisation and urbanisation, will continue to drive underlying growth in demand for commodities.

Commodity markets

Commodity prices generally averaged higher in 2011 than in 2010 although most prices peaked in the first quarter and troughed in the fourth, with prices finishing the year lower than they started. Commodity price movements can be broadly attributed to a slowing in demand, particularly in China, ongoing supply constraints and rising costs, expansionary monetary policy facilitating indirect investment demand for commodities, and finally, the sovereign debt crisis in Europe and a concern about global financial sector stability. Against this background of falling prices, operating margins have tightened due to rising costs of key raw materials and equipment and adverse exchange rate movements. Operating costs are on the rise partly due to a scarcity of key inputs such as labour and capital equipment and a noticeable deterioration in productivity. Moreover, the availability of capital is imposing constraints across some sectors of the industry.

A key feature of commodity markets in 2011 was the continued tightness in supply. Across many commodities, a range of factors have limited the growth in mine production. In general, the industry continued to face the challenges of declining grades, a lack of infrastructure in new jurisdictions, delays to expansion programmes and temporary disruptions from strikes, adverse weather conditions and environmental concerns.

Global copper mine production struggled to grow in 2011 despite several years of elevated prices. Secondary supply was also weak, particularly towards the end of the year, as Western world economic activity slowed. With a further market deficit recorded in 2011 end-users continue to investigate the potential substitution of copper for other materials such as aluminium. However, in the absence of new end-use technologies, significant replacements appear limited in the short-term.

In iron ore, supply disruptions in Australia, Brazil and India in the first half of the year proved to be temporary. Production increased in the second half of the year with a strong rise in Brazilian supply and record output from Australia. Despite this new supply, high iron ore prices were required to support increased levels of high-cost Chinese domestic production in 2011. A similar picture emerged in the thermal coal market, with production increasing by varying degrees, in Australia, Indonesia, Colombia and South Africa and new supply from the Illinois Basin supporting US East Coast exports. In the metallurgical coal market, supply was severely disrupted following flooding in Queensland. The resulting higher prices encouraged US suppliers to enter the seaborne market. 2011 also marked the significant entry of Mongolia to the market.

Apart from commodity specific constraints, our industry is facing increased demands from governments which will increase the cost, timing and uncertainty surrounding the operation of current projects and development of new capacity. By impacting investment, it will also affect supply which will lead to fewer projects coming on-stream and in an environment of high demand, will therefore result in higher prices. While recognising the right of governments to raise revenues from taxes and royalties, the growing trend of increased fiscal imposts on existing projects, mandated government shares, often as 'free carried' options, on new projects and a raft of regulatory and infrastructure requirements is impacting on the ability of the industry to increase supply through new investment. Such measures have the potential to delay economic and social development in those countries.

Outlook

Edgar Filing: RIO TINTO PLC - Form 20-F

The outlook for global commodities remains robust, supported by a rising standard of living for the majority of the world's population. But the outlook also will be characterised by elevated volatility and scope for discontinuities. We expect a high average demand growth setting across our major commodities. Given the constraints on current and future supply growth, we expect to see higher real long-run prices than in the decade preceding the most recent six year period. However, the extent to which the industry is able to maintain existing margins will depend on trends in costs, productivity and the ability to limit the escalating capital costs of new developments.

riotinto.com 5

Table of Contents

Group strategy

Vision

To be the leading global mining and metals company.

Strategy

To invest in and operate large, long-term, cost-competitive mines and businesses, driven not by choice of commodity but by the quality of each opportunity.

Strategic drivers

Five strategic drivers are helping us deliver our strategy and achieve our vision: financial and operational excellence, growth, licence to operate, globalising the business, technology and innovation.

Our strategic vision

Our vision is to be the leading global mining and metals company. We aim to maximise total shareholder return by sustainably finding, developing, mining, processing and marketing the Earth's natural resources.

We seek to achieve this leadership by working according to our values and to sustain long-term business success by building and leveraging effective relationships with relevant stakeholders, including governments and local communities.

The benefits of sector leadership to our stakeholders mean:

Delivering superior returns to our shareholders through excellent operating, development and investment performance.

Ensuring widespread and lasting economic benefits to host country communities.

Positioning us to respond to our customers' needs.

Providing our employees with leading training and career development opportunities and appropriate financial rewards.

Strong fundamentals position us well to achieve our vision: our portfolio includes some of the world's best assets, many of which set the standard for performance in their commodity sectors. Our strong balance sheet allows us financial flexibility and agility. Our people are highly capable and we are reaping the benefits of our increasingly diverse workforce that reflects our global reach. We are recognised as a responsible developer and operator of mining and refining operations around the world. This track record is built on the strong values defined in *The way we work* and the approach we have to the integration of sustainable development practices in everything we do.

Our strategy

Our investment in and operation of large, long-term, expandable, cost-competitive mines and businesses (also referred to as Tier 1 assets) define our path to sector leadership. Our choice of assets provides strong cash returns across the commodity cycle. Their expandability means we are well-placed to meet anticipated growth in demand as emerging economies urbanise and industrialise.

We pursue opportunities driven not by choice of commodity, but by the quality of each opportunity. We maximise the opportunities we identify by being in a position to choose between organic growth and value-focused acquisitions taking into account timing and market conditions. We target opportunities of sufficient magnitude and potential to meaningfully grow shareholder value. These investment decisions are subject to rigorous analysis of potential returns.

We are versatile in the way in which we develop and operate our assets. Operating across multiple jurisdictions we adhere to our commitment to safety, ethical conduct and environmental stewardship. We recognise the potential of partnerships with those who share similar values and whose specialist skills can add value to our projects.

Edgar Filing: RIO TINTO PLC - Form 20-F

We believe value-creating investment is the first and best use for the cash generated by our businesses. We maintain the strength of our balance sheet to take advantage of the opportunities capital and commodity market volatility present. Beyond these aims, we return cash to our shareholders.

Our strategic focus

Industry leaders aspire to excel not only in their business performance but in the way they conduct themselves. For Rio Tinto, this means a focus on distinctive performance in five fundamental areas: financial and operational performance; growth; licence to operate; globalising the business; and technology and innovation.

Our strategic focus requires a combination of the talents of people throughout our organisation – from individual mining and processing operations across the globe to shared functions that span our activities. Sharing common standards of best practice enables us to adapt to changing economic, market and political circumstances while achieving our performance goals. In every aspect of our strategy and our work we aim to create the processes and culture that puts safety in the forefront of our minds.

Financial and operational excellence

In acquiring and divesting our assets and in marketing our commodities we apply our deep industry knowledge and experience to identify and capitalise on opportunities. We acquire quality assets at prices that will reward operational improvement under our ownership. We also seek the acquisition of assets that capital markets temporarily undervalue. Through prudent divestments we capture value from assets that no longer fit with our strategic direction.

We seek to maximise the value of the commodities we produce through effective marketing that ensures we respond to our customers' needs in terms of quality, blend, timing, delivery and appropriate pricing and contractual arrangements.

Our work in improving performance across all our operations is focused on achieving market-leading EBITDA margins and hence returns to our shareholders.

We constantly seek to enhance capital productivity in the operation of existing assets, as well as when we design expansions. We continuously identify and capitalise on latent system capacity so that we can safely deliver increased output volumes.

There is no area of our business in which we compromise on safety. We aim for the highest threshold to ensure safety of our employees and others who work with us. We engage in constant vigilance to protect our employees but also to embed the culture that makes safety a forethought rather than an afterthought.

We aim for world-class cost competitiveness and productivity in the operation and management of our assets. Even assets that are already among the lowest cost in their industries are expected to improve incrementally. These improvements are directed at enhancing margins, quickly and efficiently expanding production and positioning us to respond with greater effectiveness to marketing opportunities.

Growth

We explore for and develop new and existing Tier 1 assets. Our objective is to develop these orebodies so as to deliver their greatest potential. We will do so in a way that delivers lasting benefits for our business and host economies and communities.

Table of Contents

Business model

Key performance indicators

Achievement of our strategy and goals is measured by a mixture of financial and non-financial performance indicators, some of which we link to executive remuneration.

We seek to protect and improve the value of resources through developing a diverse range of stakeholder relationships. We seek to achieve this through rapid organic growth at industry-leading capital and operating costs, without compromising our existing high safety and reliability levels.

Our objective is identifying and accessing major new projects through exploration and establishing lasting and community-oriented presence in resource-rich regions. In Mozambique, Mongolia and Guinea, we have developed comprehensive agreements that will create effective partnerships between the host governments and Rio Tinto. These will deliver value for investors through long-term benefits in operating cost, capital cost and licence to operate and value for the communities in terms of taxes, investment, cost-effective local sourcing and employment.

Licence to operate

External stakeholders are increasing their expectations of us in terms of our transparency in matters such as the taxes we pay but also in the way we engage with governments and the communities that host our operations. This is to ensure they benefit from the prosperity our operations will bring, that we protect the environment and leave a positive legacy when our mining is done. Our work in the area of stakeholder engagement is essential in building and maintaining our licence to operate.

Our approach to sustainable development should enable us to be seen as the industry partner of choice. On the environmental front we monitor and report the levels of greenhouse gases we emit and the volumes of water we consume, we seek to use low carbon energy sources and we engage with environmental agencies and NGOs to protect vulnerable environments.

Globalising the business

Globalising the business gives us many advantages. We have been able to achieve global standards, systems and processes that help us streamline the way we do things. It has encouraged and allowed us to become more agile and efficient as an organisation. Globalisation introduces us to a stimulating range of diversity that we are harnessing. On the one hand it ensures our approaches are appropriate at the local level, on the other the cross-pollination of ideas helps improve many aspects of the way we do business.

Technology and innovation

We apply technology and innovation to improve the way we do things. In particular it helps us to achieve greater safety as well as improving capital efficiency and enhancing productivity. We have adopted an innovative mindset not only by taking advantage of new science and technology, but innovations in our management and processes to find more efficient and effective ways to leverage our existing strengths. We employ innovative scientists and engineers find new ways in which we can protect the environment and improve the lives of those who live in communities surrounding our operations.

Enabling our strategy

Rio Tinto applies an organisation-wide effort to deploy the capabilities and skills required to achieve top performance in all areas. Where needed, we will accelerate and target training and leadership development programmes to ensure all of our people have the opportunity to contribute to achieving distinctiveness in each area.

Edgar Filing: RIO TINTO PLC - Form 20-F

We create and preserve value through investing in and operating large-scale, long-term, cost-competitive mines and businesses. The nature of our business means that the life of an orebody may be for many decades. Throughout the life of a business, from initial exploration to final closure and restoration, we commit to the highest standards of sustainable development.

Investing

Explore and evaluate

Rio Tinto has a knowledgeable and experienced in-house exploration team with a proven track record for discovering of Tier 1 orebodies. In addition to exploration, we create value through expansions and extensions of existing assets. Rio Tinto's orebody knowledge process allows us to evaluate value-enhancing approaches to developing, operating and expanding our resources and positioning our products in the market.

Develop

Rio Tinto develops orebodies with long-term value delivery in mind. Following the discovery of a resource, it must be thoroughly studied to identify the optimal configuration for development of the orebody and delivery of the product to the market. In some cases, we need to work closely with our customers to develop and prepare the market to take the type or grade of product that would enable us to maximise the value of resource over its lifecycle, for example by extending the life of the mine. As studies are undertaken, economic modelling confirms value. Once we have obtained internal and external approvals, the project moves to implementation and construction.

Operating

Rio Tinto creates value through safely and efficiently operating large, long-term, cost-competitive assets and the use of standard operating and maintenance practices across the Group, investing in our world-class assets throughout their lifecycles. An efficient process reduces the use of consumables, increases equipment operating time and optimises the extraction of ore – all of which results in higher production levels, reduced costs and optimisation of value.

Mine

We move millions of tonnes of material every day. We use world-class technologies and processes to plan, operate and maintain our equipment and activities. We invest and apply innovations to optimise productivity.

Process

Our leading proprietary technologies, such as that for aluminium smelting, ensure that recoveries are maximised and our processes are as efficient as possible. We produce material that is of the right quality for our customers.

Market

The majority of our customers are industrial companies who process our products into a wide range of applications supplied to end-users in the construction and infrastructure, automotive, industrial machinery and equipment, energy and consumer goods markets. We invest in long-term partnerships and constantly innovate and improve our products and services to maximise product value to customers. We then leverage our intimate knowledge of the market and the value chain to support our investment decision-making.

Deliver

In many cases, Rio Tinto is responsible for delivering product to our customers. We do this in a variety of ways, efficiently, reliably and cost effectively.

Close-down and restore

When a resource reaches the end of its life, we are committed to high standards of close-down and restoration. Integrating closure planning in the early stages of project development and through an asset's lifecycle helps us to leave a positive legacy of sustainable development, minimise financial impacts and ensure stakeholder expectations are met.

Table of Contents

Key performance indicators

Our key performance indicators (KPIs) give us a means to measure our financial and sustainable development performance. Their relevance to our strategic drivers, and our performance against these measures in 2011, are explained on these pages.

Our strategic drivers are: Financial and operating excellence; Growth; Licence to operate; Globalising the business; Technology and innovation.

KPI trend data

The Group's performance against each KPI is covered in more detail in later sections of this Annual report. Explanations of the actions taken by management to maintain and improve performance against each KPI support the data.

KPIs used as a key measure in the remuneration of executives are identified with this symbol:

See the Remuneration report on page 86

All injury frequency rate (AIFR)

Per 200,000 hours worked

Including former Alcan

More information on page 14

Definition

AIFR is calculated based on the number of injuries per 200,000 hours worked. This includes medical treatment cases, restricted work day and lost day injuries for employees and contractors.

Relevance to strategy

Our commitment to zero harm means that the AIFR is one of the Group's most important non-financial KPIs. Safety is a leading indicator of management performance. It is central to our focus on operational excellence and our licence to operate. A reputation for being a safe employer and neighbour helps us to gain access to the people and resources we need.

Underlying earnings^{(a) (b)}

US\$ millions

Definition

Items excluded from net earnings to arrive at underlying earnings are explained in note 2 of the 2011 financial statements.

Relevance to strategy

Underlying earnings is a measure that provides insight into the underlying business performance of the Group's operations and is the key financial performance indicator used across the Group. This KPI provides insight to cost management, performance efficiency and production growth. It is therefore an indicator of financial and operational excellence and growth.

Definition

TSR combines share price appreciation and dividends paid to show the total return to the shareholder.

Relevance to strategy

TSR measures the Group's performance in terms of shareholder wealth generation through dividends and changes in the share price. As a measure of how we maximise shareholder return, this KPI measures our performance against our strategy as a whole. Relative TSR is also monitored, which gives insight into our performance against our peers.

Definition

Net debt is calculated as the net borrowings after adjusting for amounts due to equity accounted units originally funded by Rio Tinto, cash and cash equivalents, other liquid resources and derivatives related to net debt. This is further explained in note 25 Consolidated net debt of the 2011 financial statements.

More information on page 209

Total shareholder return (TSR)

%

More information on page 99

Net debt^(a)

US\$ millions

More information on page 169

Edgar Filing: RIO TINTO PLC - Form 20-F

Relevance to strategy

A strong balance sheet gives us resilience in a volatile global economy. Net debt is a measure of how we are managing our balance sheet and capital structure, and is closely linked to our financial and operational excellence strategic driver.

8 [Rio Tinto 2011 Annual report](#)

Table of Contents

Capital expenditure^{(a)(c)}

US\$ millions

More information on page 211

Definition

Capital expenditure comprises the net cash outflow on purchases less disposals of property, plant and equipment, capitalised evaluation costs and purchases less disposals of other intangible assets.

Relevance to strategy

Our capital expenditure KPI connects to our growth strategic driver. It measures our level of investment in protecting and maintaining our existing assets, as well as our investment in the growth projects that will be our future Tier 1 operating assets. The geographic distribution of our capital expenditure is also a measure of how we are globalising the business.

Operating cash flows^(a)

US\$ millions

Dividends from equity accounted units

Cash flow from consolidated operations

More information on page 133

Definition

Operating cash flows represents the cash generated by the Group's consolidated operations, before payment of interest, taxes, capital expenditure and cash flows relating to financing activities. The measure is equivalent to cash flow from consolidated operations in the Group cash flow statement. In 2011, product group operating cash flows reported on pages 20 to 28 have been adjusted to exclude funding of defined benefit pension deficits; comparative figures have been modified accordingly.

Relevance to strategy

Operating cash flow is a complementary measure to underlying earnings. It is employed as a measure of business performance and links to two of

our strategic drivers: growth, and financial and operational excellence.

Greenhouse gas emissions intensity

Indexed relative to 2008

Excluding former Alcan

More information on page 17

Definition

Our greenhouse gas (GHG) emissions intensity measure is the change in total GHG emissions per unit of commodity production relative to a base year. Total GHG emissions are direct emissions plus emissions from imports of electricity minus electricity and steam exports and net carbon credits purchased from, or sold to, recognised sources.

Relevance to strategy

We use GHG emissions intensity as a KPI because of the urgent need for climate action, and because it is one of the most widely recognised environmental issues. The KPI links to our licence to operate and our technology and innovation work, which are key drivers of our strategy.

*2008 intensity is shown both excluding former

Alcan, and including former Alcan indexed to 100.

Notes

- (a) The accounting information in these charts is drawn up in accordance with IFRS.
- (b) Underlying earnings is the key financial performance indicator which management uses internally to assess performance. It is presented here as a measure of earnings to provide greater understanding of the underlying business performance of the Group's operations. Items excluded from net earnings to arrive at underlying earnings are explained in note 2 to the 2011 financial statements. Both net earnings and underlying earnings deal with amounts attributable to the owners of Rio Tinto. However, IFRS requires that the profit for the year reported in the income statement should also include earnings attributable to non-controlling interests in subsidiaries.
- (c) Amounts include 100 per cent of subsidiaries' capital expenditures and Rio Tinto's share of the capital expenditure of equity accounted units.

Table of Contents

Risk factors

Principal risks and uncertainties

Rio Tinto's business units and functions assess the potential economic and non-economic consequences of their respective risks using the framework defined by the Group's *Risk policy and standard*. Principal risks and uncertainties are identified when the Risk management committee, business unit or function determines that the potential consequences are materially significant at a Group level or where the risk is connected and may trigger a succession of events that, in aggregate, become material to the Group. Once identified, each principal risk and uncertainty is reviewed by the relevant internal experts and by the Risk management committee.

The following describes all known principal risks and uncertainties that could materially affect Rio Tinto. There may be additional risks unknown to Rio Tinto and other risks, currently believed to be immaterial, which could turn out to be material. The risk factors outlined below omit the management detail on how each is managed and mitigated, or how some risks could result in either a positive (upside) or negative (downside)

impact. Risks may materialise individually, simultaneously or in combination and could significantly affect the Group's:

Short, medium and long-term business and prospects;

Earnings and cash flow;

Overall financial results and product demand;

Current asset values;

Future asset values and growth potential;

Safety plus long, medium and short-term health;

Environmental effects; or

Group or business unit reputation.

The principal risks and uncertainties should be considered in connection with any forward looking statements in this document and the cautionary statement on the inside front cover.

External risks

Edgar Filing: RIO TINTO PLC - Form 20-F

Commodity prices and global demand for the Group's products are expected to remain uncertain.	Commodity prices and demand are cyclical and strongly influenced by world economic conditions. The Group's normal policy is to sell its products at prevailing market prices and not to enter into price hedging arrangements. Persistent economic imbalances that have led to recent volatility in commodity prices and demand may continue.
Past strong demand for the Group's products in China could be affected by future developments in that country.	The Group is heavily reliant on the China market and a major economic downturn in China, or if Chinese customers source products from elsewhere, would have effects across all of the Group's products. The basis on which the Group prices iron ore in Asia is evolving and sales to other iron ore customers may be influenced by any changes.
Rio Tinto is exposed to fluctuations in exchange rates.	The great majority of the Group's sales are denominated in US dollars, which is also the currency used for holding surplus cash, financing operations, and presenting external and internal results. Although many costs are incurred in US dollars, significant costs are influenced by the local currencies of the countries where the Group operates, principally the Australian dollar, Canadian dollar and euro. The normal policy is to avoid hedging of foreign exchange rates and so the Group is vulnerable to appreciation in the value of other currencies against the US dollar, or to prolonged periods of exchange rate volatility.
Political, legal and commercial changes in the places where the Group operates.	The Group has operations in jurisdictions where governments and communities are seeking a greater share in mineral wealth. In some jurisdictions commercial instability can arise from a culture of bribery and corruption. Some operations are conducted under specific agreements with respective governments and associated acts of parliament. In several countries land title and rights to land and resources (including Indigenous title) may be unclear. Political and administrative change, policy reform, and changes in law or government regulation can result in expropriation, or nationalisation.

In its operations and development projects, Rio Tinto is exposed to:

- Renegotiation, unilateral variation or nullification of existing agreements, leases and permits.
- Changes in government ownership of operations.
- Significant restoration and environmental clean-up costs.
- Currency and foreign investment restrictions.
- Changes in taxation rates, regimes or international tax agreements.

Edgar Filing: RIO TINTO PLC - Form 20-F

Limitations to power, water, energy and infrastructure access.

General increases in regulation.

Political instability and uncertainty or government changes to the fiscal terms covering the Group's operations may discourage future investments.

Community disputes in the countries and territories in which the Group operates.

Some of the Group's current and potential operations are located in or near communities that may regard the operation as being detrimental to their circumstances. Community expectations are typically complex with the potential for multiple inconsistent stakeholder views that may be difficult to resolve. Stakeholder opinion and community acceptance can be subject to many influences, for example, related industries, operations of other groups, local, regional or national events in other places where we operate. In the extreme, our operations may be a focus for civil unrest or criminal activity.

Table of Contents

Strategic risks

The Group may be unable to maintain the planned rate of growth due to possible constraints on the rate of capital expenditure.

Rio Tinto has embarked on a substantial growth programme of capital investment in greenfield and brownfield projects to bring on new capacity and to extend the life of existing operations. These projects form a portfolio that is actively managed. However, the ability to achieve the expected growth schedule and objectives is dependent on many interconnected elements. Should some of our plans fail to materialise as expected, the planned rate of capital expenditure may not be achieved.

The Group's exploration and development of new projects might be unsuccessful, expenditures may not be fully recovered and depleted ore reserves may not be replaced.

Rio Tinto identifies new orebodies and mining properties through its exploration programme, and develops or expands other operations as a means of generating shareholder value. Exploration is not always successful and there is a high degree of competition to develop world-class orebodies. Some competitors, who have access to significant resources, may be motivated by political or other non-economic factors. The Group may not be able to source or maintain adequate project financing; or may be unable to find willing and suitable joint venture partners to share the cost of developing large projects.

Rio Tinto may fail to make or successfully integrate acquisitions, or to complete divestment agreements.

Business combinations entail a number of risks including the effective integration of acquisitions to realise synergies, significant one-time write-offs or restructuring charges, and unanticipated costs and liabilities. The Group may also be liable for the past acts, omissions or liabilities it has acquired that are unforeseen or greater than anticipated. The Group may also retain unforeseen liabilities for divested entities if the buyer fails to honour all commitments.

Financial risks

The Group's reported results could be adversely affected by the impairment of assets and goodwill.

An asset impairment charge may result from the occurrence of unexpected events or changed expectations about the future. In accordance with IFRS, the Group does not amortise goodwill or indefinite life intangible assets but tests it annually for impairment; such impairments cannot be reversed.

The Group's liquidity and cash flow expectations may not be realised as expected, inhibiting planned expenditure.

The Group's ability to fund planned expenditure such as capital growth, mergers and acquisitions, innovation and other obligations may falter if its cash position proves inadequate. Our ability to weather a major economic shock for example in the eurozone could be compromised by insufficient cash reserves, a reduction in the value of existing reserves, or restricted access to our cash reserves.

General cost inflation in the resources sector is affecting both operations and projects, resulting in significant pressure on capital and operating costs.

Recently, many input costs in the resources sector have risen at a disproportionate rate, adversely affecting the economics of current operations and increasing the cost of our capital expansion projects. Many key costs are linked to commodity prices and in the case of capital expansion projects the time lag between incurring project costs and receiving revenue can result in additional exposure to commodity markets. Failure to contain costs may have an adverse impact on our operating margins and the viability of our capital expansion projects.

Operational risks

Estimates of ore reserves are based on uncertain assumptions that, if changed, could result in the need to restate ore reserves.

There are numerous uncertainties inherent in estimating ore reserves including subjective judgments and determinations that are based on available geological, technical, contract and economic information. Previously valid assumptions may change significantly with new information, which may result in changes to the economic viability of some reserves and the need for them to be restated.

Labour disputes could lead to lost production and/or increased costs.

Some of the Group's employees, including employees in non-managed operations, are represented by labour unions under various collective labour agreements. The Group may not be able satisfactorily to renegotiate

Edgar Filing: RIO TINTO PLC - Form 20-F

agreements when they expire and may face tougher negotiations or higher wage demands. In addition, labour agreements may not prevent a strike or work stoppage.

Some of the Group's technologies are unproven and failures could adversely impact costs and/or productivity.

The Group has invested in and implemented new technologies in both information systems and operational initiatives, some of which are unproven and their eventual viability cannot be assessed with certainty. The actual benefits of these technologies may differ materially from expectations.

The Group may be exposed to major failures in the supply chain for specialist equipment and materials.

Rio Tinto operates within a complex supply chain depending on suppliers of materials, services, equipment, infrastructure, and on providers of logistics. Significant supply chain failures for whatever reason could have an adverse effect on the Group's business.

Joint ventures, strategic partnerships or non-managed operations may not be successful and may not comply with the Group's standards.

The Group participates in several joint venture and partnership arrangements, and it may enter into others, all of which necessarily involve risk. Whether or not the Group holds majority interests or maintains operational control in its joint ventures, its partners may:

Have economic or business interests or goals that are inconsistent with, or opposed to, those of the Group.

Exercise veto rights to block actions that the Group believes are in its or the joint venture's best interests.

Be unable or unwilling to fulfil their obligations under the joint venture or other agreements, such as contributing capital to expansion or maintenance projects.

Where these joint ventures are controlled and managed by others, the Group may provide expertise and advice but has limited control over compliance with its standards and objectives; such that partners may take action contrary to the Group's policies with respect to its investment.

Table of Contents

Risk factors

Operational risks continued

The Group's operations are vulnerable to a range of interruptions, not all of which are covered fully by insurance.

1. Natural disasters and events

Mining, smelting, refining and infrastructure installations are vulnerable to natural events including earthquakes, drought, flood, fire, storm and the possible effects of climate change.

2. Sustained operational difficulties

Operating difficulties are many and various, ranging from unexpected geological variations that could result in significant ground or containment failure to breakdown of key capital equipment.

Reliable roads, rail networks, ports, power generation and transmission, and water supplies are required to access and conduct our operations.

The Group transports a large proportion of its products by sea. Limitations, or interruptions in transport infrastructure, including as a result of third parties gaining access to our integrated facilities, could impede its ability to deliver products. An extensive information technology infrastructure forms the backbone of many operations.

An extended failure of critical system components or malicious actions, including resulting from a cyber-security attack, could result in significant environmental incident, commercial loss or interruption to operations.

3. Major operational failure

The Group's operations involve chemicals and other substances under high temperature and pressure, with the potential for fire, explosion or other loss of control of the process, leading to a release of hazardous materials. This could occur by accident or a breach of operating standards, and could result in a significant incident.

The Group's insurance does not cover every potential loss associated with its operations and adequate coverage at reasonable rates is not always obtainable. In addition, insurance provision may not fully cover its liability

or the consequences of any business interruption. Any occurrence not fully covered by insurance could have an adverse effect on the Group's business.

Sustainable development risks

Increased regulation of greenhouse gas emissions could adversely affect the Group's cost of operations.

Rio Tinto's operations are energy intensive and depend heavily on fossil fuels. Worldwide, there is increasing regulation of greenhouse gas emissions, tighter emission reduction targets and progressive introduction of carbon pricing mechanisms. These are likely to raise worldwide energy, production and transport costs over the next few decades.

The Group depends on the continued services of key personnel.

The Group's ability to maintain its competitive position is dependent on the services of a wide range of highly skilled and experienced personnel available in the locations where they are needed. Failure to recruit and retain key staff, and the inability to deploy staff worldwide, where they are most needed, could affect the Group's business. Similar constraints may be felt by the Group's key consultants, contractors and suppliers with effects on its expansion plans.

The Group's costs of close down, reclamation, and rehabilitation could be higher than expected.

Close down and reclamation works to return operating sites to the community can be extensive and costly. Estimated costs are provided for, and updated annually, over the life of each operation but the provisions might prove to be inadequate due to changes in legislation, standards and the emergence of new reclamation techniques. In addition, the expected timing of expenditure could change significantly due to changes in the business environment that might vary the life of an operation.

Regulations, standards and stakeholder expectations in health, safety, environment and community evolve over time and unforeseen changes could have an adverse effect on the Group's business and reputation.

The resources sector is subject to extensive health, safety and environmental laws, regulations and standards alongside community and stakeholder expectations. Evolving regulation, standards and stakeholder expectations could result in litigation or, in extreme cases, threaten the viability of an operation even where the underlying dispute is not material to the Group.

Table of Contents

Sustainable development

Performance data

Our sustainable development performance data are reported for calendar years and, unless stated otherwise, represent 100 per cent basis at each managed operation, even though Rio Tinto may have only partial ownership.

Data reported in previous years may be modified if verification processes detect material errors, or if changes are required to ensure comparability over time.

Wherever possible, data for operations acquired prior to 1 October of the reporting period are included. Divested operations are included in data collection processes up until the transfer of management control.

We report in line with the GRI G3 guidelines at Application level A+ and have implemented the International Council on Mining and Metals (ICMM) sustainable development framework (www.icmm.com).

Safety

We are committed to achieving our vision of zero harm. Our safety strategy prioritises eliminating workplace fatalities and permanent damage injuries or illnesses. Leadership remains a crucial factor in achieving these priorities and creating a culture that will eliminate all injuries from the workplace over time. Our management system provides the framework for hazard identification, risk analysis and risk management into all aspects of our activities.

Regrettably, six people lost their lives whilst working at Rio Tinto managed operations and operations held for divestment in 2011. The events were an electric shock incident at the Iron Ore Company of Canada, two people drowning at Oyu Tolgoi in Mongolia, a drowning and a crush incident at Rio Tinto Iron Ore in Australia and a crush incident at Zululand Anthracite Colliery in South Africa (identified for divestment). We provided support and counselling to the families and workmates affected by these events. In addition, after each of these incidents, as is the custom at Rio Tinto, we conducted in-depth investigations of the causes of these incidents and ensured that the conclusions were communicated across the Group to prevent similar events from recurring.

We measure progress toward our goal of zero injuries through the all injury frequency rate (AIFR), which includes data for employees and contractors. At the end of 2011 our AIFR was 0.67, an improvement of two per cent over the last year.

The Group-wide safety risk management programme focuses equally on personal safety, process safety and major safety hazards, and we have processes in place to manage each of these areas. This includes the application of a Semi Quantitative Risk Assessment (SQRATM) process which applies a structured approach to the identification and evaluation of higher consequence/lower frequency hazards. The risk reduction resulting from the SQRATM process, along with the monitoring of critical controls, is used as a Group-wide leading indicator for safety performance.

Rio Tinto has required disclosures relating to mine safety violations or other regulatory matters in accordance with Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act that are included in Exhibit 99.1 to this filing.

Greenhouse gas emissions and energy use

We accept the need for climate change action and recognise that this is a great challenge and also an opportunity. We support government policies to deliver comprehensive, long-term responses that are efficient, effective and equitable but seek to maintain business competitiveness during a period of global policy transition. We seek to lower the greenhouse gas emissions footprint of our products.

Our climate change programme is focused on reducing our emissions, understanding and developing low emission product pathways and engaging with governments and stakeholders to advocate sound domestic and international policies.

Edgar Filing: RIO TINTO PLC - Form 20-F

We have reduced our total greenhouse gas (GHG) emissions intensity by 3.8 per cent between 2008 and 2011. Our total GHG emissions were 43.4 million tonnes of carbon dioxide equivalent in 2011, 0.3 million tonnes higher than in 2010.

Rio Tinto is both an energy user and producer. Our operations use hydroelectricity, nuclear and fossil-fuel based power, coal, oil, diesel and gas. This year our energy use increased by 0.6 per cent to 516 petajoules.

Two thirds of our energy use in 2011 came from low greenhouse gas emitting hydro, nuclear and other renewable power sources. Our hydroelectric power facilities in Canada, Scotland and Norway have a capacity of 3,972 MW.

To drive improvements in energy efficiency our businesses have set a range of local efficiency targets that cover nearly three quarters of the Group's energy use. Our programmes focus on energy innovation at the early stages of project planning and building the capacity to identify, engineer and implement meaningful energy efficiency projects. We remain a world leader in aluminium smelting technology development and are building our knowledge of renewable technologies. Through our coal and uranium sales, we supplied 3,556 petajoules of world energy demand, seven times more than our energy use.

We face costs associated with greenhouse gas emissions or renewable energy obligations in Europe, Australia, New Zealand, various US states and Canadian provinces. As a result, over 85 per cent of our operations are covered by existing or legislated carbon pricing legislation.

Table of Contents

Aluminium

Financial performance

	2011	2010
	US\$ million	US\$ million
Revenue	12,159	11,313
Operating cash flow	1,216	1,225
Underlying earnings	442	611
Capital expenditure	1,957	963
Net operating assets	26,204	30,815

Figures for 2011 and restated figures for 2010 exclude assets identified for divestment or closure. These assets are now managed by the Rio Tinto Business Support & Operations group.

Strategy

Second stage of transformation, already in progress, to deliver another US\$1 billion of sustainable, incremental EBITDA and increase long-term margins to 40 per cent.

Targets to be achieved through a combination of disciplined portfolio management, business improvement initiatives, and investment in modernisation and expansion of Tier 1 assets.

Combination of growth and portfolio management to increase the group's long position in both bauxite and alumina, and help supply China's growing raw material needs.

Commitment to shareholder value and harnessing the group's crucial competitive advantages such as proprietary AP Technology and clean, low-cost hydroelectricity.

Capitalise on the group's interests in some of the largest bauxite mines in the world and to access many of the industry's best reserves and mineralised materials.

Continue supporting the group's global commercial presence and reliably deliver to customers at all stages of the supply chain, from sales of bauxite through to value-added aluminium products and technology sales.

Safety

The group decreased its all injury frequency rate by 16 per cent to 0.59 in 2011^(a). Rio Tinto Alcan experienced no fatalities at its managed sites. Regrettably, there were two fatalities at its non-managed MRN joint venture alumina operation in Brazil (Rio Tinto Alcan share 12 per cent) during a truck roll-over accident.

A key priority has been the implementation of Rio Tinto HSE performance standards and risk management practices. Process safety management has progressed significantly, with reporting, investigation and analysis of significant potential incidents and completion of corrective actions as a main focus.

The Grande-Baie aluminium smelter in Quebec, Canada was awarded the 2011 Chief Executive Safety Award. Grande-Baie has implemented structured training programmes which include an induction that starts six weeks before employees begin work. Its personnel show genuine ownership of safety across the operation and there is visible celebration of safety successes as well as a focus on learning from incidents. Rio Tinto Alcan's Carbone Savoie business also earned recognition

Edgar Filing: RIO TINTO PLC - Form 20-F

and received the 2011 Chief Executive Most Improved Safety Performance Award.

Greenhouse gas emissions

Rio Tinto Alcan contributed 19 per cent of Rio Tinto's total greenhouse gas emissions (GHG) in 2011. The group's reduced proportion of the company's overall emissions levels is a result of the announcement in October to divest 13 non-core operations^(b). Realised reductions contributed significantly to the Rio Tinto Group's overall intensity improvements.

Total GHG intensity at Rio Tinto Alcan was reduced by 49 per cent in 2011 from 2008 baseline performance, which is attributable to portfolio changes and operational improvements. Furthermore, the expansion and modernisation projects are expected to further solidify Rio Tinto Alcan's position as having the lowest carbon footprint in the industry and will help deliver on Group GHG commitments. In addition to Rio Tinto Alcan's

significant hydroelectric advantages for aluminium smelting, the implementation of co-generation at the Yarwun alumina refinery will contribute to improving its GHG emission intensity.

Rio Tinto Alcan has worked closely with various regional governments during development of climate change policies and regulations, and participates in numerous community programmes aimed at addressing climate change concerns where it operates. The group has developed adaption strategies and integrated potential impacts of climate change into its risk management processes.

Review of operations for the year

In 2011, Rio Tinto Alcan's contribution to the Group's underlying earnings was US\$442 million, a decrease of US\$169 million from 2010. Higher exchange traded aluminium prices increased earnings by US\$574 million compared to 2010. This was offset by adverse currency movements of US\$282 million, mainly from the strengthening of the Canadian and Australian dollars against the US dollar, and higher costs from increased input prices for caustic, coke and pitch, as well as adverse weather impacts. Transformation benefits realised in 2011 offset some of the cost pressures from current market conditions resulting in a full year EBITDA margin of 20 per cent.

In October 2011, Rio Tinto announced the intention to divest or close 13 non-core operations including specialty alumina plants in Europe, the Gardanne refinery in France, the Lynemouth smelter and power station in the UK, the Sebree smelter in the US, and Pacific Aluminium operations (see page 30).

The annual impairment review resulted in a goodwill impairment charge of US\$6.6 billion for Rio Tinto Alcan. The impairment was largely a result of the current economic environment and related market volatility in aluminium prices in the second half of 2011 leading to declines in market values for aluminium assets.

The average aluminium market price in 2011 was US\$2,395 per tonne compared with US\$2,173 per tonne in 2010. Rio Tinto Alcan's average realised price for ingot products in 2011 was US\$2,715 per tonne compared with US\$2,457 in 2010. In the second half macroeconomic concerns took hold, particularly the unfolding debt crisis in Europe, thereby reducing prices to below US\$2,000 per tonne towards the end of 2011.

In 2011, Rio Tinto Alcan's annual bauxite production was 28.2 million tonnes, up from 25.9 million tonnes in 2010 and driven by increased third-party demand.

Alumina production decreased to 5.8 million tonnes in 2011 from 6.1 million tonnes in 2010, mainly due to abnormally heavy rains in Australia in early 2011 that impacted Queensland Alumina.

Aluminium production was broadly consistent year on year. Higher production at the Laterrière smelter in Quebec following a transformer failure in July 2010 was offset by a loss of production following two transformer incidents at the Dunkerque smelter in France in May and August 2011, and lower production at the Kitimat smelter in Canada in preparation for the modernisation project.

Gross sales revenue for Rio Tinto Alcan increased by seven per cent compared with 2010. The group's casthouses continue delivery of value added products and improved performance by implementing LEAN manufacturing processes. Rio Tinto Alcan continues to develop its value-added product capabilities in existing plants with strategies to meet future needs in the billet, slab, rod, high purity, foundry and remelt markets.

Growth and innovation

Rio Tinto Alcan made progress with its priority projects, including several initiatives towards increasing its long position in both bauxite and alumina.

The group is completing feasibility and environmental impact studies for the South of Embley bauxite extension at the current Weipa mine

Table of Contents

operations in Australia. This project would allow for staged increases in production to as much as 36 million dry product tonnes per year and provide quality bauxite to the group's regional refineries and export markets. Approval to proceed with the project is expected in 2012, depending on regulatory and internal conditions.

Also in Australia, the Yarwun alumina refinery expansion in Queensland is over 90 per cent complete and is expected to more than double production to 3.4 million tonnes per year, with start-up planned for the second half of 2012.

The group's aluminium growth strategy focuses on high-return production capacity increases and modernisation projects that leverage renewable, low-cost hydroelectric power. The Aluminium group's portfolio was restructured in October 2011, resulting in the creation of Pacific Aluminium. The assets comprising Pacific Aluminium have been identified for divestment. Almost 85 per cent of the group's energy is hydroelectric and in the lowest-cost quartile for power. Furthermore, its technological capabilities continue to create value from sales, faster operational improvements (eg production capacity creep), and lower full economic costs on capital projects.

The modernisation project for the Kitimat smelter in British Columbia, Canada received final approval in December 2011. This project will increase production capacity to approximately 420 thousand tonnes per year. The modernised smelter will be powered exclusively by self-generated hydroelectricity and use AP40 technology to cut total emissions intensity by about half. Once completed, Kitimat will be one of the lowest-cost smelters in the world, with one of the lowest carbon footprints in the aluminium industry. Completion of the US\$3.3 billion project is expected in 2014.

The replacement of high-cost capacity at the Arvida smelter with the AP60 plant, phase one of which is currently under construction in the Saguenay-Lac-Saint-Jean region in Quebec, as well as the ISAL smelter modernisation and expansion of the casting centre in Iceland, are also designed to help move Rio Tinto Alcan further down the cost curve. Common objectives among all our selected projects include a low carbon footprint, low operating costs and attractive projected returns on capital.

Outlook

Uncertain macroeconomic conditions, together with stronger currencies in some regions and high raw material costs, have unfavourably impacted the aluminium industry. Growth in demand for aluminium remains strong but the industry has been running surpluses for the past five years, and the short-term economic outlook remains volatile. Rio Tinto Alcan therefore continues to improve its performance and refocus on its core assets, in particular its world-class bauxite resources, industry-leading technologies and a modern portfolio of large-scale, long-life, hydroelectricity-based smelters.

In the longer term, Rio Tinto Alcan believes that the fundamentals of its industry remain strong, with aluminium demand forecast to grow by almost six per cent per year through to 2020. The robust growth is expected to be underpinned by emerging economies and a growing appreciation among end users in developed markets of aluminium's advantageous physical properties – most notably its lightness and its infinite recyclability. The underlying factors that are driving strong demand growth for structural commodities remain intact, as continued urbanisation and industrialisation in large, populous nations such as China and India drive base metal demand.

The group expects to see ongoing development of new applications in the construction, aerospace and automotive sectors as pressure on fuel consumption increases, along with increased substitution of aluminium in place of more expensive alternatives in areas such as power generation.

Growth in aluminium capacity will increase demand for bauxite and alumina. Official bauxite reserves suggest that China may not have sufficient bauxite to fully meet increasing alumina production demand.

The dramatic upsurge in bauxite imports into China over the last five years supports this scenario.

Securing access to bauxite supplies will remain an issue as uncertainty surrounding value add requirements and mining legislation in key jurisdictions adds complexity for the industry.

Global aluminium supply is expected to continue tracking demand, with increased production coming primarily from north-western China, the Middle East and India. There is credible rationale for a continued steepening of the industry cost curve, with costs for crucial inputs such as bauxite and electricity on the rise. This is especially the case in China where producers are also impacted by the appreciation of the renminbi.

As demand grows, Rio Tinto Alcan expects to benefit from its low-cost structure, sustainable transformation improvements, and its position as an integrated producer throughout the value chain – and moving to a longer position in bauxite and alumina.

Edgar Filing: RIO TINTO PLC - Form 20-F

Rio Tinto Alcan's industry-leading growth pipeline includes attractive Tier 1 opportunities for the long-term with a mixture of greenfield and brownfield options throughout the world. Projects in various stages of study and development include the future expansion options for the AP60 plant, and aluminium and hydropower projects in Cameroon, and will be paced with market needs.

(a) Safety

The aluminium assets identified for divestment or closure and now managed by Business Support & Operations (Pacific Aluminium and Other aluminium) had an all injury frequency rate of 0.70 in 2011, an improvement of 11 per cent from 2010.

(b) GHG

Pacific Aluminium accounted for 28 per cent of Rio Tinto's total GHG emissions in 2011, and Other aluminium accounted for 16 per cent of total GHG emissions.

Table of Contents

Copper

Financial performance

	2011	2010
	US\$ million	US\$ million
Revenue	7,634	7,797
Operating cash flow	3,134	4,125
Underlying earnings	1,932	2,530
Capital expenditure	3,784	990
Net operating assets	12,094	7,718

Strategy

The Copper group's strategy is to deliver shareholder value by:

Optimising operating assets with meaningful improvements in safety and productivity, and through investment in innovative technologies.

Progressing the group's high-quality growth projects.

Collaborating with local governments and communities to contribute to sustainable development.

Developing the leadership and talent needed to deliver growth.

Safety

In 2011, the Copper group's all injury frequency rate was 0.56, versus 0.57 in 2010. The group recorded 81 lost-time injuries including, regrettably, two fatalities at its Oyu Tolgoi project in Mongolia.

The Copper group is committed to providing a workplace where zero harm is possible. To that end, the group is developing enhanced programmes and procedures to manage process safety, underground safety and contractor management activities. In addition, the group is embedding the need for all leaders and employees to focus on personal safety and work collaboratively toward a goal of zero harm.

Greenhouse gas emissions

The Copper group's 2011 greenhouse gas (GHG) emissions were 8.14 tonnes of CO₂e per tonne of copper cathode produced, compared with 8.75 in 2010, as Kennecott Utah Copper, which accounts for 54 per cent of the Copper group's total GHG emissions, reduced generation at its main power plant in response to lower electricity prices.

To reduce greenhouse gas emissions, Kennecott is testing alternative fuel vehicles, best-in-class lighting technologies, equipment optimisation projects, and adoption of other developing technologies.

Review of operations for the year

The Copper group portfolio is made up of large, long-life operations, including:

Kennecott Utah Copper (Rio Tinto: 100 per cent)

Edgar Filing: RIO TINTO PLC - Form 20-F

Kennecott Utah Copper, adjacent to Salt Lake City, produces about 25 per cent of US copper and molybdenum supply and provides more than 17 per cent of US refined copper requirements. In 2011, Kennecott produced 215 thousand tonnes of refined copper, 379 thousand ounces of refined gold, and 30 million pounds of molybdenum.

Escondida (Rio Tinto: 30 per cent)

Operated by BHP Billiton, Escondida is the world's largest copper-producing mine. Located in Chile's Atacama Desert, it represents eight per cent of global production and 33 per cent of all copper production from Chile. In 2011, Escondida produced 759 thousand tonnes of mined copper (100 per cent basis).

Grasberg (a joint venture gives Rio Tinto a 40 per cent share of production above specified levels until 2021 and 40 per cent of all production after 2021)

Grasberg is owned and operated by PT Freeport Indonesia, a subsidiary of US-based Freeport-McMoRan Copper & Gold Inc. Located in the province of Papua in Indonesia, it is one of the world's largest copper mines. In 2011, Rio Tinto's share of production from Grasberg was 17 thousand tonnes of mined copper and 178 thousand ounces of mined gold.

Northparkes (Rio Tinto: 80 per cent)

Based in New South Wales, Australia, Northparkes is a joint venture with the Sumitomo Group. Northparkes produced 50 thousand tonnes of mined copper and 76 thousand ounces of mined gold in 2011, (100 per cent basis).

Palabora (Rio Tinto: 57.7 per cent)

Palabora Mining Company is a South African company (listed on the Johannesburg Stock Exchange) based in Limpopo Province. Palabora produced 59 thousand tonnes of refined copper in 2011 (100 per cent basis). In September 2011, Rio Tinto announced plans to divest its interest in Palabora and a commercial process to do so is under way.

Growth and innovation

During the next three years, the Copper group will invest more than US\$4.5 billion of capital in its existing operations.

In the first half of 2011, the group began a US\$238 million feasibility study to extend the mine life at Kennecott Utah Copper's Bingham Canyon mine. With this expansion, Bingham Canyon will mine an additional 974 million tonnes of ore and recover 3.7 million tonnes of copper, 4.1 million ounces of gold and 584 million pounds of molybdenum. Total capital expenditure for the mine expansion project is expected to be between US\$2 billion and US\$3 billion.

Rio Tinto has also approved a US\$165 million investment to conduct pre-feasibility studies for the North Rim Skarn, a proposed underground operation that would operate in parallel with the Bingham Canyon open pit and produce an estimated 50 thousand tonnes of copper per year, with gold and silver by-products, at grades significantly higher than the current open pit reserves.

In 2012, the Copper group will complete construction of a Molybdenum Autoclave Process at Kennecott Utah Copper, which will improve recovery rates by seven per cent. Phase one will begin commissioning towards the end of 2012, with an initial capacity of 30 million pounds, increasing to 60 million pounds in early 2015.

Escondida is constructing a new 152 thousand tonnes per day concentrator that is expected to increase production by 2015. Construction of a new dynamic oxide leaching pad will maintain current processing capacity following the completion of the existing heap leach in 2014. The current sulphide leach pad is also being expanded. Moving crushing and conveying systems in the pit will provide access to high-grade ore and a fourth ball mill will be added to the Laguna Seca concentrator.

In Indonesia, Grasberg continues its transition to underground block cave mining. Grasberg's US\$3.7 billion underground project will ultimately produce 160 thousand tonnes of ore per day and is expected to come on line in 2016, when the current open pit mine will be depleted. In addition, construction has begun on the Deep Mill Level Zone block cave mine, which is expected to begin production in 2015. This US\$2 billion project will produce an additional 80 thousand tonnes of ore per day at full capacity.

At the Northparkes mine, the group continues to evaluate a step change expansion that will increase metal production threefold, add more than 20 years to the life of the mine. The pre-feasibility phase of the project is expected to be complete in late 2012, with construction beginning in 2013.

Table of Contents

Oyu Tolgoi (2012 - Rio Tinto: 51 per cent interest in Ivanhoe Mines Limited)

The Oyu Tolgoi project in Mongolia has the potential to be a top ten copper producer and one of the world's largest producers of gold. During 2011, Rio Tinto increased its holding in Ivanhoe Mines Limited (which holds a 66 per cent interest in Oyu Tolgoi) from 40.3 per cent to 49 per cent and fully participated in Ivanhoe's rights offering. Consideration for these transactions totalled US\$1.9 billion. Following expiry of the standstill agreement on 24 January 2012, Rio Tinto moved to a majority stake in Ivanhoe, having purchased shares that take it to 51 per cent interest.

Rio Tinto is the manager of the Oyu Tolgoi project, which is on track for first commercial production in 2013. Phase one includes the development of an open pit mine and a 100 thousand tonne per day concentrator. Total capital expenditure for the first phase is approximately US\$6 billion.

Rio Tinto expects phase two of Oyu Tolgoi, which includes developing an underground mine and expanding the mill to 160 thousand tonnes per day, to begin production in 2015. Oyu Tolgoi's underground reserve grades are nearly four times those of the open pit.

La Granja (Rio Tinto: 100 per cent)

La Granja, in Peru, is wholly owned by Rio Tinto, and is currently the world's seventh-largest undeveloped copper resource. In the fourth quarter of 2011, Rio Tinto approved funding to begin pre-feasibility work on the project, which would be developed over a nine-year timeframe using a staged development approach. La Granja's initial leaching operation envisions production of up to 100 thousand tonnes of copper per year, with the potential to expand to 250 thousand tonnes. The subsequent addition of a concentrator could add another 250 thousand tonnes of copper production, bringing total copper production to 500 thousand tonnes per year.

Resolution Copper (Rio Tinto: 55 per cent)

The Resolution Copper project, located in the US state of Arizona, is the third-largest undeveloped copper resource in the world. Rio Tinto expects to complete pre-feasibility studies in 2012, with the aim of production starting in the next ten years. With grades at around 1.5 per cent, Resolution currently plans to produce in excess of 600 thousand tonnes of copper per year at peak production, with significant amounts of molybdenum as a by-product.

To realise the full potential of the project, Resolution Copper needs access to public land where mining is currently prohibited. In exchange, the project would give the public more than 2,400 hectares of high-quality conservation lands. A bill outlining the parameters of this exchange has been pending before the US Congress since 2005. In October 2011 the US House of Representatives voted to approve the bill, which now awaits consideration by the Senate.

Technology and innovation

The Copper group continues to invest in advanced mining technologies designed to give access to more copper, sooner and with greater efficiencies.

In 2012, the Copper group will commission a tunnel boring system at Northparkes, that it is developing with Aker Wirth. The group is also evaluating full-scale prototype trials of additional tunnel boring machines and a shaft boring system. When used in combination, these two boring systems have the potential to decrease the time it takes to construct an underground mine by 40 per cent, compared to conventional methods.

At Kennecott Utah Copper, the Copper group has begun construction of a pilot plant facility to test its CopperNuWave recovery technology, that upgrades marginal ore or waste material, reduces energy consumption and more efficiently uses concentrator capacity. The group expects to commission the facility in the second quarter of 2012.

Outlook

In the short term, Rio Tinto sees ongoing volatility in the market.

Supply continues to be challenged – a result of decreasing grades and disruptions at existing mines, while new discoveries are increasingly located at depth and in developing regions with higher sovereign risks, and the need for increased levels of stakeholder engagement. This will favour organisations with strong social, environmental, operating, and technical mining skills, such as Rio Tinto's Copper group.

Edgar Filing: RIO TINTO PLC - Form 20-F

The long-term demand picture has not changed and growth will remain robust and continue to be driven by urbanisation, electrification and industrialisation in China and other emerging markets. In addition, increased focus on renewable sources of energy and energy efficiency will be beneficial for copper in the long term.

In 2011, Rio Tinto experienced a dip in copper ore grades, although gold and molybdenum grades have remained strong. The Group expects to see improving grades in the second half of 2012 and into 2013. Production from the existing mines will be supplemented with Oyu Tolgoi's first commercial production in 2013, and the Copper group's growth pipeline contains a number of promising projects.

riotinto.com 23

Table of Contents

Diamonds & Minerals

Financial performance

	2011	2010
	US\$ million	US\$ million
Revenue	3,220	3,035
Operating cash flow	333	598
Underlying earnings	252	328
Capital expenditure	639	300
Net operating assets	3,605	4,580

Strategy

Demand for diamonds and industrial minerals typically follows peak requirements for commodities such as iron ore and copper. Diamonds & Minerals intends to capitalise on this trend by strengthening its portfolio and securing opportunities for profitable growth. The product group strategy is to:

Improve its existing businesses' operational and commercial performance.

Build capacity by executing growth projects within its existing asset base.

Grow its portfolio through value accretive exploration and acquisitions in existing and complementary sectors.

Safety

Diamonds & Minerals continues to focus on fostering a culture of accountability and awareness among employees and improving contractor safety. The product group's all injury frequency rate (AIFR) rose slightly to 0.56 in 2011 compared to 0.51 in 2010.

Rio Tinto Minerals (RTM) operations achieved an AIFR of 0.36 in 2011, down from 0.65 in 2010. RTM also led National Mining Association efforts to improve safety standards among US mining companies.

Rio Tinto Iron & Titanium (RTIT) operations reported a slight increase in injury rates to an AIFR of 0.57 in 2011 from 0.52 in 2010. A concerted effort to improve employee engagement at the front lines is helping to build a stronger safety culture throughout the business.

Rio Tinto Diamonds' (RTD's) safety performance across its sites in 2011 was mixed. In a year that saw a transition from open pit mining to underground operations at two of its sites, RTD's safety performance declined with an AIFR of 0.66 in 2011, up from 0.36 in 2010. All RTD businesses have renewed their efforts to improve overall safety performance. On the upside Murowa achieved the best safety performance in the product group and Diavik's underground mine rescue team was recognised as the best in the western region of North America.

Greenhouse gas emissions

Overall greenhouse gas (GHG) emission intensity declined slightly across the product group due to higher production levels and more efficient equipment and technology. Improvements included shorter-haul routes and recycling programmes to extract ore from tailings.

GHG emissions per tonne of product improved slightly at RTM in 2011, and intensity decreased by two per cent across RTIT's operations, reflecting efficiencies associated with higher production levels and new technology.

GHG emission intensities improved at Diavik and Murowa but increased at Argyle due to lower production.

Edgar Filing: RIO TINTO PLC - Form 20-F

Diavik began construction of a wind energy system which will reduce diesel consumption by approximately ten per cent and lower greenhouse gas emissions by approximately six per cent.

Review of operations for the year

Diamonds & Minerals underlying earnings of US\$252 million were 23 per cent lower than 2010. Excluding the effects of a US\$79 million tax benefit in 2010, underlying earnings were slightly higher than the prior year. The group benefited from higher prices from improved market conditions across all products. This was offset by lower volumes and increased costs, primarily in the diamonds business, due to the transition to underground mining at Argyle and severe weather conditions.

A net impairment charge of US\$344 million after tax was recognised on the diamonds assets to reduce their carrying value to an estimated recoverable amount. This is excluded from underlying earnings.

Rio Tinto Minerals

Borates are essential nutrients for plants and are used in fertilisers to increase crop yield and quality. They are key ingredients in building materials such as fibreglass, wood preservatives and ceramics; heat-resistant glass used in flat screen TVs and computers.

RTM (100 per cent interest) supplies nearly 40 per cent of the world's refined borates from its world-class deposit in Boron, California. Its operation footprint also includes borate refineries and shipping facilities in China, France, Malaysia, the Netherlands, Spain and the US. RTM completed the divestment of its talc business on 1 August 2011 for an enterprise value of US\$340 million.

Production rose slightly to 504 thousand tonnes boric oxide equivalent up from 500 thousand tonnes in 2010 despite significant rainfall events in the US that curtailed production and led to a declaration of force majeure for sodium borates in the beginning of the year.

RTM achieved a five per cent improvement in refined borates revenues through strong prices, product mix and steady Asian demand growth. Eliminating the effects of the talc divestment and a US\$79 million tax benefit in 2010, revenue and cost improvements increased earnings by 31 per cent in 2011.

Rio Tinto Iron & Titanium

Titanium dioxide is a white, opaque compound that is an important pigment used in paint, plastics and paper. RTIT is the largest producer of titanium dioxide feedstocks.

RTIT mines ilmenite at its wholly-owned Rio Tinto Fer et Titane (RTFT) operation in Quebec; its managed operation Richards Bay Minerals (RBM) in South Africa (37 per cent interest); and its QIT Madagascar Minerals (QMM) operation (80 per cent interest). RTIT produces high-quality titanium dioxide feedstocks at its world-class metallurgical complexes as well as co-products including high-purity iron, steel, metallic powders, zircon and rutile.

In 2011, titanium dioxide feedstock production (Rio Tinto share) increased by four per cent, despite a furnace rebuild at RTFT, due to strong second half performance at RTFT and production increases at QMM through new dry mining operations and at RBM's new tailings treatment plant.

RTIT grew its revenues by 19 per cent due to price increases for titanium dioxide feedstocks, zircon and metallic co-products, in line with demand growth associated with global urbanisation trends. The impact of improved pricing more than offset increased input costs resulting in a 104 per cent increase in year-on-year earnings. RTIT continued to replace its multi-year sales contracts with alternative pricing mechanisms, increasing the exposure to current market prices.

Table of Contents

Rio Tinto Diamonds

Rio Tinto is a leading producer of rough diamonds with a product portfolio that provides a presence in all major markets. Rio Tinto's diamond assets currently comprise the Argyle Diamond Mine in Australia (Rio Tinto: 100 per cent), the Diavik Diamond Mine in Canada (60 per cent), Murowa Diamonds in Zimbabwe (78 per cent) and the Bunder diamond project in India (100 per cent). RTD sells its share of production through its centralised marketing office in Belgium. RTD also has a niche cutting and polishing factory in Australia, where it cuts and polishes the high-end pink diamonds from the Argyle mine, and sells them to an international customer base.

RTD produced 11.7 million carats in 2011, a 15 per cent reduction from 2010 that reflected adverse weather conditions, maintenance shutdowns in the processing plant and a transition to underground mining at Argyle. Construction of the underground mine is scheduled to be completed at the end of 2013 and the investment will extend mine life until at least 2019. Three diamond-bearing kimberlite pipes are mined at Diavik using open pit and underground methods. The open pit is expected to be depleted by 2012, but underground operations will extend Diavik's mine life past 2020.

RTD revenue increased by seven per cent reflecting improved market conditions in the US and continued demand growth in China and India. This was more than offset by higher costs and lower production volumes at Argyle and higher depreciation following a 2010 impairment reversal at Diavik, leading to an 86 per cent drop in overall earnings.

Growth and innovation

In 2011, Diamonds & Minerals re-entered the potash business through an exploration joint venture with North Atlantic Potash Inc, a subsidiary of JSC Acron. Acron is a world leader in fertiliser production and holds multiple potash exploration permits in Saskatchewan, Canada, home to about half the world's potash reserves. Drilling has commenced to confirm an economically viable potash resource. Higher nutritional standards, population growth and limited arable land make potash a critical factor in maintaining global food security, and a natural complement to RTM's existing borate fertiliser business.

Development also progressed at the group's Jadar lithium-borate deposit in Serbia. If developed, the deposit has the potential to supply more than 20 per cent of global lithium demand. New investment will fund the collection of bulk ore samples. These will be refined at RTM's pilot processing facilities into boric acid and battery-grade lithium carbonate, and tested in the marketplace. Lithium carbonate's fastest-growing application is in batteries that provide clean power to industrial systems and electric and hybrid cars.

In 2011, RTIT commenced studies to identify, pursue and realise the best opportunities for organic expansions of its titanium dioxide mining and smelting capacity. Demand for titanium dioxide feedstocks is expected to climb significantly and the industry has invested very little in new mine or smelting capacity in the last two decades. RTIT is taking a progressive approach to evaluating and executing its best options for long-term organic growth. To date, US\$63 million has been approved to conduct Order of Magnitude studies.

Rio Tinto Fer et Titane announced its TiO₂₀₅₀ project in May 2011, a proposed investment of C\$800 million over the next five years to enhance mining and processing operations. Through this investment, mine life will be extended to 2050 and equipment at the operation's metallurgical complex will be upgraded to improve efficiency and environmental performance.

In February 2012, Rio Tinto announced that it would double its stake in RBM to 74 per cent through the acquisition of BHP Billiton's 37 per cent interest.

Pre-feasibility studies are continuing at the Bunder diamonds project in Madhya Pradesh, India. Rio Tinto has received a Letter of Intent to issue a mining lease for the project from the Government of Madhya Pradesh, following approval in principle from the Government of India. This is a critical milestone which allows Rio Tinto to commence a detailed mining plan and progress the environmental approvals required for further development.

In December 2011, a further US\$0.5 billion of capital was approved for the Argyle Underground project. This increase reflected project development delays primarily caused by a record 2010/2011 wet season and adverse exchange rate movements. The underground mine will be complete at the end of 2013, with targeted production of 20 million carats per year when fully operational.

Outlook

Diamonds & Minerals businesses serve a range of different industries, but are linked through their track record of creating and defining new and profitable markets for their products. Following a solid performance in 2011, the outlook continues to be positive across all products as urbanisation and rising standards of living drive higher levels of demand.

Edgar Filing: RIO TINTO PLC - Form 20-F

In the borate marketplace, RTM will seek to capture profitable growth in emerging economies and maintain its position in its established markets. Planned supply chain improvements will facilitate speed and flexibility in shifting supply to promising sectors and regions. RTM will focus on increasing refined borate capacity to meet higher than GDP demand growth while achieving world-class safety performance and improving its cost position.

Demand for titanium dioxide feedstock is expected to continue to grow in line with improving global economic conditions, urbanisation and demand growth in emerging markets. This is expected to have a positive impact on prices. RTIT is well placed to benefit from improved market conditions through its marketing strategy and expansion plans.

The medium to long-term fundamentals for the diamond industry are positive and expected to support future price growth. The global mineral reserve base is steadily declining, compounded by limited exploration investment and success, and expected reductions in supply over the medium to longer-term. Demand in India and China is expected to continue to grow, and to represent some 20 per cent of global diamond consumption by 2012 and 40 per cent of global diamond jewellery consumption by 2020. Demand in mature markets is expected to grow in line with GDP.

riotinto.com 25

Table of Contents

Energy

Financial performance

	2011	2010
	US\$ million	US\$ million
Revenue	7,327	5,652
Operating cash flow	2,019	2,463
Underlying earnings	1,074	1,187
Capital expenditure	1,327	685
Net operating assets	8,164	3,694

Strategy

The Energy group is focused on safely supplying the world's growing energy needs through the sustainable development and operation of large-scale, long-life, cost-competitive mines.

It aims to be a sector leader in the development and operation of the world's coal and uranium resources, and to build strong customer relationships while maximising revenues.

The Energy group is pursuing opportunities for growth to meet expanding long-term global energy demand, while continuing to focus on operational excellence, community engagement and environmental performance to ensure it is the developer of first choice.

Safety

Regrettably a fatality occurred in the Energy group during 2011 due to a crush incident at Zululand Anthracite Colliery in South Africa, an operation identified for divestment. The group's all injury frequency rate (AIFR) was 0.79 in 2011 as compared with 0.73 in 2010. The Energy group's AIFR increased during 2011, due in part to a rise in the number of incidents involving hand injuries and contractors at RTCA. Programmes have been implemented to address these core areas in 2012. Safety highlights for 2011 included zero recordable injuries at Colowyo up to the point of divestiture of that business on 1 December 2011, and an AIFR of 0.57 at ERA down from 0.71 in 2010. All of Rio Tinto's Energy business units remain focused on achieving the goal of zero harm through optimisation of Rio Tinto safety systems and continued strengthening of safety culture in the workplace.

Greenhouse gas emissions

The Energy group is committed to a future where energy is about sustainable practices that will minimise global carbon emissions. Initiatives and projects at each operation are helping to reduce energy use and greenhouse gas (GHG) emissions, and the group continues to dedicate resources to the development of low-emissions coal technology. GHG for the Energy group totalled approximately 4.3 million tonnes of carbon dioxide equivalent in 2011, compared with 4.0 million tonnes in 2010. Rio Tinto Coal Australia completed drilling at New South Wales sites to measure coal seam methane content, and also contributed to the development of an industry methodology to improve estimation of coal seam methane emissions from mining.

Review of operations for the year

Rio Tinto's Energy business faced a number of challenges in 2011 – in particular severe wet weather in Australia which constrained supply of uranium and coal, and the Japanese tsunami which impacted demand for uranium.

Rio Tinto Coal Australia (Rio Tinto: 100 per cent)

RTCA manages the group's Australian coal interests. These include the Blair Athol (Rio Tinto: 71.2 per cent), Clermont (Rio Tinto: 50.1 per cent), Hail Creek (Rio Tinto: 82 per cent) and Kestrel (Rio Tinto: 80 per cent) coal mines in Queensland. RTCA also provides management services to Coal & Allied Industries (Rio Tinto: 80 per cent) for operation of its four mines located in the Hunter Valley in New South Wales. Coal & Allied wholly owns Hunter Valley Operations, has an 80 per cent interest in Mount Thorley Operations, a 55.6 per cent interest in the contiguous Warkworth mine, and a 40 per cent interest in the Bengalla mine adjacent to its wholly owned Mount Pleasant project. Coal & Allied also has a

Edgar Filing: RIO TINTO PLC - Form 20-F

36.5 per cent interest in Port Waratah Coal Services (PWCS) which operates the Kooragang and Carrington coal port terminals in Newcastle.

The group's Australian coal operations were impacted by severe weather events which saw all four Queensland mines declare force majeure in December 2010.

Favourable prices through the first part of 2011 for all coal types have contributed to underlying earnings of US\$1.2 billion, a 32 per cent increase from 2010. Constraints in explosives supplies to New South Wales sites in late 2011 will impact production in the first half of 2012. However, coal production is forecast to increase in 2012. This will be achieved through the realisation of brownfield expansions across all New South Wales operations, the ongoing ramp-up of the Clermont Mine and productivity benefits flowing from the implementation of a significant business improvement programme during 2011. Rio Tinto completed the privatisation of Coal & Allied during 2011, which is now owned 80/20 with Mitsubishi Development. Rio Tinto continues to manage Coal & Allied.

Energy Resources of Australia (Rio Tinto: 68.39 per cent)

ERA is a publicly listed company. Since 1981 ERA has mined ore and produced uranium oxide at its Ranger open pit mine, 260km east of Darwin in Australia's Northern Territory. ERA also holds title to the adjacent Jabiluka mineral lease. Ranger and Jabiluka are surrounded by, but remain separate from, the World Heritage listed Kakadu National Park. ERA's operations are subject to stringent environmental requirements and governmental oversight.

In 2011, ERA was severely impacted by the third highest wet season on record, which triggered a proactive shutdown of ERA's processing operations from January to June 2011. ERA made an adjustment to its reserves statement in August 2011 following the decision not to proceed with construction of the Ranger heap leach facility project. ERA also raised A\$500 million via an accelerated renounceable entitlement offer to progress strategic projects around exploration and water management.

Rössing Uranium (Rio Tinto: 68.58 per cent)

Our Rössing Mine is located near the town of Arandis, 70 km inland from the coastal town of Swakopmund in Namibia's Erongo Region. In 2011, the Rössing mine announced a reduction in reserves following an update of the mine design.

A major business improvement diagnostic was completed and execution of a range of initiatives commenced in 2011, with a view to improving reliability and increasing production.

Rio Tinto Coal Mozambique (Rio Tinto: 100 per cent)

Zambeze Project (100 per cent); Tete East Project (100 per cent); Benga Project (65 per cent); Zululand Anthracite Colliery (74 per cent).

Rio Tinto's acquisition of Riversdale, renamed as Rio Tinto Coal Mozambique, was completed in August 2011. Its first operation, the Benga project, is due to start exports around the end of March.

In this report, the reserves figures for our Mozambique coal assets are published for the first time since Riversdale was acquired by Rio Tinto. The magnitude of the reserves figures is consistent with our original estimates that were calculated during our due diligence studies.

Rio Tinto is planning to divest its stake in the Zululand Anthracite Colliery which was acquired as part of the Riversdale purchase.

Growth and innovation

Each of the Energy group's coal and uranium operations in Australia and Africa are progressing expansion projects, in either execution or evaluation phase.

Rio Tinto Coal Australia's large, cost-competitive resource base positions us favourably to capture ongoing demand for seaborne thermal and coking coal. Existing growth plans at Australian coal operations are expected to

Table of Contents

see production increase by around 50 per cent over the coming years to around 73 million tonnes a year in 2015. This includes the Mount Pleasant Project in the Hunter Valley, which is expected to be considered for investment approval during 2012, and the Kestrel Mine Extension project, which is due to be completed in 2013. 2012 will also see an increase in exploration activities and studies to support planning for further options.

The Moatize basin in Mozambique is home to one of the best undeveloped coking coal resources in the world. Rio Tinto has the largest licence holding in that region and owns Tier 1 resources which are long life, will be cost competitive and will have substantial expansion options. Rio Tinto plans to significantly grow these assets and sees this region providing a development opportunity that is long term and will achieve sustainable growth over a 50-year-plus timeframe. Whilst saleable production will initially be constrained by existing rail and port infrastructure, feasibility studies into infrastructure solutions and mine expansions at Benga and the adjacent Zambeze Project are continuing in 2012.

The Ranger 3 Deeps exploration decline was approved in August 2011, with construction commencing in 2012. This will enable ERA to conduct close-spaced underground exploration drilling and explore areas adjacent to the Ranger 3 Deeps mineralisation. ERA will also invest a total of A\$220 million to construct a brine concentrator to reduce process water inventories and underpin our approach to mine closure obligations.

Work is progressing on expansion studies to extend the Rössing mine life beyond 2023. Pre-feasibility work on upgrades to the processing facilities at Rössing is ongoing.

In early 2012, Rio Tinto completed a friendly takeover bid for Canadian uranium exploration company Hathor Exploration. The mineralisation at Hathor is being evaluated. In late 2011 Rio Tinto finalised the sale of Colowyo, its last remaining thermal coal mine in the US, in order to focus on growing energy demand in the Asia region.

Outlook

Increasing prosperity, urbanisation and industrialisation in large developing countries, such as China and India, will continue to drive global demand growth for energy in the coming decades.

Under even the most ambitious climate change policy scenarios, the International Energy Agency (IEA) predicts demand for energy will increase by more than 20 per cent by 2035. Future growth will be dominated by Asia; the IEA forecasts that China alone represents 44 per cent of global energy growth over the period 2008 to 2020.

The Energy group's strategy is to target expanding export markets, particularly in the Asia Pacific region.

While uranium as a source of energy is currently much smaller than coal, it remains significant in the global energy mix, and there are expectations demand will rise in a carbon-constrained future. The 2011 tsunami in Japan and its impact on the Fukushima plant had a negative effect on the short to medium term outlook for uranium. Operations at Japan's nuclear power plants continue to be limited by political action, while Germany reacted by declaring a total phase-out of nuclear energy over the course of the decade. These events are not expected to have a significant effect on the long-term growth in uranium demand. This is primarily due to China's ambitious nuclear programme, of more than 100 new reactors over the next ten years.

Korea, India and the UAE are also building new nuclear power plants, and investment in new capacity continues in the more mature markets of the US and Europe.

For many countries, energy diversification is the key to their energy security. Coal will continue to be an important base load fuel for decades to come, and nuclear energy also provides large-scale energy security with the added benefit of no greenhouse gas emissions. For this reason, Rio Tinto's Energy group continues to be positive about the demand outlook for both coal and uranium.

Table of Contents

Iron Ore

Financial performance

	2011	2010
	US\$ million	US\$ million
Revenue	29,909	24,024
Operating cash flow	21,486	15,976
Underlying earnings	12,853	10,189
Capital expenditure	4,757	1,716
Net operating assets	13,368	11,628

Strategy

The Iron Ore group's strategy is to:

Create shareholder value by maximising the return from existing assets and building value through expansions and greenfield developments.

Maintain close control of capital and operating costs to protect margins, with particular emphasis on improving unit costs as the business expands rapidly.

Implement major expansion programmes while maintaining at-nameplate capacity production.

Continue to develop and benefit from technology and innovation to deliver supply chain efficiencies, reducing costs and maximising underlying profit.

Capitalise on its position as the leading iron ore supplier close to the world's largest, fastest-growing markets.

Achieve a portfolio of alternative contract methodologies across different markets and customer segments in order to ensure full off-take and maximise revenue in an increasingly segmented market.

Safety

Safety performance in 2011 was tragically marred by three fatalities, including two fatalities at the Group's Pilbara operations, the first such events in eight years. In April, a subcontractor was fatally electrocuted at the Iron Ore Company of Canada's (IOC) Labrador City facility during the commissioning of a new overhead power line. IOC is committed to improving safety performance and achieving a zero-harm safety culture across all its operations.

In June a man working on scaffolding on East Intercourse Island jetty at Dampier died when the scaffolding collapsed into the water, and in August a man died carrying out maintenance on a front-end loader in the workshop at Brockman 2 mine, 60 kilometres from Tom Price in the Pilbara region.

In addition to the specific investigations into each incident, the fatalities led to an independent safety diagnostic assessment to examine all aspects of the Western Australian business's workplace practices and cultural factors that may have impacted on safety performance. That review was finalised in November and its recommendations will be implemented with the highest priority.

Separate to the fatalities, overall safety performance was assisted by increased tracking of indicators such as near-miss incidents. Emphasis on improved lifestyle as a health and safety factor, such as improved diet and better management of fatigue, was also accelerated during the year. In 2011 the Iron Ore group's all injury

Edgar Filing: RIO TINTO PLC - Form 20-F

frequency rate (AIFR) was 0.63, compared with 0.71 in 2010.

Greenhouse gas emissions

The focus was maintained on achieving greater fuel and energy efficiencies, highlighted by a US\$833 million investment in improved power and gas projects, and in operational decisions such as the planned deployment of more than 150 of the more efficient Autonomous Haulage System (AHS) driverless trucks across the Pilbara region. Within Expansion Projects an energy and greenhouse gas (GHG) assessment tool was developed to assist with monitoring and evaluation of projects. All requirements for the National Greenhouse & Energy Reporting System and the Energy Efficiency Opportunities Act were met.

IOC has undertaken a major study on air pollution abatement for its Labrador City facility – the Air Quality Improvement Program (AQIP). This involves monitoring, stack testing, modelling, analysing and engineering solutions to mitigate when necessary our environmental effects in the communities where we work and live. The Iron Ore group's total GHG emission intensity has improved 7.8 per cent since 2008.

Review of operations for the year

Iron Ore achieved a record performance in 2011, meeting ambitious production targets of more than 240 million tonnes despite a very challenging first half of the year, when difficult weather conditions significantly impacted operating performance.

A volatile iron ore market produced first major increases and then decreases in spot prices, as well as forcing significant structural changes to the way iron ore as a commodity is marketed and sold. As the bulk of Rio Tinto's supply contracts were linked to that spot price, volatility fed through to revenues.

Overall the strong result reflected the fact that the global economy continued its slow recovery from the global financial crisis, notwithstanding the continued instability in the eurozone. The positive result highlighted Rio Tinto's significant exposure to China and the better performing East Asian economies.

Weather-related incidents severely affected operations into the second quarter of the year. Tropical cyclones and associated widespread flooding led to a derailment and the suspension of all deliveries from mines to Dampier port for nine days. System efficiency was impaired for months after restoration. The effects of poor weather were mitigated by the Operations Centre's success in optimising throughput.

Production, rail and shipping in the second half of the year was greatly improved, with the system able to operate consistently at above-nameplate capacity.

In February 2011, Rio Tinto approved a US\$933 million investment in the Marandoo Mine in the Pilbara, extending its current capacity of 15 million tonnes a year until 2030. Key cost initiatives over the year included extracting increased synergies from improved contractor utilisation and management, improved management of component overhauls and refinements to maintenance plans, optimisation of mine plans, and benefits from improvements in asset health through condition monitoring and application of relevant technologies.

The multi-staged expansion of Pilbara operational capacity proceeded on schedule. Debottlenecking of the Parker Point circuit at Dampier port increased annual capacity to 225 million tonnes, and this will rise to 230 million tonnes in early 2012.

The major expansion programme at Cape Lambert port was accelerated during the year, following the approval in June of a US\$676 million investment to fund early works and procurement. As a result, capacity expansion in the Pilbara to 353 million tonnes a year is scheduled to be reached in the first half of 2015, six months earlier than planned. Advancing the earlier engineering work can be achieved without increasing the overall cost of the expansion programme.

In November Rio Tinto confirmed it would add a further 20 million tonnes capacity to this target by replacing the original car dumper at Cape Lambert. This would align the in-load annual capacity at the port up to the existing 100 million tonne outload potential of the jetty. Due for final approval in 2012, it would bring overall system capacity to 353 million tonnes in the first half of 2015.

Supporting the expansion, in September an investment of US\$310 million was approved to assure a sustainable water supply for the Pilbara operations. Rio Tinto also approved an investment of US\$833 million (Rio Tinto share US\$706 million) in major power and fuel supply projects.

Table of Contents

In addition to the major capital works approved or planned, a number of regulatory and administrative arrangements were resolved including those relating to rail and port operations, land tenure and union agreements.

In a very challenging recruitment market, the Iron Ore group adopted innovative methods to augment its workforce beyond the current total of approximately 11,000. Flexible talent recruitment and retention strategies were developed to allow more lifestyle arrangements for those living in or commuting to the Pilbara and elsewhere. The Iron Ore group reconfigured its apprenticeship arrangements to improve recruitment and a new training centre was opened in Perth mid-year to handle the huge increase in apprentices and trainees expected to enter the Pilbara iron ore industry over the next decade.

In Canada, IOC experienced a challenging first quarter attributable to poor weather conditions, low mobile equipment availability and major repairs which impacted production. However, performance improved significantly over the remainder of the year, reinstating capacity. Also, in the second half of the year, production flexibility enabled IOC to capture higher concentrate spot sales by reducing pellet production in favour of higher concentrate production.

Rio Tinto's deployment of a global production platform continued.

IOC's Concentrate Expansion Project (CEP) made good progress and remains on track for completion by 2013, when annual capacity will be 26 million tonnes. The third and final stage of the CEP is in its final study phase. In August IOC announced preliminary studies to increase annual production capacity to 50 million tonnes from 2016, as well as consider the pathway for further expansions beyond this capacity, capitalising on the significant reserve base. The integrated study will consider multiple alternatives for the expansion, which may include new concentrators, mining pits and related mine, rail, stock handling, and port infrastructure.

In April the proposed development of the Simandou iron ore mining project was endorsed with a new Settlement Agreement with the Government of Guinea, confirming Rio Tinto's tenure. Rio Tinto paid US\$700 million to resolve all outstanding issues with the Government, which will be able to take up to 35 per cent equity in the project.

Rio Tinto is working with the Government of Guinea to have relevant provisions of the Settlement Agreement ratified as law, as contemplated and required by the Settlement Agreement.

In October Rio Tinto approved the investment of US\$1.1 billion of funding for commitments for early works and procurement of long-lead items and a further US\$211 million for additional studies. This funding will allow the project to move forward towards first shipment of ore by mid-2015, as set out in the Settlement Agreement. Work progressed through 2011 on finalising the required regulatory approvals with project venture partner Chalco, and finalising of the infrastructure investment framework.

The closure phase for the HIs melt plant at Kwinana, south of Perth, was being finalised at year's end. The HIs melt technology business continued to progress, with an agreement signed in August with the India-based Jindal Group to incorporate the HIs melt process in its steel-making plant.

Dampier Salt's various operations were significantly impacted by cyclones and rain during the first half of the year, with record rainfall challenging salt production and requiring significant risk management. Despite the conditions, Dampier Salt achieved record annual sales with deliveries of 10.3 million tonnes of salt into the Asian and European markets. In October the business achieved record monthly sales of 1.3 million tonnes shipped.

Growth and innovation

The Pilbara 353 million tonne capacity expansion and the Iron Ore Company of Canada CEP projects are the principal drivers of organic growth. Progressing the Simandou project towards its 2015 production commitment is the key greenfield expansion focus. The Pilbara programme is on track to deliver an additional 133 million tonnes of annual capacity by 2015. All individual projects required to deliver the interim target of 283 million tonnes capacity have been approved. Work has commenced at Cape Lambert port, rail infrastructure and mines (Brockman 4 Phase II and Western Turner Syncline). The US\$2.2 billion extension of the Nammuldi mine expansion was approved in February 2012.

Mine options for the next 50 million tonne phase include a further expansion of Nammuldi and Brockman 4, and the development of the greenfield Koodaideri deposit. Studies are all well under way. All mines in the expansion programme adhere to the defined strategy of being close to existing infrastructure and fully Rio Tinto-owned. There are multiple port expansion options beyond the current programme under preliminary study. The proposed new car dumper at Cape Lambert would boost capacity to 353 million tonnes.

Introduction of innovative technology to the group's Pilbara operations through the Mine of the Future programme has also been a key feature in 2011. The two-year trial at the West Angelas mine of the Autonomous Haulage System (AHS) proved successful and as a result a significant proportion of the Yandicoogina mine will now be converted to fully autonomous operation. In November a memorandum of understanding with Komatsu (subject to binding terms of supply being negotiated) was concluded for the supply of at least 150 AHS haul trucks to be used in the Pilbara inland mining operations. Progress is also being made

Edgar Filing: RIO TINTO PLC - Form 20-F

towards gaining innovative efficiencies in the group's ports and rail divisions, including the deployment of a driver-assist system in rail operations and vacuum moorings at ports. In February 2012 a US\$518 million investment was approved to introduce the AutoHaul driverless trains on the Pilbara network from 2014.

Rio Tinto Marine

In 2011 freight volumes increased slightly to 164 Mt of dry bulk cargo. The freight market exhibited high volatility over the year with average levels reflecting the current oversupply of new vessels, particularly in the Capesize segment. Rio Tinto Marine continues to support Rio Tinto businesses in providing competitive freight solutions in markets that are increasingly moving to shorter-term, CFR index prices. Safety performance continued to show general improvement. Marine has 15 vessels on order at shipyards in Asia and these are on schedule for delivery between 2012 and 2014 to meet specific trade requirements, enhancing Rio Tinto Marine's portfolio of long-term, low-cost freight. The existing fleet of five post-Panamax bauxite carriers continue to provide competitive and reliable delivery of bauxite from Weipa to refineries at Gladstone.

Outlook

The iron ore market outlook remains strong overall and positive, though significant volatility will continue to reflect macro-economic instability in major economies.

The Iron Ore group continued to ship at full capacity through the second half of the year, notwithstanding the eurozone challenges and softening in steel markets.

There remains great confidence in the long-term fundamentals of major markets, particularly in China, and the significant expansion programmes in the Pilbara and Guinea are based on that premise. Global supply has struggled to keep pace with increased demand, which reinforces Rio Tinto's growth strategy. Challenges will come from higher input prices, particularly increased manning, and a stronger Australian dollar. Developing high-productivity mines and adopting step-change technologies will help offset rising operational and higher native title costs.

Table of Contents

Business Support & Operations

Exploration

The Group has had a sustained commitment to exploration since 1946 and considers exploration to be one of its core competencies. A fundamental element of the Group's business strategy is a focus on finding and mining only the largest, lowest-cost resources that are profitable at all parts of the commodity cycle. We refer to these as Tier 1 resources. Mature Group operations, such as Weipa, the Pilbara and Rössing, were Tier 1 greenfield discoveries by Rio Tinto. The value of these discoveries is still being realised after more than 40 years of mine production.

The Exploration group is accountable for greenfield exploration programmes, provides technical assistance to business units on brownfield exploration, and supports business development groups in the evaluation of merger and acquisition opportunities. Greenfield exploration aims to establish completely new operating business units, involving geographic or commodity diversification away from existing Group operations. Brownfield exploration is directed at sustaining or growing existing Group businesses.

The evolution of a project from target generation to investment approval, implementation and commissioning involves a series of study stages that aim to deliver a progressive increase in confidence in the technical and economic parameters of the project. These exploration and evaluation studies can take ten to 20 years, with sustainable development criteria applied throughout the project development cycle.

Target generation and testing involves the progression of a project from concept to demonstration of mineralisation and declaration as A Project of Merit. Where mineralisation is identified through drilling to be of a grade and quantity sufficient to be of economic interest to the relevant Rio Tinto product group, projects are progressed to Order of Magnitude Study. This involves an assessment of a range of options to establish economic viability of the project, and determine whether its potential value is sufficient to justify committing significant resources to detailed evaluation. A successful Order of Magnitude Study results in the declaration of a discovery, and the transfer of project management accountability to the relevant Rio Tinto product group.

The following table shows the Exploration group's Tier 1 discoveries since 2001:

Year	Discovery	Commodity	Location
2002	Resolution	Copper	US
2004	Simandou	Iron ore	Guinea
2005	La Granja	Copper	Peru
2005	Caliwingina	Iron ore	Australia
2008	Sulawesi	Nickel	Indonesia
2008	Mutamba	Titanium	Mozambique
2009	Jadar	Lithium/Borates	Serbia

At the end of 2011, the Exploration group was actively exploring in 18 countries, and assessing opportunities in a further six countries, for a broad range of commodities including bauxite, copper, coking coal, diamonds, iron ore, nickel, potash and uranium.

Strategy

The purpose of Exploration is to add value to the Group by discovering or acquiring resources that can increase future cash flows. Exploration programmes are prioritised on a global basis so that only the most attractive opportunities are pursued. Priorities are determined in consultation with the product groups, with investment decisions being driven not by location or choice of commodity but rather by the quality of each opportunity.

The Exploration group is organised geographically into regional multi-commodity teams, with head offices in London, Salt Lake City and Brisbane. This structure provides a balance of global reach and local presence.

Exploration teams frequently present the first face of Rio Tinto in a community and lay the groundwork for what could become a multi-decade relationship. We place a high priority on effective community engagement

and consider our commitment to sustainable development as fundamental to securing our social licence to operate.

Safety

Edgar Filing: RIO TINTO PLC - Form 20-F

The Exploration group's all injury frequency rate has deteriorated from 1.18 at the end of 2010 to 1.52 at the end of 2011. Access to experienced employees and contractors remains a challenge in light of rapid expansion across the industry. The Exploration group continues to focus on implementing critical controls around high-risk activities such as aviation, drilling, vehicles and driving.

Performance

An Order of Magnitude project at Amargosa in Brazil delivered the Tier 1 bauxite deposit to Rio Tinto Alcan for pre-feasibility study. Ongoing exploration in the Amargosa orbit identified multiple bauxite occurrences for resource definition in 2012.

Drilling in the Orientale Province of the Democratic Republic of Congo, in joint venture with Delrand Resources and Kilo Goldmines, returned intersections of high-grade iron ore at Mount Asonga and Zatua.

An option to joint venture was entered into with North Atlantic Potash Inc., a subsidiary of JSC Acron, to explore for potash on nine permitted areas in Saskatchewan, Canada. A Project of Merit has been initiated based on initial drill results.

In the brownfield environment, Exploration handed over the Bourne Highway project in the Pilbara, Australia, to Rio Tinto's Iron Ore group. Drill testing of targets in the orbit of Iron Ore Company of Canada operations returned multiple mineralised intercepts for assessment in 2012. In Mozambique, exploration commenced on licences acquired under the Riversdale acquisition and adjacent tenement secured under option agreement. Order of Magnitude studies were initiated at Lake Elphinstone, Mount Robert and Valeria in the Bowen Basin, Australia. On the Rössing mine lease in Namibia, evaluation of the Z20 prospect continued.

The Altai Nuurs coking coal deposit in Mongolia and the Sari Gunay gold deposit in Iran were divested. Exploration projects in Jordan and Guyana were terminated due to poor results.

Several test flight programmes of the VK1 airborne gravity gradiometer were conducted in Western Australia throughout the year, including the first flights of a second improved system. Production flying is anticipated in 2012.

Gross cash expenditure on exploration and evaluation in 2011 was US\$1,437 million, representing a US\$843 million increase over 2010 gross expenditure of US\$594 million (due to ramp-up of evaluation project activities). Gross expenditure was offset by US\$89 million (pre-tax) proceeds from divestment of Tier 2 exploration assets.

Outlook

The Exploration group will explore for a range of commodities across at least 18 countries in 2012. Early stage target generation will be a key enabler of sustained exploration success. The next crop of potential discoveries includes:

Project	Commodity	Country	Stage
Amargosa Orbit	Bauxite	Brazil	Project of Merit
Saskatchewan Potash	Potash	Canada	Project of Merit
Bafwasende	Iron ore	Democratic Republic of Congo	Project of Merit

Other Business Support & Operations

In addition to Exploration, the following parts of the Group are included in Business Support & Operations: Business Evaluation; Corporate Assurance; Economics & Markets; Group Risk; Global Business Services; Rio Tinto Japan; Rio Tinto Singapore Holdings; Cable; Pacific Aluminium and Other Aluminium (Sebree and Lynemouth aluminium operations, three specialty alumina plants and the Gardanne refinery).

Table of Contents

Technology & Innovation

Technology & Innovation (T&I) consists of a central team of technology professionals and centres. These develop leading practice and promote improvements in technology, mining, processing, asset management, strategic production planning, and project development, execution and evaluation. Emphasis is given to shared and visible measures of operational effectiveness, the improvement of analytical tools, development of staff capabilities, and implementation of technology step changes that will confer competitive advantage in development of orebodies likely to be available to the Group in the future.

The total number of employees in T&I increased from 538 at year end 2010 to 925 at year end 2011 primarily due to an increase of demand for the design and build of major projects on behalf of the Group's business units.

The T&I gross cost in 2011 was US\$343 million, compared with US\$213 million in 2010 and US\$134 million in 2009.

Strategy

T&I's strategy is to:

Maintain and promote a safe working environment.

Continue to embed operational excellence in business units.

Maximise the contribution of technology to the Group's vision of industry leadership.

Deploy technology solutions that increase earnings.

Design and build valuable, new growth projects.

Position the Group to unlock orebodies that require innovative solutions.

Safety

T&I is committed to the safe operation of its facilities and to the safe deployment of its personnel. The all injury frequency rate for T&I and projects in 2011 is 2.57 compared with 1.54 in 2010, driven largely by poor performance at the Argyle Diamond underground project.

An extensive range of actions is being taken to correct this poor performance including changes to and strengthening of the project leadership team, increased oversight of safety performance and application of Rio Tinto's Site Safety Acceleration Process.

Performance

Innovation

Innovation is the research and development group within T&I. Its focus is on developing radically new and innovative technologies that can address the significant challenges facing the mining industry. With unprecedented global demand for natural resources, a move from mature open pit orebodies to deeper underground mining with more complex mineralisation, tightening environmental and energy constraints, these challenges are significant.

Edgar Filing: RIO TINTO PLC - Form 20-F

The wealth of technical and project expertise is leveraged through a network of key partnerships with organisations and institutions around the world. The work is protected by an intense focus on competitive advantage.

Examples of initiatives and programmes:

The Mine of the Future programme; the interlinking of a number of initiatives that will deliver improvements in productivity, cost, product quality and safety.

Technologies to support the safe, rapid development of large underground block cave mines.

In situ orebody knowledge to guide the mining and processing of an ore block.

The development and deployment of autonomous blast hole drilling technologies.

Ore recovery through significant advancements in mineral recovery and sorting technologies.

Innovative research into technologies to reduce Rio Tinto's carbon footprint.

During 2011 a number of projects continued on target, or were accelerated, to deliver significant value to Rio Tinto through technological advancement.

Mineral Technology Services

The Mineral Technology Services Centre comprises a team of professionals deployed from seven regional offices in North America, Australia, the UK, and South Africa. The team works with operating sites to deliver substantial increases in value; with project teams to determine the optimum value-adding project plan; and with the broader Group to understand and manage major technical risks. The team provides support in the areas of geology, geotechnics, mining, mineral processing, hydrometallurgy, process control, asset management, environment and business analysis.

The Improving Performance Together (IPT) engagements continue to work with operating sites on operating improvements.

The Centre is responsible for implementing IPT processing, a methodology designed to increase the value delivered by Rio Tinto's processing operations. IPT processing includes focused data analysis to understand and address the constraints and variability which inhibit process performance.

Asset Management

The Asset Management Centre focuses on the effective selection and deployment of the Group's equipment for mining and processing. Work includes improvements in the reliability and performance of these physical assets, utilising asset management standards and guidelines, as well as standard business processes and fit-for-purpose technical operating systems, work practices, training and global metrics to monitor the performance of fixed plant and heavy mobile equipment.

Mining Technology

The focus of the Mining Technology Centre is to establish leading practice and develop, share and implement Group-wide solutions in the core mining production processes of surface mining, strategic resource development, underground mining, orebody knowledge, geotechnical and mine planning. The Centre also oversees the Group's reserves estimation and reporting process, reserves audit process and core technical systems.

IPT mining initiatives in 2011 included payload management, load and haul improvement, drill and blast and off-road tyre demand reduction.

The Mining Technology Centre also includes a Strategic Production Planning (SPP) team, which focuses on developing and establishing leading practice. SPP teams co-operate with business units to develop comprehensive plans and valuations of strategic resource development options. Results from SPP provide a logical resource development framework for more detailed studies and investment decision making. SPP engagements completed during the year increased the life of mine valuation of a number of existing mining businesses and supported expansion-based investment proposals.

Project Development & Implementation

Edgar Filing: RIO TINTO PLC - Form 20-F

The Project Development & Implementation Centre (PDI) provides guidance, support and training for all aspects of capital projects, performs a governance function by conducting project reviews, manages feasibility studies, and executes capital projects on behalf of the business units. During 2011, PDI continued the implementation of a global operating model in preparation for implementation of projects in nearly all continents and on behalf of most product groups. The model provides for a Project Management support function as well as Implementation Hubs focused on supporting the product groups.

Technical Evaluation Group

The Technical Evaluation Group (TEG) ensures that Rio Tinto's investment decisions are based on independent, technical review and evaluation. TEG also provides advice on the adequacy of risk identification and management at key points in the project approvals process.

Table of Contents

Financial review

2011 financial performance compared with 2010

In order to provide additional insight into the performance of its business, Rio Tinto reports underlying earnings.

2011 underlying earnings of US\$15,549 million and net earnings of US\$5,826 million were US\$1,562 million above and US\$8,412 million below the comparable measures for 2010. The principal factors explaining the movements are set out in the table below.

	US\$m	Underlying earnings US\$m	(Restated ^{a)} net earnings US\$m
Changes from 2010 to 2011			
2010		13,987	14,238
Prices	6,675		
Exchange rates	(998)		
Volumes	(502)		
General inflation	(376)		
Energy	(249)		
Other cash costs	(2,096)		
Exploration and evaluation costs (including disposals of undeveloped properties)	(796)		
Non cash/interest/tax/other	(96)		
Total changes in underlying earnings ^(b)		1,562	1,562
Increase in impairment charges			(8,551)
Absence of gain on consolidation of Oyu Tolgoi LLC			(445)
Lower profits on disposal of interests in businesses			(7)
Lower loss after tax from discontinued operations			87
Deferred tax asset write off			(342)
Movements in exchange differences and gain on derivatives			(486)
Other movements			(230)
2011		15,549	5,826

Edgar Filing: RIO TINTO PLC - Form 20-F

(a) The financial statements for the year ended 31 December 2010 have been restated in accordance with IFRS 3 Business Combinations (Revised), following reclassification of certain balances relating to the Consolidation of Oyu Tolgoi LLC.

(b) See note 2 on page 154 of the 2011 financial statements for a reconciliation of underlying earnings to net earnings.

Prices

The effect of price movements on all major commodities in 2011 was to increase underlying earnings by US\$6,675 million compared with 2010. Prices improved for nearly all of Rio Tinto's major commodities: copper prices were up 18 per cent and gold prices were up 29 per cent. Although aluminium prices averaged ten per cent higher than 2010 they fell back sharply in the last quarter of the year. Spot iron ore prices traded 15 per cent above 2010 levels but ended the year 25 per cent below where they started given price weakness in the fourth quarter driven by Chinese destocking.

Commodity prices and other drivers of sales revenue of individual product groups are discussed further in the section on pages 34 to 36.

Exchange rates

There was significant movement in the US dollar in 2011 relative to the currencies in which Rio Tinto incurs the majority of its costs. Compared with 2010, on average, the US dollar weakened by 12 per cent against the Australian dollar and by four per cent against the Canadian dollar. The effect of all currency movements was to decrease underlying earnings relative to 2010 by US\$998 million.

Volumes

Lower volumes were primarily driven by lower copper and gold grades at Kennecott Utah Copper, Escondida and Grasberg. This was partly offset by higher iron ore volumes in line with the Group's increased capacity at its Pilbara ports, despite the adverse weather conditions in the first half of the year. The net impact of volume movements was a decrease in underlying earnings of US\$502 million relative to 2010.

Energy, other cash costs and exploration

Higher energy costs across the Group reduced underlying earnings by US\$249 million compared with 2010. 2011 was impacted by the higher fuel, diesel and power rates affecting most operations. In 2010 the Aluminium operations in the Saguenay were impacted by low snow and rainfall leading to low power generation and the need to purchase additional power from the provincial utility.

Higher other cash costs during 2011 decreased underlying earnings by US\$2,096 million compared with 2010 due to a combination of higher input prices, fixed production cost inefficiencies associated with lower volumes due to weather events and grade, higher maintenance costs and costs associated with operational readiness.

Rising raw material and input prices decreased underlying earnings by US\$514 million compared with 2010, particularly relating to higher coke, pitch and caustic prices in the aluminium businesses. In addition, underlying earnings were impacted by unit cost increases due to lower volumes caused by severe weather conditions (US\$261 million) and lower grades (US\$445 million), notably in the copper business. Additional costs of US\$546 million were associated with a full year of operations at new mines and operational readiness preparations particularly in the Pilbara and Coal Australia. Other production and one-off costs lowered earnings by a further US\$330 million.

In 2011, evaluation work progressed at many of the Group's projects including the Resolution and La Granja copper projects and the Simandou iron ore project. Two undeveloped coal properties were divested in 2010 resulting in a US\$229 million gain on disposal. The impact from higher exploration and evaluation expenditure combined with lower gains realised from divestments was to lower underlying earnings by US\$796 million compared with 2010.

Finance costs, tax, other

The effective corporate income tax rate on underlying earnings, excluding equity accounted units, was 30.0 per cent compared with 27.9 per cent in 2010. The effective corporate income tax rate on net earnings, excluding equity accounted units was 49.1 per cent compared with 27.3 per cent in 2010. The increase was due to the goodwill impairment charge being non-deductible for tax purposes.

Group net finance charges were US\$245 million lower than in 2010, mainly reflecting an increase in capitalised interest in 2011.

2010 financial performance compared with 2009

2010 underlying earnings of US\$13,987 million and restated net earnings of US\$14,238 million were US\$7,689 million above and US\$9,366 million above the comparable measures for 2009. The principal factors explaining the movements are set out in the table on page 33.

32 [Rio Tinto 2011 Annual report](#)

Table of Contents

	US\$m	Underlying earnings US\$m	Restated net earnings US\$m
Changes from 2009 to 2010			
2009		6,298	4,872
Prices	9,505		
Exchange rates	(1,171)		
Volumes	782		
General inflation	(253)		
Energy	(232)		
Other cash costs	(445)		
Exploration and evaluation costs (including disposals of undeveloped properties)	(690)		
Non cash/interest/tax/other	193		
		7,689	7,689
Gain on consolidation of Oyu Tolgoi LLC			445
Profits less losses on disposal of interests in business			(325)
Net impairment charges			716
Exchange differences and derivatives			401
Chinalco break fee			182
Restructuring/severance costs from global headcount reduction			231
Other			27
2010		13,987	14,238

(a) See note 2 on page 152 of the 2011 financial statements for a reconciliation of underlying earnings to net earnings.

Prices

The effect of price movements on all major commodities in 2010 was to increase underlying earnings by US\$9,505 million compared with 2009. Average annual prices improved for nearly all of Rio Tinto's major commodities: copper prices were up 47 per cent, molybdenum prices were up 45 per cent, gold prices were up 26 per cent and aluminium prices were 31 per cent higher than 2009. Demand and prices for diamonds and minerals improved significantly as the worldwide economy emerged from the global financial recession.

Exchange rates

There was significant movement in the US dollar in 2010 relative to the currencies in which Rio Tinto incurs the majority of its costs. Compared with 2009, on average, the US dollar weakened by 16 per cent against the Australian dollar and by ten per cent against the Canadian dollar. The effect of all currency movements was to decrease underlying earnings relative to 2009 by US\$1,171 million.

Volumes

Higher sales volumes were primarily generated from the expanded iron ore operations in the Pilbara region of Western Australia running at above nameplate capacity and an increased proportion of higher-margin pellet sales at IOC. The Aluminium business benefited from higher sales of value-added aluminium products. Increased volumes of hard coking coal following new investment in heavy mobile equipment at the Queensland mines, higher volumes of refined gold and molybdenum at Kennecott Utah Copper and a significant recovery in diamonds and minerals market demand also contributed to the positive variance. These increases offset lower copper and gold volumes at Grasberg which were impacted by lower ore grades and lower mill throughput. The overall impact of volume movements was an increase in underlying earnings of US\$782 million relative to 2009.

Energy, other cash costs and exploration

Higher energy costs across the Group, in particular for the Aluminium business, reduced underlying earnings by US\$232 million. This primarily reflected low snow and rainfall levels in the Saguenay-Lac-Saint-Jean region of Quebec during the first half of 2010 which led to reduced power generation, resulting in the need to purchase additional power under a specially negotiated power block from the provincial utility over a 12 month period.

Higher other cash costs during 2010 decreased underlying earnings by US\$445 million compared with 2009. Higher unit cash costs in the Copper group were the result of the planned smelter shutdown at Kennecott Utah Copper and lower copper production following lower grades at most of the operations. Adverse weather conditions and higher stripping rates impacted costs at the Energy group. These were partly offset by lower costs in the Aluminium business, which benefited from

Edgar Filing: RIO TINTO PLC - Form 20-F

lower prices for caustic, pitch and coke.

In 2010, evaluation work accelerated at many of the Group's projects including the Resolution and La Granja copper projects and the Simandou iron ore project. Two undeveloped coal properties were divested in 2010 resulting in a US\$229 million gain on disposal, compared with a gain of US\$797 million in 2009 from the disposal of two undeveloped potash properties. The impact from higher exploration and evaluation expenditure combined with lower gains realised from divestments was to lower underlying earnings by US\$690 million compared with 2009.

Finance costs, tax, other

The effective corporate income tax rate on underlying earnings, excluding equity accounted units, was 27.9 per cent compared with 24.8 per cent in 2009. The effective corporate income tax rate on net earnings excluding equity accounted units was 27.3 per cent compared with 29.3 per cent in 2009. A significant proportion of the increase related to the one-off non-taxable profit on disposal of the potash assets which was recognised in 2009. The Group's net finance charge was US\$110 million lower than in 2009, mainly reflecting lower debt in 2010 following completion of the rights issues and divestments.

Exclusions from underlying earnings 2009-2011

Earnings contributions from Group businesses and business segments are based on underlying earnings. Amounts excluded from net earnings in arriving at underlying earnings are summarised in the discussion of year on year results below.

	2011 US\$m	Restated 2010 US\$m	2009 US\$m
Impairment charges net of reversal	(9,290)	(739)	(1,103)
Profits on disposal of interests in businesses	167	174	499
Gain on consolidation of Oyu Tolgoi LLC		445	
Loss after tax from discontinued operations	(10)	(97)	(449)
Exchange differences and gains/(losses) on derivatives	(57)	429	28
Deferred tax asset write off	(342)		
Chinalco break fee			(182)
Restructuring/severance costs from global headcount reduction			(231)
Other exclusions	(191)	39	12
Total excluded in arriving at underlying earnings	(9,723)	251	(1,426)

2011

An impairment charge of US\$9,290 million was recognised in 2011, of which US\$8,855 million related to the Group's aluminium businesses. The valuation of Rio Tinto's aluminium businesses for impairment testing is based on our assessment of fair market value less costs to sell (FVLCS) derived from discounted future cash flows. In the current market environment, costs are substantially higher due to continued strength in the Australian and Canadian dollars against the US dollar and an increase in input prices. These factors, combined with rising LME inventory, are delaying the aluminium industry's investment in growth projects for new capacity. Under these conditions, FVLCS does not include the full value of our planned improvements in cash margins from existing operations and from the successful implementation of our growth projects. The impairment was therefore largely a result of the current economic

Table of Contents

Financial review continued

environment and related market volatility in aluminium prices in the second half of 2011 leading to declines in market values for aluminium assets.

In addition, there were net impairments of US\$344 million relating to the Group's diamond business and US\$91 million in other net impairments. The impairment to the Group's diamond business was caused by a change in assumptions about future capital costs required to complete the Argyle underground project. This was partly offset by a recovery in prices, which resulted in a reversal of impairment at Diavik of US\$112 million.

Profits on the disposal of businesses in 2011 related principally to the sale of the Group's talc business and Colowyo mine.

The deferred tax asset write-off in 2011 of US\$342 million followed a change in French legislation which restricted the utilisation of tax losses.

2010

Rio Tinto consolidated Oyu Tolgoi LLC on 15 December 2010 following the signing of a new agreement with Ivanhoe Mines. The US\$445 million gain arising on consolidation represents the excess of the fair value ascribed to the Group's indirect share of the assets and liabilities of Oyu Tolgoi LLC over the historic cost of acquiring that share through its investment in Ivanhoe Mines.

The 2010 impairment charge of US\$739 million related mainly to the Alcan Engineered Products businesses. The Group completed the divestment of 61 per cent of Alcan Engineered Products to Apollo Global Management, LLC and the Fonds Stratégique d'Investissement on 4 January 2011.

Profits on the disposal of businesses in 2010 relate primarily to the sale of the Group's remaining 48 per cent interest in Cloud Peak Energy Inc.

Loss after tax from discontinued operations of US\$97 million (inclusive of divestment costs) related to the completion of the disposal of Alcan Packaging global Pharmaceuticals, global Tobacco, Food Europe and Food Asia divisions to Amcor on 1 February 2010, and the Alcan Packaging Food Americas division to Bemis Company Inc. on 1 March 2010.

2009

In 2009, the Group completed the divestments of its interests in the Ningxia aluminium smelter, the Corumbá iron ore operation, the Jacobs Ranch coal mine, Alcan Composites and the sale of 52 per cent of the Group's interest in Cloud Peak Energy Resources LLC. Net gains on these transactions totalling US\$0.5 billion were excluded from underlying earnings as divestments of interests in businesses are considered to be outside the underlying activities of the Group.

Of the Group's total post-tax impairment charge of US\$1,103 million, US\$500 million related to Alcan Engineered Products, US\$212 million related to the Group's aluminium businesses and US\$348 million related to the Group's diamond businesses.

An impairment of US\$318 million relating to the Alcan Packaging businesses was recognised during the year, and was included within loss after tax of discontinued operations.

All impairments were measured based upon an assessment of fair value less costs to sell. These impairments were caused by continued weakness in the economic environment.

In 2009, Rio Tinto paid a break fee of US\$195 million (US\$182 million post-tax) to Chinalco which was excluded from underlying earnings.

During 2009, the Group incurred restructuring and severance costs of US\$231 million associated with its global headcount reduction programme.

Net earnings and underlying earnings

Both net earnings and underlying earnings deal with amounts attributable to the owners of Rio Tinto. However, IFRS requires that the profit for the period reported in the income statement should also include earnings

attributable to non-controlling interests in subsidiaries. The profit for the period is reconciled to net earnings and to underlying earnings as follows:

Edgar Filing: RIO TINTO PLC - Form 20-F

	2011 US\$m	Restated 2010 US\$m	2009 US\$m
Profit from continuing operations	6,775	15,195	5,784

Molybdenum		Pound	16	16	11

(a) Dry metric tonne unit. The quoted price for 2011 is based on contract sales under a quarterly long pricing mechanism.

(b) LME cash price.

The above table shows published prices for Rio Tinto's commodities for the last three years where these are publicly available, and where there is a reasonable degree of correlation between the published prices and Rio Tinto's realised prices. The prices set out in the table are the averages for each of the calendar years 2009, 2010 and 2011.

The Group's sales revenue will not necessarily move in line with these published prices for a number of reasons which are discussed below.

34 [Rio Tinto 2011 Annual report](#)

Table of Contents

The discussion of revenues below relates to the Group's gross revenue from sales of commodities, including its share of the revenue of equity accounted units (after adjusting for sales to subsidiaries), as included in the financial information by business unit.

Iron Ore

2011 sales revenue compared with 2010

Gross sales revenue for the Iron Ore group increased by 24 per cent in 2011 compared with 2010 reflecting higher prices and increased volumes. In 2011, Rio Tinto's Pilbara ports operated at above annualised capacity rates and shipped record volumes of 225 million tonnes for the full year.

Rio Tinto priced its iron ore contracts on a quarterly basis with a four month lag for the first three quarters of 2011. From 1 October 2011, the Group transitioned to a more diversified sales contract portfolio. In the fourth quarter, approximately 40 per cent of sales were priced with reference to a quarterly average index set at the prior quarter's average lagged by one month. The remainder was sold on a shorter term price basis linked to current quarter average, current month average or spot index prices. Index prices are adjusted for product characteristics and iron and moisture content.

2010 sales revenue compared with 2009

Gross sales revenue for the Iron Ore group increased by 91 per cent in 2010 compared with 2009 driven by strong prices and a nine per cent increase in global production. During 2010, iron ore pricing moved to quarterly contracts, reflecting the structural shift away from annual benchmark pricing. Sales volumes increased in response to growing demand in major markets stimulated by improving economic conditions and delays in capacity from other suppliers.

Aluminium

2011 sales revenue compared with 2010

The Aluminium group's sales revenues are from aluminium and related products such as alumina and bauxite. Gross sales revenue in 2011 for the group increased by seven per cent compared with 2010 driven by higher exchange-traded aluminium prices offset by the effects of adverse weather conditions in the early part of 2011 mainly in Queensland, Australia.

The 2011 average aluminium price was US\$2,395 per tonne, an increase of ten per cent on 2010. In the second half, macroeconomic concerns took hold, particularly the unfolding debt crisis in Europe, thereby reducing prices to below US\$2,000 per tonne towards the end of 2011.

Following the Group's streamlining announcement on 17 October 2011, 13 non-core assets have been transferred into Other operations. These assets are now managed and reported separately from Rio Tinto Alcan while the Group progresses divestment options.

2010 sales revenue compared with 2009

Gross sales revenue in 2010 for the Aluminium group increased by 30 per cent compared with 2009. The 2010 exchange traded aluminium price averaged US\$2,173 per tonne, an increase of 31 per cent on 2009. This increase reflected the combination of a robust recovery in end use demand in developed economies and the continued rollover of inventory financing positions amidst a prolonged period of low interest rates.

Copper

2011 sales revenue compared with 2010

The Copper group also produces gold and molybdenum as significant by-products. Gross sales revenue for the Copper group decreased by two per cent in 2011 compared with 2010. This was a reflection of reduced volumes due to lower grades at Kennecott Utah Copper, Escondida and Grasberg. A work stoppage which halted operations for 15 days at Escondida and industrial action at Grasberg also impacted 2011 production levels. Copper increased 18 per cent to 400 cents per pound, gold increased 29 per cent to US\$1,571 per ounce and molybdenum was flat year on year.

At the end of 2011, the Group had an estimated 181 million pounds of copper sales that were provisionally priced at US 344 cents per pound. The final price of these sales will be determined during the first half of 2012.

2010 sales revenue compared with 2009

Edgar Filing: RIO TINTO PLC - Form 20-F

Gross sales revenue for the Copper group increased by 25 per cent in 2010 compared with 2009. The Copper group benefited from higher average prices for its major products in 2010. Copper increased 47 per cent to 340 cents per pound, gold increased 26 per cent to US\$1,222 per ounce and molybdenum increased 45 per cent to US\$16 per pound. The benefit from higher prices in 2010 was partly offset by lower volumes, notably from Grasberg.

At the end of 2010, the group had an estimated 270 million pounds of copper sales that were provisionally priced at US 428 cents per pound.

Energy

2011 sales revenue compared with 2010

A significant proportion of Rio Tinto's coal production is sold under long-term contracts. In Australia, the prices applying to sales under the long-term contracts are generally renegotiated annually for thermal coal; but prices are fixed at different times of the year and on a variety of bases. Coking coal prices for 2011 have been negotiated on a quarterly basis. For these reasons, average realised prices will not necessarily reflect the movements in any of the publicly quoted prices. Moreover, there are significant product specification differences between mines. Sales volumes will vary during the year and the timing of shipments will also result in differences between average realised prices and published prices.

Gross sales revenue in 2011 for the Energy group increased by 30 per cent compared with 2010 as a result of an improved global pricing environment, partially offset by lower volumes following adverse weather conditions in the first half of 2011.

After achieving near record prices for thermal coal in January 2011 following Indonesian and Australian supply side disruptions, global markets for thermal and coking coal experienced broad price declines throughout the remainder of 2011. This decline reflected weaker global economic activity and strong supply growth. However, prices remained well supported.

Uranium declined 38 per cent year on year with substantially lower production at both operations. The processing plant at Energy Resources of Australia was shut from late January to mid June as a proactive strategy to manage processed water levels in the tailings dam following a sustained period of above-average rainfall. Lower grades, lower milled tonnes and lower extraction rates were experienced at Rössing as the mine continues with its major pre-strip programme which will allow access to higher grade, lower strip ratio reserves.

2010 sales revenue compared with 2009

Gross sales revenue for the Energy group increased by 16 per cent in 2010. Overall average coal prices were lower than in 2009 due to the absence of higher carry over prices from 2008. 2010 saw continuing strength in the seaborne market for Australian coal. Demand for thermal coal continued to be robust from South Korea, India, Taiwan and China. Global steel demand improved in all markets in the first half of the year and led to strong demand for semi-soft coking coal. The market for premium quality hard coking coal remained steady in 2010.

Uranium spot markets were relatively weak early in 2010 but strengthened in the second half of the year, mainly driven by strong demand from China. Long-term prices remained consistent with some small increases in the latter part of the year.

Diamonds & Minerals

2011 sales revenue compared with 2010

Gross sales revenue increased by six per cent in 2011 compared with 2010. The group benefited from higher prices from improved market conditions across all products. This was offset by lower volumes primarily in the diamond business, due to the transition to underground mining at Argyle and severe weather conditions.

Table of Contents

Financial review continued

Rough diamond prices improved strongly in the first eight months of 2011 due to restocking in the US and continued growth in Chinese and Indian consumer markets. Despite some softening towards the end of the year, global rough diamond prices improved 24 per cent year on year. Diamond prices realised by Rio Tinto depend on the size and quality of diamonds in the product mix. Rio Tinto Diamonds revenues increased by seven per cent year-on-year, despite the impact of lower production volumes.

Revenues for Rio Tinto Iron & Titanium (RTIT) increased by 19 per cent compared with 2010 due to increasing titanium dioxide feedstock, zircon and metallic co-product prices and demand growth associated with urbanisation trends. RTIT continued to replace its multi-year sales contracts with alternative pricing mechanisms in 2011, increasing the exposure to market prices.

Rio Tinto Minerals achieved a five per cent improvement in refined borate revenues in 2011 through strong prices, product mix and steady Asian demand growth.

2010 sales revenue compared with 2009

Gross sales revenue increased by 16 per cent in 2010 compared with 2009. Sustained demand from emerging markets, which largely offset the slower recovery from the established markets of the US and Europe was reflected in higher prices and increased sales volumes for the Diamonds & Minerals group.

Rough diamond prices demonstrated a robust recovery throughout 2010 as demand from emerging markets, notably India and China, accelerated. Demand for titanium dioxide feedstocks, talc and borates in 2010 continued to demonstrate a healthy recovery in line with improving global economic conditions.

Cash flow

2011 compared with 2010

A full consolidated cash flow statement is contained in the 2011 financial statements.

Cash flows from operations, including dividends from equity accounted units, were US\$27.4 billion, 16 per cent higher than 2010, primarily as a consequence of higher prices. Tax paid in 2011 increased by 51 per cent to US\$6.2 billion in line with higher taxable profits.

Purchase of property, plant and equipment and intangible assets accelerated in 2011 to US\$12.3 billion, an increase of US\$7.7 billion from 2010. This included the continued expansion of the Pilbara iron ore mines and infrastructure to 283 Mt/a in Western Australia, the development of the Oyu Tolgoi copper-gold project in Mongolia, the expansion of the Yarwun alumina refinery in Queensland, the extension and expansion of the Kestrel coking coal mine in Queensland and the underground development of the Argyle diamond mine in Western Australia. The US\$700 million payment to the Government of Guinea following the signing of the agreement for the Simandou iron ore project was recognised as capital expenditure.

In addition, during 2011 the Group spent a total of US\$6.4 billion (net of cash acquired) on acquisitions and increasing interests in businesses. The Group completed the acquisition of a 100 per cent interest in Riversdale Mining Limited for a total of US\$3.7 billion and, in 2011, paid US\$0.5 billion to acquire an 88 per cent interest in Hathor Exploration Limited, which completed on 12 January 2012. Rio Tinto increased its interest in Ivanhoe Mines from 40.3 per cent to 49 per cent and participated in Ivanhoe's rights offering for a total consideration of US\$1.9 billion. On 24 January 2012, Rio Tinto moved to a majority stake in Ivanhoe, taking its interest to 51 per cent.

During 2011, the Group bought back 91 million Rio Tinto plc shares at a total cost of US\$5.5 billion.

Dividends paid in 2011 of US\$2.2 billion were 27 per cent higher than 2010 reflecting the increase in the 2010 final dividend and the subsequent 2011 interim dividend.

2010 compared with 2009

Cash flows from operations, including dividends from equity accounted units, were US\$23.5 billion, 70 per cent higher than 2009, primarily as a consequence of higher prices.

Tax paid for 2010 increased to US\$4.1 billion, US\$1.024 billion higher than 2009 largely due to the increase in taxable profits. Net interest paid of US\$696 million for 2010 was US\$440 million lower than 2009, largely due to lower amounts of debt, following a US\$8.5 billion repayment of Alcan acquisition facility D at the beginning of 2010.

Edgar Filing: RIO TINTO PLC - Form 20-F

Purchase of property, plant and equipment and intangible assets was US\$4.6 billion in 2010, a decrease of US\$0.8 billion from 2009. This included the Brockman 4 iron ore mine development in Western Australia, the expansion of the Yarwun alumina refinery, the commissioning of the Clermont thermal coal mine and the extension and expansion of the Kestrel coking coal mine.

Net cash proceeds from disposals and acquisitions in 2010 were US\$2.9 billion, and related to the disposal of Alcan Packaging businesses and the remainder of Cloud Peak Energy Inc; partly offset by the payments to acquire an additional 20.62 per cent in Ivanhoe Mines.

Dividends paid in 2010 of US\$1.8 billion compared with US\$0.9 billion in 2009 reflected the suspension of the 2009 interim dividend.

Statement of financial position

Net debt increased from US\$4.1 billion (restated) at 31 December 2010 to US\$8.5 billion at 31 December 2011 as strong operating cash inflows were offset by outflows relating to capital expenditure, acquisitions, the increase in the dividend and the share buy-back programme. Net debt to total capital was 12 per cent at 31 December 2011 and interest cover was 27 times.

In 2011, Rio Tinto issued US\$4 billion of fixed rate bonds, with maturities of five, ten and 30 years. The weighted average maturity was around 12 years and the weighted average coupon was less than 3.7 per cent. At 31 December 2011, 60 per cent of Rio Tinto's adjusted total borrowings of US\$18.1 billion were at fixed interest rates.

As disclosed at the 2011 half year, the Group has revised its definition of net debt, such that it is stated net of the impact of certain funding arrangements relating to equity accounted units (EAU) and partially-owned subsidiaries (EAU funded balances). This modification is required in order to avoid showing borrowings twice in the net debt disclosure, where funding has been provided to an EAU by the Group and subsequently loaned by the EAU to a consolidated Group subsidiary. Comparative figures have been adjusted accordingly. This primarily impacted the consolidation of the net debt of Ivanhoe (an EAU) and Oyu Tolgoi (a subsidiary). Adjusted total borrowings have been similarly adjusted.

Provisions have risen by US\$4.7 billion due to increases of approximately US\$3 billion to the estimate of closure obligations, following revisions to cost estimates (including the impact of mine and infrastructure expansions), combined with changes to the rate used to discount these obligations to their present value. Net pension provisions have increased by approximately US\$1.5 billion due to falling discount rates and lower than expected fund returns.

Financial risk management

The Group's policies with regard to financial risk management are clearly defined and consistently applied. They are a fundamental part of the Group's long-term strategy covering areas such as foreign exchange risk, interest rate risk, commodity price risk, credit risk, liquidity risk and capital management. Further details of our financial risk management are disclosed in note 31 'Financial risk management' to the 2011 financial statements.

The Group's 2011 Annual report and financial statements show the full extent of its financial commitments, including debt. The principal risks and uncertainties to which the Group is subject are summarised on pages 10 to 12. The effectiveness of internal control procedures continues to be a high

Table of Contents

priority in the Rio Tinto Group. The board's statement on internal control is set out in the Risk management section.

Capital risk management and dividend

The Group's total capital is defined as equity attributable to owners of Rio Tinto plus equity attributable to non-controlling interests and net debt, as shown below:

Total capital

	2011	Restated 2010
	US\$m	US\$m
Equity attributable to owners of Rio Tinto	52,539	58,247
Equity attributable to non-controlling interests	6,669	6,265
Net debt (note 25)	8,451	4,071
Total capital	67,659	68,583

The board's overriding objective when managing capital is to safeguard the business as a going concern whilst maximising returns for the companies' shareholders. In practice, this involves regular reviews by the board of the Group's capital structure. These reviews take into account the Group's strategic priorities, economic and business conditions and opportunities that are identified to invest across all points of the commodities cycle, and the focus on its progressive dividend policy, whilst also striving to maintain the Group's overall credit rating. The resulting capital structure provides the Group with a high degree of financial flexibility at a low cost of capital.

Net debt increased from US\$4.1 billion (restated) to US\$8.5 billion at 31 December 2011 as strong operating cash inflows were offset by outflows relating to capital expenditure, acquisitions, the increase in the dividend and the share buy-back programme. Net debt at 31 December 2011 was made up principally from adjusted total borrowings of US\$18.12 billion, offset by US\$9.67 billion in cash and cash equivalents. The proportion of net debt to total capital stood at 12 per cent at 31 December 2011 compared with six per cent at 31 December 2010. As part of the Group's capital management programme, a share buy-back of US\$7 billion is on track for completion by 31 March 2012.

Rio Tinto has a progressive dividend policy which aims to increase the US dollar value of ordinary dividends over time, taking into account the results of the past year and the outlook. Under the dividend policy, the interim dividend is set at one half of the total ordinary dividend for the previous year and the final ordinary dividend is expected to be at least equal to the previous interim dividend.

Dividends paid on Rio Tinto plc and Rio Tinto Limited shares are equalised on a net cash basis; that is without taking into account any associated tax credits. Dividends are determined in US dollars. Rio Tinto plc dividends are declared and paid in pounds sterling and Rio Tinto Limited dividends are declared and paid in Australian dollars, converted at exchange rates applicable on 7 February 2012. Details relating to the payment of dividends in sterling, Australian dollars and other currencies and on the payment of dividends to holders of American Depositary Receipts (ADRs) are included in the Shareholder information section.

The Group's major capital and evaluation projects are listed in the Capital projects section on page 41.

Liquidity and capital resources

Details of our Liquidity and Capital risk management are contained within note 31 Financial risk management, part (v), to the 2011 financial statements.

We expect that contractual commitments for expenditure, together with other expenditure and liquidity requirements, will be met from internal cash flow and, to the extent necessary, from the existing facilities described in note 31 Financial risk management, part (v), to the 2011 financial statements.

Treasury management and financial instruments

Details of our Treasury management and financial instruments are contained within the introductory paragraphs of note 31 Financial risk management, to the 2011 financial statements.

Foreign exchange

The following sensitivities give the estimated effect on net and underlying earnings assuming that each exchange rate moved in isolation. The relationship between currencies and commodity prices is a complex one and movements in exchange rates can cause movements in commodity prices and vice versa. Where the functional currency of an operation is that of a country for which production of commodities is an important feature of the economy, such as the Australian dollar, there is a certain degree of natural protection against cyclical fluctuations, in that the currency tends to be weak, reducing costs in US dollar terms, when commodity prices are low, and vice versa.

Earnings sensitivities exchange rates

	Average exchange rate for 2011	Effect on net and underlying earnings of 10% change in full year average +/- US\$m
Australian dollar	US cents 103	910
Canadian dollar	101	300
Euro	139	8
Chilean peso	US\$1 = 483 pesos	24
New Zealand dollar	79	25
South African rand	14	51
UK sterling	160	17

The exchange rate sensitivities quoted above include the effect on net operating costs of movements in exchange rates but exclude the effect of the revaluation of foreign currency financial assets and liabilities. They should therefore be used with care.

Further details of our exposure to foreign currency fluctuations and currency derivatives, and our approach to currency hedging, are contained within note 31 Financial risk management, part (i), to the 2011 financial statements.

Interest rates

Details of our exposure to interest rate fluctuations are contained within note 31 Financial risk management, part (ii), to the 2011 financial statements.

Commodity prices

The approximate effect on the Group's underlying and net earnings of a ten per cent change from the full year average market price in 2011 for the following products would be:

Table of Contents

Financial review continued

Earnings sensitivities commodity prices

	Unit	Average market price for 2011	Effect on underlying and net earnings of 10% change in full year average
	dmtu	US\$	+/- US\$m
Iron ore			1,720
Aluminium ^{(a)(b)}	Tonne	2,395	510
Copper ^(a)	Pound	4.00	340
Gold	Ounce	1,571	70
Molybdenum	Pound	16	55
Thermal and coking coal	Tonne		280

(a) Excludes the impact of commodity derivatives.

(b) Excludes any impact on the non-core aluminium assets included in Other operations.

The sensitivities give the estimated impact on net earnings of changes in prices assuming that all other variables remain constant. These should be used with care. As noted previously, the relationship between currencies and commodity prices is a complex one and changes in exchange rates can influence commodity prices and vice versa.

Further details of our exposure to commodity price fluctuations are contained within note 31 Financial risk management, part (iii), to the 2011 financial statements.

Credit risks

Details of our exposure to credit risks relating to receivables, financial instruments and cash deposits, are contained within note 31 Financial risk management, part (iv), to the 2011 financial statements.

Disposals and acquisitions

Information regarding disposals and acquisitions is provided in note 39 Purchases and sales of subsidiaries, joint ventures, associates and other interests in businesses, to the 2011 financial statements on page 190.

Australian Minerals Resource Rent Tax

On 23 November 2011, the Australian Minerals Resource Rent Tax (MRRT) passed through the Australian lower house. The MRRT is a proposed tax on 30 per cent of the super profits from the mining of iron ore and coal in Australia, increasing the tax burden on these mines and hence the Group.

The bill is scheduled to be debated at the Senate in 2012. Whilst it is proposed to be effective from 1 July 2012, this is dependent on the bill being supported and passed through parliament. Once passed the legislation will be considered substantively enacted and the Group will be required to account for the deferred tax consequences under IAS 12 Income taxes from the substantive enactment date.

Deductible expenditure will include a starting base allowance that is proposed to be based on the value of the mining assets at 1 May 2010, depreciated over the life of the mines. Projects will also be eligible for a 25 per cent extraction allowance which reduces the effective statutory tax rate to 22.5 per cent of the super profits.

Edgar Filing: RIO TINTO PLC - Form 20-F

State royalties will be creditable for MRRT purposes, and MRRT payments will be deductible for company income tax purposes. The deferred tax consequences will have no current cash flow implications but may be significant. However, given the complexity of the MRRT, quantification remains in progress.

Critical accounting policies and estimates

Many of the amounts included in the financial statements involve the use of judgment and/or estimates. These judgments and estimates are based on management's best knowledge of the relevant facts and circumstances, having regard to previous experience, but actual results may differ from the amounts included in the financial statements.

Information about such judgments and estimates is contained in note 1 "Principal accounting policies" to the 2011 financial statements, and/or the other notes to the 2011 financial statements. The key areas are listed below:

Dual listed company reporting

Asset carrying values and the recoverability of goodwill

Asset lives

Ore reserve estimates

Close down, restoration and clean up obligations

Overburden removal costs

Deferred tax on fair value adjustments

Exploration and evaluation

Functional currency

Post retirement benefits

Recoverability of potential deferred tax assets

Contingencies

Basis of consolidation

Acquisition accounting

Off balance sheet arrangements and contractual commitments

Edgar Filing: RIO TINTO PLC - Form 20-F

The table below presents information in relation to our material off balance sheet arrangements, principally contingent liabilities, commitments for capital expenditure and other expenditure, and commitments under operating leases at 31 December 2011. Information regarding the Group's pension commitments and funding arrangements is provided in note 47 Post retirement benefits to the 2011 financial statements. Information regarding the Group's closedown and restoration obligations is provided in note 27 Provisions (not including taxation) to the 2011 financial statements.

We expect that these contractual commitments for expenditure, together with other expenditure and liquidity requirements will be met from internal cash flow and, to the extent necessary, from the existing facilities.

At 31 December 2011	< 1 yr US\$m	1-3 yrs US\$m	3-5 yrs US\$m	> 5 yrs US\$m	Total US\$m
Expenditure commitments in relation to:					
Operating leases	523	766	564	1,052	2,905

Unconditional purchase obligations	2,578	3,828	3,211	12,303	21,920
Other	1,646	256	42	20	1,964
	6,581	9,549	6,778	30,609	53,517
Total	16,804	13,615	7,383	31,661	69,463

Table of Contents**Five year review****Selected financial data**

The selected consolidated financial data below has been derived from the historical audited consolidated financial statements of the Rio Tinto Group. The selected consolidated financial data should be read in conjunction with, and qualified in their entirety by reference to, the 2011 financial statements and notes thereto. The financial statements as included on pages 131 to 215 have been prepared in accordance with International Financial Reporting Standards both as adopted by the EU (EU IFRS) and as issued by the International Accounting Standards Board (IFRS).

Notes

- (a) The financial statements for the year ended 31 December 2010 have been restated in accordance with IFRS 3 Business Combinations (Revised), following reclassification of certain balances relating to the consolidation of Oyu Tolgoi LLC.

- (b) Group operating profit under IFRS includes the effects of charges and reversals resulting from impairments (other than impairments of equity accounted units) and profit and loss on disposals of interests in businesses. Group operating profit amounts shown above exclude equity accounted operations, finance items, tax and discontinued operations.

- (c) The rights issues completed in July 2009 were at a discount to the then market price. Accordingly, earnings per share and dividends per share for all periods up to the date on which the shares were issued were adjusted for the bonus element of the issue. The bonus factor for Rio Tinto plc was 1.2105 and for Rio Tinto Limited was 1.2679.

- (d) The 31 December 2007 balance sheet has been restated for the revisions to Alcan's fair value accounting which were finalised in 2008.

Table of Contents**Acquisitions and divestments****Acquisitions**

Asset	Cost	Status
US\$m		
Acquired in 2012		
Copper Ivanhoe Mines	308	Purchase of additional shares increasing the Group's holding to 51 per cent
Acquired in 2011		
Copper Ivanhoe Mines	1,860	Participation in the strategic rights offering, exercise of outstanding share warrants, exercise of subscription rights granted in 2010 and purchase of additional shares, in aggregate increasing the Group's holding to 49 per cent
Energy Riversdale	4,168	Staged acquisition of shares in Riversdale Mining Limited; acquisition of a controlling interest of 52.6 per cent on 8 April 2011, increasing to 100 per cent by 1 August 2011, with renaming as Rio Tinto Coal Mozambique
Energy Hathor	550	Purchase of shares in Hathor Exploration resulting in an aggregate of a 70.2 per cent controlling interest being reached on 30 November 2011, increasing to 88 per cent by 31 December 2011 and completed on 12 January 2012
Acquired in 2010		
Copper Ivanhoe Mines	1,590	Purchases of additional shares, maturing of convertible debt facility and exercise of Series A and B warrants increasing the Group's holding to 40.3 per cent as at 31 December 2010. Rio Tinto consolidated Oyu Tolgoi LLC on 15 December 2010 following the signing of a new agreement with Ivanhoe Mines
Acquired in 2009		
Copper Ivanhoe Mines	388	The purchase of an additional 9.8 per cent interest increasing the Group's total holding to 19.7 per cent

Divestments

Asset	Proceeds	Status
US\$m		
Divested in 2011		
Alcan Engineered Products	Undisclosed	Sold 61 per cent to investment funds affiliated with Apollo Global Management, LLC (Apollo) and the Fonds Stratégique d'Investissement (FSI)
Minerals Talc	340 ^(a)	Sold to Imerys SA
Energy Colowyo	Undisclosed	Sold to Western Fuels-Colorado LLC
Exploration sundry assets	52	Sale of projects including Altai Nuurs coking coal deposit and Sari Gunay gold deposit
Divested in 2010		
Energy Cloud Peak	573	Secondary public offering
Alcan Packaging Beauty	Undisclosed	Sold to Sun European Partners LLP
Alcan Packaging Medical Flexibles	66	Sold to Amcor
Alcan Packaging Food Americas	1,200	Sold to Bemis Company Inc.
Energy Maules Creek (Rio Tinto: 75.7%)	427	Sold to Aston Resources
Energy Vickery (Rio Tinto: 75.7%)	28	Sold to Whitehaven Coal
Alcan Packaging global Pharmaceuticals, global Tobacco, Food Europe and Food Asia	1,948	Sold to Amcor
Sundry asset sales	57	Sale of assets including Ghana Bauxite Company, Brockville Specialty Alumina Plant and Rawhide Mine
Divested in 2009		
Energy Jacobs Ranch	764	Sold to Arch Coal, Inc
Iron Ore Corumbá mine	814	Sold to Vale
Diamonds & Minerals Exploration projects in Argentina and Canada	850	Sold to Vale
Aluminium Ningxia smelter (Rio Tinto: 50%)	125	Sold to Qingtongxia Aluminium Group
Exploration sundry assets	68	Sold to multiple parties
Energy Cloud Peak	741	IPO and connected debt offering
Alcan Engineered Products composites	349	Sold to Schweiter Technologies

40 [Rio Tinto 2011 Annual report](#)

Table of Contents**Capital projects**

Project	Approved capital cost (100%) US\$	Status
Iron ore expansion of Iron Ore Company of Canada (Rio Tinto 58.7%) from 18 to 22mtpa	\$486m	Recommended in May 2010 and is currently being commissioned as planned.
Iron ore preparation for the expansion of the Pilbara to 283mtpa and beyond (Rio Tinto share \$649m)	\$990m	Approved in July and August 2010, the funding allowed long lead items to be ordered as part of early works on the expansion of the Cape Lambert port to 133mtpa capacity.
Iron ore development of Hope Downs 4 mine in the Pilbara (Rio Tinto 50%)	\$2.1bn	Approved in August 2010, first production is expected in 2013. The new mine will have a capacity of 15mtpa and a capital cost of \$1.6 billion (Rio Tinto share \$0.8bn). Rio Tinto is funding the \$0.5 billion for the infrastructure.
Iron ore debottlenecking of Dampier port.	\$284m	Approved in September 2010, the project will add 5 million tonnes of annual capacity at the Dampier port by Q1 2012, taking the Pilbara capacity to 230mtpa.
Iron ore expansion of Pilbara infrastructure to 283mtpa	\$4.1bn	Approved in October 2010, the investment will increase infrastructure capacity by 53 million tonnes to 283mtpa by the end of 2013. Further investments in mine expansions will be required.
Iron ore expansion of Brockman 4 mine (from 22mtpa to 40mtpa) and Western Turner Syncline mine (from 6mtpa to 15mtpa) in the Pilbara.	\$1.4bn	Approved in December 2010, the two projects represent the first two of three mine developments to expand mine capacity to an anticipated 283mtpa by the end of 2013.
Iron ore phase two expansion of IOC's concentrate capacity to 23.3mtpa (Rio Tinto 58.7%)	\$277m	Approved in February 2011, phase two is expected to be complete by 2013 (Rio Tinto share \$163 million).
Iron ore phase two of the Marandoo mine expansion to sustain production at 230mtpa	\$1.1bn	Approved in February 2011, the mine will extend Marandoo at 15mtpa by 16 years to 2030.
Iron ore funding for early works and procurement as part of the programme to increase capacity in the Pilbara to 353mtpa	\$676m	Approved in June 2011, the funding (Rio Tinto share \$350 million) will be used to bring forward engineering work for the longest lead-time components of Cape Lambert port development and rail infrastructure. As a result, capacity expansion to 353mtpa will now be reached in the first half of 2015, six months earlier than planned.
Iron ore coastal water project in the Pilbara	\$310m	Approved in September 2011, the investment will assure a sustainable water supply for its iron ore operations in the Pilbara.
Iron ore investment in power and fuel supply in the Pilbara	\$833m	Approved in September 2011, the investment (Rio Tinto share \$706 million) in major power and fuel supply projects is part of its drive to substantially increase iron ore production capacity in Western Australia.
Iron ore development of Nammuldi mine in the Pilbara	\$2.2bn	Approved in February 2012, the project represents the third mine development to expand mine capacity to an anticipated 283mtpa by the end of 2013.
Iron ore Cape Lambert port and rail early works for the proposed capacity expansion to 353mtpa	\$1.2bn	Approved in February 2012, the \$1.2 billion funding (Rio Tinto share \$0.7 billion) follows other early works investments approved in June 2011.
Iron ore investment in autonomous trains in the Pilbara	\$518m	Approved in February 2012, the project (Rio Tinto share \$478 million) will drive productivity improvements, with the first driverless train to be launched in 2014, and the AutoHaul™ automated train programme scheduled for completion a year later.
Alumina expansion of the Yarwun refinery in Queensland, Australia from 1.4mtpa to 3.4mtpa	\$2.3bn	Approved in July 2007, the co-generation plant and shiploader were commissioned in 2010 and the calciners were commissioned in the fourth quarter of 2011. The project is expected to commence operation in the third quarter of 2012 with first bauxite to be processed through the expanded plant a few months prior.
Aluminium construction of a new 225MW turbine at the Shipshaw power station in Quebec, Canada	\$268m	Approved in October 2008, the project remains on track and is expected to be completed in December 2012. An additional \$40 million was approved in 2011 due to currency impacts and scope changes.
Aluminium modernisation of ISAL smelter in Iceland	\$487m	Approved in September 2010, the project is expected to increase production from 190 thousand tonnes (kt) to 230kt between April 2012 and July 2014. The project includes a leading-edge casting facility to produce value-added billet.
Aluminium 60kt per annum AP60 plant in Quebec, Canada	\$1.1bn	Approved in December 2010, first hot metal is expected in February 2013.
Aluminium modernisation and expansion of Kitimat smelter in British Columbia, Canada	\$3.3bn	A further amount of \$2.7bn was approved in December 2011. This was in addition to the cumulative spend of \$550m. It will increase capacity from 280ktpa to 420ktpa. Expected to come on-stream in first half of 2014.

Edgar Filing: RIO TINTO PLC - Form 20-F

<p>Molybdenum moly autoclave project in Utah, US Phase 1: 30mlbs, phase 2: 60mlbs</p>	<p>\$340m</p>	<p>Approval given to restart in April 2010. Phase 1 by Q4 2012, capacity by Q4 2013. Phase 2 complete in Q1 2015.</p>
<p>Nickel construction of the Eagle nickel and copper mine in Michigan, US</p>	<p>\$469m</p>	<p>Approved in June 2010, first production is expected in late 2013. The mine will produce an average of 17.3kt and 13.2kt per year of nickel and copper metal over six years.</p>
<p>Copper construction of phase one of Oyu Tolgoi copper and gold mine in Mongolia. On 24 January 2012, Rio Tinto increased its stake in Ivanhoe Mines to 51%. Ivanhoe owns 66% of the Oyu Tolgoi copper/gold project.</p>	<p>\$5.9bn</p>	<p>Rio Tinto consolidated Oyu Tolgoi LLC from 15 December 2010 following the signing of a new agreement with Ivanhoe Mines. First commercial production is expected in the first half of 2013.</p>
<p>Copper development of Organic Growth Project 1 and the Oxide Leach Area Project at Escondida (Rio Tinto share 30%)</p>	<p>\$1.4bn</p>	<p>Approved in February 2012, the expenditure primarily relates to replacing the Los Colorados concentrator with a new 152,000 tonnes per day plant, allowing access to high grade ore located underneath the existing facilities. Construction of the new plant will be complete within three years.</p>

(Rio Tinto share)

Table of Contents**Capital projects continued**

Project	Approved capital cost (100%) US\$	Status
Coking coal 20 year extension and expansion from 4.3mtpa to 5.7mtpa at Kestrel (Rio Tinto 80%), Queensland, Australia	\$2.0bn	The investment will extend the life of the mine to 2031 and is expected to come on-stream in Q2 2013. Capital cost increased from \$1.1bn: 50% of the increase relates to exchange rates, 20% from higher inflation and 30% due to delays and scope changes.
Thermal coal 6mtpa expansion of Hunter Valley Operations (Rio Tinto 80%) and Mount Thorley Warkworth mine (Rio Tinto 51%)	\$260m	Approved in July 2010, the two thermal coal expansions are expected to reach the full run rate by mid-2012.
Thermal coal expansion of thermal coal capacity at Bengalla, New South Wales, Australia by 2.1 million tonnes to 7.5 mtpa (Rio Tinto 32%)	\$184m	Approved in November 2010, the expansion will include the upgrading of infrastructure and the purchase of additional mining equipment. A feasibility study for a second stage expansion to increase production to 8.5mtpa is under way.
Coking coal development of the greenfield Benga coking and thermal coal mine in Mozambique (Rio Tinto 65%)	\$516m	Acquired as part of the Riversdale acquisition, Benga is expected to commence production around the end of the first quarter of 2012. Production from phase one is expected to ramp up to a rate of 1.6 mtpa of coking coal and 0.8 mtpa of thermal coal by the end of 2012.
Diamonds Argyle Diamond Mine underground project (originally approved in 2005, project was slowed in 2009)	\$2.1bn	In December 2011, a further \$0.5 billion of capital was approved for the Argyle underground project. This increase primarily reflected the impact of a record 2010/2011 wet season on project development and adverse exchange rate movements. The project is expected to be complete by the end of 2013 with full production in 2014.

Production data notes:

Mine production figures for metals refer to the total quantity of metal produced in concentrates, leach liquor or doré bullion irrespective of whether these products are then refined onsite, except for the data for bauxite and iron ore which represent production of marketable quantities of ore.

- (a) Rio Tinto percentage share, shown above, is as at the end of 2011. Where this shareholding has changed over the period 2009-2011, the weighted average ownership has been used. The footnotes below indicate all ownership changes over the three years. The Rio Tinto share varies at individual mines and refineries in the 'others' category and thus no value is shown.
 - (b) On 17 October 2011, Rio Tinto announced a reorganisation of its aluminium assets into three business units, Rio Tinto Alcan, Pacific Aluminium and Other Aluminium.
 - (c) Jonquière's (Vaudreuil's) production shows smelter grade alumina only and excludes hydrate produced and used for specialty alumina.
 - (d) Rio Tinto sold its 100 per cent interest in the Brockville specialty alumina plant with an effective date of 20 September 2010. Production data are shown up to that date.
 - (e) Production of smelter grade alumina at Gardanne ceased at the end of 2008. Production of specialty alumina continues from the Gardanne refinery.
 - (f) The Anglesey smelter ceased smelting operations at the end of the third quarter of 2009. Casting operations continue.
 - (g) The Beauharnois smelter ceased smelting operations in the second quarter of 2009. Casting operations continue.
 - (h) Rio Tinto sold its 50 per cent interest in the Ningxia aluminium smelter with an effective date of 26 January 2009. Production data are shown up to that date.
 - (i) Rio Tinto Alcan had an 80 per cent interest in the Awaso mine but purchased the additional 20 per cent of production. Rio Tinto Alcan sold its interest in Ghana Bauxite Company, owner of the Awaso mine, with an effective date of 1 February 2010.
 - (j) Bauxite production at non-managed mines has been restated from a wet to a dry tonne basis, in line with the tonnes shown for Rio Tinto managed operations.
 - (k) Rio Tinto has a 22.95 per cent shareholding in the Sangaredi mine but receives 45.0 per cent of production under the partnership agreement.
 - (l) Borate quantities are expressed as B₂O₃.
 - (m) Rio Tinto's interest in these mines is held through Coal & Allied Industries Ltd; Rio Tinto increased its interest in Coal & Allied from 75.7 per cent to 80.0 per cent with effect from 16 December 2011. Production data reflect the increased shareholding from that date.
 - (n) Production commenced at Clermont in the second quarter of 2010.
-
- (o) As a result of the initial public offering of Cloud Peak Energy Inc. on 20 November 2009, Rio Tinto held a 48.3 per cent interest in the Antelope, Cordero Rojo and Spring Creek mines and a 24.1 per cent interest in the Decker mine. These interests were formerly reported under Rio Tinto Energy America but are now managed by Cloud Peak Energy. Following a secondary public offering in December 2010, Rio Tinto completed the divestment of its entire interest in Cloud Peak Energy Inc. with an effective date of 15 December 2010. Production data are shown up to that date.
 - (p) Rio Tinto sold its 100 per cent interest in Colowyo with an effective date of 1 December 2011. Production data are shown up to that date.
 - (q) Rio Tinto completed the sale of its 100 per cent interest in the Jacobs Ranch mine on 1 October 2009. Production data are shown up to that date.
 - (r) Through a joint venture agreement with Freeport-McMoRan Copper & Gold (FCX), Rio Tinto is entitled to 40 per cent of additional material mined as a consequence of expansions and developments of the Grasberg facilities since 1998. Total production reflects the quantities attributable to the joint venture.
 - (s) On 28 October 2008, Rio Tinto increased its shareholding in the Rawhide Joint Venture from 51 per cent to 100 per cent. The previous joint venture shareholder continued to be entitled to 49 per cent of production until 31 December 2008; thereafter Rio Tinto was entitled to 100 per cent. Rio Tinto sold its 100 per cent interest in the Rawhide mine with an effective date of 25 June 2010. Production data are shown up to that date.
 - (t) Rio Tinto completed the sale of its 100 per cent interest in the Corumbá mine, effective 18 September 2009.
 - (u) Rio Tinto's share of production includes 100 per cent of the production from the Eastern Range mine. Under the terms of the joint venture agreement (Rio Tinto 54 per cent), Hamersley Iron manages the operation and is obliged to purchase all mine production from the joint venture.
 - (v) Production at the Mesa A mine commenced in the first quarter of 2010.
 - (w) Rio Tinto sold its 100 per cent interest in the talc business with an effective date of 1 August 2011. Production data are shown up to that date.
 - (x) Quantities comprise 100 per cent of Rio Tinto Fer et Titane and 50 per cent of Richards Bay Minerals (RBM) production until late 2009 when RBM concluded a Broad Based Black Economic Empowerment transaction. Rio Tinto Iron & Titanium's share of RBM production reflects a decrease from 50 to 37 per cent interest with effect from 9 December 2009. In February 2012, Rio Tinto announced that it would be increasing its interest in RBM from 37 per cent to 74 per cent.
 - (y) Ilmenite mined in Madagascar is being processed in Canada with effect from June 2009.

Production figures are sometimes more precise than the rounded numbers shown, hence an apparent small difference may result where the Rio Tinto share is totalled.

Table of Contents

Ore Reserves (under Industry Guide 7)

For the purposes of this combined Annual report on Form 20-F estimates of ore reserves have been prepared in accordance with the SEC's Industry Guide 7 under the United States Securities Act of 1933 and the following definitions:

An Ore Reserve means that part of a mineral deposit that can be economically and legally extracted or produced at the time of the reserves determination. To establish this, studies appropriate to the type of mineral deposit involved have been carried out to estimate the quantity, grade and value of the ore mineral(s) present. In addition, technical studies have been completed to determine realistic assumptions for the extraction of the minerals including estimates of mining, processing, economic, marketing, legal, environmental, social and governmental factors. The degree of these studies is sufficient to demonstrate the technical and economic feasibility of the project and depends on whether or not the project is an extension of an existing project or operation. The estimates of minerals to be produced include allowances for ore losses and the treatment of unmineralised materials which may occur as part of the mining and processing activities. Ore Reserves are sub-divided in order of increasing confidence into Probable Ore Reserves and Proven Ore Reserves as defined below.

The term economically, as used in the definition of reserves, implies that profitable extraction or production under defined investment assumptions has been established through the creation of a mining plan, processing plan and cash flow model. The assumptions made must be reasonable, including costs and operating conditions that will prevail during the life of the project.

Ore reserves presented in accordance with SEC Industry Guide 7 do not exceed the quantities that, it is estimated, could be extracted economically if future prices were to be in line with the average of historical prices for the three years to 30 June 2011, or contracted prices where applicable. For this purpose, contracted prices are applied only to future sales volumes for which the price is predetermined by an existing contract; and the average of historical prices is applied to expected sales volumes in excess of such amounts. Moreover, reported ore reserve estimates have not been increased above the levels expected to be economic based on Rio Tinto's own long term price assumptions.

The term legally, as used in the definition of reserves, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for reserves to exist, there is reasonable assurance of the issuance of these permits or resolution of legal issues. Reasonable assurance means that, based on applicable laws and regulations, the issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with the Company's current mine plans.

The term proven reserves means reserves for which (a) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling; and (b) the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well established. Proven reserves represent that part of an orebody for which there exists the highest level of confidence in data regarding its geology, physical characteristics, chemical composition and probable processing requirements.

The term probable reserves means reserves for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation. This means that probable reserves generally have a wider drill hole spacing than for proven reserves.

The amount of proven and probable reserves shown below does not necessarily represent the amount of material currently scheduled for extraction, because the amount scheduled for extraction may be derived from a life of mine plan predicated on prices and other assumptions which are different to those used in the life of mine plan prepared in accordance with Industry Guide 7.

The estimated ore reserve figures in the following tables are as of 31 December 2011. Metric units are used throughout. The figures used to calculate Rio Tinto's share of reserves are often more precise than the rounded numbers shown in the tables, hence small differences might result if the calculations are repeated using the tabulated figures. Commodity price information is given in footnote (a).

Edgar Filing: RIO TINTO PLC - Form 20-F

Where operations are not managed by Rio Tinto the reserves are published as received from the managing company.

Notes

(a) Commodity prices (based on a three year average historical price to 30 June, 2011) used to test whether the reported reserve estimates could be economically extracted, include the following benchmark prices:

Ore reserve	Unit	US\$
Aluminium	pound	0.95
Copper	pound	3.07
Gold	ounce	1,112
Iron ore	dry metric tonne	112

Edgar Filing: RIO TINTO PLC - Form 20-F

Platts Spot price, 62% Fe fines, fob West Australia			
Molybdenum		pound	15.64
Nickel		pound	8.58
Silver		ounce	19.53

Prices for all other commodities are determined by individual contract negotiation. The reported reserves for these commodities have been tested to confirm that they could be economically extracted using a combination of existing contract prices until expiry and thereafter three year historical prices.

- (b) Type of mine: O/P = open pit, O/C = open cut, U/G = underground.
- (c) Reserves of iron ore, bauxite and diamonds are shown as recoverable reserves of marketable product after accounting for all mining and processing losses. Mill recoveries are therefore not shown.
- (d) Reserves at Trombetas (MRN) decreased following production.
- (e) The reserves increased at Sangaredi following technical and economic studies supporting a reduced cut-off grade.
- (f) On 17 October 2011, Rio Tinto announced a reorganization of its aluminium assets with the Gove mine moving into Pacific Aluminium.
- (g) Reserves of industrial minerals are expressed in terms of marketable product, ie after all mining and processing losses. In the case of borates, the marketable product is B₂O₃.
- (h) Stockpile components of reserves are shown for all operations at the relevant mine.
- (i) Coal reserves are shown as both recoverable and marketable. The yield factors shown reflect the impact of further processing, where necessary, to provide marketable coal. All reserves at operating mines are assigned, all undeveloped reserves are unassigned. By assigned and unassigned, we mean the following: assigned reserves means coal which has been committed by the coal company to operating mine shafts, mining equipment, and plant facilities, and all coal which has been leased by the company to others; unassigned reserves represent coal which has not been committed, and which would require new mineshafts, mining equipment, or plant facilities before operations could begin on the property.
- (j) Coal type: SC: steam/thermal coal, MC: metallurgical/coking coal.
- (k) Analyses of coal from the US were undertaken according to ASTM Standards on an As Received moisture basis whereas the coals from Australia have been analysed on an Air Dried moisture basis according to Australian Standards, MJ/kg = megajoules per kilogramme. 1 MJ/kg = 430.2 Btu/lb.
- (l) Rio Tinto's interest in these mines is held through Coal and Allied Industries Ltd; Rio Tinto increased its interest in Coal and Allied from 75.7 per cent to 80.0 per cent with effect from 16 December 2011.
- (m) The reduced reserves at Blair Athol reflect production depletion.
- (n) The lower reserves at Hail Creek have resulted from production depletion, geological model updates and updated mining studies.
- (o) Hunter Valley Operations reduced its reserves after updating economic inputs in the modelling process.
- (p) The term undeveloped reserves is used here to describe material that is economically viable on the basis of technical and economic studies but for which mining and processing permits may have yet to be requested or obtained. There is a reasonable, but not absolute, certainty that the necessary permits will be issued and that mining can proceed when required.
- (q) Rio Tinto acquired Riversdale Mining Limited, renamed as Rio Tinto Coal Mozambique, in August 2011. The Benga project was commissioned in February 2012 and the reserve is listed here for the first time.
- (r) Escondida sulphide and sulphide leach reserves increased after updating economic inputs in the modelling process.
- (s) The Escondida oxide reserve decrease is driven by an updated geological model and mining studies.
- (t) Under the terms of a joint venture agreement between Rio Tinto and FCX, Rio Tinto is entitled to a direct 40 per cent share in reserves discovered after 31 December 1994 and it is this entitlement that is shown.
- (u) The decrease in reserves at Palabora reflects production as well as updated anticipated metal recovery rates based on reconciliation results.
- (v) Rio Tinto increased its interest in Hugo Dummett North from 26.6 per cent to 32.3 per cent during 2011.
- (w) Rio Tinto increased its interest in Hugo Dummett North Extension from 24.9 per cent to 29.5 per cent during 2011.
- (x) Rio Tinto increased its interest in South Oyu from 26.6 per cent to 32.3 per cent during 2011.
- (y) The Brockman 2 (Brockman ore) reserve increase results from updated geological models and mining studies.
- (z) The Mt Tom Price (Brockman ore) reserve decrease follows production.
- (aa) The Nammuldi (Mara Mamba ore) reserve increase is due to updated geological models and inclusion of additional material following mining studies.
- (bb) The Paraborndoo (Brockman ore) reserve decrease follows production.
- (cc) The Yandicoogina (Pisolite ore HG) reserve increase is due to the inclusion of additional material following mining studies.
- (dd) The Yandicoogina (Process Product) reserve increase is due to the inclusion of additional material following mining studies.
- (ee) The Hamersley Channar (Brockman ore) reserve decrease reflects production and updating of the geologic model.
- (ff) The Hamersley Eastern Range (Brockman ore) reserve decrease is due to updated geological models and mining studies.
- (gg) Reserves at Iron Ore Company of Canada are reported as marketable product (56 per cent pellets and 44 per cent concentrate for sale), at a natural moisture content of two per cent using process upgrade factors derived from current IOC concentrating and pellet operations. The marketable product is obtained from mined material comprising 844 million dry tonnes at 38.2 per cent iron (proven) and 530 million dry tonnes at 37.8 per cent iron (probable).
- (hh) Palabora underground iron ore reserves are reported for the first time following technical and economic studies.
- (ii) The increase in the Pannawonica (Pisolite ore) reserves is due to updated geological models.
- (jj) Hope Downs 4 (Brockman Ore) is currently under construction.
- (kk) Molybdenum grades interpolated from exploration drilling assays have been factored based on a long reconciliation history to blasthole and mill samples.
- (ll) Tonnage and grade changes at Ranger include production, removal of low grade stockpiled material as announced in mid 2011 as well as technical studies leading to an expected increase in the grade of the remaining ore.
- (mm) Drill hole spacings are either average distances, a specified grid distance (a regular pattern of drill holes the distance between the drill holes along the two axes of the grid will be aligned to test the size, shape and continuity of the mineral deposit; as such there may be different distances between the drill holes along the two axes of a grid) or the maximum drill hole spacing that is sufficient to determine the reserve category for a particular deposit. As the continuity of mineralisation varies from deposit to deposit, the drill hole spacing required to categorise a reserve varies between and within deposit types.

Table of Contents**Mines and production facilities****Group mines as at 31 December 2011**

(Rio Tinto's interest 100 per cent unless otherwise shown)

Mine	Location	Access	Title/lease
BAUXITE Rio Tinto Alcan CBG Sangaredi (23%)	Kamsar, Guinea	Road, air and port	Lease expires in 2038
MRN Porto Trombetas(12%)	Porto Trombetas, Para, Brazil	Air or port	Mineral rights granted for undetermined period
Weipa/Ely	Weipa, Queensland, Australia	Road, air and port	The Queensland Government Comalco (ML704) lease expires in 2041 with an option of 21 year extension, then two years' notice of termination; the Ely Alcan Queensland Pty. Limited Agreement Act 1965 (ML7301) expires in 2048 with 21 year right of renewal with a two year notice period
Pacific Aluminium Gove	Gove, Northern Territory, Australia	Road, air and port	All leases were renewed in 2011 for a further period of 42 years. The residue disposal area is leased from the Arnhem Land Aboriginal Land Trust. The Northern Territory government is the lessor of the balance of the leases, however, on expiry of the 42 year renewed term, the land subject of the balances of the leases will all vest to the Arnhem Land Aboriginal Land Trust
COPPER Escondida (30%)	Atacama Desert, Chile	Pipeline and road to deep sea port at Coloso; road and rail	Rights conferred by Government under Chilean Mining Code
Grasberg joint venture (40% of production)	Papua, Indonesia	Pipeline, road and port	Indonesian Government Contracts of Work expire in 2021 with option of two ten-year extensions
Kennecott Utah Copper Bingham Canyon	Near Salt Lake City, Utah, US	Pipeline, road and rail	Owned
Northparkes (80%)	Goonumbla, New South Wales, Australia	Road and rail	Hold three State Government mining leases of which two expire in 2012. Lease renewals were lodged in 2011 as per Government requirements and are under review. Third lease expires 2031. Development consent approved in 2009 for extension of mine life to 2025
Palabora (57.7%)	Phalaborwa, Limpopo Province, South Africa	Rail and road	Lease from South African Government until deposits depleted. Base metal claims owned by Palabora

Edgar Filing: RIO TINTO PLC - Form 20-F

DIAMONDS & MINERALS

Diamonds

Argyle Diamonds	Kimberley Ranges, Western Australia	Road and air	Mining tenement held under Diamond (Argyle Diamond Mines Joint Venture) Agreement Act 1981-1983; lease extended for 21 years from 2004
Diavik (60%)	Northwest Territories, Canada	Air, ice road in winter	Mining leases from Canadian Federal Government expiring in 2017 and 2018
Murowa (77.8%)	Zvishavane, Zimbabwe	Road and air	Claims and mining leases
Industrial Minerals			
Rio Tinto Minerals Boron	California, US	Road and rail	Owned
Rio Tinto Fer et Titane	Havre-Saint-Pierre, Quebec, Canada	Rail and port (St Lawrence River)	Mining covered by two concessions granted by State in 1949 and 1951 which, subject to certain Mining Act restrictions, confer rights and obligations of an owner
Lac Tio QIT Madagascar Minerals (80%)	Fort-Dauphin, Madagascar	Road and port	Mining lease
Richards Bay Minerals (37%)	Richards Bay, KwaZulu-Natal, South Africa	Rail, road and port	Long-term renewable mineral leases; State lease for Reserve 4 initially runs to end 2022; Ingonyama Trust lease for Reserve 10 runs to 2022. Application made for both mineral leases to be converted to new order mining rights following transfer in December 2009 of 26% interest to investor groups of historically disadvantaged South Africans in terms of Mining Charter legislation

Table of Contents

History	Type of mine	Power source
Bauxite mining commenced in 1973. Shareholders are 51% Halco and 49% Government of Guinea. Rio Tinto Alcan has held 45% of Halco since 2004. Current annual capacity is 13 million tonnes	Open cut	On site generation (fuel oil)
Mineral extraction commenced in April 1979. Initial production capacity 3.4 million tonnes annually. From October 2003, production capacity up to 16.3 million tonnes per year on a dry basis. Capital structure currently: Vale (40%), BHP Billiton (14.8%), Rio Tinto Alcan (12%), CBA (10%), Alcoa/Abalco (18.2%) and Norsk Hydro (5%)	Open cut	On site generation (heavy oil, diesel)
Bauxite mining commenced in 1961 at Weipa. Major upgrade completed at Weipa in 1998. Rio Tinto interest increased from 72.4% to 100% in 2000. In 1997, Ely Bauxite Mining Project Agreement signed with local Aboriginal land owners. Bauxite Mining and Exchange Agreement signed in 1998 with Comalco to allow for extraction of ore at Ely. The Western Cape Communities Co-Existence Agreement, an Indigenous Land Use Agreement, was signed in 2001. In 2004 a mine expansion was completed at Weipa that lifted annual capacity to 21.5 million tonnes. Mining commenced on the adjacent Ely mining lease in 2006, in accordance with the 1998 agreement with Alcan (first ore extracted at Ely in 2007). A second shiploader that increases the shipping capability was commissioned in 2006 at Weipa	Open cut	On site generation; new power station commissioned in 2006
Bauxite mining commenced in 1970 feeding both the Gove refinery and export market capped at two million tonnes per annum. Bauxite export ceased in 2006 with feed intended for the expanded Gove refinery. Bauxite exports recommenced in 2008. Current production capacity about ten million tonnes per annum with mine life estimated to 2030	Open cut	Central power station located at the Gove refinery
Production started in 1990 and expanded in phases to 2002 when new concentrator was completed; production from Norte started in 2005 and the sulphide leach produced the first cathode during 2006	Open pit	Supplied from SING grid under various contracts with local generating companies
Joint venture interest acquired 1995. Capacity expanded to over 200,000 tonnes of ore per day in 1998. Addition of underground production of more than 35,000 tonnes per day in 2003. Expansion to 50,000 tonnes per day in mid 2007 and to 80,000 tonnes in 2010	Open pit and underground	Long-term contract with US-Indonesian consortium operated purpose-built coal-fired generating station
Interest acquired in 1989. Modernisation includes smelter complex and expanded tailings dam	Open pit	On site generation supplemented by long-term contracts with Rocky Mountain Power
Production started in 1995; interest acquired in 2000	Open pit and underground	Supplied from State grid
Development of 20-year underground mine commenced in 1996 with open pit closure in 2003	Underground	Supplied by ESKOM via grid network
Interest increased from 59.7% following purchase of Ashton Mining in 2000. Underground mine project approved in 2005 to extend mine life to 2019	Open pit to underground in future	Long-term contract with Ord Hydro Consortium and on site generation
Deposits discovered 1994-1995. Construction approved 2000. Diamond production started 2003. Second dike closed off in 2005 for mining of additional orebody. The underground mine started production in 2010, ramping up to full production in 2013	Open pit to underground in future	On site diesel generators; installed capacity 27MW with an upgrade under way
Discovered in 1997. Small-scale production started in 2004	Open pit	Supplied by ZESA with diesel generator back up

Edgar Filing: RIO TINTO PLC - Form 20-F

Deposit discovered in 1925 and acquired by Rio Tinto in 1967	Open pit	On site co-generation units and local power grid
Production started 1950; interest acquired in 1989	Open pit	Long-term contract with Hydro-Québec
Began as exploration project 1980s; construction approved 2005; ilmenite production started end of 2008	Mineral sand dredging	On site diesel generators
Production started 1977; interest acquired 1989. Fifth mining plant commissioned in 2000. One mining plant decommissioned in 2008	Dune sand dredging	Contract with ESKOM

Table of Contents

History	Type of mine	Power source
Mining commenced 1981. Interest acquired through acquisition of North 2000	Open pit	On site diesel/steam power generation
Production started for export at Blair Athol in 1984. Kestrel was acquired and recommissioned in 1999. Hail Creek started in 2003. Clermont Mine commenced production in 2010. Rio Tinto completed the privatisation of Coal & Allied during 2011, which is now owned 80/20 with Mitsubishi Development, and which Rio Tinto continues to manage. Successive acquisitions of surrounding assets results in the current portfolio	Open cut and underground (Kestrel)	State-owned grid
Interest acquired in 2011. Construction of mine and coal handling and preparation plant started in 2010 and is expected to be finalised early 2012	Open pit	Mozambican national grid and diesel generators
Production began in 1976	Open pit	Supplied by NamPower via grid network
Annual capacity increased to 68 million tonnes during 1990s. Yandicoogina first ore shipped in 1999 and port capacity increased. Eastern Range started 2004	Open pit	Supplied through the integrated Hamersley and Robe power network operated by Pilbara Iron
Joint venture between Rio Tinto and Hancock Prospecting. Construction of Stage 1 to 22 million tonnes per annum commenced April 2006 and first production occurred November 2007. Stage 2 to 30 million tonnes per annum completed 2009	Open pit	Supplied through the integrated Hamersley and Robe power network operated by Pilbara Iron
Interest acquired in 2000 through North. Current operation began in 1962 and has processed over one billion tonnes of crude ore since. Annual capacity 17.5 million tonnes of concentrate of which 13.5 million tonnes can be pelletised	Open pit	Supplied by Newfoundland Hydro under long-term contract
First shipment in 1972. Annual sales reached 30 million tonnes in late 1990s. Interest acquired in 2000 through North. West Angelas first ore shipped in 2002 and mine expanded in 2005. Current capacity approximately 50 million tonnes per year	Open pit	Supplied through the integrated Hamersley and Robe power network

Construction of the Dampier field started in 1969; first shipment in 1972. Lake MacLeod was acquired in 1978 as an operating field. Port Hedland was acquired in 2001 as an operating field

Solar evaporation of seawater (Dampier and Port Hedland) and underground brine (Lake MacLeod); dredging of gypsum from surface of Lake MacLeod

Dampier supply from Hamersley Iron Pty Ltd; Lake MacLeod from Western Power and on site generation units; Port Hedland from Western Power

IOC Pellet Plant (59%)	Labrador City, Newfoundland and Labrador, Canada	100% leaseholds (expiring in 2020, 2022 and 2025 with rights of renewal for further terms of 30 years)	Pellet induration furnaces producing multiple iron ore pellet types	13,500,000 tonnes per+ year pellet

Notes:

(a) Capacity as at 31 December 2011 reflects the closures of two potlines in preparation for the Kitimat modernisation project. The nameplate capacity of the Kitimat smelter remains at 282,000 tonnes per year.

(b) In March 2009, Rio Tinto announced that Hismelt® would be placed on an extended care and maintenance programme. In December 2010, the Hismelt® joint venture partners agreed to close the Kwinana site permanently and terminate the joint venture. A closure study is expected to be completed in 2012. In 2011, Rio Tinto signed a Memorandum of Understanding with Jindal Steel and Power Limited (JSPL) that will involve the relocation of the existing Kwinana Hismelt® plant from Australia to India at JSPL's existing facility in Angul, Orissa. The relocated plant will be fully owned by JSPL, and JSPL and Rio Tinto will work together to further develop and market the technology.

Corporate governance

Letter from the chairman

Dear Shareholder,

To achieve our vision of global leadership in the mining and metals sector, we must maintain the highest standards of corporate governance. In the section that follows, we focus on our corporate governance framework and practice, provide you with further details about the board and explain how it carries out its responsibilities to safeguard the Group's assets. I hope this will demonstrate to you that the way in which we conduct our business supports our strategic aim of creating long-term, sustainable returns to you, our shareholders.

In this letter, I wanted to share with you my views on the composition of the board, its continued evolution, the importance we place on diversity, and on sound and effective corporate governance, which I see as fundamental to the successful delivery of our strategy.

My role as non-executive chairman is to lead the board and to ensure it is focused on its oversight of management and the delivery of our strategy. Tom Albanese's role, as chief executive, is to focus on sustained operational excellence and growth of the business and to do so safely. Our roles are complementary, but importantly, they are distinct, with our respective responsibilities set out in writing and in a form which has been approved by the board.

For me, the delineation between these executive and non-executive roles is crystal clear: the non-executives have oversight of the executive management team whilst the executive, under Tom's leadership, have an operational role based upon our vision of leadership in the mining and metals sector. The non-executive directors nevertheless exercise a strong and deliberately challenging role in the board decision-making process and ensure appropriate control mechanisms are in place to safely implement our strategy and plans.

With me as chairman, the board comprises three executive directors and ten independent non-executive directors, all of whom meet our own independence criteria, which are in turn based upon the requirements of the corporate governance codes in the UK, the US and Australia.

We are a balanced and diverse board. The directors bring with them truly international experience from a wide range of professional, business and public office backgrounds. For Rio Tinto, diversity embraces a range of different measures, including, of course, gender diversity. We have adopted a diversity and inclusion policy with measurable objectives for achieving diversity across the company, including on the board. More information on this policy is set out in this report.

When I was appointed three years ago I made it clear that one of my objectives was to gradually and systematically refresh the board. Since then our Nominations committee, which I chair, has dedicated considerable attention to succession planning, both non-executive and executive. The composition of the board has changed considerably in this period. It will continue to evolve as we constantly review the profile, skill sets, diversity and individual qualities of our non-executives against the current and future needs of the business and the ever-changing environment in which we operate.

Your board devotes much of its time to reviewing, debating and challenging proposals for investment from management, as well as dealing with a wide range of other issues including safety, the Group's strategic direction, monitoring business performance, optimising capital allocation and expenditure whilst carefully evaluating the wide range of risks facing the business. As you will read in the sections that follow, the board committees, under the effective leadership of their respective chairs, carry out important and demanding roles on the board's behalf and facilitate the embedding of effective governance across the organisation.

As they typically come from a wide range of backgrounds, we provide new board members with a detailed induction programme and extensive training. I also lead a rigorous evaluation exercise of the performance of the directors each year and having just completed this for 2011, I am very comfortable with the contribution each member of the board is making. Resulting from that evaluation, I also support the need for continuous improvement and the desire for a renewed focus on the Group's strategic position relative to its peers, as well as how we will deal with the growing human resource and productivity challenges facing the sector generally.

I believe that our non-executive directors cannot make an effective contribution without the familiarisation and deeper understanding gained through site visits. So in 2011, the directors visited our operations in the Pilbara, Western Australia; and our coal operations in Queensland, Australia. Future visits are planned to the Group's new operations in Mozambique, and to our established operations in South Africa. Indeed, of the eight board meetings held in 2011 five were in the UK, two in Australia and one in Canada.

We want to ensure we have people on your board for whom corporate governance is not simply a set of rules: we need those who are also willing to embrace it openly and appreciate how we want the Group to be managed in the interests of all our stakeholders. Good governance is, in essence, at the heart of everything we do.

Edgar Filing: RIO TINTO PLC - Form 20-F

I would welcome your feedback.

Yours sincerely,

Jan du Plessis
Chairman

Table of Contents

Corporate governance continued

Rio Tinto takes a unified approach to corporate governance to comply with the regulatory obligations associated with its three principal stock exchange listings in the UK, Australia and the US.

Statement of compliance with governance codes and standards in 2011

In compiling this report, the directors have referred to the UK Corporate Governance Code (the Code), the Australian Securities Exchange (ASX) Corporate Governance Principles and Recommendations 2nd edition with 2010 Amendments (the ASX Principles), and the New York Stock Exchange (NYSE) Corporate Governance Standards (the NYSE Standards).

Throughout 2011 and at the date of this report the Group applied the principles of, and was compliant with, the provisions of Section 1 of the Code and with the ASX Principles.

Rio Tinto plc, as a foreign issuer with American Depositary Shares listed on the NYSE, is obliged by the NYSE Standards to disclose any significant ways in which its practices of corporate governance differ from the NYSE Standards.

The Company has reviewed the NYSE Standards and believes that its practices are broadly consistent with them, with one exception. The NYSE Standards state that companies must have a nominating/ corporate governance committee composed entirely of independent directors which, in addition to identifying individuals qualified to become board members, develops and recommends to the board a set of corporate governance principles applicable to the Company.

Rio Tinto has a Nominations committee, information about which is set out on page 72. This committee does not develop corporate governance principles for the board's approval. The board itself performs this task and approves the Group's overall system of governance and internal controls.

Further information about the corporate governance framework is available in the Shareholders section of Rio Tinto's website.

The board

Rio Tinto plc and Rio Tinto Limited have a common board of directors. The directors are responsible for the success of the Group and, through the independent oversight of management, are accountable to shareholders for the performance of the business.

Role and responsibilities

The principal role of the board is to set the Group's vision and to regularly review its strategic direction. In doing this, the board also has responsibility

for corporate governance and oversees management's control and accountability framework.

Edgar Filing: RIO TINTO PLC - Form 20-F

A formal schedule of matters reserved by the board has been established by the directors. This covers areas such as the Group's strategy, major investments and acquisitions and oversight of risk. It is available on the website.

The board is ultimately accountable to Rio Tinto's shareholders for the performance of the business. Responsibility for day-to-day management of the business is delegated to the chief executive and the Executive committee. Authorities are also delegated to individual executives, all within an agreed financial control framework. As part of the annual financial planning process, the board sets annual performance targets, which include personal and business performance measures, under the Group's short term incentive plan (detailed on page 101). These performance targets are determined by the Remuneration committee on behalf of the board for the chief executive based upon his proposals and objectives for the year. The chief executive establishes targets for the other members of his Executive committee which are then cascaded throughout management teams. Further details of the performance evaluation of the executive directors and other senior executives is discussed in the Remuneration report.

Board balance and independence

Board composition

The names, skills and experience of each director together with their terms in office are shown in the biographical details on pages 77 to 79. Details of changes to the board during 2011 and in the year to date are set out in the Directors' report on page 83.

Director independence

The tests of independence of a non-executive director vary between the jurisdictions where Rio Tinto has listings. The board has adopted a formal policy for the determination of the independence of its non-executive directors which is available on the Group's website. Applying the criteria of the independence policy, the board is satisfied that all of its non-executive directors are independent.

Among the key criteria of the independence policy are independence from management and the absence of any business relationship which could materially interfere with the director's independence of judgement and ability to provide a strong, valuable contribution to the board's deliberations, or which could interfere with the director's ability to act in the best interests of the Group. Where contracts in the ordinary course of business exist between Rio Tinto and a company in which a director has declared an interest, these are reviewed for materiality to both the Group, and the other party to the contract. Material is defined in the policy as being where the relationship accounts for more than two per cent of either party's consolidated gross revenue per

Progress against our priorities

What we said

Prioritise value-adding growth, and opportunistic merger and acquisition activity;

Support the vision of global sector leadership through regular review and oversight of Group strategy;

Review financial and non-financial performance metrics to maintain a strong balance sheet;

Lead succession planning for the board and senior executives;

What we have achieved

Organic growth programme continues to ramp up whilst acquisitions completed have created further growth options;

Major projects progressing well with phased approach to allocating cash for investment through the cycle;

Disciplined capital approval process resulting in US\$16 billion capital expenditure approved for 2012;

High quality Tier 1 projects in advanced study;

Keen focus on the Group's risks, increasing oversight and review of key risks by board and committees;

Edgar Filing: RIO TINTO PLC - Form 20-F

Strive for excellence in the Group's governance processes and policies, including risk governance; and

Deliver year-on-year improvement in safety performance.

Secured an enhanced mix of experience on the Board through the appointments of Chris Lynch and John Varley in 2011;

Overall progress against key indicators in 2011. Regrettably there were fatalities in controlled operations;

Delivered continued improvements in safety in terms of injury frequency rates; and

Achieved balance sheet flexibility allowing the Group to pursue further economic growth and/or mergers and acquisitions.

Table of Contents

annum, although the test also takes other circumstances into account. The chairman was considered independent on appointment under the Code, and in the board's view he continues to satisfy the tests for independence under the ASX Principles and the NYSE Standards.

Executive directors' other directorships

Executive directors may be invited to become non-executive directors of other companies. The board has adopted a procedure under which approval may be given to accept such invitations recognising the benefit to be derived to the individual and to Rio Tinto from such appointments. For further information see page 104.

Election and re-election

The directors may appoint additional members to join the board during the year. Directors appointed in this way will be subject to election by shareholders at the first annual general meetings after their appointment. In subsequent years the directors are expected to submit themselves for re-election at the annual general meetings of each Company on an annual basis.

Non-executive directors are normally expected to serve at least six years and, except in special circumstances, would not normally serve more than nine years.

Governance processes

In 2011, there were eight scheduled board meetings and two board meetings convened and held at short notice. Details of the directors' attendance at all of the board and committee meetings held in 2011 are set out below.

The board has regular discussions with the executives during the year on the Group's strategy. These discussions will typically include strategy presentations that are given by product group chief executives, other members of the Executive committee or global heads of function. The board also holds an annual two day strategy-setting meeting with the Executive committee which includes broader, detailed review sessions on the Group's strategic direction. The outputs from this event help underpin the board's annual financial planning exercise and provide strategic direction and focus to the executive team through effective allocation of the Group's resources.

Directors receive timely, regular and appropriate information to enable them to fulfil their duties. They also have direct access to the advice and services of the company secretaries. The directors are also able to obtain independent professional advice at the Group's expense.

Directors' membership of and attendance of board and committee meetings during 2011

(a) Retired from the board on 5 May 2011

(b) Appointed 1 September 2011

(c) Number of meetings attended/maximum the director could have attended

(d) Stood down from Audit committee with effect from October 2011

What are our priorities

Succession

Review executive succession planning under the leadership of the Nominations committee.

Performance

Optimal application of human resources;

Leadership in mine operations, profitability and value accretive growth;

Maintaining strength in the balance sheet;

Delivery on existing commitments without losing sight of credible alternatives;

Addressing the performance challenges within Rio Tinto Alcan; and

Continued drive for improvements in safety performance.

Strategy

Enhanced economic scenario planning;

An asset allocation strategy focusing on the relative merits of dividend/capital management versus M&A growth; and

Weather the current economic weakness and volatility and capitalising on opportunities, as and when these arise.

People

Globalising the business in relation to employee diversity and ensuring host country employee representation; and

Embedding values, ethics and governance.

Table of Contents

Corporate governance continued

In addition, the directors are in regular informal communication with members of the Executive committee and other senior executives. This helps to foster an open and regular exchange of knowledge and experience.

All new non-executive directors undertake a formal induction programme. In addition, they are routinely provided with training and development opportunities. In 2011, these included a briefing on the Bribery Act. The directors are also encouraged to participate in site visits to the Group's operations around the world and to meet local employees. In 2011, the board visited our operations in: the Pilbara, Western Australia; and our coal mines in Queensland. The board also takes the opportunity to combine attendance at the annual general meeting in Australia with site visits.

Board performance evaluation

An annual exercise is undertaken to evaluate the effectiveness of the board, board committees and individual directors.

For 2011, the board evaluation process was led by the chairman and managed by the company secretary. Questionnaires were completed by each director, the results of which informed discussions between the company secretary and each individual director. The chairman personally appraises the performance of non-executive directors each year and provides feedback on each individual's performance and contribution. The board considered the output from its performance evaluation. Actions included:

regular discussion on Rio Tinto's strategic position relative to its peers, and high risk topics, such as iron ore pricing, Simandou and Oyu Tolgoi;

continued development of directors' knowledge and understanding of the business and operating environment through the site visits and specific training; and

striving for an optimal allocation of human resources, particularly in non-OECD locations where the Group's dependency and exposure is increasing. A similar process was followed for the board committees. Actions included:

mapping the Group's key risks to the remit of each board committee and ensuring agendas maintain a focus on these risks;

continually improving safety metrics with a goal of zero harm; and

maintaining a focus on executive succession planning.

The performance of the chairman is evaluated by the non-executive directors, with input from members of the executive. The process is led by the senior independent non-executive director.

The chief executive undertakes a performance evaluation of the other executive directors, with input from the chairman and the non-executive directors.

Based upon the results of these evaluations, it was concluded that the board and its committees are operating effectively and that the individual directors performance continues to be effective and demonstrates the level of commitment expected by Rio Tinto.

Governance structure

The board has established committees which are responsible for audit, remuneration, succession and sustainability. In addition, a Chairman's committee operates under delegated authority between scheduled board meetings. These assist the board in ensuring that high standards of corporate governance are maintained across the Group.

The committees are governed by terms of reference which are reviewed annually and can be viewed in the corporate governance section of the website.

Edgar Filing: RIO TINTO PLC - Form 20-F

The chief executive is assisted by the work of management committees in monitoring performance and delivering Rio Tinto strategy.

(a) The Continuous Disclosure committee is an independent management committee.

Table of Contents

Board committees

Audit committee

Members of the Committee are Ann Godbehere (chair), Michael Fitzpatrick, Lord Kerr and Paul Tellier. Vivienne Cox was a member of the Audit committee until 17 October 2011.

Key responsibilities

The primary function of the Audit committee, as set out in its terms of reference which are summarised below, is to assist the board in fulfilling its responsibilities by monitoring decisions and processes designed to ensure the integrity of financial reporting and sound systems of internal control and risk management. The scope of the Committee's responsibilities includes: financial reporting and internal controls over financial reporting; internal controls; corporate assurance; external auditors; risk management; and the whistleblowing programme.

In carrying out its responsibilities the Committee has full authority to investigate all matters that fall within its terms of reference. Accordingly, the Committee may:

obtain independent professional advice in the satisfaction of its duties at the cost of the Group; and

have such direct access to the resources of the Group as it may reasonably require including the external and internal auditors. The Audit committee's main responsibilities include the review of accounting principles, policies and practices adopted in the preparation of public financial information, review with management of procedures relating to financial and capital expenditure controls, including internal audit plans and reports, review with external auditors of the scope and results of their audit, review and approval of the auditors' fees, the nomination of auditors for appointment by shareholders, and the review of and recommendation to the board for approval of Rio Tinto's risk management policies and processes. Its responsibilities also include the oversight of the whistleblowing programme.

Governance processes

In discharging its responsibilities, the Committee met six times in 2011. The Group's chairman, chief executive, chief financial officer, other senior management and external and internal auditors regularly attend its meetings.

The members of the Committee are independent and free of any relationship that would affect their impartiality in carrying out their responsibilities. The members meet the independence requirements of the Code, the ASX Principles, the NYSE Code and US legislation. The Committee meets the composition, operation and responsibility requirements of the ASX Principles.

The Committee is also bound by SEC requirements for audit committees' financial experts and the Code and ASX Principles requirement that at least one Committee member should have recent and relevant financial qualifications and experience. Ann Godbehere, chairman of the Committee, is considered by the board to have recent and relevant financial experience and financial qualifications and has been designated the Committee's financial expert. All other members of the Committee are, in the opinion of the Committee, deemed to be financially literate by virtue of their business experience.

The Committee applies policies for the pre-approval of permitted services provided by the Group's external auditors PricewaterhouseCoopers LLP (PwC). All of the engagements for services provided by them were either within the pre-approval policies or approved by the Committee. The Committee members are satisfied that the provision of non-audit services by PwC in accordance with this procedure is compatible with the general standard of independence for auditors imposed by relevant regulations, including the Australian Corporations Act 2001 and US legislation.

The Committee considered reports from PwC and Rio Tinto Corporate Assurance on the activities undertaken in reviewing and auditing the control environment in order to assess the quality and effectiveness of the internal control system. This included an evaluation of the effectiveness of the Group's internal controls over financial reporting and the Group's disclosure controls and procedures in accordance with sections 404 and 302 of the Sarbanes Oxley Act 2002 respectively. A review of the scope and the outputs from the annual Internal Control Questionnaire, a key element of Rio Tinto's internal control framework, was also evaluated.

The external auditor attended all six committee meetings during the year. In advance of the Committee meetings, the audit partners brief the chairman on key matters. Following the majority of the meetings, a private session was held with members of the external audit team to discuss the status of the audit and nature of interaction with management.

During the year, the Committee reviewed the effectiveness of PwC for Group audit and local, statutory audit work. The evaluation took the form of a survey comprising a range of questions covering objectivity and quality and efficiency and was completed by individual Rio Tinto business units. The results of this

Edgar Filing: RIO TINTO PLC - Form 20-F

survey were presented to the Committee which concluded that PwC continued to provide a high quality audit and an effective and independent challenge to management. The Committee was satisfied with the external audit process and that the independence of the external auditors was in no way compromised.

PwC has been the external auditor since the formation of the dual listed company structure in 1995. The Committee does not consider it necessary to undertake a tender process for the Group's external auditors. Since 2002, PwC has followed the requirements of the Sarbanes-Oxley and APB Ethical Standards and rotated the audit partner at least every five years. This continued refreshing of the team brings new perspectives to the audit and promotes healthy debate between auditors and management as well as the Committee. The current UK audit partner, Richard Hughes, was appointed for the 2011 year end and therefore 2015 will be his last year of involvement before transition to a new partner. The current Australian audit partner, Rob Hubbard, retires after the 2011 year end audit process having served as audit partner since 2007. PwC's transitional arrangements have been reviewed and the Committee is satisfied that the new partner, Paul Bendall, is ready to take on this role.

What we did in 2011

Reviewed implementation of revised Group risk management processes;

Reviewed ore reserves governance and reporting processes;

Focused on impairment, acquisitions and the Annual report;

Reviewed and approved the Integrity and Compliance Programme;

Oversight of transition of lead audit partner;

Engaged with management over tax transparency reporting; and

Oversight of the tender for, and appointment of the Internal Audit service provider.

What we are doing in 2012

Implementation of dedicated induction, training and development programme for all Committee members;

Overview of Internal Audit Strategy for 2013/14;

Monitoring effectiveness of the Group's risk management process;

Oversight of transition of Australian external audit partner;

Appointment of new Head of Corporate Assurance; and

Engagement with European Commission over EU audit reform proposals.

Ann Godbehere

Chairman

Table of Contents

Corporate governance continued

Nominations committee

Members of the Committee are Jan du Plessis (chair), Robert Brown, Vivienne Cox, Michael Fitzpatrick, Ann Godbehere, Richard Goodmanson, Andrew Gould, Lord Kerr, Chris Lynch, Paul Tellier and John Varley. Sir Rod Eddington and Yves Fortier were members of the Committee until retirement on 5 May 2011.

Key responsibilities

The Committee is responsible, on behalf of the board, for regularly assessing the balance of executive and non-executive directors and the composition of the board in terms of the skills, diversity and capacity required to oversee the delivery of Rio Tinto strategy.

The Committee develops and agrees the desired profiles of potential candidates for board membership. It oversees the recruitment process in consultation with external search consultants. Proposals for new board members are submitted to the full board for approval.

On behalf of the board, the Committee also reviews proposals for senior executive appointments, monitors executive succession planning and oversees the board's policy on external appointments of executive committee members.

Governance processes

In 2011, the Committee met four times.

The members of the Committee are independent in accordance with the independence policy adopted by the board.

What we did in 2011

Reviewed the plans formulated for both executive and non-executive director succession;

Considered the implications arising from the annual re-election of directors, including possible revisions to terms of appointment; and

Monitored emerging regulation, including relating to diversity, and adopted a Diversity and inclusion policy.

What we are doing in 2012

Continue regular executive succession planning reviews, including in relation to the chief executive, and taking into account the Group's Diversity and inclusion policy;

Enhance the knowledge and skills of the board through the addition of new, suitably diverse directors with good understanding and experience of the world's emerging economies; and

Further development of the quality and depth of bench-strength of the executive.

Jan du Plessis

Chairman

Edgar Filing: RIO TINTO PLC - Form 20-F

Sustainability committee

Members of the Committee are Richard Goodmanson (chair), Robert Brown, Lord Kerr and Vivienne Cox. Sir Rod Eddington and Yves Fortier were members of the Committee until retirement on 5 May 2011.

Key responsibilities

The Committee assists the board to oversee management processes, standards, and strategies designed to manage social and environmental risks and achieve compliance with social and environmental responsibilities and commitments. The Committee reviews the effectiveness of management policies and procedures relating to safety, health, employment practices, relationships with neighbouring communities, environment, human rights, land access, political involvement and sustainable development.

Governance processes

In 2011, the Committee met five times. The chairman, chief executive, and other senior management regularly attend its meetings.

The members of the Committee are all independent.

What we did in 2011

Assessed safety performance and progress towards embedding a zero harm culture through the Group and its non-managed operations;

Monitored progress made with the Group's process safety programmes in identifying and understanding critical process safety risk and the development of mitigation plans;

Following the Committee's site visit at the Pilbara, Western Australia, considered how Rio Tinto Iron Ore meets the challenges of balancing water demand, supply and distribution;

Reviewed the Group's integrated approach to managing land access risk, focused on emerging biodiversity offset requirements and the importance of rehabilitation performance in support of the Group's licence to operate;

Reviewed the work performed relating to land with post-operational environmental contamination for which the Group is liable for restoration or other remedial actions;

Considered the implications of emerging legislation, including national developments around the world on climate change policy; and

Reviewed work plans formulated for health, safety, environment, communities and employment practices.

What we are doing in 2012

Review reputational risks around non-managed operations within the wider context of identified risks within the Committee's remit;

Consider deep dives on key risks and management's plans for tackling them; and

Undertake locally-focused sustainable development reviews with management during site visits.

Richard Goodmanson

Chairman

Edgar Filing: RIO TINTO PLC - Form 20-F

Remuneration committee

Members of the Committee are John Varley (chair), Michael Fitzpatrick, Richard Goodmanson, Andrew Gould and Paul Tellier. Andrew Gould was chairman of the Committee until 17 October 2011.

Key responsibilities

The Remuneration committee assists the board to fulfil its oversight responsibility to shareholders to ensure that remuneration policy and practices reward fairly and responsibly and with a clear link to corporate and individual performance.

The report of the Remuneration committee on pages 86 to 118 has been recommended by the Committee for approval by the board. Key responsibilities, governance processes, key achievements in 2011 and priorities for 2011 are set out in the report.

Chairman's committee

Members of the Committee are Jan du Plessis (chair), Tom Albanese and Guy Elliott.

Key responsibilities

The Committee acts on behalf of the board between scheduled board meetings either in accordance with authority delegated by the board or as specifically set out within its terms of reference. It supports the functioning of the board and ensures that the business of the board and its committees is properly planned and aligned with management. When mandated by the board, the Chairman's committee will consider urgent matters between board meetings, and deal with the implementation of board decisions on transactions and other corporate matters. Other than for the chairman of the board, the Committee performs the annual review of non-executive directors' fees and makes a recommendation to the board, as appropriate.

Table of Contents

Diversity and inclusion

Our commitment to diversity and inclusion

We are a global company, and wherever we operate, and across every part of our business, we strive to create an inclusive culture in which difference is recognised and valued. By bringing together men and women from diverse backgrounds and giving each person the opportunity to contribute their skills, experience and perspectives, we believe that we are able to develop the best solutions to challenges and deliver sustainable value for Rio Tinto and its stakeholders.

What diversity and inclusion means for Rio Tinto

Embracing workforce diversity age, gender, race, national or ethnic origin, religion, language, political beliefs, sexual orientation, physical ability.

Valuing diversity of perspective leveraging the diverse thinking, skills, experience and working styles of our employees and other stakeholders.

Building a flexible organisation providing opportunities for work arrangements that accommodate the diverse needs of individuals at different career and life stages.

Respecting stakeholder diversity developing strong and sustainable relationships with diverse shareholders, communities, employees, governments, customers and suppliers.

How we support diversity and inclusion

We use the following to drive action and build awareness about diversity and inclusion:

Governance models

Policies, practices and targets

Leadership and cultural competence

Stakeholder relationships

Education and communication.

We prioritise long and short-term programmes based on need and impact.

Read a summary of our Diversity and Inclusion Policy in the corporate governance section of our website.

Our current focus

Our goal is to have a workforce that is representative of the countries and communities in which we operate. Currently, our focus is to improve the representation of women and of people from nationalities which are under-represented in our workforce.

Some of the activities and initiatives relating to diversity that we undertook during the year are:

Edgar Filing: RIO TINTO PLC - Form 20-F

Establishment of a Group Diversity and Inclusion Council, an internal executive advisory group helping to drive necessary changes to our processes and culture to gain the full business benefits of diversity and inclusion.

Establishment of a diversity champions network to share best practice across businesses, geographies and functions and support the work of the Diversity and Inclusion Council.

Development of a Group Diversity and Inclusion Policy that sets out principles and guides the direction for diversity and inclusion efforts.

Amendment to the terms of reference of the Remuneration committee to formalise its responsibility to review remuneration by gender across the Group.

Pilot training programmes in unconscious bias to help minimise the impact of bias in recruitment and development practices and extension of cultural competency training to enhance our capability to grow and globalise the Company.

A three year commitment by the chairman to mentoring high potential female board candidates through the FTSE100 Cross-company Mentoring Programme.

Participation by the managing director Australia in the Male champions of change initiative of corporate leaders to promote strategies and actions to elevate women's representation in leadership.

Proportion of women employees and board members

In 2011, the proportion of women on the board was 14 per cent, in senior management 14 per cent and in the overall workforce 18 per cent.

Measurable objectives and progress

We established the following five year measurable objectives for workforce diversity at the start of 2011.

Measurable objective

Women to represent 20 per cent of our senior management by 2015.

Women to represent 40 per cent of our 2015 graduate intake.

15 per cent of our 2015 graduate intake to be nationals from regions where we are developing new businesses.

Two new objectives relating to diversity of the board were added during 2011.

Progress

Women represented 14 per cent of our senior management in 2011.

Women represented 35 per cent of our 2011 graduate intake.

21 per cent of our 2011 graduate intake were nationals from regions where we are developing new businesses.

The Nominations committee will undertake a review of board diversity in 2012.

During each director selection and appointment process, the professional search firm supporting the board will provide at least one credible and suitably experienced female candidate.

The board will assess the objectives annually, as well as the progress in achieving them.

Board diversity

The board has been actively engaged in the corporate governance reviews highlighting issues surrounding board diversity. The board reviewed its corporate governance practices during the year, including how the director selection and appointment process takes into account the board's desired mix of skills and diversity. The review included an assessment of the terms of reference of the Nominations committee and Remuneration committee, and resulted in amendments in relation to board appointments and succession planning. More information about the selection, appointment and election of directors is available in the corporate governance section of the website.

The Nominations committee regularly reviews the structure, size and composition of the board. As a consequence of this review in 2011 the board formalised the following statement as to the mix of skills and diversity it is looking to achieve in membership of the board.

Edgar Filing: RIO TINTO PLC - Form 20-F

In leading a global mining and metals company, the board seeks to continually evolve its membership by seeking non-executive directors with diverse and complementary skills and perspectives, as well as experience which reflects the geographic spread of the Group's operations. Core skills required for non-executive membership of the board are maintained. These skills may, depending upon the circumstances, comprise international business, financial or public policy experience, strategic acumen or mining or metals industry experience. The board aspires to increase other aspects of diversity, including the gender diversity, of directors in order to bring a diversity of skills, experience and perspective to the governance of the Group. The board recognises that the evolution of the mix of skills and diversity is a long-term process and weighs the various factors relevant to board balance and diversity when vacancies arise.

Table of Contents

Corporate governance continued

Other disclosures

Global code of conduct

Rio Tinto's commitment to integrity and compliance is set out in *The way we work*. This contains principles and standards of conduct which reaffirm the Group's commitment to corporate responsibility. It is inspired by our four core values: accountability, respect, teamwork and integrity.

It is supported by Rio Tinto's extensive framework of policies and standards. Core policies are adopted by the board after wide consultation, externally and within the Group. Once adopted, they are communicated to business units worldwide, together with mandatory standards, guidance notes and resources to support implementation. Business units are required to devote the necessary effort by management to implement and report on these policies and standards.

Rio Tinto's core policies, addressed in *The way we work*, include: access to land; business integrity; communities; corporate governance; employment; environment; human rights; internal controls and reporting; occupational health; political involvement; government relations; safety; sustainable development; and transparency. These are supported by policies in the areas of data privacy, risk, information management and security.

Each policy is supported by standards and guidance, expanding on the minimum expectations on topics such as antitrust, continuous disclosure, antibribery, compliance, cultural heritage and health, safety and the environment. These policies and standards apply to all Rio Tinto managed businesses. Where the Group does not have operating responsibility for a business, Rio Tinto's policies are communicated to its business partners and they are encouraged to adopt similar policies of their own. Rio Tinto employees are required to undertake training about the requirements of *The way we work* and other core policies.

Whistleblowing programme

The board has adopted a whistleblowing programme called *Speak-OUT*. Employees may report concerns, including suspicion of violations of the Group's financial reporting or environmental procedures. The *Speak-OUT* programme is independently administered, confidential, and our employees can use this programme without fear of recrimination.

Dealing in Rio Tinto securities

Rio Tinto has a set of rules which restrict the dealing in Rio Tinto securities by directors and employees with access to inside information. These rules require those people to seek clearance from the chairman or the company secretary before any proposed dealing to ensure that they do not deal when in possession of inside information. Directors and members of the Executive committee will not be given clearance during close periods immediately preceding the announcement of annual and interim results. The rules prohibit the hedging of unvested options or other unvested securities issued as remuneration. The Rules for dealing in Rio Tinto securities can be viewed on the website.

Communication with stakeholders

Rio Tinto recognises the importance of effective timely communication with shareholders and the wider investment community.

To ensure that trading in its securities takes place in an informed market, the Group has adopted continuous disclosure standards which are overseen by the Continuous Disclosure committee and form part of the Group's corporate governance standards. The committee is responsible for determining whether information relating to Rio Tinto may require disclosure to the markets under the continuous disclosure requirements in the jurisdictions in which Rio Tinto is listed. The members of the committee are: the chief financial officer (chair); the company secretary of Rio Tinto plc; general counsel, Asia Pacific; the head of Business Development; the head of Investor Relations; and the global practice leader, Media Relations.

Rio Tinto makes immediate disclosure to the listing authorities of any information that a reasonable person would expect to have a material effect on its share price in accordance with their rules. All information released to the markets is posted on the media section of the website.

In addition to statutory documents, Rio Tinto's website features in-depth information on health, safety and the environment, corporate governance, as well as general investor information, publications and policies and guidance. Annual and half year results, as well as any major presentations, are also webcast. Presentation material from investor seminars is also made available on the website.

The annual general meetings present an opportunity to provide a summary business presentation, to inform shareholders of recent developments and to give them the opportunity to ask questions. Generally, the chairs of all board committees will be available to answer questions raised by shareholders and all directors are expected to attend where possible. Rio Tinto's external auditor, PricewaterhouseCoopers, attends the annual general meetings and is available to answer questions about the conduct of the audit and the preparation and content of the auditor's report. Any questions received and answers provided ahead of the annual general

Edgar Filing: RIO TINTO PLC - Form 20-F

meetings are made available to shareholders, who also have the opportunity to meet informally with directors after the meetings.

The main channels of communication with the investment community are through the chairman, chief executive and chief financial officer, who have regular meetings with the Companies' major shareholders. The senior independent director, chairmen of board committees, and other non-executive directors are also available on request. The senior independent director has a specific responsibility to be available to shareholders who have concerns, and where contact with the chairman, chief executive or chief financial officer has failed to resolve their concerns, or for whom such contact is inappropriate.

During 2011, these meetings with the investment community focused on the issues of strategy, board succession, corporate governance, executive remuneration, and the operational and financial platform of the Group. The Group has an active programme of investor dialogue, including regular investor seminars, which provide a two way communication opportunity with investors and analysts. More recently, corporate governance round tables have been hosted to provide investors with an opportunity to engage with non-executive directors. Feedback is communicated to the board. Surveys of major shareholders' opinions and perceptions of the Group are presented to the board by the Group's investor relations advisers on a regular basis.

Table of Contents

Risk management

Risk management

Rio Tinto's overriding objective is to generate attractive sustainable returns to shareholders through a strategy of investing in large, long-term, cost-competitive mines and businesses. The directors recognise that creating shareholder return is the reward for taking and accepting risk. The risks facing shareholders are, to some extent, managed by the Group's diversified portfolio of assets spread across multiple geographies, currencies and commodities.

A description of the risk factors that could affect Rio Tinto are found on pages 10 to 12.

Risk policy and standard

The board recognises that risk is an integral component of the business, and that it is characterised by both threat and opportunity. The Group fosters a risk aware corporate culture in all decision making, and is committed to managing all risk in a proactive and effective manner through competent risk management. To support this commitment, risk is analysed in order to inform the management decisions taken at all levels within the organisation. The principles of the risk analysis and management process are set out in the Risk policy and standard which is on the website.

Risk approach

The Risk policy and standard is supported by an integrated framework of risk governance and reporting specifying how the Group organises the handling of risk. Together with the policy, the framework provides an on-going process for identifying, evaluating and managing the significant risks faced by the Group. Clear accountability for risk management is defined throughout the Group and is a key performance area of line managers. The process has been in place for 2011 and up to the date of the report.

To support risk understanding and management at all levels, the Group Risk function provides the necessary infrastructure, information collation for the senior executive, and co-ordination between other risk-focused functions. Group Risk reports into the Risk management committee.

Internal controls

The directors are responsible for the Group's system of internal controls and for reviewing annually its effectiveness in providing shareholders with a return on their investments that is consistent with a responsible assessment and management of risks. This includes reviewing financial, operational and compliance controls and risk management procedures and their effectiveness. The directors have completed their annual review and assessment for 2011. Whilst the Audit committee is responsible for oversight of the effectiveness of the risk management process, accountability for identifying and managing risks rests with the chief executive and is cascaded throughout the Group through the Executive committee.

Internal risk control systems

Two of the Group's management committees, the Executive committee and the Disclosures and procedures committee, regularly review reports related to the Group's control framework in order to satisfy the internal control requirements of the Code, the ASX Principles, the NYSE Code and US legislation. Each year, the leaders of the Group's businesses and administrative offices complete an internal control questionnaire that seeks to confirm that adequate internal controls are in place, are operating effectively and are designed to capture and evaluate failings and weaknesses, if any exist, and that action is taken promptly, as appropriate. The results of the internal control evaluation are presented to the Audit committee in support of their review of the Group's internal controls. Assurance functions, including internal auditors and sustainable development auditors, perform reviews of the integrity and effectiveness of control activities and provide regular written and oral reports to the Audit committee, Sustainability committee and management committees.

In 2011, information was reported by management to the Audit committee to enable it to assess the effectiveness of the internal controls and the management of material business risks. In addition, as part of their role, the board and its committees routinely monitor the Group's material business risks.

Due to the limitations inherent in any risk management system, the process for identifying, evaluating and managing the material business risks is designed to manage rather than eliminate risk and to provide reasonable but not absolute assurance against material misstatement or loss. Certain risks, for example natural disasters, cannot be managed to an acceptable degree using internal controls. Such major risks are transferred to third parties in the international insurance markets, to the extent considered appropriate. The Group has material investments in a number of jointly controlled entities and associates. Where Rio Tinto does not have managerial control, it cannot guarantee that local management of mining and related assets will comply with Rio Tinto standards or objectives. Accordingly, the review of their internal controls is less comprehensive than that of the Group's managed operations.

Auditors and internal assurance

As indicated in the report of the Audit committee on page 71, Rio Tinto has adopted policies designed to uphold the independence of the Group's external auditors by prohibiting their engagement to provide other accounting and other professional services that might compromise their appointment as independent auditors.

Edgar Filing: RIO TINTO PLC - Form 20-F

The engagement of the external auditors to provide statutory audit services, other services pursuant to legislation, taxation services and certain other services are pre-approved. Any engagement of the external auditors to provide other permitted services is subject to the specific approval of the Audit committee or its chairman.

Prior to the commencement of each financial year the chief financial officer and the external auditors submit to the Audit committee a schedule of the types of services that are expected to be performed during the following year for its approval. The Audit committee may impose a financial limit on the total value of other permitted services that can be provided. Any non-audit service provided by the external auditors, where the expected fee exceeds a pre-determined level, must be subject to the Group's normal tender procedures.

In exceptional circumstances, the chief financial officer is authorised to engage the external auditors to provide such services without going to tender, but if the fees are expected to exceed certain pre-determined limits then the chairman of the Audit committee must give prior approval of the engagement.

Further information on audit and non-audit fees as well as remuneration payable to other accounting firms, is set out in note 41 to the financial statements and in the Directors' report.

Corporate Assurance

Corporate Assurance is an internal function which provides independent and objective assurance on the adequacy and effectiveness of the Group's systems for risk management, internal control, and governance together with recommendations to improve the efficiency and effectiveness of the relevant systems and processes. The function has adopted international auditing standards set by the Institute of Internal Auditors (IIA).

The function operates independently of management, under a mandate approved by the Audit committee and the Sustainability committee and has full access to all functions, records, property and personnel of the Group. The head of Corporate Assurance reports functionally to both the Audit committee and Sustainability committee, providing each committee with information relevant to their specific terms of reference.

Table of Contents

Corporate governance continued

A risk-based approach is used to focus assurance activities on high risk areas and audit plans are presented annually to the Audit committee and Sustainability committee for approval.

In respect of its internal audit function, Rio Tinto utilises the services of external service providers. The Audit committee has a policy which addresses conflicts of interest in relation to management requested engagements of the service provider. The policy complies with the IIA's standards on independence. Certain services are pre-approved under the policy as they would not be in conflict with the internal auditor's role. There is a list of prohibited services which may not be undertaken without approval of the head of Corporate Assurance, and guidance on the consideration of services which may give rise to a conflict of interest.

Financial reporting

Financial statements

The directors are required to prepare financial statements for each financial period which give a true and fair view of the state of affairs of the Group as at the end of the financial period and of the profit or loss and cash flows for that period. This includes preparing financial statements in accordance with UK company law which give a true and fair view of the state of the Company's affairs, and preparing a Remuneration report which includes the information required by Regulation 11, Schedule 8 of the Large and Medium Sized Companies and Groups (Accounts and Reports) Regulations 2008 and the Australian Corporations Act 2001.

The directors are responsible for maintaining proper accounting records, in accordance with UK and Australian legislation. They have a general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the Group and to prevent and detect fraud and other irregularities. The directors are also responsible for ensuring that appropriate systems are in place to maintain and preserve the integrity of the Group's website. Legislation in the UK governing the preparation and dissemination of financial statements may differ from current and future legislation in other jurisdictions. The work carried out by the auditors does not involve consideration of such developments and, accordingly, the auditors accept no responsibility for any changes, should any be made, to the financial statements after they are made available on the website.

The directors, senior executives, senior financial managers and other members of staff who are required to exercise judgment in the course of the preparation of the financial statements are required to conduct themselves with integrity and honesty and in accordance with the ethical standards of their profession and/or business.

The directors consider that the 2011 Annual report presents a true and fair view and has been prepared in accordance with applicable accounting standards, using the most appropriate accounting policies for Rio Tinto's business and supported by reasonable judgments and estimates. The accounting policies have been consistently applied. The directors have received a written statement from the chief executive and the chief financial officer to this effect. In accordance with the internal control requirements of the Code and the ASX Principles Recommendation 7.3, this written statement relies on a sound system of risk management and internal controls and confirms that the system is operating effectively in all material respects in relation to financial reporting risks.

Disclosure controls and procedures

The Group maintains disclosure controls and procedures as such term is defined in Exchange Act Rule 13a-15(e). Management, with the participation of the chief executive and chief financial officer, has evaluated the effectiveness of the design and operation of the Group's disclosure controls and procedures pursuant to Exchange Act Rule 13a-15(b) as of the end of the period covered by this report and has concluded that these disclosure controls and procedures were effective at a reasonable assurance level.

Management's report on internal control over financial reporting

The management of Rio Tinto plc and Rio Tinto Limited is responsible for establishing and maintaining adequate internal control over financial reporting. The Companies' internal control over financial reporting is a process designed under the supervision of their common chief executive and chief financial officer to provide reasonable assurance regarding the reliability of financial reporting and the preparation and fair presentation of the Group's published financial statements for external reporting purposes in accordance with International Financial Reporting Standards.

Because of its inherent limitations, internal control over financial reporting cannot provide absolute assurance, and may not prevent or detect all misstatements whether caused by error or fraud, if any, within each of Rio Tinto plc and Rio Tinto Limited.

The Group's internal control over financial reporting includes policies and procedures that pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets; provide reasonable assurances that transactions are recorded as necessary to permit preparation

Edgar Filing: RIO TINTO PLC - Form 20-F

of financial statements in accordance with IFRS and that receipts and expenditures are being made only in accordance with authorisations of management and directors of each of the Companies; and provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use or disposition of the Group's assets that could have a material effect on our financial statements.

Management conducted an assessment of the effectiveness of internal control over financial reporting as of 31 December 2011, based on the Internal Control Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and concluded that it was effective.

PricewaterhouseCoopers LLP and PricewaterhouseCoopers, the auditors of Rio Tinto plc and Rio Tinto Limited respectively, audited the Financial statements included in this Form 20-F and audited the effectiveness of internal controls over financial reporting as of 31 December 2011. Their audit report is included on page 216 of this Annual Report on Form 20-F.

There were no changes in the internal controls over financial reporting that occurred during the period covered by this Annual Report on Form 20-F that have materially affected or are reasonably likely to materially affect the internal controls over financial reporting of each of Rio Tinto plc and Rio Tinto Limited.

Rio Tinto's principal activities during 2011 were minerals exploration, development, production and processing.

The business review set out on pages 1 to 42 provides a comprehensive review of the development and performance of Rio Tinto's operations for the year ended 31 December 2011 and the likely future developments of those operations. The information set out in the business review is incorporated by reference into this report and is deemed to form part of this report.

The subsidiary and associated undertakings principally affecting the profits or net assets of the Group in the year are listed in notes 35 to 38 to the financial statements.

Significant changes and events affecting the Group during 2011 and until the date of this report have been:

On 4 January 2011 the Group announced the completion of the divestment of 61 per cent of its Alcan Engineered Products business.

On 8 February 2011 the Group announced its approval of a US\$933 million investment to extend the life of the Marandoo iron ore mine in the Pilbara region of Western Australia by 16 years to 2030.

On 10 February 2011 Rio Tinto announced a capital management programme, comprising a US\$5 billion share buy-back. This was increased to US\$7 billion on 4 August 2011.

On 21 February 2011 Rio Tinto announced that coastal operations in the Pilbara region were being affected by ongoing weather issues associated with tropical cyclones and there was likely to be an impact on shipped tonnage for the first quarter of the year.

On 23 February 2011 the Group announced that it had received a binding offer from Imerys SA to acquire Rio Tinto's talc business for an enterprise value of US\$340 million. Completion of the transaction was announced on 1 August 2011.

On 29 March 2011 the Group declared that its offer for Riversdale Mining Limited (Riversdale) was unconditional. The acquisition was completed on 29 July 2011 for a price of A\$16.50 per share.

On 7 April 2011 the Group announced approval of investment of US\$238 million for a feasibility study and long-lead items to extend Kennecott Utah Copper's Bingham Canyon mine in Utah.

Edgar Filing: RIO TINTO PLC - Form 20-F

On 22 April 2011 Rio Tinto, its subsidiary Simfer S.A (Simfer) and the Government of Guinea signed a Settlement Agreement securing Rio Tinto's mining title in Guinea, West Africa. In recognition of the resolution of all outstanding issues and finalisation of new investment agreement terms, Simfer agreed to pay US\$700 million to the Guinean Government upon promulgation of Presidential Decrees granting its mining concession and the approval of the proposed Chalco and Rio Tinto Simandou joint venture. On 18 October 2011 the Group announced the acceleration of the development of the Simfer project with further investment of US\$211 million for continued studies and US\$1.117 billion for commitments for early works and procurement of long-lead items.

On 4 May 2011 the Full Court of the Federal Court in Australia made a decision endorsing the ruling of the Australian Competition Tribunal not to declare the Hamersley rail line available for third-party access. The Full Court also ruled that the Tribunal's decision to declare the Robe line available for third-party access should be set aside. On 28 October 2011 the Group announced that the High Court of Australia had granted Fortescue Metals Group Ltd and the National Competition Council leave to pursue appeals in relation to the decision of the Full Federal Court.

On 18 May 2011 Rio Tinto announced that it had priced US\$700 million of five-year, US\$1 billion of 10-year and US\$300 million of 30-year SEC-registered debt securities.

On 15 June 2011 the Group announced that it was accelerating its iron ore expansion programme in the Pilbara region with US\$676 million of funding (Rio Tinto share US\$350 million) for early works and procurement. On 9 September 2011 Rio Tinto announced an investment of US\$310 million to assure a sustainable water supply for its iron ore operations in the Pilbara region of Western Australia, ensuring a sufficient resource to accommodate an expansion of annual production capacity up to the planned 333 million tonnes. On 15 September 2011 the Group announced a further investment of US\$833 million (Rio Tinto share US\$706 million) in power and fuel supply projects to support the planned increase in iron ore production capacity. On 8 February 2012 the Group announced that it had committed a further US\$3.4 billion (Rio Tinto share US\$ 2.9 billion) to the expansion of its Pilbara iron ore operations, comprising US\$2.2 billion to extend the life of the Nammuldi iron ore mine and US\$1.2 billion for early infrastructure works for the proposed capacity expansion to 353 million tonnes per year. On 19 February 2012 the Group announced a US\$518 million investment in autonomous trains for the Pilbara iron ore rail network.

On 8 August 2011 the Group declared its non-binding offer made to Coal & Allied Industries Limited (Coal and Allied) on 6 August 2011, under which Rio Tinto and Mitsubishi Development Pty Ltd (Mitsubishi), would acquire all of the shares in Coal & Allied they did not already own. On 28 November 2011 the Group announced that Coal & Allied shareholders had approved the transaction at a price of A\$125 per share and the acquisition was completed on 15 December 2011.

On 5 September 2011 the Group announced that it had informed the board of Palabora Mining Company Limited (Palabora) of its intention to divest its 57.7 per cent shareholding in Palabora.

On 15 September 2011 Rio Tinto announced it had priced US\$500 million of five-year, US\$1.15 billion of ten year and US\$350 million of 30-year SEC-registered debt securities.

On 20 September 2011 Rio Tinto announced an increase in the copper mineralisation at its wholly-owned Kennecott Utah Copper Bingham Canyon Mine.

On 17 October 2011 the Group announced its intention to divest 13 aluminium assets at an appropriate point in the future. Prior to divestment Rio Tinto's interests in six Australian and New Zealand assets would be transferred into a new business unit, to be called Pacific Aluminium. The remaining seven non-core assets were also transferred out of Rio Tinto Alcan to be managed separately while the Group investigates divestment options.

On 19 October 2011 Rio Tinto announced a recommended cash offer for all the common shares of Hathor Exploration Limited (Hathor). On 12 January 2012, Rio Tinto announced the completion of the acquisition of 100 per cent of the issued and outstanding shares of Hathor for a price of C\$4.70 per share.

On 1 December 2011 Rio Tinto announced an additional investment of US\$2.7 billion to modernise its aluminium smelter in Kitimat, British Columbia by 2014. The Kitimat project is expected to increase the smelter's production capacity to approximately 420,000 tonnes per year.

Table of Contents

Directors report continued

During 2011, the Group increased its ownership in Ivanhoe Mines Limited (Ivanhoe) to 49 per cent, the maximum shareholding permitted in contractual arrangements between Rio Tinto and Ivanhoe. On 13 December 2011 the Group announced that an independent arbitrator had upheld Rio Tinto's claim in respect of Ivanhoe Mines' Shareholder Rights Plan (SRP) giving Rio Tinto the ability, on the expiry of a standstill agreement with Ivanhoe, to purchase additional shares in Ivanhoe beyond 49 per cent without being diluted by the SRP. On 24 January 2012 Rio Tinto announced that it had taken a majority stake in Ivanhoe Mines having purchased shares that took its interest to 51 per cent.

On 1 February 2012 following BHP Billiton's decision to exercise a put option agreed between Rio Tinto and BHP Billiton as part of Richards Bay Minerals (RBM's) restructuring in 2009, the Group announced its intention to increase its stake in RBM to 74 per cent through the acquisition of BHP Billiton's 37 per cent interest.

On 14 February 2012, the Group announced that it had approved US\$1.4 billion investment in two projects to support higher production at the Escondida copper mine in Chile in which Rio Tinto holds a 30 per cent interest. Details of events after the statement of financial position date are contained in note 45 to the financial statements.

As permitted by sections 299(3) and 299A(3) of the Australian Corporations Act 2001, information which is likely to result in unreasonable prejudice, regarding likely future developments in, and the expected results of the operations of the Group or its strategies and prospects, has been omitted.

Risk identification, assessment and management

The Group's principal risks and uncertainties are set out on pages 10 to 12.

Share capital

Details of the Group's share capital as at 31 December 2011 can be found at notes 28 and 29 to the financial statements. Details of the rights and obligations attached to each class of shares can be found on page 125 under

the heading 'Voting rights'. The voting rights of shares held beneficially by a third party in line with an employee share plan are set out on page 103.

Details of certain agreements triggered on a change of control can be found on page 120 under the heading 'Dual listed companies structure'.

Details of certain restrictions on holding shares in Rio Tinto are described on page 120 under the heading 'Limitations on ownership of shares and merger obligations'. There are no other restrictions on the transfer of ordinary shares in Rio Tinto plc save for:

restrictions that may from time to time be imposed by laws and regulations (for example, those relating to market abuse and insider dealing);

restrictions that may be imposed pursuant to the Listing Rules of the UK Financial Services Authority, whereby certain employees of the Group require approval to deal in shares;

restrictions on the transfer of shares that may be imposed under Rio Tinto plc's Articles of Association or under Part 22 of the UK Companies Act 2006, in either case following a failure to supply information required to be disclosed following service of a request under section 793 of the UK Companies Act 2006; and

restrictions on the transfer of shares held under certain employee share plans while they remain subject to the plan. At the annual general meetings held in 2011, shareholders authorised:

Edgar Filing: RIO TINTO PLC - Form 20-F

the purchase by Rio Tinto Limited and its subsidiaries, and the on-market repurchase by Rio Tinto plc of up to 152,273,000 Rio Tinto plc shares (representing approximately ten per cent of Rio Tinto plc's issued share capital at that time);

the off-market purchase by Rio Tinto plc of up to 152,273,000 Rio Tinto plc shares acquired by Rio Tinto Limited or its subsidiaries under the above authority; and

the off-market or on-market buy-back by Rio Tinto Limited of up to 43.5 million Rio Tinto Limited shares (representing approximately ten per cent of Rio Tinto Limited's issued share capital at the time).

(a) Rio Tinto plc ordinary shares of 10p each; Rio Tinto Limited shares.

(b) The average prices paid have been translated into US dollars at the exchange rate on the day of settlement.

(c) Shares purchased by the Companies' registrars in connection with the dividend reinvestment plans and employee share plans are not deemed to form part of any publicly announced plan or programme.

(d) This figure represents 6.39 per cent of Rio Tinto plc issued share capital at 31 December 2011.

(e) This figure represents 6.24 per cent of Rio Tinto plc issued share capital at 31 December 2011.

Table of Contents

During 2011, in order to satisfy obligations under employee share plans, Rio Tinto plc issued 875,057 shares from treasury, and Rio Tinto plc's registrar purchased on market 1,720,000 shares and delivered 848,410 ordinary shares to plan participants. Rio Tinto Limited's registrar purchased on market and delivered 1,075,319 shares to plan participants.

Also during the year, the Companies' registrar purchased on market 504,988 Rio Tinto plc shares and 693,613 Rio Tinto Limited shares to satisfy obligations to shareholders under the dividend reinvestment plans.

On 4 August 2011, Rio Tinto announced an increase in the share buy-back programme by US\$2 billion to US\$7 billion, subject to market conditions, to be completed by the end of the first quarter of 2012. In the period to 20 February 2012, 106,713,405 Rio Tinto plc shares were repurchased for a total aggregate consideration of US\$6.43 billion.

For the period 1 January 2012 to 20 February 2012, Rio Tinto plc issued 201,130 shares from treasury in connection with employee share plans and Rio Tinto Limited's registrar purchased on market and delivered 636,486 shares to plan participants.

Awards over 2,407,309 Rio Tinto plc shares and 1,641,317 Rio Tinto Limited shares were granted under employee share plans during 2011. As at 20 February 2012, awards were outstanding over 8,385,698 Rio Tinto plc shares and 5,420,484 Rio Tinto Limited shares. Upon vesting, awards may be satisfied by the issue of new shares, the purchase of shares on market, or, in the case of Rio Tinto plc, by issuing treasury shares.

Dividends

Details of dividends paid and the dividend policy can be found on page 123.

Directors

The names of the directors who served during the year, together with their biographical details and other information are shown on pages 77 to 79. Rod Eddington and Yves Fortier retired at the conclusion of the Rio Tinto Limited annual general meeting held on 5 May 2011. Chris Lynch and John Varley were appointed as directors with effect from 1 September 2011.

Chris Lynch and John Varley will stand for election, and with the exception of Andrew Gould who will be retiring at the conclusion of the 2012 annual general meetings, all other directors will stand for re-election at the 2012 annual general meetings.

A table of directors' attendance at board and committee meetings during 2011 is on page 69.

Secretaries

Details of the company secretary of each of Rio Tinto plc and Rio Tinto Limited together with their qualifications and experience are set out on page 79.

Corporate governance

A full report on corporate governance can be found on pages 66 to 76 and forms part of this Directors' report.

Indemnities and insurance

The Articles of Association and Constitution of the Companies provide for them to indemnify, to the extent permitted by law, officers of the Companies, including officers of wholly owned subsidiaries, against liabilities arising from the conduct of the Group's business. The directors and the company secretaries of the Companies, and certain employees serving as directors of subsidiaries at the Group's request have been indemnified in accordance with these provisions. No amount has been paid under any of these indemnities during the year.

The Group has purchased directors' and officers' insurance during the year. In broad terms, the insurance cover indemnifies individual directors' and officers' personal legal liability and legal defence costs for claims arising out of actions taken in connection with Group business. It is a condition of the insurance policy that detailed terms and premiums paid cannot be disclosed.

Employment policies and communication

Information about the Group's employment policies and our employees is available on page 16.

Donations

Edgar Filing: RIO TINTO PLC - Form 20-F

No donations were made for political purposes in the EU, Australia or elsewhere, as defined by the UK Companies Act 2006. During 2011, the Group spent US\$294 million on community assistance programmes and payments into benefit receiving trusts set up in directly negotiated community impact benefit agreements. Donations in the UK during 2011 amounted to £0.4 million.

Governmental regulations

Rio Tinto is subject to extensive governmental regulations affecting all aspects of its operations and consistently seeks to apply best practice in all of its activities. Due to Rio Tinto's product and geographical spread, there is unlikely to be any single governmental regulation in effect that could have a material effect on the Group's business.

Rio Tinto's operations in Australia and New Zealand are subject to state and federal regulations of general application governing mining and processing, land tenure and use, environmental requirements, including site-specific environmental licences, permits and statutory authorisations, workplace health and safety, trade and export, corporations, competition, access to infrastructure, foreign investment and taxation. Some operations are conducted under specific agreements with the respective governments and associated acts of parliament.

In addition, Rio Tinto's uranium operations in the Northern Territory, Australia and Namibia are subject to specific regulation in relation to mining and the export of uranium.

In November 2011, the Australian lower house passed the Minerals Resource Rent Tax (MRRT) which would levy a 30 per cent tax on the "super profits" from the mining of iron ore and coal in Australia. Whilst proposed to be effective in July 2012, the MRRT has not yet received full legislative approval. The deferred tax consequences to the Group will have no current cash flow implications but may be significant in the future. Given the complexity of the MRRT, however, quantification of these implications remains in progress.

US and Canada-based operations are subject to local, state, provincial and national regulations governing mining and processing, access to infrastructure, water use, land tenure and use, environmental aspects of operations, product and workplace health and safety, trade and export administration, corporations, competition, securities and taxation. In relation to hydroelectric power generation in Canada, water rights, as well as power sales and purchases, are regulated by the Quebec and British Columbia provincial agencies.

Rio Tinto's operations in Europe are subject to national and European rules and regulations governing general and specific aspects of current and planned operations, notably land tenure and use, workplace health and safety, environmental issues, including applicable regulations in case of sale or closure of industrial sites and permit requirements concerning activities listed for environmental protection purposes, chemical risks management (REACH), competition requirements including compliance with antitrust rules, trade and export, corporations, intellectual property, labour requirements (including personal data protection), investment and taxation.

Table of Contents

Directors report continued

Rio Tinto's South African-based operations are subject to black economic empowerment legislation which includes the requirement to transfer (for fair value) 26 per cent of the Group's South African mining assets to historically disadvantaged South Africans by 2014.

Environmental regulation

Rio Tinto measures its performance against environmental regulation by rating incidents on a low, moderate, high, or critical scale of likelihood and consequence of impacting the environment. High and critical ratings are reported to the executive management team and the Sustainability committee including progress with remedial actions. Prosecutions and other breaches are also used to gauge Rio Tinto's performance.

In 2011, there were 11 environmental incidents rated high consequence at Rio Tinto managed operations (2010: 18).

These incidents were of a nature to impact the environment or potentially concern local communities. Of these, seven resulted from water discharge, three were spills and one related to air emissions. The incidents included:

Discharge standards for water being exceeded on a number of occasions at Alucam, Cameroon.

Leakage of Jet A1 fuel from a fuel bladder at an exploration camp in Africa.

Overflow of water from a dam during an intense storm resulting in erosion below the dam at a project site in Guinea.

Leakage of sulphuric acid from a rail tanker in the rail yard at Palabora, South Africa.

Recording of levels of sulphur dioxide in air emissions above permitted amounts on a number of occasions at Palabora, South Africa.

An extended period of release into the local river of saline water which exceeded permitted levels at Hunter Valley Operations, Australia.

Overflow from a retention pond into local waterways during a high rainfall event at Kitimat, Canada.

During 2011, six operations incurred fines amounting to US\$236,416 (2010: US\$540,328). An amount of US\$156,300 related to a petrol spill that occurred in June 2010 at Gove, Australia. An amount of US\$67,952 related to permit breaches that occurred in 2008 and 2009 at a plant in Holland.

Australian corporations that exceed specified thresholds are required under the Australian National Greenhouse and Energy Reporting Act 2007 to register and report on greenhouse gas emissions and energy use and production. Three Rio Tinto entities, Rio Tinto Limited, Alcan Gove Pty Limited and Pechiney Consolidated Australia Limited, are separately covered by the Act. All three companies submitted their reports by the required 31 October 2011 deadline.

The same three Rio Tinto entities have obligations under the Australian Energy Efficiency Opportunities Act 2006 (EEO). All three completed the required public and government reporting in 2011, completing the first five year assessment cycle. Preparatory work was commenced for the second assessment cycle.

Further information on the Group's environmental performance is included in the sustainable development section of this Annual report, on pages 14 to 19 and on the website.

Legal proceedings

Edgar Filing: RIO TINTO PLC - Form 20-F

Neither Rio Tinto plc nor Rio Tinto Limited nor any of their subsidiaries is a defendant in any proceedings which the directors believe will have a material effect on either Company's financial position or profitability. Contingencies are disclosed in note 33 to the financial statements.

Exploration, research and development

The Group carries out exploration and research and development in support of its activities as described more fully under Exploration, and Technology & Innovation on pages 30 to 31. Amounts charged for the year net of any gains on disposal generated a net loss for exploration and evaluation of US\$1,348 million (2010: US\$72 million). Research and development costs were US\$148 million (2010: US\$187 million).

Auditors

PricewaterhouseCoopers LLP and PricewaterhouseCoopers are the auditors of Rio Tinto plc and Rio Tinto Limited respectively. PricewaterhouseCoopers LLP have indicated their willingness to continue in office as auditors of Rio Tinto plc and a resolution to reappoint them as auditors of Rio Tinto plc will be proposed at the 2012 annual general meetings. The resolution will also seek authority for the Audit committee to determine their remuneration. PricewaterhouseCoopers will continue in office as auditors of Rio Tinto Limited.

A copy of the declaration given by PricewaterhouseCoopers as the Group's external auditors to the directors in relation to the auditors' compliance with the independence requirements of the Australian Corporations Act 2001 and the professional code of conduct for external auditors is set out on page 215 in the financial statements.

No person who was an officer of Rio Tinto during 2011 was a director or partner of the auditors at a time when the auditors conducted an audit of the Group.

Each person who held the office of director at the date the board resolved to approve this report makes the following statements:

so far as the directors are aware, there is no relevant audit information of which the auditor is unaware; and

the directors have taken all steps that he or she ought to have taken as a director to make him or herself aware of any relevant audit information and to establish that the auditor is aware of that information.

Fees for audit and non-audit services

The amounts payable to the Group's auditor, PricewaterhouseCoopers, were:

	2011 US\$m	2010 US\$m
Audit fees ^(a)	14.4	15.7
Assurance services ^(b)	4.4	10.9
Taxation services	1.5	0.5
All other fees ^(c)	3.6	6.2
	23.9	33.3

The Group has early adopted the statutory changes in relation to the presentation of Group auditor's remuneration for the year ended 2011. Prior years have been reclassified accordingly.

(a) Audit fees relating to statutory audits.

(b) Assurance services are mainly related to half year review procedures, carve-out financial statements, sustainability assurance and limited assurance over the Taxes paid in 2010 report.

(c) All other fees include services in connection with the divestment programme and similar corporate projects.

Further information on audit and non-audit fees is set out in note 41 to the financial statements.

A description of Rio Tinto's policies to uphold the independence of the Group's auditor is set out in the corporate governance section on page 75. Based on advice provided by the Audit committee as set out in the Report of the Audit committee on page 71, the directors are satisfied that the provision of non-audit services by PricewaterhouseCoopers is compatible with the general standard of independence for auditors and the standards imposed by the Australian Corporations Act 2001 and US legislation.

Table of Contents

Financial instruments

Details of the Group's financial risk management objectives and policies and exposure to risk are described in note 31 to the 2011 financial statements.

Value of land

Most of the Group's interests in mining properties and leases, and in other land and buildings have been included in the financial statements at cost in accordance with its accounting policies. It is not possible to estimate the market value of such interests in land as this will depend on product prices over the long term which will vary with market conditions.

Creditor payments

It is the Group's policy to agree terms of payments with suppliers when entering into contracts and to meet its obligations accordingly. The Group does not follow any specific published code or standard on payment practice.

At 31 December 2011, there were 24 days (2010: 23 days) purchases outstanding in respect of the Group based on the total invoiced by suppliers during the year.

Remuneration report

Letter from the Remuneration committee chairman

Dear Shareholder,

As the new chairman of the Remuneration committee, I am pleased to introduce our report on remuneration for 2011, for which we seek your support at our annual general meetings in London in April, and in Brisbane in May.

The report is designed to provide you with the necessary information to demonstrate the link between our Group's strategy, its performance, and the remuneration outcomes for its executives. It is also intended to deliver the remuneration disclosures required by Australian and UK regulation.

In writing to you, I am fully aware of the strength of feeling which the subject of executive remuneration provokes; and I am aware too that many of our shareholders have registered their concerns through their votes and abstentions on the remuneration report at our recent annual general meetings. Both the board and the Remuneration committee have reflected very carefully on this. I realise that the decisions made by the Committee will not always please all our owners: if we seek perfect consensus among shareholders, I am afraid we will seek in vain. But we are conscious of our obligation to be as accessible to you as we can so that, on behalf of the board, I hear your views, and try to answer your questions; and in so doing, carry those opinions into our decision-making forums. Since my appointment I have met a number of major shareholders in the UK and in Australia and this process has been invaluable to me in understanding shareholders perspectives on legacy and current issues.

Reflecting shareholder feedback, we will be bringing to our 2013 annual general meetings proposals relating to the future structure of our incentive plans. We intend to consult widely on these proposals, and on the broader remuneration context, particularly during 2012, so that by the time we make our recommendations to you in 2013, we will have had the benefit of the thoughts and feedback of as many major shareholders as practical.

Our remuneration strategy and policies focus on using remuneration resource to help implement a successful corporate strategy that will create superior value for our shareholders over the long term. We see that resource as yours; and our endeavour is to use it wisely to promote and protect your interests. We want to use it to ensure that your Company can attract, motivate and retain the high quality and committed people that are critical to lead the business.

We seek to reward employees fairly and responsibly, by providing an appropriate balance between fixed and variable remuneration, the payment of which is linked to the achievement of what are intended to be demanding Group and individual performance measures. But our aim is to pay no more than is necessary to achieve this goal.

Whilst we delivered another record year of underlying earnings performance, short term incentive payments are, on average, lower than in 2010 as the Group did not outperform to the same extent, the challenging financial and safety targets set by your Board for 2011. I also acknowledge the responsibility shown by Tom Albanese and Guy Elliott in informing the Remuneration committee that they did not wish to be considered for an annual bonus in the light of the impairments in our Aluminium business. The Committee's decision endorsed this request.

This year, we have introduced a different format to the remuneration report. We have responded to the request for greater simplicity by providing you with the essential remuneration narrative in the first sections of the report, amplified by the ever-increasing disclosures required by Australian and UK statute and regulation which appear, piece by piece, in the pages that follow. So the sections which follow this letter are:

About the report

Our remuneration strategy and approach

What we paid our executive directors and why

Edgar Filing: RIO TINTO PLC - Form 20-F

Remuneration committee responsibilities, independent advisers, and how the Committee spent its time in 2011

Appendix: detailed remuneration disclosures.

We hope this presentation makes our approach, and the facts behind it, more accessible. We would find it very helpful to know in due course what you think.

Yours sincerely,

John Varley

Remuneration committee chairman

86 Rio Tinto 2011 Annual report

Table of Contents

About the report

This report has been prepared in accordance with applicable legislation and corporate governance guidance in the UK and Australia. Australian legislation requires disclosures in respect of key management personnel, being those persons having authority and responsibility for planning, directing and controlling the activities of the Group. For the purposes of this report, the key management personnel are, in addition to the directors, members of the Executive committee. The Executive committee comprises the executive directors, product group chief executive officers (PGCEOs) and Group executives. Throughout this report, the members of the Executive committee are collectively referred to as executives. The executives are listed on page 103 together with the positions held during the year and dates of appointment.

Australian legislation further requires disclosures in respect of the five highest paid executives below board level selected from the senior managers who make, or participate in making, decisions that affect the whole, or a substantial part, of the business of the Group, or have the capacity to significantly affect the Group's financial standing. The Committee has determined that below board level, only members of the Executive committee constitute the group of senior managers that make decisions that affect the whole, or a substantial part, of the business of the Group.

In addition to executive remuneration, this report covers the chairman's and the non-executive directors' remuneration on page 105.

Our remuneration strategy and approach

Rio Tinto operates in global and local markets where it competes for a limited pool of talented executives. High quality people, who are capable of achieving stretching performance targets, are essential to generating superior returns for the Group. Our people and remuneration strategies aim to provide this support by enabling the Group to attract and retain talent that will maximise shareholder value.

We aim to engage people over the long term by fostering diversity, providing challenging work and development opportunities, and rewarding for performance. This people strategy is underpinned by our group wide values of respect, integrity, accountability and teamwork and our employee commitment to provide sustainable growth and development for both Rio Tinto and our employees.

Our remuneration strategy is based on the principles of aligning remuneration arrangements with the Group wide strategic drivers, and empowering employees by differentiating top performers, whilst achieving simplicity and transparency in the design and communication of remuneration arrangements. The remuneration strategy and supporting policies, and how they support our overall business strategy for achieving our vision to be the leading global mining and metals company, are set out below and in the executive remuneration structure table on pages 101 and 102.

Competitive, performance-related remuneration

We provide competitive rewards that attract, retain and motivate executives of the high calibre required to lead the Group while ensuring rewards remain appropriate compared to market practice and when compared to remuneration arrangements for other employees in the Group.

The majority of remuneration is linked to demanding performance targets over both the short and long-term to ensure that executive rewards are aligned with performance delivered for shareholders.

For the purposes of assessing the appropriate level of executive remuneration, the Committee references the FTSE30, (excluding financial services companies, and with due regard for size and complexity) as the initial comparator group. The FTSE30 is considered the most relevant comparator group as it comprises organisations broadly comparable to the Group in terms of global reach, revenue, market capitalisation and complexity. Additional references are also made to other relevant supplementary comparator groups including a cross-section of comparable international industrial organisations and other international mining companies where appropriate.

Typically, base salaries will be positioned at the median of these comparator groups, with total remuneration positioned across the full market range according to individual and business performance.

Health and safety

We promote and reward sustainable development, with a strong focus on health and safety in the Short Term Incentive Plan (STIP) targets.

As an organisation, we strive for superior long term shareholder value creation in a healthy, safe and environmentally appropriate way. These are key elements of our commitment to operational excellence and licence to operate.

Edgar Filing: RIO TINTO PLC - Form 20-F

Health and safety key performance indicators (measured in relation to all injury frequency rate (AIFR), Significant Potential Incidents (SPI) and Semi Quantitative Risk Assessment (SQRATM)), comprise 17.5 per cent of the STIP for executives.

The extent of the impact of a fatality on the STIP score for all executives is based on an assessment by the Committee of the impact of leadership, individual behaviour and systems in the incident.

For some executives, where relevant, an additional proportion of their individual objectives under the STIP are linked to safety objectives.

Long term focus

Consistent with our strategy of investing in and operating large, long term, cost competitive mines and businesses we provide incentive plans that focus on longer term performance.

Our incentive plans are designed to promote and reward decision making with a positive long-term impact while avoiding excessive risks.

Half of the STIP is deferred into shares which vest after three years.

The performance based options and shares have a three and four year time horizon, respectively.

Options may be exercised up to ten years after the grant.

Shareholder alignment

We reward executives for delivering shareholder value by using relative Total Shareholder Return (TSR) as the metric for our performance based long term incentive plans (LTIP).

Rewards are delivered based on the relative standing of our performance against both the HSBC Global Mining Index and the broader market of large global companies as measured through the Morgan Stanley Capital World Index (MSCI).

TSR is considered an appropriate performance measure for the long term incentive plans as it captures objectively the return Rio Tinto delivers to its shareholders over the long term and rewards executives based on the Group's TSR performance against its comparators.

The choice of both the HSBC Global Mining Index and MSCI reflects the fact that Rio Tinto competes against a global market for investors as well as within the mining sector and is consistent with rewarding executives for providing stable returns over the long term relative to the broader market and the mining sector.

The Remuneration committee is currently reviewing the performance measures for the LTIP to ensure that they remain aligned with long-term value creation for shareholders.

Remuneration report continued

What we paid our executive directors and why

This section provides an overview of 2011 remuneration for the executive directors. This includes details of the key elements of remuneration and a summary of total remuneration for 2011.

Tom Albanese (chief executive)

Base salary

Base salaries are reviewed annually, with reference to underlying Group and individual performance; global economic conditions; role responsibilities; an assessment against relevant comparator groups; and base salary budgets applying to the broader employee population. The Committee has increased Tom's base salary by 2.5 per cent effective 1 March 2012. This was below the average increase for Rio Tinto employees in the UK.

Base salary (stated in £ '000)	2012	2011	% change
STIP objectives for 2011	1,056	1,030	2.5

In addition to the health, safety and financial measures summarised in the executive remuneration structure table on page 101, the following individual objectives were set for 2011:

Continue to advance the portfolio towards large, long-term, cost competitive mines and businesses.

Maintain or improve controllable cost performance against 2011 targets.

Demonstrate progress in Mongolia and Guinea.

Longer term objectives commensurate with the longer term nature of the business include:

Ensure Rio Tinto's portfolio remains strong.

Build upon distinctive sector competitive advantage in areas of operational excellence, sustainable development, innovation, and exploration.

Improve diversity (by gender and nationality) to become more effective on a global basis.

Maintain capital discipline especially on transactions through the commodity cycle.

STIP outcomes for 2011

Edgar Filing: RIO TINTO PLC - Form 20-F

Tom led the Group in achieving record underlying earnings and record cash flow results in 2011.

The Group's safety performance was disappointing. There were six fatalities in 2011. The target 15 per cent reduction in the AIFR was not achieved; however near or above target results were achieved for the other key health and safety measures.

Tom's achievement against his personal objectives was seen as strong. In particular:

Good progress has been made around our large projects, such as Simandou.

In relation to Oyu Tolgoi, we strengthened our position with the Mongolian government as well as over Ivanhoe rounded off by our recent acquisition of control of that company.

Resource nationalism and geopolitical tensions remain serious threats throughout the resource sector and Tom invested considerable energy in the strengthening of Rio Tinto's position as a global player.

Tom notified the Remuneration committee that he did not wish to be considered for an annual bonus, recognising the significant impairment charge in relation to our aluminium business. The Remuneration committee's decision endorsed this request.

LTIP awards granted in 2011

Award levels are set so as to incentivise executives to meet the long-term strategic goals of the Group, to provide sufficient retention for the executive team and to contribute towards the competitiveness of the

overall remuneration package. The expected value of awards granted in 2011, based on the fair value calculations performed by independent advisers, was 190 per cent of base salary (£1,957,000). The eventual value of the award will depend on performance during the years 2011-2014.

LTIP awards for 2012

The Remuneration committee has decided that the award level in 2012 should again have an expected value of 190 per cent of base salary (£2,006,400). The eventual value of the award will depend on performance during the years 2012-2015.

LTIP outcomes for the period ended 31 December 2011

The performance shares under the Performance Share Plan (PSP) awarded in 2008 had a four year performance period that ended on 31 December 2011. This award did not vest. Share options under the Share Option Plan (SOP) granted in 2009 had a performance period that ended on 31 December 2011. This award has vested in full. Tom has an option over 72,029 shares at a price of £16.53 per share. The market price of Rio Tinto plc shares at 20 February 2012 being the latest practicable date before the date of publication of this report was £37.06. These options can be exercised from 17 March 2012. Further details of the awards vesting in 2012 and in prior years are provided on pages 98 and 112.

Shareholding policy

The Committee has determined that executive directors should aim to reach a holding equivalent in value to two times their base salary. At 20 February 2012 the value of Tom's holding was 7.7 times his current base salary.

Pension

Tom's target defined benefit pension is equal to two-thirds of basic salary at age 60, through funded and unfunded arrangements as provided to other UK based employees. This is inclusive of benefits accrued in the US. The accrued pension as at 31 December 2011 was £476,000 per annum, (31 December 2010: £395,000 per annum). Further details are set out in table 2 on page 109.

Total remuneration

The table below provides a summary of actual remuneration in respect of 2009, 2010 and 2011 stated in pounds sterling. This is in addition to statutory disclosure requirements. The purpose of this table is to enable shareholders to better understand the actual remuneration received and to provide an overview of the actual outcomes of the Group's remuneration arrangements. The remuneration details set out in table 1a on pages 106 and 107, include theoretical accounting values relating to various parts of the remuneration packages, most notably LTIP arrangements. Accordingly, the numbers below are not directly comparable with those

Edgar Filing: RIO TINTO PLC - Form 20-F

in table 1a.

(stated in £ 000)	2011	2010	2009
Base salary paid ^(a)	1,010	907	907
STIP payment – cash	0	797	589
STIP payment – deferred share ^(b)	0	797	0
Total short-term pay	1,010	2,501	1,496
Expected value of LTIP awards granted ^(c)	1,957	1,723	1,723
Pension ^(d)	1,230	1,105	784
Other benefits ^(e)	269	208	211
Total remuneration	4,466	5,537	4,214
Percentage change in total remuneration (2011 versus 2010; 2010 versus 2009)	(19.3%)	31.4%	
Percentage of maximum STIP awarded	0	87.8%	54.1%
Percentage of maximum STIP forfeited	100%	12.2%	45.9%
Percentage of target STIP awarded	0	146.4%	108.2%

(a) Salary paid in the financial year to 31 December. Salaries are reviewed with effect from 1 March.

(b) Value of STIP deferred under the Bonus Deferral Plan (BDP).

(c) Based on the expected value of awards (PSP awards are calculated to have an expected value of 65 per cent of face value, SOP awards are calculated to have an expected value of 20 per cent of face value).

(d) Pension represents the value of one year's pension accrual calculated using an IAS19 methodology and assumptions on rates of investment return, inflation and salary increases and is sensitive to changes to those assumptions.

(e) Includes health care, provision of a car and driver and other contractual payments.

Table of Contents

The graphs below show the value of the 2012 remuneration package at below threshold, target and outstanding performance levels together with the proportion of the package delivered through fixed and variable reward. Election 1 provides a mix of performance shares under the PSP and performance options under the SOP and Election 2 provides the full LTIP opportunity in performance shares. Under the PSP, one and a half times the original award can vest for outstanding performance.

The PSP, SOP, STIP-deferred shares and STIP-cash are all performance related remuneration.

Potential value of 2012 remuneration package

Guy Elliott (chief financial officer)

Base salary

Base salaries are reviewed annually, with reference to underlying Group and individual performance; global economic conditions; role responsibilities; an assessment against relevant comparator groups; and base salary budgets applying to the broader employee population. The Committee has increased Guy's base salary by 2.5 per cent effective 1 March 2012. This was below the average increase for Rio Tinto employees in the UK.

Base salary (stated in £ 000)	2012	2011	% change
STIP objectives for 2011	738	720	2.5

In addition to the health, safety and financial measures summarised in the executive remuneration structure table on page 101, the following individual objectives were set for 2011:

Continue to advance the portfolio towards large, long-term, cost competitive mines and businesses.

Enhance value through M&A transactions.

Expand marketing capabilities and competencies.

Complete balance sheet transition and recover the Group's credit rating.

STIP outcomes for 2011

Guy was part of the Executive committee that led the Group in achieving record underlying earnings and record cash flow results in 2011.

Edgar Filing: RIO TINTO PLC - Form 20-F

The Group's safety performance was disappointing. There were six fatalities in 2011. The target 15 per cent reduction in the AIFR was not achieved; however near or above target results were achieved for the other key health and safety measures.

Guy's achievement against his personal objectives was seen as strong. In particular:

Rio Tinto completed approximately US\$6.3 billion in well executed acquisitions, completed several divestments such as Luzenac and Colowyo and prepared for the divestment of Pacific Aluminium.

A stronger balance sheet allowed the Group to recover the Group's credit rating with all four agencies, and the Group undertook an additional US\$2 billion share buy-back programme.

Improved marketing leadership.

Guy notified the Remuneration committee that he did not wish to be considered for an annual bonus, recognising the significant impairment charge in relation to our aluminium business. The Remuneration committee's decision endorsed this request.

LTIP awards granted in 2011

Award levels are set so as to incentivise executives to meet the long-term strategic goals of the Group, to provide sufficient retention for the executive team and to contribute towards the competitiveness of the overall remuneration package. The expected value of awards granted in 2011, based on the fair value calculations performed by independent advisers, was 190 per cent of base salary. The eventual value of the award will depend on performance during the years 2011-2014.

LTIP awards for 2012

The Remuneration committee has decided that the award level in 2012 will again have an expected value of 190 per cent of base salary (£1,402,200). The eventual value of the award will depend on performance during the years 2012-2015.

LTIP outcomes for the period ended 31 December 2011.

The performance shares under the PSP awarded in 2008 had a four year performance period that ended on 31 December 2011. This award did not vest. Share options under the SOP granted in 2009 had a performance period that ended on 31 December 2011. This award has vested in full. Guy has an option over 53,615 shares at a price of £16.53 per share.

Sam Walsh (executive director and chief executive Iron Ore and Australia)

Base salary

Base salaries are reviewed annually, with reference to underlying Group and individual performance; global economic conditions; role responsibilities; an assessment against relevant comparator groups; and base salary budgets applying to the broader employee population. The Committee has increased Sam's base salary by 4.0 per cent effective 1 March 2012. This was below the average increase for Rio Tinto employees in Australia.

Base salary (stated in A\$ '000)	2012 1,654	2011 1,590	% change 4.0
----------------------------------	-----------------------------	---------------	-----------------

STIP objectives for 2011

In addition to the health, safety and financial measures summarised in the executive remuneration structure table on page 101, the following individual objectives were set for 2011:

Delivery of the Pilbara growth plans.

Delivery of expansion initiatives at IOC and the formation of the Simandou Joint Venture.

Identification and development of new global growth opportunities.

Provide leadership to the business in Australia.

Renew focus on overhead costs.

STIP outcomes for 2011

Each objective is scored out of a maximum of 200 per cent which represents outstanding performance. The following table summarises the outcomes for each objective.

Measures	Weight (%)	Score (out of 200%)	Weighted score (%)
Group financial	21.0	129	27.1
PG financial	31.5	141	44.4
PG health and safety	17.5	37	6.4
Individual	30.0	158	47.5
Total	100.0		125.4

The Group's performance against the financial targets was 129 per cent.

The Iron Ore group achieved record earnings and cash flow results for 2011 and the performance against the financial targets was 141 per cent.

Edgar Filing: RIO TINTO PLC - Form 20-F

There were three fatalities in 2011. The RTIO safety scores, including the AIFR, SPI and SQRA™, were all above target and resulted in a score of 124 per cent (out of a maximum of 200 per cent). However, this was reduced to 37 per cent, which is the threshold safety score after a fatality.

The Committee, with input from the chief executive, then assessed Sam's performance against his individual objectives as 158 per cent (out of 200 per cent) which reflects his outstanding contribution to the business during the year. In particular:

Delivery on the Pilbara RTIO growth plans, keeping the 283 mtpa project on track, accelerating the 333 mtpa project, and increasing its scope to 353 mtpa

Rio Tinto's strong relationship with the Government of Guinea

Work on reducing overhead costs

His leadership in making RTIO a primary performance driver of Rio Tinto's business.

LTIP awards granted in 2011

Award levels are set so as to incentivise executives to meet the long-term strategic goals of the Group, to provide sufficient retention for the executive team and to contribute towards the competitiveness of the overall remuneration package. The expected value of awards granted in 2011, based on the fair value calculations performed by independent advisers, was 190 per cent of base salary. The eventual value of the award will depend on performance during the years 2011-2014.

LTIP awards for 2012

The Remuneration committee has decided that the award level in 2012 will again have an expected value of 190 per cent of base salary or A\$3,142,600. The eventual value of the award will depend on performance during the years 2012-2015.

LTIP outcomes for the period ended 31 December 2011

The performance shares under the PSP awarded in 2008 had a four year performance period that ended on 31 December 2011. These awards did not vest. Share options under the SOP granted in 2009 had a performance period that ended on 31 December 2011. These awards have vested in full. Sam has an option over 40,005 shares at a price of A\$33.45 per share. The market price of Rio Tinto Limited shares at 20 February 2012 being the latest practicable date before the date of publication of this report was A\$68.04. These options can be exercised from 17 March 2012. Further details of the awards vesting in 2012 and in prior years are provided on pages 98 and 112.

Shareholding policy

The Committee has determined that executive directors should aim to reach a holding equivalent in value to two times their base salary. At 20 February 2012, the value of Sam's holding was 2.0 times his current base salary.

Superannuation

Sam's target defined benefit superannuation is a lump sum multiple of 4.05 times final basic salary at age 62 provided through an employer funded superannuation plan as provided to other Australian based employees. Sam receives an additional Company contribution on a defined contribution basis of 20 per cent of the lesser of 50 per cent of the annual STIP award or 20 per cent of basic salary in line with typical market practice in Australia. The accrued lump sum benefit as at 31 December 2011 was A\$6,245,000 (31 December 2010: A\$5,493,000). The additional Company contribution for 2011 was A\$59,000 (2010: A\$59,000). Further details are set out in table 2 on page 109.

Total remuneration

The table below provides a summary of actual remuneration in respect of 2009, 2010 and 2011 stated in Australian dollars. This is in addition to statutory disclosure requirements. The purpose of this table is to enable shareholders to better understand the actual remuneration received and to provide an overview of the actual outcomes of the Group's remuneration arrangements. The remuneration details set out in table 1a on pages 106 and 107, include theoretical accounting values relating to various parts of the remuneration packages, most notably LTIP arrangements. Remuneration committee responsibilities, independent advisers, and how the Committee spent its time in 2011

Responsibilities

The Committee's responsibilities are set out in its terms of reference which are available in the corporate governance section of the Rio Tinto website. The responsibilities of the Committee include:

determining the remuneration structure, policies and assessing their cost, including pension and superannuation arrangements for executives;

determining contractual notice periods and termination commitments and approve any retention and termination arrangements for executives;

approving the use of short and long term incentive plans for executives;

overseeing the operation of the Group's short and long term incentive plans as they relate to executives, including the approval of awards, setting of performance criteria, where applicable, and approval of any vesting;

approving awards under the Group's all-employee share plans;

Edgar Filing: RIO TINTO PLC - Form 20-F

approving the terms of service upon appointment and any subsequent changes for the chairman, executives and the company secretary of Rio Tinto plc; and

reviewing and making recommendations to the Board on remuneration by gender.

The Committee considers the level of pay and conditions throughout the Group when determining executive remuneration and ensures the same principles are used when designing the broader employee remuneration policies. The Committee is committed to ensuring that remuneration policy and practices reflect, to the extent practicable, corporate governance guidance on executive remuneration.

The members of the Committee are all independent in accordance with the independence policy adopted by the board. The membership and meeting attendances are detailed in the corporate governance section on page 69. The chairman and chief executive participated in meetings at the invitation of the Committee during 2011. Jan du Plessis joined the Committee as a member with effect from 7 February 2012. The Committee is supported by members of senior management who regularly attend meetings to provide information as requested by the Committee. These included Hugo Bague (Group executive, people & organisation), John Beadle (global practice leader, Total Rewards) and Ben Mathews (company secretary, Rio Tinto plc). None of the attendees mentioned above were present when matters associated with their own remuneration were considered.

92 [Rio Tinto 2011 Annual report](#)

Table of Contents

Independent advisers

The independent advisers engaged by and reporting to the Committee during 2011 were Deloitte LLP. Total fees paid by the Company to Deloitte LLP in 2011 for their services to the Committee amounted to US\$400,000. Deloitte LLP attended committee meetings and provided advice in relation to management proposals. Fees for these services were US\$65,000. In addition, Deloitte LLP provided general and technical executive remuneration advice for which fees amounted to US\$177,000 and provided remuneration data and information on market practice for which fees were US\$158,000. Deloitte LLP provide unrelated taxation advice and advisory services to the Group.

The Committee has adopted a protocol effective from 1 January 2012 governing the engagement of and communications with any external remuneration consultants, including Deloitte LLP. The purpose of the protocol is to ensure that any remuneration recommendations provided by remuneration consultants are provided without undue influence of key management personnel, as stipulated by applicable legislation.

The Group has also drawn on the services and publications of a range of advisers, including Towers Watson, Hay Group and Mercer in relation to remuneration data and external validation of TSR performance.

How the Committee spent its time in 2011

During 2011, the Committee met three times. It fulfilled its responsibilities as set out in its terms of reference. In particular, its work has included:

reviewing and determining base salary increases for the executives;

reviewing and determining threshold and outstanding performance targets used in the 2011 STIP and so far in 2012, reviewing actual performance against these targets as well as establishing the 2012 STIP targets;

reviewing and determining long term incentive grants for the executives and deciding vesting outcomes;

a detailed review of potential performance measures to be used as part of the review of long term incentive plans;

reviewing changes to the UK income tax regime for pensions;

reviewing and determining changes to the PSP rules in order to allow participants the choice to take their entire LTIP opportunity in performance shares;

reviewing and approving proposals with respect to the new global employee share plan; and

a review of remuneration practices against our comparator groups.

Table of Contents**Remuneration report: Appendix****Appendix: detailed remuneration disclosures****What we paid other Executive committee members and why****Base salary**

Base salaries are reviewed annually, with reference to underlying Group and individual performance, global economic conditions, role responsibilities, an assessment against relevant comparator groups and base salary budgets applying to the broader employee population. The average base salary increase for other Executive committee members was 3.3 per cent, effective from 1 March 2012. This was below the average increases applying to the broader Rio Tinto employee population in Australia, Canada, UK and US and in line with the 2012 salary budgets in each country.

Stated in '000	2012	2011	% change
Hugo Bague	£429.5	£415	3.5
Preston Chiaro	US\$789	US\$770	2.5
Bret Clayton	US\$763.5	US\$745	2.5
Jacynthe Côté (a)	C\$930	US\$885	2.9
Andrew Harding	£436	£420	3.8
Harry Kenyon-Slaney	£436	£420	3.8
Doug Ritchie	A\$967	A\$930	4.0
Debra Valentine	US\$652	US\$630	3.5

(a) Jacynthe Côté's base salary has been converted to Canadian dollars from March 2012 to align earnings currency with home base expenditures.

STIP objectives and outcomes for 2011

We set tough targets for our STIP and demand that sustainable business practices are adhered to, particularly around safety. Whilst we delivered another record year of underlying earnings performance, STIP payments are on average lower than in 2010 as the Group did not outperform to the same extent, the challenging financial and safety targets set for 2011. A summary of the assessed score against achievement of financial, health and safety and individual objectives by executive is set out in the following table on page 95.

LTIP awards granted in 2011

Award levels are set so as to incentivise executives to meet the long-term strategic goals of the Group, to provide sufficient retention for the executive team and to contribute towards the competitiveness of the overall remuneration package. The expected value of awards granted in 2011, based on the fair value calculations performed by independent advisers, was 190 per cent of base salary. The eventual value of the award will depend on performance during the years 2011-2014.

LTIP awards for 2012

The Remuneration committee has decided that the award level in 2012 for all other Executive committee members will again have an expected value of 190 per cent of base salary. The eventual value of the awards will depend on performance during the years 2012-2015.

LTIP outcomes for the period ended 31 December 2011

The performance shares under the PSP awarded in 2008 had a four year performance period that ended on 31 December 2011. For awards granted in 2008, different vesting schedules applied for awards made to individuals who were executive directors and PGCEOs and for other executives. Certain members of the Executive committee were not executive directors or PGCEOs at the time of grant and therefore this different vesting schedule applied.

These awards did not vest for those executives who were PGCEOs at the time the awards were granted. The performance shares partially vested at 33.3 per cent for other executives.

Share options under the SOP granted in 2009 had a performance period that ended on 31 December 2011. These awards vested in full. Options can be exercised from 17 March 2012.

Edgar Filing: RIO TINTO PLC - Form 20-F

Further details of the LTIP outcomes for the period ended 31 December 2011 and in prior years are provided on pages 98 and 112.

Post employment benefits

Executives may participate in pension, superannuation and post employment medical benefits offered to the broader employee population in similar locations.

Summary of 2011 individual objectives

Build a learning organisation and significantly improve the engagement of frontline employees

Drive improvement in capabilities at developing country assets and projects

Develop the globalisation of the business through the design and implementation of the Group employee diversity policy

Ensure organisational agility and workforce flexibility through functional optimisation and business partnering

Support our people strategy by building capability, diversity, engagement and leadership

Support operational excellence and growth through the creation of an underground mining support organisation

Add capabilities to innovation team to refill idea pipeline and deliver technology at commercial scale

Continue to build project development capabilities and delivery

Support our people strategy by building capability, diversity, engagement and leadership

Advance risk management strategies, ensuring integration and collaboration across the various functional areas

Support efforts on portfolio divestment

Deliver on exploration targets, including engagement and support to product groups in identifying and analysing early stage investment opportunities

Improve our analytical tools, pricing and evaluation models

Support our people strategy by building capability, diversity, engagement and leadership

Drive further sustainable cost reductions to achieve 40 per cent EBITDA margins

Continue to enhance portfolio quality

Drive value improvement on key growth projects to reduce capital expenditure intensity

Bring about transformational change in the product group

Support our people strategy by building capability, diversity, engagement and leadership

Ensure appropriate resources, structure and support to deliver sustainable value in key strategic locations

Provide the leadership, resources and support to maximise long term value from the Group's investment in Oyo Tolgoi

Pursue growth opportunities

Support our people strategy by building capability, diversity, engagement and leadership

Edgar Filing: RIO TINTO PLC - Form 20-F

Remuneration report: Appendix continued

Total remuneration

The tables below provide a summary of actual remuneration in respect of 2010 and 2011 stated in the currency of payment. This is in addition to statutory disclosure requirements. The purpose of this table is to enable shareholders to better understand the actual remuneration received by executives and to provide an overview of the actual outcomes of the Group's remuneration arrangements. The remuneration details set out in table 1a on pages 106 and 107, include theoretical accounting values relating to various parts of the remuneration packages, most notably LTIP arrangements.

(a) Salary paid in the financial year to 31 December. Salaries are reviewed with effect from 1 March.

(b) Value of STIP deferred under the BDP.

(c) Based on expected value of awards (PSP award are calculated to have an expected value of 65 per cent of face value, SOP awards are calculated to have an expected value of 20 per cent of face value).

(d) Pension or superannuation represents the value of one year's pension or superannuation accrual calculated using an IAS19 methodology and assumptions on rates of investment return, inflation and salary increases and is sensitive to changes to those assumptions.

(e) Includes health care, expatriate related payments, car allowance or car and other contractual payments.

(f) The value of all components of total remuneration paid or awarded in currencies other than the base salary currency have been converted to base salary currency using average annual exchange rates.

Edgar Filing: RIO TINTO PLC - Form 20-F

- (g) Tax equalisation costs relating to Preston Chiaro's assignment to the UK were significantly higher in 2010 than in 2011.

- (h) Other benefits includes a one-time special bonus which vested 50 per cent in 2010 and 50 per cent in 2011. The 2010 amount includes the vesting of a one-off time-based, special retention grant as part of a legacy Alcan Inc. arrangement awarded on assuming the role of president and CEO Primary Metals, Rio Tinto Alcan. Further details of the 2011 other payments are provided on page 99.

Table of Contents

Potential value of 2012 remuneration package

The graphs below show the value of the 2012 remuneration package at below threshold, target and outstanding performance levels together with the proportion of the package delivered through fixed and variable reward. The remuneration mix is identical for all other executive committee members. Election 1 provides a mix of performance shares under the PSP and performance options under the SOP and Election 2 provides the full LTIP opportunity in performance shares. Under the PSP, one and a half times the original award can vest for outstanding performance.

Table of Contents

Remuneration report: Appendix continued

Remuneration mix

Consistent with the Group's strategy, the Committee seeks to achieve a remuneration mix which best reflects the long-term nature of the business. As such, the total remuneration package is designed to provide an appropriate balance between fixed and variable components with a focus on long-term variable pay. The PSP, SOP, STIP-deferred shares and STIP-cash are all performance related remuneration.

Proportion of remuneration package value delivered through fixed and performance-related reward

%

Long term incentives vesting outcomes for the period ended 31 December 2011

2008 PSP awards

A group of eight comparator companies was used to assess Rio Tinto's relative TSR performance, which is the performance measure used to determine the vesting of awards made under the 2008 PSP. For PSP awards made from and including 2010, two indices are used for assessing Rio Tinto's relative TSR performance as detailed in the table on page 99.

PSP performance period that ended on 31 December 2011

<p>Comparator companies^(a)</p> <p>Performance period (4 years)</p> <p>Performance condition^(b)</p> <p>TSR Ranking</p> <p>% of shares vested</p> <p>% of shares forfeited</p>	<p>Alcoa, Anglo American, Barrick Gold, BHP Billiton, Freeport-McMoRan, Newmont Mining, Vale do Rio Dolce, Xstrata 1 January 2008 - 31 December 2011</p> <p>For awards made prior to 2010, different performance conditions applied for executive directors and PGCEOs; and other executives 6th (17.2% TSR)</p> <p>Executive directors and PGCEOs at the date awards were granted ^(c): Nil Other executives at the date awards were granted ^(d): 33.3%</p> <p>Executive directors and PGCEOs at the date awards were granted ^(c): 100% Other executives at the date awards were granted ^(d): 66.7%</p>
--	---

(a) The comparator companies were selected at the start of the performance period.

(b) The performance condition for executive directors and PGCEOs provides greater upside for outstanding performance than that applying for other executives. The threshold and maximum vesting levels for each group were used to calibrate the vesting schedules. For executive directors and PGCEOs, Rio Tinto must achieve a ranking of 5th (median of the comparator group) for threshold vesting at 35 per cent. The maximum vesting for executive directors and PGCEOs is 1.5 times the award with equal steps between 5th and 1st rank. For awards to other executives, Rio Tinto must achieve a ranking of 7th for threshold vesting at 16.7 per cent. The maximum vesting for other executives is one times the award with equal steps between 7th and 1st rank. No awards vest below the threshold levels. The performance condition for all executives was aligned in 2010 when the comparator group was changed to measure TSR against the HSBC Global Mining Index and the Morgan Stanley Capital World Index.

(c) Applies to: Tom Albanese, Preston Chiaro, Bret Clayton, Guy Elliott and Sam Walsh.

(d) Applies to: Hugo Bague, Jacynthe Côté, Andrew Harding, Harry Kenyon-Slaney, Doug Ritchie and Debra Valentine who were subject to the other executive performance condition at the time the 2008 PSP awards were made.

The methodology used to calculate the starting share prices for TSR comparison purposes, for Rio Tinto and comparator companies, was the 12 month average prior to the commencement of the performance period. The methodology used to calculate the ending share prices for TSR comparison purposes, for Rio Tinto and comparator companies, was the last 12 months in the performance period. The methodology used to set the levels of award was based on the prior year average share price.

Edgar Filing: RIO TINTO PLC - Form 20-F

PSP awards granted to executive directors and PGCEOs in 2006 partially vested at 39 per cent in 2010. PSP awards granted in 2007 partially vested at 36 per cent in 2011. The average vesting of performance shares for executive directors and PGCEOs in the prior five years (2007-2011) has been approximately 27 per cent of the maximum grant.

2009 SOP awards

The HSBC Global Mining Index is used to assess Rio Tinto's relative TSR performance which is the performance measure used to determine the vesting of awards made under the SOP.

SOP performance period that ended on 31 December 2011

Comparator group	HSBC Global Mining Index
Performance period (3 years)	1 January 2009-31 December 2011
Index TSR %	116.0
Rio Tinto TSR %	151.3
% of options vested	100
% of options forfeited	

The 2008 average share price was abnormally inflated by the BHP Billiton bid. The Remuneration committee at that time used the average of the Rio Tinto share price over the three month period commencing 12 February 2009 (as opposed to a 12 month period commencing 1 January 2008) for the purpose of calculating the opening share price for TSR performance over the performance period. It used the same period in relation to the HSBC Global Mining Index. However, the usual 12 month methodology was used to calculate the ending share prices for TSR comparison purposes for Rio Tinto and the Index. The usual conventions were also applied to set the number of options awarded, based upon the prior year average share price which resulted in a significant reduction in options awarded for the majority of participants compared to the prior year.

Share options granted to executives in 2007 and 2008 did not vest and have lapsed in accordance with the SOP rules. The average vesting of share options for executives in the prior five years (2007-2011) has been 60 per cent of the maximum grant.

2009 MSP awards

Although executives are not eligible to receive awards under the MSP, Jacynthe Côté, Andrew Harding, Harry Kenyon-Slaney and Doug Ritchie each received grants prior to their appointments as PGCEOs. Hugo Bague and Debra Valentine received grants prior to remuneration arrangements for all Executive committee members being aligned in 2010. The vesting period for these previous MSP awards ended during 2011 with the exception of a residual award made to Debra Valentine when she joined the Group in 2008 and which vested in January 2012.

Plan period	Plan period that ended 31 December 2011
Vesting period	17 March 2009-31 December 2011
% of shares vested	100
% of shares forfeited	

Table of Contents

Five-year TSR and relevant index TSR

TSR is the performance measure used to determine the vesting of awards made under the PSP and SOP. In 2011, Rio Tinto achieved record earnings; however the share price deteriorated over the course of 2011. Rio Tinto's TSR relative to the relevant index over the performance period has a direct impact on the levels of LTIP vesting.

The effect of this performance on shareholder wealth, as measured by TSR delivered during the relevant calendar year, is detailed in the table.

Year	Dividends	Share price-		Share price-		Total
	paid during	Rio Tinto plc		Rio Tinto Limited		shareholder
	the year	pence		A\$		(TSR)
	US cents	1 Jan	31 Dec	1 Jan	31 Dec	Group %
2011	117.0	4,487	3,125	85.47	60.30	(31.8)
2010	90.0	3,390	4,487	74.89	85.47	33.2
2009	68.0	1,231	3,390	29.97	74.89	173.5
2008	152.0	4,392	1,231	105.65	29.97	(71.5)
2007	116.0	2,245	4,392	58.60	105.65	93.0

The graph below illustrates the TSR performance of the Group against the HSBC Global Mining Index and the MSCI over the past five years. These two indices are used to assess Rio Tinto's relative TSR performance for awards made under the PSP from and including 2010. The HSBC Global Mining Index alone is used to determine the vesting of awards made under the SOP. The remuneration structure table on page 102 provides further details of the performance conditions for the PSP and SOP.

Other payments during 2011

This section provides information on any other payments made during the year.

Bonus Deferral Plan (BDP)/Company Contributed Awards (CCA)

During the global and industry downturn in 2009, the Committee decided to defer the 2008 STIP payments into shares in order to enhance alignment with shareholders during a challenging economic period by ensuring executives were rewarded in-line with share price performance. Executive directors and PGCEOs were required to defer 100 per cent of any bonus due in respect of 2008, and all other executives were required to defer 50 per cent. The bonus deferral for executive directors and PGCEOs vested 100 per cent based on continued service at the end of 2011. In the case of the other executives (as described in the 2010 remuneration report), an amount equal to 25 per cent of salary (the CCA) was added to the amount of the bonus deferral to provide enhanced retention during a challenging period. Half the shares vested at the end of 2010 and half vested at the end of 2011. Accordingly, half of the shares awarded under the BDP and CCA vested for Jacynthe Côté, Hugo Bague, Andrew Harding, Harry Kenyon-Slaney, Doug Ritchie and Debra Valentine in December 2011. These shares were conditionally awarded prior to the named executives becoming PGCEOs or Group executives. The payments made under these awards are detailed in Table 1a.

The BDP continues to operate with 50 per cent of STIP awards deferred from 2010 onwards.

One-off long term incentive grant

Upon promotion to the role of chief executive of Rio Tinto Alcan on 1 February 2009, and based on the terms of her Alcan Inc. contract, Jacynthe Côté was granted a one-time conditional award of deferred shares equal to 25 per cent of her base salary. 50 per cent of the award vested on 1 February 2010 and the remaining 50 per cent vested on 1 February 2011 based on the successful achievement of the performance conditions for the award which were based on the successful integration and re-organisation of Rio Tinto Alcan.

Edgar Filing: RIO TINTO PLC - Form 20-F

The payments made under this award are detailed in Table 1a.

Former director

In early 2012, Rio Tinto was responsible for a payment on behalf of Dick Evans, a former executive director who retired on 31 December 2009. This payment of US\$255,524 was in accordance with Rio Tinto's contractual obligations with regard to his former international assignment.

Table of Contents

Executive remuneration structure

The remuneration structure for executives, including the relationship between each element of remuneration and Group performance, is summarised below:

<p>Fixed Base salary</p>	<p>Link to Group performance Provides the fixed element of the remuneration package</p>	<p>Remuneration arrangements Base salaries reviewed annually effective 1 March</p>
<p>Benefits</p>	<p>Reflects an employee's sustained contribution to the organisation</p> <p>Provides locally competitive post employment and other benefits in a cost efficient manner</p>	<p>Any increases are determined with reference to underlying Group and individual performance, global economic conditions, role responsibilities, an assessment against relevant comparator groups and base salary budgets applying to the broader employee population</p> <p>Post employment benefit arrangements include pension or superannuation and post retirement medical benefits where applicable</p> <p>Other benefits include healthcare, accident insurance where applicable, provision of a car, professional advice, spouse travel, flexible perquisites and secondment costs comprising housing, education, tax equalisation and relocation payments made to and on behalf of executives living outside their home country</p>
<p>Performance-related (At risk) STIP</p>	<p>Focuses participants on achieving demanding annual performance goals, which are based on the Group's KPIs, to create sustainable shareholder value</p> <p>50 per cent of the STIP delivered in cash and 50 per cent delivered in deferred shares under the BDP. The BDP vests in the December of the third year after the end of performance year to which they relate. Vesting is subject to continued employment to ensure ongoing alignment between the executives and shareholders</p>	<p>The maximum annual bonus opportunity for outstanding performance under the STIP for executives is 200 per cent of base salary (for target performance, this is 120 per cent of base salary for executive directors and 100 per cent of base salary for other executives)</p> <p>Threshold, target and outstanding performance levels are established for all STIP measures in order to drive high levels of business and individual performance. The STIP awards for achieving these performance levels are 50 per cent, 100 per cent and 200 per cent of the STIP opportunity respectively</p> <p>The financial performance targets for the measures identified below are established through an annual planning process, where the product group and Group plans are ultimately approved by the board. The central case or base plan delivers what the board considers to be target performance. Probability factors are then applied based upon a range of potential operating and cost scenarios to establish the threshold and outstanding performance levels. These threshold and outstanding levels are approved by the Remuneration committee at the beginning of each performance year</p> <p>The following measures and weightings are used to determine STIP payments for executives:</p>

	Weighting for executive directors and Group	Weighting for PGCEOs(a)
Business measures	executives%	%
Rio Tinto Group		
Earnings flexed and unflexed	26.25	10.50
Cash flow flexed and unflexed	26.25	10.50
Product group		
Earnings		15.75
Cash flow		15.75
Total financial measures	52.50	52.50
Health and safety	17.50	17.50
Total business measures	70.00	70.00
Individual objectives	30.00	30.00
Total	100.00	100.00

Edgar Filing: RIO TINTO PLC - Form 20-F

(a) Sam Walsh is considered a PGCEO with regard to STIP performance measures.

An explanation of why performance is assessed against these measures and objectives is provided below:

The inclusion of health and safety in the STIP (measured in relation to AIFR 40 per cent, SPI 25 per cent and SQRA^M 35 per cent) is a strong reminder that the safety of our employees is paramount and should not be compromised when targeting superior financial results

In order to increase the focus on the significant risks that can be addressed before people are injured, the weighting to the combined leading safety indicators, SPI and SQRATM, was increased from 50 per cent to 60 per cent in 2011 while the weighting to the lagging safety indicator, AIFR, was reduced from 50 per cent to 40 per cent

The maximum health and safety score a PGCEO, the Group executive T&I and the Group executive Business Support and Operations can achieve after a fatality is 75 per cent (out of a maximum of 200 per cent).

The extent of the impact of a fatality on the STIP score for executives is based on a judgment process that assesses the impact of leadership, individual behaviour and systems in the incident. Recommendations on the appropriate downward adjustment are made to the Remuneration committee

The Committee selected the financial measures as they are KPIs used in managing the business. In measuring performance against the annual plan, the original plan is flexed to exclude the impact of uncontrollable fluctuations in exchange rates, quoted metal prices and other prices. Earnings and cash flow results are therefore compared against equally weighted flexed and unflexed targets

Individual objectives are tailored to each executive but are generally based on the achievement of strategic initiatives, key project deliverables and leadership competencies

Remuneration report: Appendix continued

LTIP	<p>Link to Group performance</p> <p>Award levels are set so as to incentivise executives to meet the long-term strategic goals of the Group, to provide sufficient retention for the executive team and to contribute towards the competitiveness of the overall remuneration package</p> <p>For grants made under the PSP and SOP from March, 2012, if an executive leaves during the first 24 months from the date of grant as a good leaver then awards will be reduced to reflect the time worked up to the date of termination, as a proportion of the first 24 months from the date of grant. This compares to the previous practice of pro rating awards over a 12 month period and is designed to more closely align these provisions with market practice. The award will continue to vest at the normal vesting date subject to achievement against the performance conditions.</p>	<p>Remuneration arrangements</p> <p>Awards are made in the form of options under the SOP and/or performance shares under the PSP</p> <p>Awards have an expected value equal to 190% of base salary</p> <p>Executives can express a preference regarding the mix of the long term incentive opportunity between:</p> <p>A mix of performance shares and performance options. Under this preference the maximum performance share award is 200% of base salary (vesting up to 1.5 times for exceptional performance) and the maximum share option award is 300% of base salary</p> <p>Receiving their full opportunity in performance shares. Under this preference the maximum performance share award is 292% of base salary (vesting up to 1.5 times for exceptional performance)</p> <p>The expected value of awards made under either preference is the same</p>											
SOP	<p>Rewards participants for increasing the share price and delivering superior TSR performance against other companies over a longer timeframe</p> <p>Motivates and drives individual contribution while focusing individuals on the collective performance of the Group</p> <p>Three year performance period to provide long-term alignment with shareholders</p> <p>How performance is generated is as important as what level of performance is delivered. Therefore, before awards vest, the Committee must also satisfy itself that TSR performance is an appropriate reflection of the underlying performance of the business and can adjust vesting accordingly</p>	<p>Market value performance options vest subject to the achievement of a stretching TSR performance condition, comparing Rio Tinto's TSR performance to that of the HSBC Global Mining Index</p> <p>Awards have a maximum face value of 300% of base salary (expected value of 60% of base salary)</p> <p>Vesting for awards is as follows:</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 35%;">Outperformance of the index</td> <td style="width: 30%;">Awards of over 20,000 options will vest in full</td> </tr> <tr> <td>by 5% per annum</td> <td></td> </tr> <tr> <td>Performance between index and 5% out performance</td> <td>Proportionate vesting for performance between index and 5% outperformance of the index (ie two-thirds vesting for 2.5% outperformance)</td> </tr> <tr> <td>Performance equal to index</td> <td>Awards of up to 20,000 options or one-third of the award (whichever is higher)</td> </tr> <tr> <td>Performance less than index</td> <td>Nil vesting</td> </tr> </table>	Outperformance of the index	Awards of over 20,000 options will vest in full	by 5% per annum		Performance between index and 5% out performance	Proportionate vesting for performance between index and 5% outperformance of the index (ie two-thirds vesting for 2.5% outperformance)	Performance equal to index	Awards of up to 20,000 options or one-third of the award (whichever is higher)	Performance less than index	Nil vesting	
Outperformance of the index	Awards of over 20,000 options will vest in full												
by 5% per annum													
Performance between index and 5% out performance	Proportionate vesting for performance between index and 5% outperformance of the index (ie two-thirds vesting for 2.5% outperformance)												
Performance equal to index	Awards of up to 20,000 options or one-third of the award (whichever is higher)												
Performance less than index	Nil vesting												
PSP	<p>Rewards participants for increasing the share price and delivering superior TSR performance against other companies over a longer timeframe</p> <p>Motivates and drives individual contribution while focusing individuals on the collective performance of the Group</p> <p>Four year performance period to provide long-term alignment with shareholders</p>	<p>Conditional share awards vest subject to the achievement of a stretching TSR performance condition, comparing Rio Tinto's TSR performance against:</p> <p>50% the HSBC Global Mining Index</p> <p>50% the Morgan Stanley Capital World Index (MSCI)</p> <p>Awards have a maximum face value of 292% of base salary (expected value of 190% of base salary assuming one times award vests)</p> <p>Vesting for awards is as follows:</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 35%;">Outperformance of the index</td> <td style="width: 30%;">1.5 times award vests</td> </tr> <tr> <td>by 8% per annum</td> <td></td> </tr> </table>	Outperformance of the index	1.5 times award vests	by 8% per annum								
Outperformance of the index	1.5 times award vests												
by 8% per annum													

Edgar Filing: RIO TINTO PLC - Form 20-F

As with options, before vesting the Committee must also satisfy itself that TSR performance is an appropriate reflection of the underlying performance of the business and can adjust vesting accordingly

Performance between index and 8% out performance	Proportionate vesting for performance between index and 8% outperformance of the index.
Outperformance of the index by approximately 5% per annum	One times award vests
Performance equal to index	0.35 times award vests
Performance less than index	Nil vesting

The outperformance required for maximum vesting has been calibrated to be equivalent to the upper quartile performance against these indices and, as such, is considered by the Committee to be particularly stretching. The outperformance required for one times award vesting approximates 5% which is consistent with the outperformance required for full vesting of the SOP

Dividends are not received by executives during the performance period and are not received on awards which do not vest

Table of Contents

Performance evaluation process for executives

Rio Tinto conducts an annual performance evaluation process for all of its executives. In the case of members of the Executive committee, the chief executive conducts the review. In the case of the chief executive, the chairman of the Remuneration committee conducts the review in conjunction with the chairman of the board.

The key objectives of the performance process are to:

Improve organisational effectiveness by creating alignment between the executive's individual objectives and Rio Tinto's strategy, and

provide a consistent, transparent and balanced approach to measure, recognise and reward executive performance.

Individual objectives are set with the Remuneration committee in the first quarter of each year. Annual performance reviews are completed during early January of the following year. Performance evaluations for each executive took place in January 2012 in accordance with the process described. Individual objectives and awards for 2011 for executives are set out in the tables on pages 88, 89, 91 and 95.

Executives' service contracts

The executives have service contracts that can be terminated by either party with 12 months' notice in writing, or immediately by paying the base salary only in lieu of any unexpired notice. Debra Valentine's service contract was aligned with the other executives during 2011. For Jacynthe Côté, the 12 months' notice includes salary and target bonus opportunity, in line with typical market practice in Canada and her Alcan Inc. contract.

In the case of dismissal for cause, the Company can terminate employment without notice and without payment of any salary or compensation in lieu of notice. Bonus and outstanding awards under the LTIP are forfeited in these circumstances.

If termination is a result of a redundancy, the terms of the relevant policy may apply in the same way as for other local employees. In the case of involuntary termination, Jacynthe Côté may be eligible to receive 24 months' salary and target bonus opportunity inclusive of notice in line with entitlements under her Alcan Inc. contract.

STIP and LTIP rules govern entitlements that participants may have upon termination. If termination is due to any reason besides cause or resignation, participants are eligible to receive a pro rata STIP for the portion of the performance period worked which is calculated based on actual business and individual performance. Any outstanding deferred shares under the BDP normally vest at their normal vesting date. Where an individual leaves for 'good' leaver reasons or in other circumstances that the Committee determines, outstanding performance options and performance shares will vest at the normal vesting date subject to performance against the performance conditions, with any awards held for less than 12 months at the date of termination reduced pro rata. Contractual entitlements to severance are not triggered by a change of control. All of the Company's share plans contain provisions relating to a change of control. Outstanding deferred shares under the BDP would normally vest in full and outstanding performance shares and performance options would normally vest and become exercisable on a change of control on a pro rata basis, subject to the satisfaction of any performance conditions at that time.

Name	Position held during 2011	Date of appointment to current position
Executive directors		
Tom Albanese	chief executive	1 May 2007
Guy Elliott	chief financial officer	19 June 2002
Sam Walsh	CEO Iron Ore and Australia	5 June 2009

Preston Chiaro	Group executive, Technology & Innovation	1 November 2009
Bret Clayton	Group executive, Business Support & Operations	1 November 2009
Jacynthe Côté	CEO Rio Tinto Alcan	1 February 2009
Andrew Harding	CEO Copper	1 November 2009
Harry Kenyon-Slaney	CEO Diamonds & Minerals	1 November 2009
Doug Ritchie	CEO Energy	1 November 2009

Employee share plans

Management Share Plan (MSP)

The primary focus of the MSP is to support the Group's ability to attract and retain key staff below executive level in an increasingly tight and competitive labour market. Executives are not eligible to participate in the MSP. Jacynthe Côté, Andrew Harding, Harry Kenyon Slaney and Doug Ritchie received grants under the MSP prior to becoming PGCEOs. Hugo Bague and Debra Valentine received grants prior to Group executives being excluded from participation in the plan in 2010.

Retention of key individuals is also important given the long-term nature of the delivery of the business strategy. MSP awards are conditional awards not subject to a performance condition as they vest subject to continued employment, at the end of three years, and thus act as an effective retention tool. Shares to satisfy the awards are purchased in the market and no new shares are issued.

All employee share plans

Executives may participate in broad based share and share option plans which are available to Group employees generally and for which performance conditions do not apply. These plans form part of standard remuneration practice whereby employees are offered participation in plans to encourage alignment with the long term performance of the Group. Executives may participate in the Rio Tinto plc Share Savings Plan or the Rio Tinto Limited Share Savings Plan depending on whether they are employed by Rio Tinto plc or Rio Tinto Limited. The Share Ownership Plan is available to eligible employees in the UK who may receive an annual award of shares up to five per cent of salary, subject to a cap of £3,000.

Where under an employee share plan operated by the Company, participants are the beneficial owners of the shares, but not the registered owners, the voting rights are normally exercised by the registered owner at the direction of the participant.

Proposed new global employee share plan

The Committee believes that all employees should be given the opportunity to become shareholders in our business. The Committee is implementing a new global employee share purchase plan from 2012. The new plan may be offered to all eligible employees across the world save for any local jurisdictional restrictions. Under the plan employees may acquire shares up to the value of US\$5,000 per year, capped at 10 per cent of base salary. Each share purchased will be matched by the Company providing the participant holds the shares, and remains employed, at the end of the vesting period. The Committee believes the new plan will serve to engage, retain and motivate employees over the long term.

Table of Contents

Remuneration report: Appendix continued

Dilution

Awards under the SOP, PSP and Share Savings Plan may be satisfied by treasury shares, the issue of new shares or the purchase of shares in the market. Currently, Rio Tinto plc satisfies these awards by the issue of new shares or the transfer of shares from treasury. Rio Tinto Limited satisfies these awards by the market purchase and delivery of shares to plan participants. Rio Tinto plc complies with applicable corporate governance guidelines in relation to the issue of new shares. All other share awards are satisfied by the use of shares which are purchased in the market. Further information in respect of the number of shares issued under plan arrangements can be found in note 46 to the financial statements.

Shareholding policy for executives

The Group recognises the importance of aligning executives' interests with those of shareholders and they are therefore expected to build up a shareholding. The Committee has determined that executive directors should aim to reach a holding equivalent in value to two times their base salary over three years, with other executives aiming to achieve this holding over five years.

Share dealing policy

Executives and employee insiders are bound by the Rules for dealing in Rio Tinto securities which comply with the requirements of the ASX Listing Rules and are consistent with the UK Listing Authority's Model Code. These rules are available on the Rio Tinto website. The rules apply fixed close periods before results announcements as well as other prohibited periods during which key management personnel and employee insiders are prohibited from trading Rio Tinto securities. Directors, other executives and employee insiders are required to certify that they do not hold any inside information when seeking clearance to deal in Rio Tinto securities. All employees subject to the rules receive regular training and information.

Executives and employee insiders are prohibited from engaging in hedging arrangements, dealing in derivatives or entering into other arrangements which limit the economic risk related to Rio Tinto securities, including in relation to securities awarded under long term incentive plans.

Executives' external and other appointments

Executives may be invited to become non executive directors of other companies. It is Rio Tinto's policy that such appointments can broaden the experience and knowledge of executives, to the benefit of the Group. This policy limits each executive's external appointment to one FTSE100 company directorship or equivalent. Consequently, where there is no likelihood that such an appointment will give rise to a conflict of interest, the board will normally provide consent to the appointment. The executive is permitted to retain any fees earned.

In 2011, the following executive directors received fees from external appointments: Guy Elliott received US\$219,918 (2010: US\$100,537) and Sam Walsh received A\$137,084 (2010: A\$120,690).

Details of all board members' and executives' external appointments can be found on pages 77 to 80.

Company secretary remuneration

The executive remuneration policy applies to the company secretary of each of Rio Tinto plc and Rio Tinto Limited. They participate in the performance share plan and they receive awards under MSP. The individual performance measures for the company secretaries' STIP comprise Group and individual objectives. Their personal measures reflect the key responsibilities of the company secretarial role and include ensuring compliance with regulatory requirements, continual improvement of corporate governance practice and measures related to the provision of corporate secretarial services to the Group.

Table of Contents**Chairman and non executive directors remuneration****Remuneration policy****Chairman**

The Remuneration committee determines the terms of service, including remuneration, of the chairman. It is Rio Tinto's policy that the chairman should be remunerated on a competitive basis and at a level which reflects his contribution to the Group, as assessed by the board. The chairman is not present at any discussion regarding his own remuneration.

The chairman receives a fixed annual fee and does not receive any additional fee or allowance for either committee membership or for overseas travel. He is provided with a car and driver for business purposes, and private healthcare. He is also covered under the Group's accident policy. These are disclosed as benefits in Table 1b on page 108. He does not participate in the Group's incentive plans or pension arrangements.

Non executive directors

Fees paid to non executive directors reflect their respective duties and responsibilities and the time required to be spent by them so as to make a meaningful and effective contribution to the affairs of Rio Tinto. Non-executive directors receive a fixed annual fee comprising a base fee, committee membership or committee chairmanship fees, as applicable, and allowances for attending meetings which involve medium or long distance air travel. Rio Tinto does not pay retirement or post employment benefits to non executive directors, nor do any of them participate in any of the Group's incentive plans. Where the payment of statutory minimum superannuation contributions for Australian non-executive directors is required by Australian superannuation law, these contributions are deducted from the director's overall fee entitlements. Non-executive directors are also covered under the Group's accident policy.

The fees payable to non executive directors are subject to review by the Chairman's committee. During 2011, the review took into account market and related developments. In light of Rio Tinto's size, the complexity of its Dual Listed Companies' structure and the resulting demands on directors as well as market developments, the base fee for non-executive directors was increased to £85,000 from 1 January 2012. Other fees were also increased, as indicated in the table below, with effect from 1 January 2012, including allowances for overseas meetings involving long and medium distance flights.

Fees

The table below sets out the annual fees payable to the chairman and the non-executive directors.

	2012	2011	2010
Director fees			
Chairman's fee	£ 700,000	£ 700,000	£ 700,000
Non-executive director base fee	£ 85,000	£ 80,000	£ 70,000
Senior independent director	£ 40,000	£ 35,000	£ 35,000
Committee fees			
Audit committee chairman	£ 35,000	£ 35,000	£ 30,000
Audit committee member	£ 20,000	£ 15,000	£ 15,000
Remuneration committee chairman	£ 30,000	£ 30,000	£ 20,000
Remuneration committee member	£ 15,000	£ 10,000	£ 10,000
Sustainability committee chairman	£ 30,000	£ 25,000	£ 20,000
Sustainability committee member	£ 15,000	£ 10,000	£ 7,500
Nominations committee member	£ 7,500	£ 7,500	£ 7,500
Overseas meeting allowances			
Long distance (flights over 10 hours per journey)	£ 10,000	£ 7,500	£ 7,500
Medium distance (flights of 5-10 hours per journey)	£ 5,000	£ 3,500	£ 3,500

Remuneration paid during 2011

Edgar Filing: RIO TINTO PLC - Form 20-F

Details of each element of remuneration paid to the chairman and non-executive directors during 2011 are set out in Table 1b. No post employment, long term or termination payments were paid and no share based payments were made. The total payments made to the chairman and non-executive directors in 2011 are within the maximum aggregate annual amount of £3 million set out in the Group's constitutional documents approved by shareholders at the 2009 annual general meetings.

Shareholding policy for non-executive directors

In 2006, the board recommended that non-executive directors be encouraged to build up a shareholding within three years of their appointment equal in value to one year's base fee. To help facilitate this, a non-executive directors' share purchase plan was established under which non-executive directors may elect to invest a proportion of their fees net of tax on a regular basis to acquire shares on the open market. Details of non-executive directors' share interests in the Group are set out in Table 3 on page 110.

Letters of appointment

The chairman's letter of appointment stipulates his duties as chairman of the Group. His appointment may be terminated without liability on the part of Rio Tinto in accordance with the Group's constitutional documents dealing with retirement, disqualification from office or other vacation from office. Otherwise his appointment may be terminated by giving 12 months notice.

Non-executive directors have formal letters of appointment setting out their duties and responsibilities. These letters are available for inspection at Rio Tinto plc's registered office, and at its annual general meeting. Each non-executive director is appointed by the board subject to their election and annual re-election by shareholders as detailed on page 69. Non-executive directors' appointments may be terminated by giving three months' notice. There are no provisions for compensation payable on termination of their appointment.

Notes to Table 1a

- (a) The total remuneration is reported in US dollars. The amounts have been converted using the relevant 2011 average exchange rates of £1 =US\$1.6039, A\$1=US\$1.0327 and C\$1 =US\$1.0116. The annual cash bonus payable under the STIP has been converted using the relevant 2011 year end exchange rates of £1=US\$1.5597, A\$1=US\$1.0124 and 1 C\$=US\$0.9771.
- (b) Cash bonus relates to the cash portion of the 2011 STIP to be paid in March 2012.
- (c) Other cash based benefits include cash in lieu of a car and fuel. For Hugo Bague, Harry Kenyon-Slaney and Andrew Harding, it includes a cash supplement equal to 20 per cent of the amount by which their Contributory Salary exceeds the Earning Cap as defined in the Rio Tinto Pension Fund. For Jacynthe Côté, it includes a residual amount paid out in 2011 for her 2010 flexible perquisites.
- (d) Non monetary benefits for executives include healthcare, provision of a car, professional advice, spouse travel, flexible perquisites and secondment costs comprising housing, education, tax equalisation and relocation payments made to and on behalf of executives living outside their home country. For Andrew Harding, it includes a UK tax payment made by the Company for the period from 1 January 2010 to 30 June 2010 during which he was on a commuter assignment to the UK as well as a US tax payment for 2010 for the period when he was an inbound assignee to the US from Australia. For Harry Kenyon-Slaney, it includes an Australian tax payment made by the Company in 2011 resulting from an international assignment in Australia. For Doug Ritchie, it includes a service award recognising long service under a policy applicable to all employees in Australia. For Tom Albanese and Guy Elliott, it includes the value of company provided transport. Rio Tinto provides accident cover for employee members of the Rio Tinto Pension Fund. Some of the executives are members of the Rio Tinto Pension Fund; the total premium paid in 2011 was US\$8,090.
- (e) Total short term benefits represents the disclosure of total emoluments and compensation required under the UK Companies Act 2006 (UK) and total remuneration under the Australian Corporations Act 2001 and applicable accounting standards.

Edgar Filing: RIO TINTO PLC - Form 20-F

- (f) The value of share based awards has been determined in accordance with the recognition and measurement requirements of IFRS2 Share-based Payment . The fair value of awards granted under the Share Option Plan (SOP), the Management Share Plan (MSP), the Bonus Deferral Plan (BDP) and the Share Savings Plan (SSP) have been calculated at their dates of grant using an independent lattice-based option valuation model provided by external consultants, Lane Clark and Peacock LLP. With effect from 2010, the Group s policy for settling awards granted under the Performance Share Plan (PSP) (formerly known as the Mining Companies Comparative Plan (MCCP)) changed. For settlement of all awards under this plan, participants will be assigned shares and offered a third party facility to realise these shares for cash and/or to meet any tax liabilities. Accordingly, the fair values of the awards granted prior to this change were re-measured at 1 July 2010 and from that date treated as equity-settled awards. This re-measurement was calculated using a Monte Carlo valuation model based on the market price of shares and their relative TSR performance at 30 June 2010. The fair value of awards granted after July 2010 is measured at date of grant. Further details of the valuation methods and assumptions used for these awards are included in note 46 (Share Based Payments) in the 2011 financial statements. The fair value of other share based awards is measured at the purchase cost of the shares from the market. The non-executive directors do not participate in the long term incentive share schemes.
- (g) BDP represents the deferral of the full 2008 STIP and 50 per cent of the 2010 and 2011 STIP into Rio Tinto Shares.
- (h) CCA represents the additional shares provided to employees below the executive directors and PGCEO level under the 2008 BDP to provide and enhance retention.

(i) The vesting of Jacynthe Côté's 2009 MSP award was subject to satisfying specific performance conditions related to the integration and re-organisation of Rio Tinto Alcan. 50 per cent of the award vested on 1 February 2010 and the remaining 50 per cent vested on 1 February 2011.

(j) Others include the Share Savings Plan and Share Ownership Plan as described in the Remuneration report on page 103.

(k) The costs shown for defined benefit pension plans and post retirement medical benefits are the service costs attributable to the individual, calculated in accordance with IAS19. The cost for defined contribution plans is the amount contributed in the year by the Company. For Bret Clayton and Preston Chiaro, the 2010 pension and superannuation costs have been restated as part of the STIP was not included in the pensionable pay on which benefits are based. The figures previously disclosed were US\$163,000 for Bret Clayton and US\$210,000 for Preston Chiaro.

(l) Jacynthe Côté's remuneration is stated in US dollars. To convert the base salary, a fixed exchange rate of US\$1=C\$1.0350 was used during the year. All other short term benefits received are paid in Canadian dollars.

Notes to Table 1b

(a) The total remuneration is reported in US dollars. The amounts have been converted using the relevant 2011 average exchange rates of £1 = US\$1.6039 and A\$1 = US\$1.0327.

(b) Other cash based benefits for non-executive directors comprise overseas meeting allowances.

(c) Non monetary benefits include for Jan du Plessis the value of company provided transport, spouse travel and medical insurance premiums. For Sir Rod Eddington, it includes the value of a retirement gift. For Yves Fortier, it includes the value of a retirement gift and spouse travel. For Robert Brown, Vivienne Cox, Ann Godbehere, Lord Kerr and Paul Tellier, it includes spouse travel. For Richard Goodmanson, it includes spouse travel and accountancy fees. For Lord Kerr, it includes accountancy fees. Rio Tinto plc provides accident cover for non-executive directors; the total premium paid in 2011 was US\$4,525.

(d) Represents disclosure of total emoluments and compensation required under the UK Companies Act 2006 and total remuneration under the Australian Corporations Act 2001 and applicable accounting standards.

(e) Chris Lynch's fees (other than statutory superannuation contributions) were paid to the Transurban Group.

Notes to Table 2

Age	Years of service completed	Company Contributions	
		Year to 31 Dec 2010	Year to 31 Dec 2011
		A\$000	A\$000
62	20	59	59

(a) Price inflation is calculated as the increase in the relevant retail or consumer price index over the year to 31 December 2011, except for Australia where a September to September change is used.

(b) Tom Albanese accrued pension benefits in the US plans for service up to 30 June 2006 and is accruing benefits in the UK plans for subsequent service.

(c) The transfer value of benefits in the UK plans is calculated in a manner consistent with Retirement Benefit Schemes - Transfer Values (GN11) published by the Institute of Actuaries and the Faculty of Actuaries. The transfer value of benefits in the US plans is represented by the Accumulated Benefit Obligation calculated on the accounting assumptions used for the Group's post-retirement benefits disclosures. Tom

Edgar Filing: RIO TINTO PLC - Form 20-F

Albanese and Guy Elliott have benefits provided through a combination of funded and unfunded arrangements. The pension and transfer values shown are in respect of their total benefits. The increase in transfer values arising from changes in financial assumptions between 2010 and 2011 for the three directors are: Tom Albanese: £1,046,000; Guy Elliott: £ 1,680,000; Sam Walsh: nil.

Notes to Table 4												

- (a) Awards denominated in pounds sterling were for Rio Tinto plc ordinary shares of 10p each and awards denominated in Australian dollars were for Rio Tinto Limited shares.
- (b) The weighted fair value per share of conditional awards granted under the BDP was £40.13 for Rio Tinto plc and A\$80.36 for Rio Tinto Limited and for PSP was £33.08 for Rio Tinto plc and A\$65.86 for Rio Tinto Limited.
- (c) Conditional awards are awarded at no cost to the recipient and no amount remains unpaid on any shares granted.
- (d) The amount in US dollars has been converted from sterling at the rate of £1 = US\$1.60387 and Australian dollars at the rate of A\$1 = US\$1.03271, being the average exchange rates for 2011.
- (e) Details of the performance conditions for the PSP are provided in the Executive remuneration structure table on page 102.
- (f) As of 20 February 2012, the executives in the table above had 1,212,545 shares awarded and not vested under long term incentive plans.
- (g) The 2008 PSP awards granted on 10 March 2008 and with a performance period that concluded 31 December 2011 have lapsed in full for Tom Albanese, Preston Chiaro, Bret Clayton, Guy Elliott and Sam Walsh. The awards vested at 33.3 per cent for the other executives who were subject to the other executives' performance condition at the time the 2008 PSP awards were made.

Notes to Table 5

- (a) All options granted over ordinary shares. Rio Tinto plc ordinary shares of 10p each stated in sterling; Rio Tinto Limited ordinary shares stated in Australian dollars. Each option is granted over one share at no cost to participants. Details of the performance conditions for the SOP are provided in the Executive remuneration structure table on page 101.
- (b) The closing price of Rio Tinto plc ordinary shares at 31 December 2011 was £31.25 and the closing price of Rio Tinto Limited shares at 31 December 2011 was A\$60.30. The high and low prices during 2011 of Rio Tinto plc and Rio Tinto Limited shares were £47.18 and £26.37 and A\$89.04 and A\$58.52 respectively.
- (c) The exercise price represents the price payable on the options.
- (d) The weighted fair value per option during 2011, at date of grant was as follows: Rio Tinto plc SSP two year contract £6.73 and five year contract £4.95. Rio Tinto plc SOP £14.36; Rio Tinto Limited SOP A\$26.79.
- (e) The value of options exercised during 2011 is calculated by multiplying the number of options exercised by the difference between the market price and the exercise price on date of exercise.
- (f) Options granted in 2008 under the SOP failed to satisfy their performance condition and lapsed on 10 March 2011. The value of options which lapsed during 2011 is calculated using the closing share price on the lapse date with the exercise price subtracted. As the exercise price is greater than the share price on the lapse date the options are valued at zero.

Edgar Filing: RIO TINTO PLC - Form 20-F

(g) Details of the performance conditions for the SOP are provided in the Executive remuneration structure table on page 102. (h) As of 20 February 2012, the executives held 2,442,088 options to acquire Rio Tinto plc and Rio Tinto Limited shares.

(i) Between 31 December 2011 and 20 February 2012 no options were granted to the executives.

Directors' report continued

Audited information

Under Schedule 8 of the Large and Medium sized Companies and Groups (Accounts and Reports) Regulations 2008, the information included in respect of the non-executive directors and the directors' short term employee benefits and termination benefits in Tables 1a and 1b, and the information included in respect of the directors' accrued benefits, transfer values and defined contribution pension in Table 2, Table 4 and Table 5 and the information under 'Former director' on page 99, are all auditable.

The Australian Securities and Investments Commission issued an order dated 22 December 2010 (varied on 17 February 2012) under which the Remuneration report must be prepared and audited in accordance with the requirements of the Corporations Act 2001 applied on the basis of certain modifications set out in the order (as detailed on page 213). The information provided in this Remuneration report has been audited as required by section 308(3C) of the Corporations Act.

Going concern

The directors, having made appropriate enquiries, have satisfied themselves that no material uncertainties that cast significant doubt about the ability of the Companies and the Group to continue as a going concern have been identified, and they have a reasonable expectation that the Group has adequate financial resources to continue in operational existence for the foreseeable future. Therefore, these financial statements have been prepared on a going concern basis.

Annual general meetings

The 2012 annual general meetings will be held on 19 April in London and 10 May in Brisbane. Separate notices of the 2012 annual general meetings are produced for the shareholders of each Company.

The Directors' report is made in accordance with a resolution of the board.

Jan du Plessis

Chairman
5 March 2012

Table of Contents

Shareholder information

Organisational structure

The Rio Tinto Group consists of Rio Tinto plc, which is registered in England and Wales under company number 719885, and is listed on the London Stock Exchange, and Rio Tinto Limited, which is registered in Australia under ABN 96 004 458 404, and is listed on the Australian Securities Exchange. Rio Tinto is headquartered in London and has executive offices in Melbourne.

Nomenclature and financial data

Rio Tinto plc and Rio Tinto Limited operate together and are referred to in this report as Rio Tinto, the Rio Tinto Group or, more simply, the Group. These collective expressions are used for convenience only, since both Companies, and the individual companies in which they directly or indirectly own investments, are separate and distinct legal entities.

Limited, plc, Pty, Inc, Limitada, L.L.C., A.S. or SA have generally been omitted from Group company names, except to distinguish between Rio Tinto and Rio Tinto Limited. Financial data in US dollars (US\$) is derived from, and should be read in conjunction with, the 2011 financial statements. In general, financial data in pounds sterling (£) and Australian dollars (A\$) have been translated from the consolidated financial statements and have been provided solely for convenience; exceptions arise where data can be extracted directly from source records. Certain key information has been provided in all three currencies in the 2011 financial statements.

History

Rio Tinto plc was incorporated on 30 March 1962 (then called The Rio Tinto-Zinc Corporation Limited (RTZ)) and was formed by the merger of The Rio Tinto Company and The Consolidated Zinc Corporation. The Rio Tinto Company was incorporated in 1873 to reopen ancient copper workings in Spain. The Consolidated Zinc Corporation's origins trace back to the Australian mining industry in the early twentieth century. Operating out of Broken Hill in New South Wales, it came to prominence with the mining of silver, lead and zinc deposits and later expanded into lead and zinc smelting.

Rio Tinto Limited was incorporated on 17 December 1959 (then called The Rio Tinto Mining Company of Australia Limited) and in 1962 the Australian interests of Consolidated Zinc Corporation and the Rio Tinto Company Limited of the United Kingdom were merged to form Conzinc Riotinto of Australia Limited as a limited liability company under the laws of the State of Victoria, Australia. In 1980, Conzinc Riotinto of Australia Limited changed its name to CRA Limited.

Between 1962 and 1995, both RTZ and CRA discovered important mineral deposits, developed major mining projects and also grew through acquisition.

RTZ and CRA began operating in 1995 through a dual listed companies structure. In 1997, the RTZ Corporation became Rio Tinto plc and CRA Limited became Rio Tinto Limited, together known as the Rio Tinto Group.

In 2007, Rio Tinto completed an agreed takeover of the Canadian aluminium producer Alcan Inc.

Dual listed companies structure

In 1995, Rio Tinto shareholders approved the terms of the dual listed companies merger (the DLC structure) which was designed to place the shareholders of both Companies in substantially the same position as if they held shares in a single entity owning all of the assets of both Companies.

Following the approval of the DLC structure, both Companies entered into a DLC Merger Sharing Agreement (the Sharing Agreement) through which each Company agreed to ensure that the businesses of Rio Tinto plc and Rio Tinto Limited are managed together, to ensure that the boards of

directors of each Company are the same, and to give effect to certain arrangements designed to provide shareholders of each Company with a common economic interest in the DLC structure.

In order to achieve this third objective, the Sharing Agreement provided for the ratio of dividend, voting and capital distribution rights attached to each Rio Tinto plc share and to each Rio Tinto Limited share to be fixed in an Equalisation Ratio which has remained unchanged at 1:1. The Sharing Agreement has provided for this ratio to be revised in special circumstances where, for example, certain modifications are made to the share capital of one Company, such as rights issues, bonus issues, share splits and share consolidations, but not to the share capital of the other. Outside these specified circumstances, the Equalisation Ratio can only be altered with the approval of shareholders under the Class Rights Action approval procedure described under Voting rights. In addition, any adjustments are

Edgar Filing: RIO TINTO PLC - Form 20-F

required to be confirmed by the Group's external auditors.

Consistent with the creation of the DLC structure, directors of each Company seek to act in the best interests of Rio Tinto as a whole. The Class Rights Action approval procedure is intended to deal with instances where there may be a conflict of interest between the shareholders of each Company.

To ensure that the boards of both Companies are identical, resolutions to appoint or remove directors must be put to shareholders of both Companies as a joint electorate (as Joint Decisions as described under Voting rights). It is a requirement that a person can only be a director of one Company if that person is also a director of the other Company. So, for example, if a person was removed as a director of Rio Tinto plc, he or she would also cease to be a director of Rio Tinto Limited.

One consequence of the DLC merger is that Rio Tinto is subject to a wide range of laws, rules and regulatory review across multiple jurisdictions. Where these rules differ, Rio Tinto, as a Group, aims to comply with the strictest applicable level.

Dividend rights

The Sharing Agreement provides for dividends paid on Rio Tinto plc and Rio Tinto Limited shares to be equalised on a net cash basis, that is without taking into account any associated tax credits. Dividends are determined in US dollars and are then, except for ADR holders, translated and paid in sterling and Australian dollars. The Companies are also required to announce and pay their dividends and other distributions as close in time to each other as possible.

In the unlikely event that one Company did not have sufficient distributable reserves to pay the equalised dividend or the equalised capital distribution, it would be entitled to receive a top up payment from the other Company. The top up payment could be made as a dividend on the DLC Dividend Share, or by way of a contractual payment.

If the payment of an equalised dividend would contravene the law applicable to one of the Companies, then they may depart from the Equalisation Ratio. However, should such a departure occur, then the relevant Company will put aside reserves to be held for payment on the relevant shares at a later date.

Rio Tinto shareholders have no direct rights to enforce the dividend equalisation provisions of the Sharing Agreement.

The DLC Dividend Shares can also be utilised to provide the Group with flexibility for internal funds management by allowing dividends to be paid between the two parts of the Group. Such dividend payments are of no economic significance to the shareholders of either Company, as they will have no effect on the Group's overall resources.

Shareholder information continued

Voting rights

In principle, the Sharing Agreement provides for the shareholders of Rio Tinto plc and Rio Tinto Limited to vote as a joint electorate on all matters which affect shareholders of both Companies in similar ways. These are referred to as Joint Decisions. Such Joint Decisions include the creation of new classes of share capital, the appointment or removal of directors and auditors and the receiving of the annual financial statements. All shareholder resolutions including Joint Decisions are voted on a poll.

The Sharing Agreement also provides for the protection of shareholders of each Company by requiring their separate approval for decisions that do not affect the shareholders of both Companies equally. Matters requiring this approval procedure are referred to as Class Rights Actions and are voted on a poll. For example, fundamental elements of the DLC merger cannot be changed unless approved separately by shareholders of both Companies under the Class Rights Action approval procedure.

Exceptions to these principles can arise in situations such as where legislation requires the separate approval of a decision by the appropriate majority of shareholders in one Company and approval of the matter by shareholders of the other Company is not required.

Where a matter has been expressly categorised as either a Joint Decision or a Class Rights Action, the directors do not have the power to change that categorisation. If a matter falls within both categories, it is treated as a Class Rights Action. In addition, the directors can determine that matters not expressly listed in either category should be put to shareholders for their approval under either procedure.

To facilitate the joint voting arrangements each Company has entered into shareholder voting agreements. Each Company has issued a Special Voting Share to a special purpose company held in trust by a common Trustee.

Rio Tinto plc has issued its Special Voting Share (RTP Special Voting Share) to RTL Shareholder SVC and Rio Tinto Limited has issued its Special Voting Share (RTL Special Voting Share) to RTP Shareholder SVC. The total number of votes cast on Joint Decisions by the shareholders of one Company are voted at the parallel meeting of the other Company. The role of these special purpose companies in achieving this is described below.

In exceptional circumstances, certain shareholders of the Companies can be excluded from voting at the respective Company's general meetings because they have acquired shares in one Company in excess of a given threshold without making an offer for all the shares in the other Company. If this should occur, the votes cast by these excluded shareholders will be disregarded.

Following the Companies' general meetings the overall results of the voting are announced to the stock exchanges, to the media in the UK and Australia, and published on the Rio Tinto website.

At a Rio Tinto plc shareholders' meeting at which a Joint Decision is considered, each Rio Tinto plc share carries one vote and the holder of its Special Voting Share has one vote for each vote cast by the public shareholders of Rio Tinto Limited. The holder of the Special Voting Share is required to vote strictly, and only, in accordance with the votes cast by public shareholders for and against the equivalent resolution at the parallel Rio Tinto Limited shareholders' meeting.

The holders of Rio Tinto Limited ordinary shares do not actually hold any voting shares in Rio Tinto plc by virtue of their holding in Rio Tinto Limited and cannot enforce the voting arrangements relating to the Special Voting Share.

At a Rio Tinto Limited shareholders' meeting at which a Joint Decision is considered, each Rio Tinto Limited share carries one vote and the holder of its Special Voting Share will have one vote for each vote cast by the public shareholders of Rio Tinto plc in their parallel meeting. The holder of the Special Voting Share is required to vote strictly, and only, in accordance with the votes cast for and against the equivalent resolution at the parallel Rio Tinto plc shareholders' meeting.

The holders of Rio Tinto plc ordinary shares do not actually hold any voting shares in Rio Tinto Limited by virtue of their holding in Rio Tinto plc and cannot enforce the voting arrangements relating to the Special Voting Share.

Capital distribution rights

If either of the Companies goes into liquidation, the Sharing Agreement provides for a valuation to be made of the surplus assets of both Companies. If the surplus assets available for distribution by one Company on each of the shares held by its shareholders exceed the surplus assets available for distribution by the other Company on each of the shares held by its shareholders, then an equalising payment between the two Companies shall be made, to the extent permitted by applicable law, such that the amount available for distribution on each share held by shareholders of each Company conforms to the Equalisation Ratio. The objective is to ensure that the shareholders of both Companies have equivalent rights to the assets of the combined Group on a per share basis, taking account of the Equalisation Ratio.

Edgar Filing: RIO TINTO PLC - Form 20-F

The Sharing Agreement does not grant any enforceable rights to the shareholders of either Company upon liquidation of a Company.

Limitations on ownership of shares and merger obligations

The laws and regulations of the UK and Australia impose restrictions and obligations on persons who control interests in publicly listed companies in excess of defined thresholds that, under certain circumstances, include obligations to make a public offer for all of the outstanding issued shares of the relevant company. The threshold applicable to Rio Tinto plc under UK law and regulations is 30 per cent and to Rio Tinto Limited under Australian law and regulations is 20 per cent (on a stand alone basis or, taking into account only Rio Tinto plc interests, on a Joint Decision basis).

As part of the DLC merger, the Articles of Association of Rio Tinto plc and the Constitution of Rio Tinto Limited were amended with the intention of extending these laws and regulations to the combined enterprise and, in particular, to ensure that a person cannot exercise control over one Company without having made offers to the public shareholders of both Companies. It is consistent with the creation of the single economic enterprise, and the equal treatment of the two sets of shareholders, that these laws and regulations should operate in this way. The Articles of Association of Rio Tinto plc and the Constitution of Rio Tinto Limited impose restrictions on any person who controls, directly or indirectly, 20 per cent or more of the votes on a Joint Decision. If, however, such a person only has an interest in either Rio Tinto Limited or Rio Tinto plc, then the restrictions will only apply if they control, directly or indirectly, 30 per cent or more of the votes at that Company's general meetings.

If one of the thresholds specified above is breached then, subject to certain limited exceptions and notification by the relevant Company, such persons may not attend or vote at general meetings of the relevant Company, may not receive dividends or other distributions from the relevant Company, and may be divested of their interest by the directors of the relevant Company. These restrictions continue to apply until such persons have either made a public offer for all of the publicly held shares of the other Company, or have reduced their controlling interest below the thresholds specified, or have acquired through a permitted means at least 50 per cent of the publicly held shares of each Company.

These provisions are designed to ensure that offers for the publicly held shares of both Companies would be required to avoid the restrictions set out above, even if the interests which breach the thresholds are only held in one of the Companies. The directors do not have the discretion to exempt a person from the operation of these rules.

Under the Sharing Agreement, the Companies agree to co-operate to enforce the restrictions contained in their Articles of Association and Constitution.

Guarantees

In 1995, each Company entered into a Deed Poll Guarantee in favour of creditors of the other Company. Pursuant to the Deed Poll Guarantees, each Company guaranteed the contractual obligations of the other Company and

Table of Contents

the obligations of other persons which are guaranteed by the other Company, subject to certain limited exceptions. Beneficiaries under the Deed Poll Guarantees may make demands upon the guarantor thereunder without first having recourse to the Company or persons whose obligations are being guaranteed. The obligations of the guarantor under each Deed Poll Guarantee expire upon termination of the Sharing Agreement and under other limited circumstances, but only in respect of obligations arising after such termination and, in the case of other limited circumstances, the publication and expiry of due notice. The shareholders of the Companies cannot enforce the provisions of the Deed Poll Guarantees.

Markets

Rio Tinto plc

The principal market for Rio Tinto plc shares is the London Stock Exchange with the shares trading through the Stock Exchange Electronic Trading Service (SETS) system.

Rio Tinto plc shares are also listed on NYSE Euronext Brussels and its American depositary receipts are listed on the New York Stock Exchange. Rio Tinto plc delisted from NYSE Euronext Paris with effect from 23 February 2012.

As at 20 February 2012, there were 46,491 holders of record of Rio Tinto plc's shares. Of these holders, 350 had registered addresses in the US and held a total of 357,865 Rio Tinto plc shares, representing 0.02 per cent of the total number of Rio Tinto plc shares issued and outstanding as at such date. In addition, 104,004,668 Rio Tinto plc shares were registered in the name of a custodian account in London which represented 7.23 per cent of Rio Tinto plc shares issued and outstanding. These shares were represented by 104,004,668 Rio Tinto plc ADRs held of record by 402 ADR

holders. In addition, certain accounts of record with registered addresses other than in the US hold shares, in whole or in part, beneficially for US persons.

Rio Tinto Limited

Rio Tinto Limited shares are listed on the Australian Securities Exchange (ASX). The ASX is the principal trading market for Rio Tinto Limited shares. The ASX is a national stock exchange with an automated trading system.

As at 20 February 2012, there were 211,506 holders of record of Rio Tinto Limited shares. Of these holders, 331 had registered addresses in the US, representing approximately 0.0425 per cent of the total number of Rio Tinto Limited shares issued and outstanding as of such date. In addition, nominee accounts of record with registered addresses other than in the US may hold Rio Tinto Limited shares, in whole or in part, beneficially for US persons.

American depositary receipts (ADRs)

Rio Tinto plc has a sponsored ADR facility with JPMorgan Chase Bank NA (JPMorgan) under a Deposit Agreement, dated 13 July 1988, as amended on 11 June 1990, as further amended and restated on 15 February 1999, 18 February 2005 when JPMorgan became Rio Tinto plc's depositary and on 29 April 2010. The ADRs evidence Rio Tinto plc American Depositary Shares (ADS), each representing one ordinary share. The shares are registered with the US Securities and Exchange Commission (SEC), are listed on the NYSE and are traded under the symbol RIO.

Fees and charges payable by a holder of ADSs

In accordance with the terms of the Deposit Agreement, JPMorgan may charge holders of Rio Tinto ADSs, either directly or indirectly, fees or charges up to the amounts described below.

Category	Depository actions	Associated fee
Depositing or substituting the underlying shares	Issuance of ADSs against the deposit of shares, including deposits and issuance in respect of:	US\$5.00 per 100 ADSs (or portion thereof) evidenced by the new ADSs delivered
	Share distributions, stock split, rights, merger	

Edgar Filing: RIO TINTO PLC - Form 20-F

<p>Selling or exercising rights</p>	<p style="text-align: center;">Exchange of securities or other transactions</p> <p style="text-align: center;">Other events or distributions affecting the ADSs or the deposited securities</p> <p>Distribution or sale of securities, the fee being in an amount equal to the fee for the execution and delivery of ADSs which would have been charged as a result of the deposit of such securities</p>	<p>US\$5.00 for each 100 ADSs (or portion thereof)</p>
<p>Withdrawing an underlying share</p>	<p style="text-align: center;">Acceptance of ADSs surrendered for withdrawal of deposited securities</p>	<p>US\$5.00 for each 100 ADSs (or portion thereof) evidenced by the ADSs surrendered</p>

Table of Contents

Shareholder information continued

Fees and payments made by the depositary to the issuer

JPMorgan has agreed to reimburse certain company expenses related to the Rio Tinto plc ADR programme and incurred by the Group in connection with the programme. For the year ended 31 December 2011, JPMorgan reimbursed US\$1.05 million in respect of expenses incurred by the Group in connection with the ADR programme. JPMorgan did not pay any amount on the Group's behalf to third parties. JPMorgan also waived certain of its standard fees and expenses associated with the administration of the programme relating to routine programme maintenance, reporting, distribution of cash dividends, annual meeting services and report mailing services.

Under certain circumstances, including removal of JPMorgan as depositary or termination of the ADR programme by the Company, the Company is required to repay JPMorgan any amounts of administrative fees and expenses waived during the 12 month period prior to notice of removal or termination.

Share ownership

Substantial shareholders

Under the UK Disclosure and Transparency Rules and the Australian Corporations Act, any shareholder of Rio Tinto plc with voting rights of three per cent or more or any person with voting power of five per cent or more in Rio Tinto Limited, is required to provide the Companies with notice. The shareholders who have provided such, or an equivalent, notice are:

	Date of notice	Number of shares	Percentage of issued share capital
Rio Tinto plc			
The Capital Group Companies, Inc	13 Jun 2006	41,031,494	3.90
Capital Research and Management Company	16 Jul 2009	75,461,183	4.95
AXA S.A.	29 Jan 2008	48,493,873	4.86

Rio Tinto Limited

Shining Prospect Pte. Ltd (a)	4 Feb 2008		
BlackRock Investment Management (Australia) Limited	8 Nov 2010	25,357,003	5.81

(a) Shining Prospect Pte. Ltd, a Singapore based entity owned by Chinalco (Aluminum Corporation of China) acquired 119,705,134 Rio Tinto plc shares on 1 February 2008. Through the operation of Australian Corporations Act as modified, this gave these entities and their associates voting power of 9.3 per cent in the Rio Tinto Group on a joint decision matter, making them substantial shareholders of Rio Tinto Limited, as well as of Rio Tinto plc. Further to the Rio Tinto plc rights issue in 2009, Shining Prospect Pte. Ltd increased its holding to 182,550,329 shares. As a result of this increase and the ongoing US\$7 billion Rio Tinto plc buy-back programme, these entities and their associates currently have a voting power of 9.8 per cent in the Rio Tinto Group on a joint decision matter.

As far as is known, Rio Tinto plc and Rio Tinto Limited are not directly or indirectly owned or controlled by another corporation or by any government or natural person. Rio Tinto is not aware of any arrangement which may result in a change in control. No shareholder possesses voting rights that differ from those attaching to Rio Tinto plc's and Rio Tinto Limited's securities.

As of 20 February 2012, the total amount of the Group's voting securities owned by the directors in Rio Tinto plc was 438,769 ordinary shares of 10p each and in Rio Tinto Limited was 58,323 ordinary shares, in aggregate representing less than one per cent of the Group's total number of shares in issue.

Large registered shareholders are nominees who hold securities on behalf of beneficial shareholders.

Dividends

Both Companies have paid dividends on their shares every year since incorporation in 1962. The rights of Rio Tinto shareholders to receive dividends are explained under the description of the Dual listed companies structure on page 119.

Dividend policy

The aim of Rio Tinto's progressive dividend policy is to increase the US dollar value of ordinary dividends over time. The rate of the total annual dividend, in US dollars, is determined taking into account the results for the past year and the outlook. Under Rio Tinto's dividend policy, the interim dividend is set at one half of the total ordinary dividend for the previous year and the final ordinary dividend is expected to be at least equal to the previous interim dividend.

Dividend determination

The majority of the Group's sales are transacted in US dollars, making this the most reliable measure for the Group's global business performance. It is Rio Tinto's main reporting currency and consequently the natural currency for dividend determination. Dividends determined in US dollars are translated at exchange rates prevailing two days prior to the announcement and are then declared payable in sterling by Rio Tinto plc and in Australian dollars by Rio Tinto Limited. On request, shareholders of Rio Tinto plc can elect to receive dividends in Australian dollars and shareholders of Rio Tinto Limited can elect to receive dividends in sterling. These dividend amounts are calculated by converting the declared dividend using currency exchange rates applicable five business days prior to the dividend payment date.

Shareholders who wish to receive their dividends in any other currencies should contact the Companies' share registrars, who also offer payment services in other currencies, subject to a fee.

Edgar Filing: RIO TINTO PLC - Form 20-F

2011 dividends

The 2011 interim and final dividends were determined at 54 US cents and at 91 US cents per share respectively and the applicable conversion rates for the interim and final dividend were US\$1.62965 and US\$1.58730 to the pound sterling and US\$1.08405 and US\$1.08080 to the Australian dollar respectively. For those Rio Tinto plc shareholders who elected to receive their interim dividend in Australian dollars the applicable conversion rate was A\$1.50455 and for Rio Tinto Limited shareholders who elected to receive their dividend in sterling the applicable conversion rate was £0.66465.

Final dividends of 57.33 pence or 84.20 Australian cents per share will be paid on 12 April 2012. For those Rio Tinto plc shareholders requesting the 2011 final dividend be paid in Australian dollars, those holders of Rio Tinto plc ADRs (each representing one share) and those Rio Tinto Limited shareholders requesting the 2011 final dividend be paid in pounds sterling, the applicable conversion rates will be announced on 3 April 2012.

Table of Contents**Shareholder information continued**

The charts below set out the amounts of interim and final dividends paid or payable on each share or ADR in respect of each financial year, but before deduction of any withholding tax.

These have been restated for the impact of the 2009 rights issues and the ADR ratio change.

	2011	2010	2009	2008 restated	2007 restated

Fourth quarter	3,620	2,713	58.94	40.50	70.75	59.00

(a) On 12 April 2010, Rio Tinto announced a ratio change for the Rio Tinto plc ADR programme. With effect from 30 April 2010, one ADR represents one ordinary share of 10p in Rio Tinto plc. Prior to this date one ADR represented four ordinary shares of 10p. To effect this change ADR holders received three additional ADRs for every one ADR held as of 22 April 2010, the ADR record date. Prior year comparatives have been restated for the impact of the ratio change.

(b) None of these prices have been restated to take account of the rights issues undertaken in 2009.

(c) The Noon Buying Rate on such dates differed slightly from the rates used in the preparation of Rio Tinto's financial statements as of such date. No representation is made that pound sterling and Australian dollar amounts have been, could have been or could be converted into dollars at the Noon Buying Rate on such dates or at any other dates.

Material contracts**Articles of Association and Constitution**

As explained on pages 119 to 120, under the terms of the DLC structure the shareholders of Rio Tinto plc and of Rio Tinto Limited entered into certain contractual arrangements which are designed to place the shareholders of both Companies in substantially the same position as if they held shares in a single entity which owned all of the assets of both Companies. Please refer to the section on Guarantees on pages 120 to 121 for further information. Generally and as far as is permitted by the UK Companies Act and the Australian Corporations Act and ASX Listing Rules this principle is reflected in the Articles of Association of Rio Tinto plc and in the Constitution of Rio Tinto Limited. The summaries below include descriptions of material rights of the shareholders of both Rio Tinto plc and Rio Tinto Limited.

Objects

At the 2009 annual general meetings, shareholders of Rio Tinto plc and Rio Tinto Limited approved amendments to the constitutional documents whereby the object clauses were removed to allow the Companies to have the widest possible scope of activities.

Directors

Under Rio Tinto plc's Articles of Association a director may not vote in respect of any proposal in which he or any other person connected with him, has any material interest other than by virtue of his interests in shares or debentures or other securities of or otherwise in or through the Company, except where resolutions:

indemnify him or a third party in respect of obligations incurred by the director on behalf of, or for the benefit of, the Company, or in respect of obligations of the Company, for which the director has assumed responsibility under an indemnity, security or guarantee;

relate to an offer of securities in which he may be interested as a holder of securities or as an underwriter;

concern another body corporate in which the director is beneficially interested in less than one per cent of the issued shares of any class of shares of such a body corporate;

Edgar Filing: RIO TINTO PLC - Form 20-F

relate to an employee benefit in which the director will share equally with other employees; and

relate to liability insurance that the Company is empowered to purchase for the benefit of directors of the Company in respect of actions undertaken as directors (or officers) of the Company.

Under Rio Tinto Limited's Constitution, except where a director is constrained by Australian law, a director may be present at a meeting of the board while a matter in which the director has a material personal interest is being considered and may vote in respect of that matter.

The directors are empowered to exercise all the powers of the Companies to borrow money, to charge any property or business of the Companies or all or any of their uncalled capital and to issue debentures or give any other security for a debt, liability or obligation

of the Companies or of any other person. The directors shall restrict the borrowings of Rio Tinto plc to the limitation that the aggregate amount of all moneys borrowed by the Company and its subsidiaries shall not exceed an amount equal to one and one half times the Company's share capital plus aggregate reserves unless sanctioned by an ordinary resolution of the Company.

Directors are not required to hold any shares of either Company by way of qualification. The Remuneration report on pages 104 to 105 provides information on shareholding policies relating to executive and non-executive directors. Please refer to Corporate Governance page 69 for information on appointment of directors.

Rights attaching to shares

Under English law, dividends on shares may only be paid out of profits available for distribution, as determined in accordance with generally accepted accounting principles and by the relevant law. Shareholders are entitled to receive such dividends as may be declared by the directors. The directors may also pay shareholders such interim dividends as appear to them to be justified by the financial position of the Group.

Any Rio Tinto plc dividend unclaimed after 12 years from the date the dividend was declared, or became due for payment, will be forfeited and returned to the Company. Any Rio Tinto Limited dividend unclaimed may be invested or otherwise used by the board for the benefit of the Company until claimed or otherwise disposed of according to Australian law.

Voting rights

Voting at any general meeting of shareholders on a resolution on which the holder of the Special Voting Share is entitled to vote shall be decided by a poll, and any other resolution shall be decided by a show of hands unless a poll has been duly demanded. On a show of hands, every shareholder who is present in person or by proxy or other duly authorised representative and is entitled to vote has one vote regardless of the number of shares held. The holder of the Special Voting Share is not entitled to vote on a show of hands. On a poll, every shareholder who is present in person or by proxy or other duly authorised representative and is entitled to vote has one vote for every ordinary share for which he or she is the holder and, in the case of Joint Decisions, the holder of the Special Voting Share has one vote for each vote cast by the shareholders at the parallel meeting of the other Company's shareholders.

A poll may be demanded by any of the following:

the chairman of the meeting;

at least five shareholders entitled to vote on the resolution;

any shareholder or shareholders representing in the aggregate not less than one tenth (Rio Tinto plc) or one 20th (Rio Tinto Limited) of the total voting rights of all shareholders entitled to vote on the resolution;

any shareholder or shareholders holding shares conferring a right to vote at the meeting on which there have been paid-up sums in the aggregate equal to not less than one tenth of the total sum paid up on all the shares conferring that right (Rio Tinto plc); or

the holder of the Special Voting Share.

A proxy form will be treated as giving the proxy the authority to demand a poll, or to join others in demanding one.

Edgar Filing: RIO TINTO PLC - Form 20-F

The necessary quorum for a Rio Tinto plc general meeting is three members present (in person or by proxy or other duly authorised representative) and entitled to vote and for a Rio Tinto Limited general meeting is two members present in person or by proxy or other duly authorised representative.

Matters are transacted at general meetings by the proposing and passing of resolutions:

ordinary resolutions, which require the affirmative vote of a majority of the votes of those persons voting at a meeting at which there is a quorum, for example the election of directors; and

riotinto.com 125

Table of Contents

Shareholder information continued

special resolutions, which require the affirmative vote of not less than three fourths of the persons voting at a meeting at which there is a quorum, for example amending the Articles of Association of Rio Tinto plc or the Constitution of Rio Tinto Limited. The DLC Merger Sharing Agreement further classifies resolutions as Joint Decisions and Class Rights Actions as explained under Voting rights on page 120.

Annual general meetings must be convened with 21 days' written notice for Rio Tinto plc and with 28 days' notice for Rio Tinto Limited. Other meetings of Rio Tinto plc must be convened with 21 days' written notice for the passing of a special resolution and with 14 days' notice for any other resolution, depending on the nature of the business to be transacted. All meetings of Rio Tinto Limited require 28 days' notice. In calculating the period of notice the days of delivery or receipt of the notice and the date of the meeting are not included. Among other things, the notice must specify the nature of the business to be transacted.

Variation of rights

If, at any time, the share capital is divided into different classes of shares, the rights attached to any class may be varied, subject to the provisions of the relevant legislation, with the consent in writing of holders of three fourths in value of the shares of that class or upon the adoption of an extraordinary resolution passed at a separate meeting of the holders of the shares of that class. At every such separate meeting, all of the provisions of the Articles of Association and Constitution relating to proceedings at a general meeting apply, except that the quorum for Rio Tinto plc should be two or more persons who hold or represent by proxy not less than one third in nominal value of the issued shares of the class.

Rights in a winding-up

Except as the shareholders have agreed or may otherwise agree, upon a winding up, the balance of assets available for distribution:

after the payment of all creditors including certain preferential creditors, whether statutorily preferred creditors or normal creditors; and

subject to any special rights attaching to any class of shares is to be distributed among the holders of ordinary shares according to the amounts paid-up on the shares held by them. This distribution is generally to be made in cash. A liquidator may, however, upon the adoption of a special resolution of the shareholders, divide among the shareholders the whole or any part of the assets in kind.

The DLC Merger Sharing Agreement further sets out the rights of ordinary shareholders in a liquidation as explained on page 120.

Facility agreement

Rio Tinto Finance plc and Rio Tinto Finance Limited entered into a facility agreement on 12 November 2010 as borrowers with a syndicate of banks. The facility is guaranteed by Rio Tinto plc and Rio Tinto Limited. The facility comprises a US\$6 billion multi-currency five-year revolving credit facility (including a US\$ denominated same day access swingline facility). The funds made available under the Facility Agreement may be used for the general corporate purposes of the Group.

Advances under the revolving facility bear an interest rate per annum equal to the margin (which is dependent on the Group's long-term credit rating as determined by Moody's and Standard & Poors and the level of drawdown) plus LIBOR or EURIBOR (in relation to any euro loan) plus any mandatory cost.

The Facility Agreement contains no financial covenants.

At 31 December 2011, the facility was undrawn. Further details of the Group's credit facilities are set out in note 23 of the 2011 financial statements.

Exchange controls and foreign investment

Rio Tinto plc

There are no UK foreign exchange controls or other restrictions on the import or export of capital or on the payment of dividends to non-resident holders of Rio Tinto plc shares or that affect the conduct of Rio Tinto plc's operations. The Bank of England, however, administers financial sanctions against specified targets related to certain regimes. There are no restrictions under Rio Tinto plc's Articles of Association or under UK law that limit the right of non-resident owners to

Edgar Filing: RIO TINTO PLC - Form 20-F

hold or vote Rio Tinto plc shares.

Rio Tinto Limited

Under current Australian legislation, the Reserve Bank of Australia does not restrict the import and export of funds and no permission is required for the movement of funds into or out of Australia, except that restrictions apply to certain financial transactions relating to specified individuals and entities associated with certain regimes.

The Department of Foreign Affairs and Trade has responsibility for the administration of restrictions relating to terrorists and their sponsors, and the former Iraqi regime.

Rio Tinto Limited may be required to deduct withholding tax from foreign remittances of dividends, to the extent that they are unfranked, and from payments of interest.

Acquisitions of interests in shares, voting power or certain other equity instruments in Australian companies by foreign interests are subject to review and approval by the Treasurer of the Commonwealth of Australia under the Foreign Acquisitions and Takeovers Act 1975 (the Takeovers Act). The Takeovers Act applies to any acquisition of 15 per cent or more of the outstanding shares of, or voting power in, an Australian company or to any transaction that results in one non-resident, or a group of associated non-residents, controlling 15 per cent or more of the shares of or voting power in, an Australian company. The Takeovers Act also applies to any transaction which results in a group of non-associated non-residents controlling 40 per cent or more of the shares of, or voting power in, an Australian company. Persons who are proposing such acquisitions or transactions are required to notify the Treasurer of their intention. The Treasurer has the power to order divestment in cases where such acquisitions or transactions have already occurred. The Takeovers Act does not affect the rights of owners whose interests are held in compliance with the legislation.

Limitations on voting and shareholding

Except for the provisions of the Takeovers Act 1975 there are no limitations imposed by law, Rio Tinto plc's Articles of Association or Rio Tinto Limited's Constitution, on the rights of non-residents or foreign persons to hold or vote the Group's ordinary shares or ADSs that would not apply generally to all shareholders.

Taxation

UK resident individuals' shareholdings in Rio Tinto plc

Taxation of dividends

Dividends carry a tax credit equal to one ninth of the dividend. Individuals who are liable to income tax at the basic rate will have no further tax to pay. Higher rate tax payers are liable to tax on UK dividends at 32.5 per cent, which after taking account of the tax credit, produces an effective tax liability of 25 per cent of the dividend received. Additional rate tax payers are liable to tax on UK dividends at 42.5 per cent, which after taking account of the tax credit, produces an effective tax liability of 36.1 per cent of the dividend received.

Dividend reinvestment plan (DRP)

The taxation effect of participation in the DRP will depend on individual circumstances. Shareholders will generally be liable to tax on dividends reinvested in the DRP on the same basis as if they had received the cash and arranged the investment. The dividend should, therefore, be included in the annual tax return.

Table of Contents

The shares acquired should be added to shareholdings at the date and at the net cost shown on the share purchase advice. The actual cost of the shares for Rio Tinto plc shareholders including the stamp duty/stamp duty reserve tax, will form the base cost for capital gains tax purposes.

Capital gains tax

Shareholders who have any queries on capital gains tax issues are advised to consult their financial adviser.

Details of relevant events since 31 March 1982 and adjusted values for Rio Tinto plc securities as at that date are available on the Group's website.

Australian resident individuals' shareholdings in Rio Tinto Limited

Taxation of dividends

The basis of the Australian dividend imputation system is that when Australian resident shareholders receive dividends from Rio Tinto Limited, they may be entitled to a credit for the Australian tax paid by the Group in respect of that income, depending on the tax status of the shareholder.

The application of the system results in the Australian tax paid by the Group being allocated to shareholders by way of franking credits attaching to the dividends they receive. Such dividends are known as franked dividends. A dividend may be partly or fully franked. The current Rio Tinto Limited dividend is fully franked and the franking credits attached to the dividend are shown in the distribution statement provided to shareholders.

The extent to which a company can frank a dividend depends on the credit balance in its franking account. Credits to this account can arise in a number of ways, including when a company pays company tax or receives a franked dividend from another company. The dividend is required to be included in a resident individual shareholder's assessable income. In addition, an amount equal to the franking credit attached to the franked dividend is also included in the assessable income of the resident individual, who may then be entitled to a rebate of tax equal to the franking credit amount included in their income. Should the franking credits exceed the tax due, the excess is refunded to the resident individual.

The effect of the dividend imputation system on non-resident shareholders is that, to the extent that the dividend is franked, no Australian tax will be payable and there is an exemption from dividend withholding tax.

A withholding tax is normally levied at the rate of 15 per cent when unfranked dividends are paid to non-resident shareholders residing in a country with which Australia has a taxation treaty. Most Western countries have a taxation treaty with Australia. A rate of 30 per cent applies to countries where there is no taxation treaty.

Since 1988, all dividends paid by Rio Tinto Limited have been fully franked. It is the Group's policy to pay fully franked dividends whenever possible. The boards expect Rio Tinto Limited to be able to pay fully franked dividends for the foreseeable future.

Dividend reinvestment plan (DRP)

Shareholders will generally be liable for tax on dividends reinvested in the DRP on the same basis as if they had received the cash and arranged the investment. The dividend should therefore be included in the annual tax return as assessable income.

The shares acquired should be added to the shareholding at the date of acquisition at the actual cost of the shares, which is the amount of the dividend applied by the shareholder to acquire shares and any incidental costs associated with the acquisition will form part of the cost base or reduced cost base of the shares for capital gains tax purposes.

Capital gains tax

The Australian capital gains tax legislation is complex. If shareholders have acquired shares after 19 September 1985 they may be subject to capital gains tax on the disposal of those shares.

Generally, disposal of shares held on capital account would give rise to a capital gain or loss. A capital gain arises when the proceeds on disposal are greater than the cost base of shares. A capital loss arises when the

proceeds on sale are less than the cost base or reduced cost base. Where a capital gain arises on shares held for at least 12 months, individual, trust and superannuation fund shareholders may be eligible for a capital gains tax discount.

Edgar Filing: RIO TINTO PLC - Form 20-F

Shareholders are advised to seek the advice of an independent taxation consultant on any possible capital gains tax exposure.

US residents

The following is a summary of the principal UK tax, Australian tax and US Federal income tax consequences of the ownership of Rio Tinto plc ADSs, Rio Tinto plc shares and Rio Tinto Limited shares, the Group's ADSs and shares by a US holder as defined below. It is not intended to be a comprehensive description of all the tax considerations that are relevant to all classes of taxpayer. Future changes in legislation may affect the tax consequences of the ownership of the Group's ADSs and shares.

It is based in part on representations by the Group's depository bank as depository for the ADRs evidencing the ADSs and assumes that each obligation in the deposit agreements will be performed in accordance with its terms.

You are a US holder if you are a beneficial owner of the Group's ADSs and shares and you are: a citizen or resident of the US, a domestic corporation, an estate whose income is subject to US federal income tax regardless of its source, or a trust if a US court can exercise primary supervision over the trust's administration and one or more US persons are authorised to control all substantial decisions of the trust.

This section applies to US holders only if shares or ADSs are held as capital assets for tax purposes. This section does not apply to shareholders who are members of a special class of holders subject to special rules, including a dealer in securities, a trader in securities who elects to use a mark-to-market method of accounting for securities holdings, a tax exempt organisation, a life insurance company, a person liable for alternative minimum tax, a person that actually or constructively owns ten per cent or more of Rio Tinto's voting stock, a person that holds shares or ADSs as part of a straddle or a hedging or conversion transaction, or a person whose functional currency is not the US dollar.

This section is based on the US Internal Revenue Code of 1986, as amended (the Code), its legislative history, existing and proposed regulations, published rulings and court decisions, and on the convention between the US and UK, and the convention between the US and Australia which may affect the tax consequences of the ownership of the Group's ADSs and shares. These laws and conventions are subject to change, possibly on a retroactive basis.

For the purposes of the Conventions and of the Code, US holders of ADSs are treated as the owners of the underlying shares.

The summary describes the treatment applicable under the conventions in force at the date of this report.

UK taxation of shareholdings in Rio Tinto plc

Taxation of dividends

US holders are not liable to UK withholding tax on dividends paid by Rio Tinto plc. Dividends carry a tax credit equal to one ninth of the net dividend, or ten per cent of the net dividend plus the tax credit. The tax credit is not repayable to US holders.

Capital gains

A US holder will not normally be liable to UK tax on capital gains realised on the disposition of Rio Tinto plc ADSs or shares unless the holder carries on a trade, profession or vocation in the UK through a permanent establishment in the UK and the ADSs or shares have been used for the purposes of the trade, profession or vocation or are acquired, held or used for the purposes of such a permanent establishment.

Table of Contents

Shareholder information continued

Inheritance tax

Under the UK Estate Tax Treaty, a US holder, who is domiciled in the US and is not a national of the UK, will not be subject to UK inheritance tax upon the holder's death or on a transfer during the holder's lifetime unless the ADSs and shares form part of the business property of a permanent establishment in the UK or pertain to a fixed base situated in the UK used in the performance of independent personal services. In the exceptional case where ADSs or shares are subject both to UK inheritance tax and to US Federal gift or estate tax, the UK Estate Tax Treaty generally provides for tax payments to be relieved in accordance with the priority rules set out in the Treaty.

Stamp duty and stamp duty reserve tax

Transfers of Rio Tinto plc ADSs will not be subject to UK stamp duty provided that the transfer instrument is not executed in, and at all times remains outside, the UK. Electronic paperless purchases of Rio Tinto plc shares are subject to stamp duty reserve tax (SDRT) at a rate of 0.5 per cent (rounded to the nearest penny). Purchases of Rio Tinto plc shares using a stock transfer form are subject to Stamp Duty at a rate of 0.5 per cent on transactions over £1,000 (rounded up to the nearest £5). Conversions of Rio Tinto plc shares into Rio Tinto plc ADSs will be subject to additional Stamp Duty or SDRT at a rate of 1.5 per cent on all transfers to the depositary or its nominee.

Australian taxation of shareholdings in Rio Tinto Limited

Taxation of dividends

US holders are not normally liable to Australian withholding tax on dividends paid by Rio Tinto Limited because such dividends are normally fully franked under the Australian dividend imputation system, meaning that they are paid out of income that has borne Australian income tax. Any unfranked dividends would suffer Australian withholding tax which under the Australian income tax convention is limited to 15 per cent of the gross dividend.

Capital gains

US holders are not normally subject to any Australian tax on the disposal of Rio Tinto Limited ADSs or shares unless they have been used in carrying on a trade or business wholly or partly through a permanent establishment in Australia, or the gain is in the nature of income sourced in Australia.

Gift, estate and inheritance tax

Australia does not impose any gift, estate or inheritance taxes in relation to gifts of shares or upon the death of a shareholder.

Stamp duty

An issue or transfer of Rio Tinto Limited shares does not require the payment of Australian stamp duty.

US federal income tax

In general, taking into account the earlier assumptions that each obligation of the Deposit Agreement and any related agreement will be performed according to its terms, for US federal income tax purposes, if you hold ADRs evidencing ADSs, you will be treated as the owner of the shares represented by those ADRs. Exchanges of shares for ADRs, and ADRs for shares, generally will not be subject to US federal income tax.

Taxation of dividends

Under the US federal income tax laws, and subject to the Passive Foreign Investment Company, or PFIC, Rules discussed below, if you are a US holder, the gross amount of any dividend the Group pays out of its current or accumulated earnings and profits (as determined for US federal income tax purposes) is subject to US federal income taxation.

If you are a non-corporate US holder, dividends paid to you in taxable years beginning before 1 January 2012 that constitute qualified dividend income will be taxable to you at a maximum tax rate of 15 per cent provided that, in the case of shares or ADSs, you hold the shares or ADSs for more than 60 days during the 121 day period beginning 60 days before the ex-dividend date. Dividends we pay with respect to the shares or ADSs will generally be qualified dividend income.

Edgar Filing: RIO TINTO PLC - Form 20-F

You must include any Australian tax withheld from the dividend payment in this gross amount even though you do not in fact receive it. The dividend is taxable to you when you, in the case of shares, or the depository, in the case of ADSs, receive the dividend, actually or constructively. The dividend will not be eligible for the dividends-received deduction generally allowed to US corporations in respect of dividends received from other US corporations. The amount of the dividend distribution that you must include in your income as a US holder will be the US dollar value of the non-US dollar payments made, determined at the spot UK pound/US dollar rate (in the case of Rio Tinto plc) or the spot Australian dollar/US dollar rate (in the case of Rio Tinto Limited) on the date the dividend distribution is includible in your income, regardless of whether the payment is in fact converted into US dollars. Generally, any gain or loss resulting from currency exchange fluctuations during the period from the date you include the dividend payment in income to the date you convert the payment into US dollars will be treated as ordinary income or loss and will not be eligible for the special tax rate applicable to qualified dividend income. The gain or loss generally will be income or loss from sources within the US for foreign tax credit limitation purposes. Distributions in excess of current and accumulated earnings and profits, as determined for US federal income tax purposes, will be treated as a non-taxable return of capital to the extent of your basis in the shares or ADSs and thereafter as capital gain.

Subject to certain limitations, any Australian tax withheld in accordance with the Australia/United States Tax Treaty and paid over to Australia will be creditable or deductible against your US federal income tax liability. Special rules apply in determining the foreign tax credit limitation with respect to dividends that are subject to the maximum 15 per cent tax rate.

For foreign tax credit purposes, dividends will generally be income from sources outside the US and will, depending on your circumstances, generally be either passive or general income which, in either case, is treated separately from other types of income for purposes of computing the foreign tax credit allowable to you.

Table of Contents

Taxation of capital gains

Subject to the PFIC rules discussed below, if you are a US holder and you sell or otherwise dispose of the Group's ADSs or shares, you will recognise capital gain or loss for US federal income tax purposes equal to the difference between the US dollar value of the amount that you realise and your tax basis, determined in US dollars, in your shares or ADSs. Capital gain of a non-corporate US holder is generally taxed at preferential rates where the holder has a holding period greater than one year. The gain or loss will generally be income or loss from sources within the US for foreign tax credit limitation purposes.

Passive Foreign Investment Company (PFIC) Rules

We believe that the Group's shares or ADSs should not be treated as stock of PFIC for US federal income tax purposes, but this conclusion is a factual determination that is made annually and thus may be subject to change. If we were to be treated as a PFIC, unless the shares or ADSs are marketable stock and a US holder elects to be taxed annually on a mark-to-market basis with respect to the shares or ADSs, gain realised on the sale or other disposition of the shares or ADSs would in general not be treated as capital gain. Instead, if you are a US holder, you would be treated as if you had realised such gain and certain excess distributions ratably over your holding period for the shares or ADSs and would be taxed at the highest tax rate in effect for each such year to which the gain was allocated, together with an interest charge in respect of the tax attributable to each such year. In addition, dividends that you receive from us will not be eligible for the special tax rates applicable to qualified dividend income if we are a PFIC either in the taxable year of the distribution or the preceding taxable year, but instead will be taxable at rates applicable to ordinary income.

Documents on display

Rio Tinto is subject to the Securities and Exchange Commission reporting requirements for foreign companies. A Form 20-F, which corresponds with the Form 10-K for US public companies, was filed with the SEC on 16 March 2012. Rio Tinto's Form 20-F and other filings can be viewed on the Rio Tinto website as well as the SEC website at www.sec.gov. ADR holders may also read without charge and copy at prescribed rates any document filed at the public reference facilities of the SEC's principal office at 100 F Street NE, Washington, DC 20549, US. Please call the SEC at 1-800-SEC-0330 for further information on the operation of the public reference facilities.

(a) The financial statements for the year ended 31 December 2010 have been restated in accordance with IFRS 3 Business Combinations (Revised), following reclassification of certain balances relating to the Consolidation of Oyu Tolgoi LLC. Refer to note 39.

(b) Following the continued integration and organisational restructure of Rio Tinto Aluminium and adoption of the integrated operations approach (see Rio Tinto Financial Information by Business Unit on pages 209 to 212), sales of surplus power and carbon products used in the smelting process, previously included within sales revenue, have been treated as a credit to operating costs. In addition, third party commodity swap arrangements for delivery and receipt of smelter grade alumina are offset within operating costs. Corresponding amounts in comparative periods have been reclassified accordingly. This reclassification is considered to improve the relevance of the financial statements for users. The impact of the reclassification on previously reported consolidated sales revenue is: 31 December 2010: US\$1,405 million (31 December 2009: US\$1,563 million). The impact on previously reported gross sales revenue is: 31 December 2010: US\$1,109 million (31 December 2009: US\$1,302 million).

Closing balance	5,170	4,174	14,010	20,477	43,831	2,094	45,925
------------------------	-------	-------	--------	--------	--------	-------	--------

- (a) Refer to statement of comprehensive income.

- (b) Refer to note 1 (d).

- (c) The purchase of Riversdale has been treated as a step acquisition. Non-controlling interests of US\$1,498 million arose at the acquisition date, when Rio Tinto's share in Riversdale reached 52.6 per cent. These non-controlling interests reversed as Rio Tinto increased its interests in Riversdale to 100 per cent. An amount of US\$479 million has been recognised directly in equity in relation to Rio Tinto's interests purchased after the acquisition date, representing the excess of consideration paid to acquire these additional shareholdings, over non-controlling interests acquired. Refer to note 39.

- (d) A reduction of US\$339 million in non-controlling interests arose as Rio Tinto increased its economic share in Oyu Tolgoi through the acquisition of additional interests in Ivanhoe Mines Ltd. Adjustments to retained earnings attributable to owners of Rio Tinto of US\$129 million relate to the aggregate excess of consideration paid for the additional investments in Ivanhoe, over the value of the additional economic share acquired in Oyu Tolgoi. Refer to note 39.

- (e) In relation to the Group's purchase of an additional indirect stake in Coal & Allied, adjustments to retained earnings of US\$185 million were made for the excess of consideration paid to acquire shareholdings of US\$45 million from non-controlling interests.

- (f) Refer to Group income statement.

- (g) Rio Tinto consolidated Oyu Tolgoi LLC on 15 December 2010 following the signing of a new agreement with Ivanhoe Mines. Refer to note 39.

- (h) Charges to share premium in 2009 include underwriting fees and other fees for the Rio Tinto plc rights issue together with the mark-to-market losses from inception to receipt of proceeds on forward contracts taken out by Rio Tinto plc to provide confidence in the absolute dollar proceeds of the rights issue.

Table of Contents

Reconciliation with Australian Accounting Standards

The Group's financial statements have been prepared in accordance with IFRS as adopted by the European Union (EU IFRS), which differs in certain respects from the version of IFRS that is applicable in Australia referred to as Australian Accounting Standards (AAS).

Prior to 1 January 2004, the Group's financial statements were prepared in accordance with UK GAAP. Under IFRS goodwill on acquisitions prior to 1998, which was eliminated directly against equity in the Group's UK GAAP financial statements, has not been reinstated. This was permitted under the rules governing the transition to IFRS set out in IFRS 1. The equivalent Australian Standard, AASB 1, does not provide for the netting of goodwill against equity. As a consequence, shareholders' funds under AAS include the residue of such goodwill, which amounted to US\$537 million at 31 December 2011 (2010: US\$584 million; 2009: US\$597 million).

Save for the exception described above, the Group's financial statements drawn up in accordance with IFRS are consistent with the requirements of AAS.

Outline of dual listed companies structure and basis of financial statements

The Rio Tinto Group

These are the financial statements of the Group formed through the merger of economic interests of Rio Tinto plc and Rio Tinto Limited (Merger), and presented by both Rio Tinto plc and Rio Tinto Limited as their consolidated accounts in accordance with both United Kingdom and Australian legislation and regulations.

Merger terms

On 21 December 1995, Rio Tinto plc and Rio Tinto Limited, which are listed respectively on Stock Exchanges in the United Kingdom and Australia, entered into a dual listed companies (DLC) merger. This was effected by contractual arrangements between the companies and amendments to Rio Tinto plc's Memorandum and Articles of Association and Rio Tinto Limited's Constitution.

As a result, Rio Tinto plc and Rio Tinto Limited and their respective groups operate together as a single economic enterprise, with neither assuming a dominant role. In particular, the arrangements:

confer upon the shareholders of Rio Tinto plc and Rio Tinto Limited a common economic interest in both groups;

provide for common boards of directors and a unified management structure;

provide for equalised dividends and capital distributions; and

provide for the shareholders of Rio Tinto plc and Rio Tinto Limited to take key decisions, including the election of directors, through an electoral procedure in which the public shareholders of the two companies effectively vote on a joint basis.

The Merger involved no change in the legal ownership of any assets of Rio Tinto plc or Rio Tinto Limited, nor any change in the ownership of any existing shares or securities of Rio Tinto plc or Rio Tinto Limited, nor the issue of any shares, securities or payment by way of consideration, save for the issue by each company of one special voting share to a trustee company which provides the joint electoral procedure for public shareholders. During 2002, each of the parent companies issued a DLC Dividend Share to facilitate the efficient management of funds within the DLC structure.

Accounting standards

The financial statements have been drawn up in accordance with IFRS. The Merger was accounted for as a merger under UK GAAP. As permitted under the rules governing the transition to IFRS, which are set out in IFRS 1, the Group did not restate business combinations that occurred before the transition date of 1 January 2004. As a result, the DLC merger of economic interests described above continues to be accounted for as a merger under IFRS.

Edgar Filing: RIO TINTO PLC - Form 20-F

The main consequence of adopting merger rather than acquisition accounting is that the statement of financial position of the merged Group includes the assets and liabilities of Rio Tinto plc and Rio Tinto Limited at their carrying values prior to the merger, subject to adjustments to achieve uniformity of accounting policies, rather than at their fair values at the date of the merger. For accounting purposes Rio Tinto plc and Rio Tinto Limited are viewed as a single public parent company (with their respective public shareholders being the shareholders in that single company). As a result the amounts attributable to both Rio Tinto plc and Rio Tinto Limited public shareholders are included in the amounts attributed to owners of Rio Tinto on the statement of financial position, income statement and statement of comprehensive income.

Australian Corporations Act

The financial statements are drawn up in accordance with an order, under section 340 of the Australian Corporations Act 2001, issued by the Australian Securities and Investments Commission (ASIC) on 22 December 2010 (as amended on 17 February 2012). The main provisions of the order are that the financial statements are prepared in accordance with IFRS and include a reconciliation from EU IFRS to the Australian equivalents of IFRS (see above).

For further details of the ASIC Class Order relief see page 213.

Table of Contents

Notes to the 2011 financial statements

1 Principal accounting policies

Corporate information

The financial statements of the Group were authorised for issue in accordance with a directors' resolution on 5 March 2012. Rio Tinto plc and Rio Tinto Limited are listed and incorporated respectively on Stock Exchanges in the United Kingdom and Australia. Rio Tinto plc's registered office is at 2 Eastbourne Terrace, London W2 6LG, United Kingdom. Rio Tinto Limited's registered office is at 120 Collins Street, Melbourne, Australia, 3000.

Rio Tinto's business is finding, mining and processing mineral resources. Major products are iron ore, aluminium, copper, diamonds, coal, uranium, gold and industrial minerals (borax, titanium dioxide and salt). Activities span the world but are strongly represented in Australia and North America with significant businesses in South America, Asia, Europe and Africa.

Basis of preparation

The basis of preparation and the accounting policies used in preparing the financial statements for the year ended 31 December 2011 are set out below.

The financial statements for the year ended 31 December 2011 have been prepared in accordance with International Financial Reporting Standards as adopted by the EU (EU IFRS) and with International Financial Reporting Standards as issued by the International Accounting Standards Board (IFRS) and interpretations issued from time to time by the IFRS Interpretations Committee (IFRIC) and adopted by the EU that are mandatory for the year ended 31 December 2011, the Companies Act 2006 applicable to companies reporting under IFRS and in accordance with applicable United Kingdom law, applicable Australian law as amended by the Australian Securities and Investments Commission Order dated 22 December 2010 (as amended on 17 February 2012) and Article 4 of the European Union IAS regulation. The financial statements are prepared on a going concern basis (page 118).

The IFRS financial information has been drawn up on the basis of accounting policies consistent with those applied in the financial statements for the year to 31 December 2010, except for the following:

Amendment to IAS 24, Related party disclosures. The definition of a related party has been clarified to simplify the identification of related party relationships. The amendment also extended the definition of a related party to include the subsidiaries of equity accounted units.

Improvements to IFRS 2010. This standard collates further minor changes to IFRS. IAS 24 relates to disclosure only, prior year information has been reclassified to conform with the current presentation. The reclassification does not affect prior year statements of financial position.

The effect of adopting the Improvements standard is not material to Group earnings or to shareholders' funds in the current or prior year.

The financial statements for the year ended 31 December 2010 have been restated in accordance with IFRS 3 Business Combinations (Revised), following reclassification of certain balances relating to the Consolidation of Oyu Tolgoi LLC. Refer to note 39.

The Group has not applied the following pronouncements which are not mandatory for 2011:

Amendment to IAS 1, Financial statement presentation presentation of items of other comprehensive income.

Amendment to IAS 12, Deferred Tax: Recovery of underlying assets.

Edgar Filing: RIO TINTO PLC - Form 20-F

Amendment to IAS 19, Employee benefits .

IAS 28 (revised 2011), Associates and joint ventures .

Amendments to IFRS 7, Financial instruments: Disclosures .

IFRS 9, Financial instruments .

IFRS 10, Consolidated financial statements .

IFRS 11, Joint arrangements .

IFRS 12, Disclosures of interests in other entities .

IFRS 13, Fair value measurement .

IFRIC 20, Stripping costs in the production phase of a surface mine .

The Group is currently evaluating the impact of the above pronouncements. The following pronouncements, all of which are mandatory in 2013, are expected to be the most relevant to the Group:

The amendment to IAS 19, which calculates finance costs on a net funding basis.

IFRS 10, which defines the principle of control.

IFRS 11, which focuses on the rights and obligations of joint arrangements rather than their legal form.

IFRS 12 which includes the disclosure requirements for IFRS 10 and IFRS 11.

IFRIC 20 which specifies the accounting for post production stripping costs. As explained in note h) below the Group currently defers stripping costs incurred during the production stage of its operations, for those operations where this is the most appropriate basis for matching the costs against the related economic benefits and the effect is material. At 31 December 2011, US\$1.6 billion was included in the statement of financial position for deferred stripping costs. Under the interpretation this balance can only be carried forward if it can be identified with a remaining component of the ore body. Some of the balance may be written off to retained earnings on implementation of the Interpretation.

IFRS 13, which provides a common framework for measuring fair value.

Judgments in applying accounting policies and key sources of estimation uncertainty

Many of the amounts included in the financial statements involve the use of judgment and/or estimation. These judgments and estimates are based on management's best knowledge of the relevant facts and circumstances, having regard to previous experience, but actual results may differ from the amounts included in the financial statements. Information about such judgments and estimation is contained in the accounting policies and/or the Notes to the financial statements, and the key areas are summarised below.

Areas of judgment that have the most significant effect on the amounts recognised in the financial statements are:

Merger accounting for the 1995 merger of the economic interests of Rio Tinto plc and Rio Tinto Limited into the dual listed companies (DLC) structure (see Dual listed companies structure).

Review of asset carrying values, impairment charges and reversals and the recoverability of goodwill note 1(e) and (i), note 6 and note 12.

Estimation of asset lives note 1(e) and (i).

Determination of ore reserve estimates note 1(j).

Close down, restoration and clean up obligations note 1(k).

Deferral of stripping costs note 1(h).

Recognition of deferred tax on mineral rights recognised in acquisitions note 1(m).

Recoverability of potential deferred tax assets note 19(d) and (e).

Capitalisation of exploration and evaluation costs note 1(f).

Identification of functional currencies note 1(d).

Basis of consolidation note 1 (b).

Edgar Filing: RIO TINTO PLC - Form 20-F

Acquisitions note 1(b).

Post retirement cost assumptions note 1(n).

Key sources of estimation uncertainty that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are:

Review of asset carrying values, impairment charges and reversals and the recoverability of goodwill 1(e) and (i), note 6 and note 12.

Estimation of close down, restoration and clean up costs and the timing of expenditure note 1(k) and note 27.

Estimation of liabilities for post retirement costs note 47.

Recoverability of potential deferred tax assets note 19(d) and (e).

Contingencies note 33.

These areas of judgment and estimation are discussed further in critical accounting policies and estimates.

(a) Accounting convention

The financial information included in the financial statements for the year ended 31 December 2011, and for the related comparative period, has been prepared under the historical cost convention, as modified by the revaluation of certain derivative contracts, financial assets and the accounting for post retirement assets and liabilities. The Group's policy in respect of these items is set out in the notes below.

(b) Basis of consolidation

The financial statements consist of the consolidation of the accounts of Rio Tinto plc and Rio Tinto Limited (together the Companies) and their respective subsidiaries (the Group) together with the Group's share of joint ventures and associates accounted for as described below.

All intragroup transactions and balances have been eliminated on consolidation.

Subsidiaries: Subsidiaries are entities controlled by the Companies. Control is the power to govern the financial and operating policies of those entities in order to obtain benefits from their activities. Control is presumed to exist where the Companies own more than one half of the voting rights (which is not always the same as more than 50 per cent ownership) unless it can be demonstrated that this does not constitute control. Control does not exist where other parties hold veto rights over significant operating and financial decisions of an entity or where the Companies have the power to govern an entity but cannot obtain benefit from its activities. Control does exist where another party or parties own more than one half of the voting rights of an entity but the Group can control those voting rights either through a contractual arrangement or through board control.

Table of Contents

Joint ventures: A joint venture is a contractual arrangement whereby two or more parties undertake an economic activity that is subject to joint control. Joint control is the contractually agreed sharing of control such that significant operating and financial decisions require the unanimous consent of the parties sharing control. In some situations, joint control exists even though the Group has an ownership interest of more than 50 per cent because of the veto rights held by joint venture partners. The Group has two types of joint venture:

Jointly controlled entities (JCEs): A JCE is a joint venture that involves the establishment of a corporation, partnership or other entity in which each venturer has a long term interest. JCEs are accounted for using the equity accounting method.

Jointly controlled assets (JCAs): JCAs do not involve the establishment of a corporation, partnership or other entity. A JCA is a joint venture in which the venturers have joint control over the assets contributed to or acquired for the purposes of the joint venture. This includes situations where the participants benefit from the joint activity through a share of the production, rather than by receiving a share of the results of trading. The Group's proportionate interest in the assets, liabilities, revenues, expenses and cash flows of JCAs are incorporated into the Group's financial statements under the appropriate headings.

Associates: An associate is an entity, that is neither a subsidiary nor a joint venture, over which the Group has significant influence. Significant influence is presumed to exist where the Group has between 20 per cent and 50 per cent of the voting rights, but can also arise where the Group holds less than 20 per cent if it has the power to participate in the financial and operating policy decisions affecting the entity.

Investments in associates are accounted for using the equity method of accounting. Under this method of accounting the investment is recorded initially at cost to the Group, including any goodwill on acquisition. In subsequent periods the carrying amount of the investment is adjusted to reflect the Group's share of the associates' retained post-acquisition profit or loss and other comprehensive income.

The Group uses the term 'Equity accounted units' to refer to associates and jointly controlled entities collectively. For all equity accounted units the carrying value will include any long term debt interests that in substance form part of the Group's net investment.

Where necessary, adjustments are made to the results of subsidiaries, joint ventures and associates to bring their accounting policies into line with those used by the Group.

Acquisitions

The acquisition method of accounting is used for acquisitions. This means that the purchase consideration is allocated to the identifiable assets acquired and liabilities assumed (the identifiable net assets) on the basis of fair value at the date of acquisition which is the date on which control is obtained. Provisional fair values allocated at a reporting date are finalised within 12 months of the acquisition date.

Costs related to the acquisition of a subsidiary are expensed as incurred.

On an acquisition by acquisition basis, the Group recognises any non-controlling interest in the acquiree either at the non-controlling interest's proportionate share of the acquiree's identifiable net assets or at fair value. Goodwill (see note (e)) and amounts attributable to non-controlling interests will be higher when the latter is used.

Where the Group has a previously held non-controlling interest in the acquiree, this is remeasured to fair value at the acquisition date with any gain or loss being recognised in the income statement. The cash cost of such purchases is included in the investing section of the cash flow.

For purchases from non controlling interests, the difference between the purchase price and the relevant carrying value of the share of net assets acquired is recorded in equity. The cash cost of such purchases is included in the financing section of the cash flow.

The results of businesses acquired during the year are brought into the consolidated financial statements from the date on which control, joint control or significant influence commences.

Disposals

Individual non-current assets or disposal groups (ie groups of assets and liabilities) to be disposed of, by sale or otherwise in a single transaction, are classified as held for sale if the following criteria are met at the period end:

the carrying amount will be recovered principally through a sale transaction rather than through continuing use; and

Edgar Filing: RIO TINTO PLC - Form 20-F

the disposal group is available for immediate sale in its present condition subject only to terms that are usual and customary for such sales; and

the sale is highly probable.

Disposal groups held for sale are carried at the lower of their carrying amount and fair value less costs to sell. Comparative statement of financial position information is not restated. Disposal groups acquired with a view to resale are held at fair value determined at the acquisition date. For these assets acquired for resale no profits or losses are recognised between the acquisition date and the disposal date, unless there is a subsequent impairment.

On classification as held for sale, the assets are no longer depreciated.

The results of businesses disposed of are taken out of the financial statements from the date on which control, joint control or significant influence ceases. The cash proceeds of such disposals are included in the Investing section of the cash flow. At this point any interest in the entity retained by the Group is remeasured to its fair value and the change in carrying amount is recognised in the income statement. This fair value is the initial carrying amount for any retained interest which may be subsequently accounted for as an associate, joint venture or financial asset depending on the facts. Any amounts previously recognised in other comprehensive income in respect of the entity disposed of are accounted for as if the Group had directly disposed of the appropriate share of the related assets or liabilities.

Gains or losses on disposals to non controlling interests where control is retained are recorded in equity. The cash proceeds of such disposals are included in the Financing section of the cash flow.

Table of Contents

Notes to the 2011 financial statements continued

1 Principal accounting policies continued

(c) Sales revenue

Sales revenue comprises sales to third parties at invoiced amounts. Most sales are priced ex works, free on board (fob) or cost, insurance and freight (cif). Amounts billed to customers in respect of shipping and handling are classed as sales revenue where the Group is responsible for carriage, insurance and freight. All shipping and handling costs incurred by the Group are recognised as operating costs. If the Group is acting solely as an agent, amounts billed to customers are offset against the relevant costs. Revenue from services is recognised as services are rendered and accepted by the customer.

Sales revenue excludes any applicable sales taxes. Mining royalties are presented as an operating cost or, where they are in substance a profit based tax, within taxes.

Revenues from the sale of significant by products such as gold, are included in sales revenue. Sundry revenue incidental to the main revenue generating activities of the operations and which is a consequence of producing and selling the main products is treated as a credit to operating costs.

Third party commodity swap arrangements for delivery and receipt of smelter grade alumina are offset within operating costs.

A large proportion of Group production is sold under medium to long term contracts.

Sales revenue is only recognised on individual sales when all of the following criteria are met:

the significant risks and rewards of ownership of the product have been transferred to the buyer;

neither continuing managerial involvement to the degree usually associated with ownership, nor effective control over the goods sold, has been retained;

the amount of revenue can be measured reliably;

it is probable that the economic benefits associated with the sale will flow to the Group; and

the costs incurred or to be incurred in respect of the sale can be measured reliably.

These conditions are generally satisfied when title passes to the customer. In most instances sales revenue is recognised when the product is delivered to the destination specified by the customer, which is typically the vessel on which it will be shipped, the destination port or the customer's premises.

Sales revenue is commonly subject to adjustment based on an inspection of the product by the customer. In such cases, sales revenue is initially recognised on a provisional basis using the Group's best estimate of contained metal, and adjusted subsequently.

Certain products are provisionally priced, ie the selling price is subject to final adjustment at the end of a period normally ranging from 30 to 180 days after delivery to the customer. The final price is based on the market price at the relevant quotation point stipulated in the contract.

As is customary in the industry, revenue on provisionally priced sales is recognised based on estimates of the fair value of the consideration receivable based on relevant forward market prices. At each reporting date provisionally priced metal is marked to market based on the forward selling price for the quotational period stipulated in the contract. For this purpose, the selling price can be measured reliably for those products, such as copper, for which there exists an active and freely traded commodity market such as the London Metals Exchange and the value of product sold by the Group is directly linked to the form in which it is traded on that market.

Edgar Filing: RIO TINTO PLC - Form 20-F

The marking to market of provisionally priced sales contracts is recorded as an adjustment to sales revenue. Information on provisionally priced sales contracts is included in note 31.

Certain of the Group's products, such as iron ore, were previously sold under long term contracts at a benchmark price. During 2010, pricing for the majority of iron ore customers changed to a quarterly basis reflecting the structural shift away from annual benchmark pricing. Changes to pricing mechanisms have continued in some markets during 2011 and substantially all iron ore sales are reflected at final prices in the results for the period, based on the best available information at the period end.

(d) Currency translation

The functional currency for each entity in the Group, and for jointly controlled entities and associates, is the currency of the primary economic environment in which that entity operates. For many entities, this is the currency of the country in which they are located. Transactions denominated in other currencies are converted to the functional currency at the exchange rate ruling at the date of the transaction unless hedge accounting applies, in which case the contract rate is used. Monetary assets and liabilities denominated in foreign currencies are retranslated at year end exchange rates.

The Group's accounting policies for derivative financial instruments and hedge accounting are explained in more detail in note 1(p) (iii). The Group's financial statements are presented in US dollars, as that currency most reliably reflects the global business performance of the Group as a whole. On consolidation, income statement items for each entity are translated from the functional currency into US dollars at average rates of exchange where the average approximates the rate at the date of transactions. Statement of financial position items are translated into US dollars at year end exchange rates.

Exchange differences arising on the translation of the net assets of entities with functional currencies other than the US dollar are recognised directly in the foreign currency translation reserve. These translation differences are shown in the statement of comprehensive income with the exception of translation adjustments relating to Rio Tinto Limited's share capital which are shown in the Group statement of changes in equity.

Where an intragroup balance is, in substance, part of the Group's net investment in an entity, exchange gains and losses on that balance are taken to the foreign currency translation reserve. Except as noted above, or in note p) below relating to derivative contracts, all other exchange differences are charged or credited to the income statement in the year in which they arise.

Table of Contents

(e) Goodwill and intangible assets (excluding exploration and evaluation expenditure)

Where the fair value of consideration paid for a business combination exceeds the fair value of the Group's share of identifiable net assets acquired, the difference is treated as purchased goodwill. When the fair value of the Group's share of identifiable net assets acquired exceeds the cost of consideration, the difference is immediately recognised in the income statement.

In 1997 and previous years, goodwill was eliminated against reserves in the year of acquisition as a matter of accounting policy, as was then permitted under UK GAAP. Such goodwill was not reinstated under subsequent UK accounting standards or on transition to IFRS.

Goodwill is not amortised; it is tested annually for impairment. Investments in equity accounted units (EAUs) including any goodwill are tested for impairment as a single asset when a trigger for impairment has been identified. The Group's impairment policy is explained in note 1 (i).

Purchased intangible assets are initially recorded at cost. Finite life intangible assets are amortised over their useful economic lives on a straight line or units of production basis, as appropriate. Intangible assets that are deemed to have indefinite lives and intangible assets that are not yet ready for use are not amortised; they are reviewed annually for impairment in accordance with accounting policy

note 1(i).

The Group considers that intangible assets have indefinite lives when, based on an analysis of all of the relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate cash flows for the Group. The factors considered in making this determination include the existence of contractual rights for unlimited terms; or evidence that renewal of the contractual rights without significant incremental cost can be expected for indefinite periods into the future in view of the Group's future investment intentions. The life cycles of the products and processes that depend on the asset are also considered.

(f) Exploration and evaluation

Exploration and evaluation expenditure comprises costs that are directly attributable to:

researching and analysing existing exploration data;

conducting geological studies, exploratory drilling and sampling;

examining and testing extraction and treatment methods; and/or

compiling pre-feasibility and feasibility studies.

Exploration expenditure relates to the initial search for deposits with economic potential. Evaluation expenditure arises from a detailed assessment of deposits or other projects that have been identified as having economic potential. Expenditure on exploration activity is not capitalised.

Capitalisation of evaluation expenditure commences when there is a high degree of confidence in the project's viability and therefore it is probable that future economic benefits will flow to the Group.

The carrying values of capitalised evaluation expenditure are reviewed twice a year by management. In the case of undeveloped mining projects, there may be only mineralised material to form a basis for that impairment review. The review is based on a status report summarising the Group's intentions for development. In some cases, the undeveloped projects are regarded as successors to orebodies, smelters or refineries currently in production. Where this is the case, it is intended that these will be developed and go into production when the current source of ore is exhausted or to replace the reduced output which results where existing smelters and/or refineries are closed. It is often the case that technological and other improvements will allow successor smelters and/or refineries to more than replace the capacity of their predecessors.

(g) Property, plant and equipment

Property, plant and equipment are stated at cost, as defined in IAS 16, less accumulated depreciation and accumulated impairment losses. The cost of property, plant and equipment includes the estimated close down and restoration costs associated with the asset. Once an undeveloped mining project has been established as commercially viable, expenditure other than that on land, buildings, plant and equipment is capitalised under Mining properties and leases together with any amount transferred from Exploration and evaluation .

Edgar Filing: RIO TINTO PLC - Form 20-F

In open pit mining operations, it is necessary to remove overburden and other waste materials to access ore from which minerals can be extracted economically. The process of mining overburden and waste materials is referred to as stripping. During the development of a mine (or pit), before production commences, stripping costs are capitalised as part of the investment in construction of the mine (or pit) and are subsequently amortised over the life of the mine (or pit) on a units of production basis.

Costs which are necessarily incurred whilst commissioning new assets, in the period before they are capable of operating in the manner intended by management, are capitalised. Development costs incurred after the commencement of production are capitalised to the extent they are expected to give rise to a future economic benefit. Interest on borrowings related to construction or development projects is capitalised until the point when substantially all the activities that are necessary to make the asset ready for its intended use are complete.

Table of Contents

Notes to the 2011 financial statements continued

1 Principal accounting policies continued

(h) Deferred stripping

Where a mine operates several open pits that are regarded as separate operations for the purpose of mine planning, stripping costs are accounted for separately by reference to the ore from each separate pit. If, however, the pits are highly integrated for the purpose of mine planning, the second and subsequent pits are regarded as extensions of the first pit in accounting for stripping costs. In such cases, the initial stripping (ie overburden and other waste removal) of the second and subsequent pits is considered to be production phase stripping relating to the combined operation.

The Group's determination of whether multiple pit mines are considered separate or integrated operations depends on each mine's specific circumstances. The following factors would point towards the stripping costs for the individual pits being accounted for separately:

If mining of the second and subsequent pits is conducted consecutively with that of the first pit, rather than concurrently.

If separate investment decisions are made to develop each pit, rather than a single investment decision being made at the outset.

If the pits are operated as separate units in terms of mine planning and the sequencing of overburden and ore mining, rather than as an integrated unit.

If expenditures for additional infrastructure to support the second and subsequent pits are relatively large.

If the pits extract ore from separate and distinct orebodies, rather than from a single orebody.

If the designs of the second and subsequent pits are significantly influenced by opportunities to optimise output from the several pits combined, including the co-treatment or blending of the output from the pits then this would point to treatment as an integrated operation in accounting for stripping costs.

The relative importance of each of the above factors is considered in each case to determine whether, on balance, the stripping costs should be attributed to the individual pit or to the combined output from several pits.

The Group defers stripping costs incurred during the production stage of its operations, where this is the most appropriate basis for matching the costs against the related economic benefits and the effect is material. This is generally the case where there are fluctuations in stripping costs over the life of the mine (or pit). The amount of stripping costs deferred is based on the ratio (Ratio) obtained by dividing the tonnage of waste mined either by the quantity of ore mined or by the quantity of minerals contained in the ore. In some operations, the quantity of ore is a more practical basis for matching costs with the related economic benefits where there are important co-products or where the grade of the ore is relatively stable from year to year. Stripping costs incurred in the period are deferred to the extent that the current period Ratio exceeds the life of mine (or pit) Ratio. Such deferred costs are then charged against reported profits to the extent that, in subsequent periods, the current period Ratio falls short of the life of mine (or pit) Ratio.

The life of mine (or pit) Ratio is based on proven and probable reserves of the mine (or pit); it is a function of the pit design(s) and therefore changes to that design will generally result in changes to the Ratio. Changes in other technical or economic parameters that impact on reserves will also have an impact on the life of mine (or pit) Ratio even if they do not affect the pit design(s). Changes to the life of mine (or pit) Ratio are accounted for prospectively.

In the production stage of some mines (or pits), further development of the mine (or pit) requires a phase of unusually high stripping activity that is similar in nature to pre-production mine development. The costs of this unusually high level of stripping activity are deferred and charged against reported profits on a units of production basis in subsequent periods. This accounting treatment is consistent with that for pre-production mine development. Deferred stripping costs are included in Mining properties and leases within property, plant and equipment or within Investments in equity accounted units, as appropriate. Amortisation of deferred stripping costs is included in net operating costs or in the Group's share of the results of its equity accounted units, as appropriate.

(i) Depreciation and impairment

Depreciation of non-current assets

Property, plant and equipment is depreciated over its useful life, or over the remaining life of the mine if that is shorter and there is no alternative use for the asset.

The useful lives of the major assets of a cash-generating unit are often dependent on the life of the orebody to which they relate. Where this is the case, the lives of mining properties, and their associated refineries, concentrators and other long lived processing equipment generally relate to the expected life of the orebody. The life of the orebody, in turn, is estimated on the basis of the life-of-mine plan. Where the major assets of a cash-generating unit are not dependent on the life of a related orebody, management applies judgment in estimating the remaining service potential of long lived assets. In the case of smelters, factors affecting the remaining service potential include smelter technology and electricity contracts when the power is not sourced from the company's own electricity generating capacity.

Depreciation commences when an asset is available for use. The major categories of property, plant and equipment are depreciated on a units of production and/or straight line basis as follows:

Units of production basis

For mining properties and leases and certain mining equipment, the consumption of the economic benefits of the asset is linked to the production level. Except as noted below, these assets are depreciated on a units of production basis.

In applying the units of production method, depreciation is normally calculated using the quantity of material extracted from the mine in the period as a percentage of the total quantity of material to be extracted in current and future periods based on proven and probable reserves and, for some mines, other mineralisation. This other mineralised material may be included in depreciation calculations in limited circumstances and where there is a high degree of confidence in their economic extraction.

Table of Contents

Straight line basis

Assets within operations for which production is not expected to fluctuate significantly from one year to another or which have a physical life shorter than the related mine are depreciated on a straight line basis.

Development costs that relate to a discrete section of an orebody, and which only provide benefit over the life of those reserves, are depreciated over the estimated life of that discrete section. Development costs incurred which benefit the entire orebody are depreciated over the estimated life of the orebody.

Impairment of non-current assets

Property, plant and equipment and intangible assets with finite lives are reviewed for impairment if there is any indication that the carrying amount may not be recoverable. All goodwill and intangible assets that are not yet ready for use, or have an indefinite life, are tested annually for impairment regardless of whether there has been any change in events or circumstances.

Impairment is assessed at the level of cash-generating units which, in accordance with IAS 36 *Impairment of Assets*, are identified as the smallest identifiable group of assets that generates cash inflows, which are largely independent of the cash inflows from other assets.

In some cases, the business units within product groups consist of several operations with independent cash generating streams, which constitute separate cash-generating units.

Goodwill acquired through business combinations is allocated to the cash-generating unit, or groups of cash-generating units if that is the lowest level within the Group at which goodwill is monitored for internal management purposes, that are expected to benefit from the related business combination.

When an impairment review is undertaken, the recoverable amount is assessed by reference to the higher of value in use (being the net present value of expected future cash flows of the relevant cash-generating unit in its current condition) and fair value less costs to sell (fair value). The best evidence of fair value is the value obtained from an active market or binding sale agreement. Where neither exists, fair value is based on the best information available to reflect the amount the Group could receive for the cash generating unit in an arm's length transaction. This is often estimated using discounted cash flow techniques.

Where recoverable amount is assessed using fair value based on discounted cash flow techniques, the resulting estimates are based on detailed life of mine and/or production plans. For value in use, recent cost levels are considered, together with expected changes in costs that are compatible with the current condition of the business and which meet the requirements of IAS 36.

The cash flow forecasts for fair value purposes are based on management's best estimates of expected future revenues and costs, including the future cash costs of production, capital expenditure, closure, restoration and environmental clean up. For the purposes of determining fair value from a market participant's perspective, the cash flows incorporate management's price and cost assumptions in the short and medium term. In the longer term, operating margins are assumed to remain constant as it is considered unlikely that a market participant would prepare detailed forecasts over a longer term period. The cash flow forecasts may include net cash flows expected to be realised from extraction, processing and sale of mineralised material that does not currently qualify for inclusion in proven or probable ore reserves. Such non-reserve material is only included where there is a high degree of confidence in its economic extraction. This expectation is usually based on preliminary drilling and sampling of areas of mineralisation that are contiguous with existing reserves. Typically, the additional evaluation to achieve reserve status for such material has not yet been done because this would involve incurring costs earlier than is required for the efficient planning and operation of the mine.

As noted above, cost levels incorporated in the cash flow forecasts for fair value purposes are based on the current life-of-mine plan or long-term production plan for the cash-generating unit. Because future cash flows are estimates for the asset in its current condition, value in use does not reflect future cash flows associated with improving or enhancing an asset's performance. Anticipated enhancements to assets are included in fair value calculations.

Where the recoverable amount of a cash-generating unit is dependent on the life of its associated orebody, expected future cash flows reflect long-term mine plans, which are based on detailed research, analysis and iterative modelling to optimise the level of return from investment, output and sequence of extraction. The mine plan takes account of all relevant characteristics of the orebody, including waste to ore ratios, ore grades, haul distances, chemical and metallurgical properties of the ore impacting on process recoveries and capacities of processing equipment that can be used. The life-of-mine plan is therefore the basis for forecasting production output in each future year and for forecasting production costs.

Forecast cash flows for ore reserve estimation for Joint Ore Reserves Committee (JORC) purposes are generally based on Rio Tinto's price forecasts of commodity prices, which assume short term market prices will revert to the Group's assessment of the long term price, generally over a period of three to five years. For most commodities, these forecast commodity prices are derived from a combination of analyses of the marginal costs of the producers and of the incentive price of these commodities. These assessments often differ from current price levels and are updated periodically. For the long run, the Group does not believe that forward prices quoted in the metals markets provide a good indication of future price levels since forward prices tend to be strongly influenced by spot price levels. Rio Tinto's price forecasts of commodity prices include an element of carbon pricing. These price forecasts are also used for impairment testing unless management deems that in certain economic environments, a market participant would not assign Rio Tinto's view on prices, in which case management base them upon

Edgar Filing: RIO TINTO PLC - Form 20-F

assumptions which a market participant would be expected to use under these economic conditions.

In some cases, prices applying to some part of the future sales volumes of a cash-generating unit are predetermined by existing sales contracts. The effects of such contracts are taken into account in forecasting future cash flows.

The discount rates applied to the future cash flow forecasts represent an estimate of the rate the market would apply having regard to the time value of money and the risks specific to the asset for which the future cash flow estimates have not been adjusted. The Group's weighted average cost of capital is used as a starting point for determining the discount rates, with appropriate adjustments for the risk profile of the countries in which the individual cash-generating units operate. For final feasibility studies and ore reserve estimation, internal hurdle rates are used which are generally higher than the weighted average cost of capital.

Table of Contents

Notes to the 2011 financial statements continued

1 Principal accounting policies continued

(i) Depreciation and impairment continued

For operations with a functional currency other than the US dollar, the impairment review is undertaken in the relevant functional currency. The great majority of the Group's sales are based on prices denominated in US dollars. To the extent that the currencies of countries in which the Group produces commodities strengthen against the US dollar without commodity price offset, cash flows and, therefore, net present values are reduced.

Management considers that over the long term, there is a tendency for movements in commodity prices to compensate to some extent for movements in the value of the US dollar (and vice versa). However, such compensating changes are not synchronised and do not fully offset each other. In estimating fair value, a forecast of the long term exchange rates, for the Australian and Canadian dollars, is made having regard to spot exchange rates, historical data and external forecasts, and is linked to price assumptions.

When calculating value in use, IAS 36 requires that calculations should be based on exchange rates current at the time of the assessment.

Non financial assets other than goodwill that have suffered an impairment are tested for possible reversal of the impairment whenever events or changes in circumstances indicate that the impairment may have reversed.

(j) Determination of ore reserve estimates

The Group estimates its ore reserves and mineral resources based on information compiled by Competent Persons as defined in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves of December 2004 (the JORC code). Reserves and, for certain mines, other mineral resources, determined in this way are used in the calculation of depreciation, amortisation and impairment charges, the assessment of life of mine stripping ratios and for forecasting the timing of the payment of close down and restoration costs and clean up costs.

For the purposes of disclosure with this combined Annual report on Form 20-F estimates of ore reserves have been computed in accordance with the SEC's Industry Guide 7, rather than in accordance with the JORC code, and are shown on pages 48 to 57. Ore reserves presented in accordance with SEC Industry Guide 7 do not exceed the quantities that, it is estimated, could be extracted economically if future prices were to be in line with the average of historical prices for the three years to 30 June 2011, or contracted prices where applicable. For this purpose, contracted prices are applied only to future sales volumes for which the price is predetermined by an existing contract; and the average of historical prices is applied to expected sales volumes in excess of such amounts. Moreover, reported ore reserve estimates have not been increased above the levels expected to be economic based on Rio Tinto's own long term price assumptions. Therefore, a reduction in commodity prices from the three year average historical price levels would not necessarily give rise to a reduction in reported ore reserves.

In assessing the life of a mine for accounting purposes, mineralisation is only taken into account where there is a high degree of confidence of economic extraction.

(k) Close down, restoration and environmental clean up obligations

The Group holds provisions for close down and restoration costs which include the dismantling and demolition of infrastructure and the removal of residual materials and remediation of disturbed areas.

Close down and restoration costs are a normal consequence of mining, and the majority of close down and restoration expenditure is incurred at the end of the life of the mine. Although the ultimate cost to be incurred is uncertain, the Group's businesses estimate their costs based on feasibility and engineering studies using current restoration standards and techniques.

Close down and restoration costs are provided for in the accounting period when the obligation arising from the related disturbance occurs based on the net present value of future costs. This may occur during development or during the production phase of a facility.

Provisions for close down and restoration costs do not include any additional obligations which are expected to arise from future disturbance. The costs are estimated on the basis of a closure plan and are updated annually during the life of the operation to reflect known developments, e.g. revisions to cost estimates and to the estimated lives of operations. The estimates are subject to formal review at regular intervals.

Edgar Filing: RIO TINTO PLC - Form 20-F

The initial closure provision is capitalised within property, plant and equipment. Subsequent movements in these closure provisions, including those resulting from new disturbance, updated cost estimates, changes to the estimated lives of operations and revisions to discount rates are also capitalised within property, plant and equipment. These costs are then depreciated over the lives of the assets to which they relate.

The amortisation or unwinding of the discount applied in establishing the net present value of provisions is charged to the income statement in each accounting period. The amortisation of the discount is shown as a financing cost.

Where rehabilitation is conducted systematically over the life of the operation, rather than at the time of closure, provision is made for the estimated outstanding continuous rehabilitation work at each statement of financial position date and the cost is charged to the income statement.

Clean up costs result from environmental damage that was not a necessary consequence of operations, and may include remediation, compensation and penalties. Provision is made for the estimated present value of such costs at the statement of financial position date. These costs are charged to the income statement. Movements in these clean up provisions are presented as an operating cost, except for the unwinding of the discount which is shown as a financing cost.

Remediation procedures may commence soon after the time the disturbance, remediation process and estimated remediation costs become known, but can continue for many years depending on the nature of the disturbance and the remediation techniques used.

Table of Contents

(l) Inventories

Inventories are valued at the lower of cost and net realisable value, primarily on a weighted average cost basis. Average costs are calculated by reference to the cost levels experienced in the relevant month together with those in opening inventory. Cost for raw materials and stores is purchase price and for partly processed and saleable products is generally the cost of production. For this purpose the costs of production include:

labour costs, materials and contractor expenses which are directly attributable to the extraction and processing of ore;

the depreciation of mining properties and leases and of property, plant and equipment used in the extraction and processing of ore; and

production overheads.

Stockpiles represent ore that has been extracted and is available for further processing. If there is significant uncertainty as to when the stockpiled ore will be processed it is expensed as incurred. Where the future processing of this ore can be predicted with confidence, eg because it exceeds the mine's cut off grade, it is valued at the lower of cost and net realisable value. If the ore will not be processed within the 12 months after the statement of financial position date it is included within non-current assets and net realisable value is calculated on a discounted cash flow basis. Work in progress inventory includes ore stockpiles and other partly processed material. Quantities are assessed primarily through surveys and assays.

(m) Taxation

Current tax is the tax expected to be payable on the taxable income for the year calculated using rates that have been enacted or substantively enacted by the statement of financial position date. It includes adjustments for tax expected to be payable or recoverable in respect of previous periods.

Deferred tax is provided in respect of fair value adjustments on acquisitions. These adjustments may relate to assets such as mining rights that, in general, are not eligible for income tax allowances. Provision for deferred tax is based on the difference between the carrying value of the asset and its income tax base (which may be nil). Even where there is no income tax base, the existence of a tax base for capital gains tax purposes is not taken into account in determining the deferred tax provision for the mineral rights because it is expected that the carrying amount will be recovered primarily through use of the rights and not from disposal. Also, the Group is only entitled to a deduction for capital gains tax purposes if the mineral rights are sold or formally relinquished.

(n) Post employment benefits

For defined benefit post employment plans, the difference between the fair value of the plan assets (if any) and the present value of the plan liabilities is recognised as an asset or liability in the statement of financial position.

Any asset recognised is restricted, if appropriate, to the present value of any amounts the Group expects to recover by way of refunds from the plan or reductions in future contributions.

Actuarial gains and losses arising in the year are taken to the statement of comprehensive income. For this purpose, actuarial gains and losses comprise both the effects of changes in actuarial assumptions and experience adjustments arising because of differences between the previous actuarial assumptions and what has actually occurred.

Other movements in the net surplus or deficit are recognised in the income statement, including the current service cost, any past service cost and the effect of any curtailment or settlements. The interest cost less the expected return on assets is also charged to the income statement. All of the amounts charged to the income statement in respect of these plans are included within operating costs or in the Group's share of the results of equity accounted units as appropriate.

The most significant assumptions used in accounting for pension plans are the long term rate of return on plan assets, the discount rate and the mortality assumptions. The long term rate of return on plan assets is used to calculate interest income on pension assets, which is credited to the Group's income statement. The discount rate is used to determine the net present value of future liabilities. The discount rate used is the yield on high quality corporate bonds with maturity and terms that match those of the post employment obligations as closely as possible. Where there is no developed corporate bond market in a country, the rate on government bonds is used. Each year, the unwinding of the discount on those liabilities is charged to the Group's income statement as the interest cost. The mortality assumption is used to project the future stream of benefit payments, which is then discounted to arrive at a net present value of liabilities.

Edgar Filing: RIO TINTO PLC - Form 20-F

Valuations of liabilities are carried out using the projected unit method. The long-term rate of return on pension plan assets is determined as management's best estimate of the long term return on the major asset classes, ie equity, debt, property and other, weighted by the actual allocation of assets among the categories at the measurement date. The expected rate of return is calculated using geometric averaging.

The values attributed to plan liabilities and the long-term rate of return are assessed in accordance with the advice of independent qualified actuaries.

The Group's contributions to defined contribution pension plans are charged to the income statement in the period to which the contributions relate.

(o) Cash and cash equivalents

For the purposes of the statement of financial position, cash and cash equivalents comprise cash on hand, deposits held on call with banks and short term, highly liquid investments that are readily convertible into known amounts of cash and which are subject to insignificant risk of changes in value. For the purposes of the cash flow statement, cash and cash equivalents are net of bank overdrafts that are repayable on demand which are shown as current liabilities on the statement of financial position.

Notes to the 2011 financial statements continued

1 Principal accounting policies continued

(p) Financial instruments

(i) Financial assets

The Group classifies its financial assets in the following categories: at fair value through profit or loss, loans and receivables, available-for-sale and held to maturity investments. The classification depends on the purpose for which the financial assets were acquired. The Group's policy with regard to Financial risk management is set out in note 31. Generally, the Group does not acquire financial assets for the purpose of selling in the short term. When the Group enters into derivative contracts these transactions are designed to reduce exposures related to assets and liabilities, firm commitments or anticipated transactions.

Management determines the classification of financial assets at initial recognition.

(a) Financial assets at fair value through profit or loss

Derivatives are included within financial assets at fair value through profit or loss unless they are designated as hedges. Assets in this category are classified based on their maturity.

(b) Loans and receivables

Loans and receivables comprise non-derivative financial assets with fixed or determinable payments that are not quoted in an active market, with the exception of items for which the Group may not recover substantially all of its investment for reasons other than credit deterioration, which are classified as available-for-sale. Trade receivables are included within this category, however, trade receivables subject to provisional pricing are valued as explained in note 1 (c) Sales revenue.

(c) Held to maturity

Held-to-maturity investments are non-derivative financial assets with fixed or determinable payments and fixed maturity that the Group has the positive intention and ability to hold to maturity.

(d) Available-for-sale financial assets

Available-for-sale financial assets are non-derivatives that are either designated as available-for-sale or not classified in any of the other categories. They are included in non-current assets unless the Group intends to dispose of the investment within 12 months of the statement of financial position date or the asset matures within less than 12 months.

(ii) Financial liabilities

Borrowings and other financial liabilities (including trade payables but excluding derivative liabilities) are recognised initially at fair value, net of transaction costs incurred and are subsequently stated at amortised cost.

Any difference between the amounts originally received for borrowings and other financial liabilities (net of transaction costs) and the redemption value is recognised in the income statement over the period to maturity using the effective interest method.

(iii) Derivative financial instruments and hedge accounting

Derivatives are initially recognised at their fair value on the date the derivative contract is entered into and transaction costs are expensed in the income statement. They are subsequently re-measured subject to IAS 39 at their fair value at each statement of financial position date. The method of recognising the resulting gain or loss depends on whether or not the derivative is designated as a hedging instrument and, if so, the nature of the item being hedged. The Group designates certain derivatives as either hedges of the fair value of recognised assets or liabilities or of firm commitments (fair value hedges) or hedges of highly probable forecast transactions (cash flow hedges).

Edgar Filing: RIO TINTO PLC - Form 20-F

Fair value hedges: Changes in the fair value of derivatives that are designated and qualify as fair value hedges are recorded in the income statement, together with any changes in the fair value of the hedged asset or liability or firm commitment that is attributable to the hedged risk. Where derivatives are held with different counterparties or with the same counterparty with no intention to settle net to the underlying asset or liability or firm commitment, the fair values of the derivative assets and liabilities are shown separately in the statement of financial position as there is no legal right of offset.

When a fair value interest rate hedging instrument expires or is sold, or when a fair value interest rate hedge no longer meets the criteria for hedge accounting, the fair value adjustments which have been made to the hedged item are amortised through the income statement over the remaining life of the hedged item or written off immediately where the hedged item is derecognised.

Cash flow hedges: The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow hedges is recognised in equity. The gain or loss relating to the ineffective portion is recognised immediately in the income statement. Amounts accumulated in equity are recycled in the income statement in the period when the hedged item affects profit or loss, for example when the forecast sale that is being hedged takes place. When the forecast transaction that is being hedged results in the recognition of a non-financial asset the gains and losses previously deferred in equity are transferred from equity and adjust the cost of the asset. The gains and losses are recognised subsequently in the income statement when the non-financial asset is amortised.

When a cash flow hedging instrument expires or is sold, or when a cash flow hedge no longer meets the criteria for hedge accounting, although the forecasted transaction is still expected to occur, any cumulative gain or loss relating to the instrument which is held in equity at that time remains in equity and is recognised when the forecast transaction is ultimately recognised in the income statement. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in equity is immediately transferred to the income statement.

Derivatives that do not qualify for hedge accounting: Any derivative contracts that do not qualify for hedge accounting are marked to market at the statement of financial position date.

Embedded derivatives: Derivatives embedded in other financial instruments or other host contracts are treated as separate derivatives when their risks and characteristics are not closely related to their host contracts. In some cases, the embedded derivatives may be designated as hedges and will be accounted for as described above.

Table of Contents

(iv) Fair value

Fair value is the amount at which a financial instrument could be exchanged in an arm's length transaction between informed and willing parties. Where relevant market prices are available, these have been used to determine fair values. In other cases, fair values have been calculated using quotations from independent financial institutions, or by using valuation techniques consistent with general market practice applicable to the instrument.

- (a) The fair values of cash, short-term borrowings and loans to joint ventures and associates approximate to their carrying values, as a result of their short maturity or because they carry floating rates of interest.
- (b) The fair values of medium and long-term borrowings are calculated as the present value of the estimated future cash flows using quoted prices in active markets or an appropriate market based yield curve. The carrying value of the borrowings is amortised cost.
- (c) Derivative financial assets and liabilities are carried at fair value based on quoted market prices where available. Where no price information is available from a quoted market source, fair value is estimated based on the Group's views on relevant future prices using modelling techniques. The fair values of the various derivative instruments used for hedging purposes are disclosed in note 32. Movements on the hedging reserve are disclosed within note 30.

The Group assesses at each statement of financial position date whether there is objective evidence that a financial asset or a group of financial assets is impaired. In the case of equity securities classified as available-for-sale, an evaluation is made as to whether a decline in fair value is significant or prolonged based on an analysis of indicators such as significant adverse changes in the technological, market, economic or legal environment in which the company invested in operates.

Where an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and the recognition of a new liability, and the difference in the respective carrying amounts is recognised in the income statement.

(q) Share-based payments

The fair value of cash-settled share plans is recognised as a liability over the vesting period of the awards. Movements in that liability between accounting dates are recognised as an expense. The grant date fair value of the awards is determined from the market value of the shares at the date of award and adjusted for any market based vesting conditions attached to the award eg relative Total Shareholder Return (TSR) performance. Fair values are subsequently re-measured at each accounting date to reflect the market value of shares at the measurement date and, where relevant, the number of awards expected to vest based on the current and anticipated TSR performance. If any awards are ultimately settled in shares, the liability is transferred directly to equity as part of the consideration for the equity instruments issued.

The Group's equity-settled share plans are settled either by the issue of shares by the relevant parent company, by the purchase of shares on market or by the use of shares previously acquired as part of a share buy back. The fair value of the share plans is recognised as an expense over the expected vesting period with a corresponding entry to retained earnings for Rio Tinto plc plans and to other reserves for Rio Tinto Limited plans.

If the cost of shares acquired to satisfy the plans exceeds the expense charged, the excess is taken to the appropriate reserve. The fair value of the share plans is determined at the date of grant, taking into account any market based vesting conditions attached to the award (eg TSR).

The Group uses fair values provided by independent actuaries calculated using a lattice based option valuation model.

Non-market based vesting conditions (eg earnings per share targets) are taken into account in estimating the number of awards likely to vest. The estimate of the number of awards likely to vest is reviewed at each statement of financial position date up to the vesting date, at which point the estimate is adjusted to reflect the actual awards issued. No adjustment is made after the vesting date even if the awards are forfeited or not exercised.

The terms of each plan are considered at the statement of financial position date. If a cash-settled plan changes to become equity-settled then the accumulated liability is transferred directly to equity at the date of change.

Further information about the treatment of individual share-based payment plans is provided in note 46.

(r) Share capital

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of new shares are shown in equity as a deduction, net of tax, from the proceeds.

Where any group company purchases the Group's equity share capital (treasury shares), the consideration paid, including any directly attributable incremental costs (net of income taxes) is deducted from equity attributable to owners of Rio Tinto. Where such shares are subsequently reissued, any consideration received, net of any directly attributable incremental transaction costs and the related income tax effects, is included in equity attributable to owners of Rio Tinto.

Table of Contents

Notes to the 2011 financial statements continued

1 Principal accounting policies continued

Critical accounting policies and estimates

(i) Dual listed company reporting

As explained in detail in the *Outline of dual listed companies structure and basis of financial statements*, the consolidated financial statements of the Rio Tinto Group deal with the results, assets and liabilities of both of the dual listed companies, Rio Tinto plc and Rio Tinto Limited, and their subsidiaries. In other words, Rio Tinto plc and Rio Tinto Limited are viewed as a single parent company with their respective shareholders being the shareholders in that single company.

The *2011 Annual report* satisfies the obligations of Rio Tinto Limited to prepare consolidated accounts under Australian company law, as amended by an order issued by the Australian Securities and Investments Commission on 22 December 2010 (as amended on 17 February 2012). The 2011 financial statements disclose the effect of the adjustments to consolidated IFRS profit, consolidated total comprehensive income and consolidated shareholders' funds for the Group that would be required under the version of IFRS that is applicable in Australia, referred to as Australian Accounting Standards (AAS).

The US dollar is the presentation currency used in these financial statements, as it most reliably reflects the Group's global business performance.

(ii) Impairment review of asset carrying values

Events or changes in circumstances can give rise to significant impairment charges or reversals of impairment in a particular year.

Where the recoverable amounts of Group cash generating units are assessed by analyses of discounted cash flows, the resulting valuations are particularly sensitive to changes in estimates of long-term commodity prices, including any carbon element, exchange rates, operating costs and discount rates.

Note 12 outlines the significant judgments and assumptions made in performing impairment testing of non-current assets.

(iii) Estimation of asset lives and determination of ore reserve estimates

Intangible assets are considered to have indefinite lives when, based on an analysis of all of the relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate cash flows for the Group. The factors considered in making this determination include the existence of contractual rights for unlimited terms; or evidence that renewal of the contractual rights without significant incremental cost can be expected for indefinite periods into the future in view of the Group's future investment intentions.

Rio Tinto estimates its ore reserves and mineral resources based on information compiled by Competent Persons as defined in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves of December 2004 (the JORC code). The amounts presented under IFRS and AAS are based on the reserves, and in some cases mineral resources, determined under the JORC code.

The estimation of ore reserves requires judgment to interpret available geological data then select an appropriate mining method and establish an extraction schedule. It also requires assumptions about future commodity prices, exchange rates, production costs, recovery rates and discount rates and, in some instances, the renewal of mining licences.

There are numerous uncertainties inherent in estimating ore reserves and assumptions that are valid at the time of estimation may change significantly when new information becomes available.

New geological data as well as changes in the above assumptions may change the economic status of reserves and may, ultimately, result in the reserves being restated. Such changes in reserves could impact on depreciation and amortisation rates, asset carrying values, deferred stripping calculations and provisions for close down and restoration costs.

(iv) Close down, restoration and clean up obligations

Provision is made for environmental remediation costs when the related environmental disturbance occurs, based on the net present value of estimated future costs.

Edgar Filing: RIO TINTO PLC - Form 20-F

The ultimate cost of environmental disturbance is uncertain and management uses its judgment and experience to provide for these costs over the life of operations. Cost estimates can vary in response to many factors including changes to the relevant legal requirements, the Group's environmental policies, the emergence of new restoration techniques and the effects of inflation. Experience gained at other mine sites is also a significant consideration.

Cost estimates are updated throughout the life of the operation. The accuracy range for operations with a remaining life of more than ten but less than 40 years is plus or minus 30 per cent. For operations with a remaining life of more than five but less than ten years the range is 20 per cent. Operations must produce a full decommissioning plan five years prior to the estimated date of closure. The accuracy range of the full decommissioning plan is plus or minus 15 per cent.

The expected timing of expenditure included in cost estimates can also change, for example in response to changes in ore reserves, or production rates, operating licence or economic conditions. Expenditure may occur before and after closure and can continue for an extended period of time depending on the specific site requirements. Some expenditure can continue into perpetuity.

Cash flows must be discounted if this has a material effect. The selection of appropriate sources on which to base calculation of the risk free discount rate used for this purpose also requires judgment.

As a result of all of the above factors there could be significant adjustments to the provision for close down, restoration and clean up costs which would affect future financial results.

Table of Contents

(v) Deferral of stripping costs

Stripping of waste materials takes place throughout the production stage of the mine or pit. Some mining companies expense these production stage stripping costs as incurred, while others defer such stripping costs. In operations that experience material fluctuations in the ratio of waste materials to ore or contained minerals on a year to year basis over the life of the mine or pit, deferral of stripping costs reduces the volatility of the cost of stripping expensed in individual reporting periods. Those mining companies that expense stripping costs as incurred will therefore report greater volatility in the results of their operations from period to period.

The life of mine or pit waste-to-ore ratio is a function of an individual mine's pit design and therefore changes to that design will generally result in changes to the ratio. Changes in other technical or economic parameters that impact on reserves will also have an impact on the life of mine or pit ratio even if they do not affect the pit design. Changes to the life of mine or pit ratio are accounted for prospectively.

The Group's determination of whether multiple pit mines are considered separate or integrated operations depends on each mine's specific circumstances and the analysis requires judgment; another company could make the determination that a mine is separate or integrated differently than the Group, even if the fact pattern appears to be similar. To the extent the determination is different, the resulting accounting would also be different.

During 2011, production stage stripping costs capitalised by subsidiaries and equity accounted operations were US\$307 million and the amount charged against pre-tax profit was US\$50 million (2010: production stage costs exceeded the amounts charged against pre tax profit by US\$123 million; 2009: production stage costs exceeded the amounts charged against pre-tax profit by US\$174 million).

There was US\$11 million impairment (net of reversals) of deferred stripping in 2011. In 2010, there was no impairment of deferred stripping. In 2009, US\$59 million was written off as part of the Diamonds businesses impairment.

The net book value of stripping costs carried forward in property, plant and equipment and in investments in jointly controlled entities and associates at 31 December 2011 was US\$1.6 billion (2010: US\$1.3billion; 2009: US\$1.2billion).

Information about the stripping ratios of the business units, including equity accounted units, that account for the majority of the deferred stripping balance at 31 December 2011, along with the year in which deferred stripping is expected to be fully amortised, is set out in the following table:

	Actual stripping ratio for year			Life of mine stripping ratio		
	2011	2010	2009	2011	2010	2009
Kennecott Utah Copper (2026) ^{(a) (d)}	2.09	2.09	2.13	1.94	1.48	1.21
Grasberg Joint Venture (2016) ^(a)	3.52	4.15	3.42	2.54	3.13	3.00
Diavik (2012) ^(b)	0.64	1.21	1.17	0.96	0.95	1.02
Escondida (2058) ^{(c) (e)}	0.17	0.13	0.11	0.13	0.14	0.14

(a) Stripping ratios shown are waste to ore.

(b) Diavik's stripping ratio is disclosed as bench cubic metre per carat. The 2011 actual ratio is low because production is now from the bottom of the A418 pit requiring less movement of waste per carat.

(c) Escondida's stripping ratio is based on waste tonnes to pounds of copper mined. The higher actual ratio in 2011 reflects the lower grade in the year.

(d) KUC's life of mine stripping ratio has increased because of a strategic review of the Bingham Canyon pit in 2010 which led to a significant conversion of mineralised material to reserves.

(e) Escondida is an equity accounted unit.

Rio Tinto Borax capitalised stripping costs during the production stage of the mine as part of a distinct period of new development which was completed in 2004. The capitalised costs will be fully amortised in 2035.

Edgar Filing: RIO TINTO PLC - Form 20-F

As noted in the Basis of preparation, IFRIC 20 will change the accounting for post production stripping costs. Implementation of the IFRIC, which is mandatory in 2013, may result in a write off to retained earnings of some of the US \$1.6 billion of deferred stripping costs included in the 31 December 2011 statement of financial position.

(vi) Recognition of deferred tax on mineral rights recognised in acquisitions

On transition to IFRS with effect from 1 January 2004, deferred tax was provided in respect of fair value adjustments on acquisitions in previous years. No other adjustments were made to the assets and liabilities recognised in prior year acquisitions. Accordingly, shareholders' funds were reduced by US\$720 million primarily as a result of deferred tax on fair value adjustments to mining rights.

Deferred tax is provided in respect of fair value adjustments on acquisitions. These adjustments may relate to assets such as mining rights that, in general, are not eligible for income tax allowances. Provision for deferred tax is based on the difference between the carrying value of the asset and its income tax base (which may be nil). Even where there is no income tax base, the existence of a tax base for capital gains tax purposes is not taken into account in determining the deferred tax provision for the mineral rights because it is expected that the carrying amount will be recovered primarily through use of the rights and not from disposal. Also, the Group is only entitled to a deduction for capital gains tax purposes if the mineral rights are sold or formally relinquished.

For acquisitions after 1 January 2004, provision for deferred tax on acquisition results in a consequential increase in the amounts attributed to goodwill under IFRS. Amounts attributed to goodwill for business combinations in 2010 and 2011 are shown in note 39.

Table of Contents

Notes to the 2011 financial statements continued

1 Principal accounting policies continued

Critical accounting policies and estimates continued

(vii) Capitalisation of exploration and evaluation costs

Under the Group's accounting policy, exploration and evaluation expenditure is not capitalised until the point is reached at which there is a high degree of confidence in the project's viability and it is therefore considered probable that future economic benefits will flow to the Group.

Subsequent recovery of the resulting carrying value depends on successful development or sale of the undeveloped project. If a project does not prove viable, all irrecoverable costs associated with the project net of any related impairment provisions are written off.

(viii) Identification of functional currencies

The functional currency for each entity in the Group, and for jointly controlled entities and associates, is the currency of the primary economic environment in which it operates. Determination of functional currency involves significant judgment and other mining companies may make different judgments based on similar facts. For many of Rio Tinto's entities, their functional currency is the currency of the country in which they operate. The Group reconsiders the functional currency of its entities if there is a change in the underlying transactions, events and conditions which determine their primary economic environment.

The determination of functional currency affects the carrying value of non-current assets included in the statement of financial position and, as a consequence, the amortisation of those assets included in the income statement. It also impacts exchange gains and losses included in the income statement.

The majority of the ex-Alcan businesses acquired by the Group in 2007 changed from US functional currency to local functional currency for accounting purposes on 1 January 2011. The integration of the ex-Alcan businesses with the existing aluminium business of Rio Tinto changed the economic environment for these ex-Alcan businesses since acquisition in several ways. In particular, the divestment of the majority of the ex-Alcan downstream operations, the legal reorganisations that have transferred ownership of certain ex-Alcan companies within the Rio Tinto group and the centralisation of certain functions such as procurement, pensions and, shipping have brought their business model closer to that for the rest of Rio Tinto's operations, the majority of which have the local currency as their functional currency. In addition, whilst financing is only a secondary indicator of functional currency, the magnitude of US dollar denominated debt, which has now been largely repaid, was a factor in the original determination of US functional currency at acquisition.

(ix) Estimation of liabilities for post retirement costs

The value of the Group's liabilities for post-retirement benefits will ultimately depend upon the amount of benefits paid out. This in turn will depend upon the future pay increases received by members of final pay plans, the level of inflation (for those benefits that are subject to some form of inflation protection) and how long individuals live in retirement.

Most of the Group's defined benefit pension plans are closed to new entrants and most of the liabilities relate to former employees. As a consequence, the carrying value of the Group's post-retirement liabilities is less sensitive to the assumption about future salary increases than it is to the assumption regarding future inflation. The assumption regarding future inflation is derived using market yields on inflation-linked instruments where possible, combined with consensus views on future inflation. This assumption is derived using the same process at each reporting date. Changes to the assumption therefore reflect changes to the market and consensus views of future inflation.

The Group reviews the actual mortality rates of retirees in its major pension plans on a regular basis and uses these rates to set its current mortality assumptions. It also allows for future improvements in mortality having regard to standard improvement scales in each country.

The discount rate used to value post-retirement liabilities is set in accordance with IAS19 Post retirement benefits based upon the yields on high quality corporate bonds in the relevant currency and of a duration consistent with the nature of the liabilities. The discount rate will vary from one period to another in line with movements in corporate bond yields, but at any given measurement date there is relatively little estimation uncertainty.

Details of the key assumptions, how they have moved since the previous statement of financial position date, and the sensitivity of the carrying value to changes in the assumptions, are set out in note 47.

Edgar Filing: RIO TINTO PLC - Form 20-F

For 2011 the charge against income for post retirement benefits net of tax and non controlling interests was US\$445 million. This charge included both pension and post retirement healthcare benefits. The charge is net of the expected return on assets which was US\$561 million after tax and non-controlling interests.

In calculating the 2011 expense, the average future increase in compensation levels was assumed to be 3.7 per cent and this will be 3.4 per cent for 2012. The average discount rate used was 5.2 per cent and the average discount rate used in 2012 will be 4.3 per cent reflecting the net impact of changes in corporate bond yields in the regions where the Group has pension obligations.

The weighted average expected long term rate of return on assets used to determine the 2011 pension cost was 5.9 per cent. This will decrease to 5.0 per cent for 2012. This decrease results mainly from lower government bond yields in most territories which drives the assumed return on other asset classes.

Based on the known changes in assumptions noted above and other expected circumstances, the impact of post retirement costs on the Group's IFRS net earnings in 2012 would be an expected increase of US\$76 million to US\$521 million. The actual charge may be impacted by other factors that cannot be predicted, such as the effect of changes in benefits and exchange rates.

The table below sets out the potential change in the Group's 2011 net earnings (after tax and outside interests) that would result from hypothetical changes to post retirement assumptions and estimates. The sensitivities are viewed for each assumption in isolation although a change in one assumption is likely to result in some offset elsewhere.

Table of Contents

The figures in the below table only show the impact on underlying and net earnings. Changing the assumptions would also have an impact on the statement of financial position.

	US\$million
Sensitivity of the Group's 2011 underlying and net earnings to changes in:	
Expected return on assets	
increase of 1 percentage point	91
decrease of 1 percentage point	(91)
Discount rate	
increase of 0.5 percentage points	1
decrease of 0.5 percentage points	1
Inflation	
increase of 0.5 percentage points	(33)
decrease of 0.5 percentage points	31
Salary increases	
increase of 0.5 percentage points	(9)
decrease of 0.5 percentage points	9
Demographic allowance for additional future mortality improvements	
participants assumed to have the mortality rates of individuals who are one year older	17
participants assumed to have the mortality rates of individuals who are one year younger	(17)
(x) Recoverability of potential deferred tax assets	

The Group has carried forward losses, mainly in UK, French, Canadian, US and Australian taxable entities, that have the potential to reduce tax payments in future years. Deferred tax assets have been recognised on tax losses, and other temporary differences, to the extent their recovery is probable, having regard to the projected future taxable profits of these taxable entities.

The possible tax assets, i.e. the amounts that would be recognised if there were no need to assess recoverability on losses and other temporary differences in these taxable entities, are shown in the table below and totalled US\$3,248 million at 31 December 2011 (2010: US\$2,880 million). Of these, US\$2,451 million have been recognised as deferred tax assets (2010: US\$2,413 million), leaving US\$797 million (2010: US\$467 million) unrecognised, as recovery is not considered probable. These amounts exclude capital losses which can only be recovered against future capital gains. The 2010 comparatives have been restated to include all other temporary differences, in addition to tax losses, unless the taxable entity has net deferred tax liabilities. This reflects an increase in the amount of recognised deferred tax assets for temporary differences other than losses, and the fact that similar judgements are required to be made about the recovery of deductible temporary differences in entities with tax losses as those relating to the losses themselves.

US\$ million	Recognised		Unrecognised	
	2011	2010	2011	2010
At 31 December				
UK	229	232	nil	nil
France (a)	515	859	797	467
Canada (b)	746	674	nil	nil
US	322	317	nil	nil
Australia	639	331	nil	nil
Total	2,451	2,413	797	467

(a) The amount recognised takes account of legislation changes introduced in 2011 which restricts the recovery of losses.

(b) No capital losses have been recognised as deferred tax assets as there are no unrealised foreign exchange gains giving rise to capital gains (2010: US\$147 million which were recoverable against capital gains arising from unrealised foreign exchange gains).

(xi) Contingencies

Disclosure is made of material contingent liabilities unless the possibility of any loss arising is considered remote. Contingencies are disclosed in note 33.

(xii) Basis of consolidation

Edgar Filing: RIO TINTO PLC - Form 20-F

In determining whether the Group has control, joint control or significant influence, the Group considers whether other parties hold veto rights over significant operating and financial decisions. In some instances, the Group has control of an entity where other parties own more than one half, or in some cases all, of the voting rights of an entity but the Group can control those voting rights through a contractual arrangement. In such circumstances, the Group considers, in particular, whether it obtains benefits, including non-financial benefits, from its power to govern the financial and operating policies of the entity.

In some cases, the Group makes acquisitions over a period of days, weeks or months. It is a matter of judgment as to whether the payments made during this period form part of one transaction or a number of separate transactions. In the latter case, the transactions will be treated as an acquisition in stages. The effect on the financial statements of treatment as an acquisition in stages is that any excess of consideration over identifiable net assets for transactions after the acquisition of control will be taken to equity. If the transactions were treated as one acquisition then all such excess consideration would be treated as goodwill. In addition, acquisitions of shares after the date on which control is gained and which are accounted for in stages are shown within the Financing section of the cash flow rather than the Investing section.

Factors which are considered in this judgment are the length of time between the acquisition date and completion of the transaction and whether, at the time of the initial share purchase, it was clear what percentage ownership would ultimately be obtained.
