Methodology for calculations used in the presentations
Return on equity = trailing 4 quarters net income / average trailing 5 quarters shareholder's equity
Return on invested capital = (EBIT - taxes) / average (total debt + equity)
Return on sales = net income / sales
Total return = stock price appreciation + dividend yield
Net debt to total capital = (total debt - cash & equivalents) / (total debt - cash & equivalents + equity)
Cash flow coverage ratio = (pre-tax income + depreciation + amortization + interest expense) / interest expense

Segment net working capital (including acquisitions) = accounts receivable + inventory - accounts payable. All amounts avera
DSO = average of quarterly DSO; quarterly DSO = quarter end accounts receivable / quarter sales * 90 days
DOH = average of quarterly DOH; quarterly DOH = quarter end inventory / quarter COGS * 90 days
DPO = average of quarterly DPO; quarterly DPO = quarter end accounts payable / quarter COGS * 90days
Cash conversion cycle = DSO + DOH - DPO
Free cash flow = cash flow from operations - capital expenditures
