Delaware Investments Closed-End Municipal Bond Funds April 6, 2010

Delaware Investments Closed-End Municipal Bond Funds

The 12-month fiscal period ended March 31, 2010, was a favorable one for the Funds and for investors in tax-exempt debt in general. The strong conditions came after two very challenging years for the municipal bond market.

### National economic environment

On the heels of a historically difficult prior fiscal period, the stage was set for a strong "snapback" recovery. Such a recovery came to fruition for the municipal market (as well as the broader fixed income and equity markets) early during the fiscal period. In our view, this recovery was the defining element of the period. For example, investors' extreme risk aversion eased within weeks of the start of the period — slowly at first, and more quickly as the year progressed. The series of aggressive actions taken by the federal government as well as the Federal Reserve helped to usher in the improved conditions. In December 2008, for example, the Fed cut its target federal funds rate to a range of 0–0.25%, an all-time low. The Fed kept that policy in place throughout the Funds' fiscal year. For its part, the federal government passed the Troubled Asset Relief Program (TARP) — a \$700 billion package designed to shore up financial institutions — in October 2008. The passage and implementation of the American Recovery and Reinvestment Act of 2009, a \$787 billion economic stimulus package, in February 2009 also helped to ease economic distress during the Funds' fiscal year.

By the second quarter of 2009, the worst economic and market conditions appeared to have passed, with the U.S. economy declining by an annual rate of just 0.7%. In the third quarter, gross domestic product turned to growth and expanded at an annualized 2.2% pace, while fourth-quarter growth was estimated at an annual rate of 5.9% — the best result in six years. Despite these favorable signs, joblessness remained historically high. In January 2010, the national unemployment rate stood at 9.7%; this figure was below the October 2009 peak of 10.1%, but well above the 8.2% at the start of the fiscal period. (Data for economic growth: Bureau of Economic Analysis; Employment data: Bloomberg.)

### Municipal market trends

Early in the reporting period, municipal bond investors remained highly cautious. They tended to favor higher-rated securities, as these securities face limited credit risk, and shorter-maturity securities, as these bonds are typically subject to diminished interest rate risk. But as the evidence of an improving economy mounted early during the fiscal period, investors began to turn toward bonds offering the prospect of higher returns, albeit with greater risk. The rally gathered momentum in subsequent months thanks in part to a favorable technical environment that generally grew stronger throughout the annual period. The technical developments can be summarized in a few main points:

- Demand for municipal bonds was robust. The \$80 billion in net inflows into tax-exempt bond mutual funds in calendar year 2009 more than doubled the previous record. (Source: Barclays Capital.)
- Although bond issuance approached a new record as well, supply of tax-exempt debt was limited by the introduction of Build America Bonds, or BABs. These bonds represent a relatively new category of taxable debt, with federally subsidized income payments. While they provided municipal issuers with an attractive alternative to traditional tax-exempt bonds, the surge in issuance of BABs continued diverting supply away from the tax-exempt market.
- Within this environment, the 2-to-30-year yield curve flattened during the year. Yields at the short end remained anchored by the fed funds rate. Yet, driven by this combination of strong demand and constrained municipal supply, yields on longer-maturity bonds declined during the period. (It is important to remember that bond yields move in the opposite direction of bond prices.)

Medium- and lower-rated municipal bonds significantly outperformed their higher-rated counterparts during the Funds' fiscal year. Credit spreads, often viewed as a way to determine a security or asset class's perceived level of risk, narrowed from historically high levels at the start of the fiscal period. For example, municipal bond spreads (on Baa-rated bonds) declined from 2.39 percentage points above "prime-rated" Aaa securities at the start of the period to

(continues) 1

# Portfolio management review

Delaware Investments Closed-End Municipal Bond Funds

1.43 percentage points at the end of the fiscal period. Such a decline represented investors' increased willingness to accept "risky" securities during the fiscal period. (Source: Bloomberg.)

Similar trends occurred when viewing the municipal market on a sector-by-sector basis. Namely, credits within traditionally higher-risk sectors, such as industrial development revenue (IDR), hospital, and housing bonds significantly outperformed lower-risk areas like pre-refunded bonds. (Source: Barclays Capital.) Pre-refunded bonds are found on the short end of the yield curve and have historically faced little, if any, credit risk because they are backed by the invested debt proceeds of a second bond issue, typically U.S. Treasury securities.

### Fund positioning

At the beginning of the fiscal year, the Funds were allocated relatively defensively, with an emphasis on higher-rated, shorter-maturity bonds. A significant portion of the Funds' holdings (approximately 30% across each Fund) was invested in pre-refunded securities, which, as noted above, tend to be among the least risky bonds in the municipal marketplace.

As risk tolerance re-emerged during the course of the year, we saw what we felt was an unusually attractive opportunity to gradually and methodically tilt the Funds' portfolios toward a slightly more aggressive stance. Especially during the second and third calendar quarters of 2009, a number of new, lower-rated investment grade issues came to market that offered much-higher-than-usual levels of income at what we believed were still very attractive prices. This provided us with a dual opportunity to trade out of some of the Funds' more defensive holdings (many of which were scheduled to mature in the coming years) for more-aggressively positioned bonds that we felt offered attractive yields and good long-term value potential for our shareholders.

More specifically, many of our new purchases across each of the Funds involved medium- and lower-medium-grade A-rated and BBB-rated issues in the healthcare, education, and transportation sectors. Additionally, we sold some of the Funds' shorter-maturity bonds — especially those with maturities of five years or less — and replaced them with 30-year and longer bonds.

By the final quarter of 2009 and in early 2010, we had essentially completed our repositioning and began to note relatively fewer value opportunities available in the marketplace. We had sold a significant portion of our exposure to high-quality, short-maturity debt — the pre-refunded bond allocation across our closed-end funds, for example, fell to roughly 10% from 30% at the start of the fiscal year — and remained more aggressively positioned at period end.

#### Performance effects

Our decision to move the Funds toward a more aggressive stance proved a fruitful one when comparing each Fund's Performance to that of its benchmark index. The types of holdings we emphasized during much of the year experienced strong returns relative to the broader municipal market.

Our best individual performers during the fiscal period largely fit the profile of the types of securities that tended to outperform during the period. Namely, they were mid- to low-investment-grade securities with long (20-plus years) maturities.

For example, a Pima County, Ariz., industrial development revenue (IDR) bond issued for the Tucson Country Day School was a top performer within Delaware Investments Arizona Municipal Income Fund, Inc. This bond was unrated by Moody's and rated BBB- (lower medium grade) by Standard & Poor's, and is due to mature in 2037. IDR bonds were among the top performers withinDelaware Investments Colorado Municipal Income Fund, Inc. and Delaware Investments Minnesota Municipal Income Fund II, Inc. Within the Colorado Fund IDR bonds issued for the Colorado Convention Center in Denver rated Baa3/BBB- by Moody's and S&P, respectively, which mature in 2035, added to returns. Within the Minnesota Fund, IDR bonds issued for International Paper boosted the Fund's return. These bonds are rated Baa3/BBB and mature in 2027.

The strongest performer within Delaware Investments National Municipal Income Fund came from a different sector — student housing — though it shared similar rating and maturity profiles with those of the aforementioned bonds. These bonds were issued by the Maryland State Economic

Development Corporation for the University of Maryland College Park. The bonds are due to mature in 2033 and are rated Baa2 by Moody's (unrated by S&P).

2

The Funds' weakest individual performers relative to the index tended to be higher-rated, shorter-maturity bonds. For example, three of the Funds' worst-performing bonds during the year were pre-refunded bonds. Within Delaware Investments Arizona Municipal Income Fund, Inc., pre-refunded bonds issued by the Commonwealth of Puerto Rico (which are exempt from federal, state, and local income taxes in all 50 states) detracted from returns, whereas pre-refunded bonds issued by the Colorado Educational and Cultural Facilities Authority to benefit student housing at the University of Colorado detracted from returns within Delaware Investments Colorado Municipal Income Fund, Inc.

Within Delaware Investments Minnesota Municipal Income Fund II, Inc, pre-refunded bonds issued by the Minneapolis Community Development Agency weakened the Fund's return. WithinDelaware Investments National Municipal Income Fund, a Virginia state general obligation bond notably hurt the Fund's return. Unlike the weaker performers mentioned above, this bond was not pre-refunded; instead, it was largely punished by investors for its high credit quality (rated Aaa/AAA by Moody's and S&P, respectively) during a period when lower-rated, higher-risk securities were most in demand.

Economic environments by state

#### Arizona

The Arizona economy has slowed significantly due to the housing crisis, with employment figures down significantly from their peak in 2007.

Arizona ended fiscal 2009 with a general fund balance of negative \$455.9 million, down from a positive \$237.3 million in fiscal 2008. Its budget stabilization fund is fully depleted. Additionally, the state is dealing with limited financial flexibility as a result of voter mandates and constitutional constraints. For example, 73% of the state's General Fund Budget is protected from reductions due to either the federal stimulus or voter constraints. (Sources: Bureau of Labor Statistics, azcentral.com, Arizona 2008 and 2009 Comprehensive Annual Financial Report, and Moody's.)

#### Colorado

As of February 2010 (latest data available), unemployment in Colorado was 7.7%, well below the national rate of 9.7%. The state's economy is diverse, with below-average employment concentration in manufacturing and a variety of service-sector strengths. Its economic outlook is favorable, reflecting a growing population and work force, relatively low costs of living and doing business, and a mix of technology and service industries. Additionally, Colorado is a wealthy state, with per capita income that's above the U.S. average.

Fiscal 2009, state-generated general fund revenues totaled \$11.2 billion, a 0.3% increase over 2008. Colorado ended fiscal 2009 with a general fund balance of \$335 million, up from \$207 million in fiscal 2008. Colorado's Required Statutory Reserve declined \$3.5 million to total \$148.2 million. (Sources: Bureau of Labor Statistics, The Denver Post, Colorado 2008 and 2009 Comprehensive Annual Financial Report, and Moody's.)

#### Minnesota

Unemployment in Minnesota in February 2010 was 7.3%, well below the national rate of 9.7%. Two-thirds of the jobs lost in the state over the past two years have been in the manufacturing, construction, and retail trade sectors. These three industries are projected to regain only about one-quarter of their losses over the next two years.

Minnesota currently faces a budget deficit of \$994 million for the 2010-2011 biennium, or 3.2% of projected biennial expenditures. The State House and Senate recently fixed about one-third of the budget problem by passing a bill that cut spending by \$312 million. The budget bill cut funding for local governments, colleges and universities, environmental and natural resource programs, economic development, bus operations, courts, prisons, and state agencies. (Sources: Bureau of Labor Statistics, Minnesota Management & Budget, twincities.com, Minnesota 2008 and 2009 Comprehensive Annual Financial Report, and Moody's.)
