(a) On March 13, 2012, the Board of Directors increased the Firm's quarterly stock dividend from $\$ 0.25$ to $\$ 0.30$ per share.
Tangible book value per share and ROTCE are non-GAAP financial ratios. ROTCE measures the Firm's earnings
(b) as a percentage of tangible common equity. Tangible book value per share represents the Firm's tangible common
b) equity divided by period-end common shares. For further discussion of these ratios, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 15-16 of this Form 10-Q.
(c) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan
${ }^{(c)}$ Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.
(d) Return on Basel I risk-weighted assets is the annualized earnings of the Firm divided by its average risk-weighted assets.
Basel I Tier 1 common capital ratio ("Tier 1 common ratio") is Tier 1 common capital ("Tier 1 common") divided by
(e) risk-weighted assets. The Firm uses Tier 1 common capital along with the other capital measures to assess and
(e) monitor its capital position. For further discussion of Tier 1 common capital ratio, see Regulatory capital on pages 59-61 of this Form 10-Q.
(f) Excludes the impact of residential real estate purchased credit-impaired ("PCI") loans. For further discussion, see Allowance for credit losses on pages 93-95 of this Form 10-Q.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## INTRODUCTION

This section of the Form 10-Q provides management's discussion and analysis ("MD\&A") of the financial condition and results of operations of JPMorgan Chase. See the Glossary of terms on pages 213-216 for definitions of terms used throughout this Form 10-Q.
The MD\&A included in this Form 10-Q contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. These statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. Actual results may differ from those set forth in the forward-looking statements. For a discussion of those risks and uncertainties and the factors that could cause JPMorgan Chase's actual results to differ materially from those risks and uncertainties, see
Forward-looking Statements on page 111 and Part II, Item 1A: Risk Factors, on pages 220-222 of this Form 10-Q; Part II, Item 1A: Risk Factors, on pages 175-175A of the Firm's Quarterly Report on Form 10-Q/A for the quarter ended March 31, 2012; Part II, Item 1A: Risk Factors, on pages 219-222 of the Firm's Quarterly Report on Form 10-Q for the quarter ended June 30, 2012; and Part I, Item 1A, Risk Factors, on pages 7-17 of JPMorgan Chase's Annual Report on Form 10-K for the year ended December 31, 2011, filed with the U.S. Securities and Exchange Commission ("2011 Annual Report" or "2011 Form 10-K"), to which reference is hereby made.
JPMorgan Chase \& Co., a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide; the Firm has $\$ 2.3$ trillion in assets and $\$ 199.7$ billion in stockholders' equity as of September 30, 2012. The Firm is a leader in investment banking, financial services for consumers and small businesses, commercial banking, financial transaction processing, asset management and private equity. Under the J.P. Morgan and Chase brands, the Firm serves millions of customers in the U.S. and many of the world's most prominent corporate, institutional and government clients.
JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), a national bank with U.S. branches in 23 states, and Chase Bank USA, National Association ("Chase Bank USA, N.A."), a national bank that is the Firm's credit card-issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities LLC ("JPMorgan Securities"), the Firm's U.S. investment banking firm. The bank and nonbank subsidiaries of JPMorgan Chase operate nationally as well as through overseas branches and subsidiaries, representative offices and subsidiary foreign banks. One of the Firm's principal operating subsidiaries in the United Kingdom ("U.K.") is J.P. Morgan Securities plc (formerly J.P. Morgan Securities Ltd.), a subsidiary of JPMorgan Chase Bank, N.A.

JPMorgan Chase's activities at the end of the third quarter 2012 were organized, for management reporting purposes, into six major business segments. In addition, there is a Corporate/Private Equity segment. The Firm's wholesale businesses comprise the Investment Bank, Commercial Banking, Treasury \& Securities Services and Asset Management segments. The Firm's consumer businesses comprise the Retail Financial Services and Card Services \& Auto segments. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows.
Investment Bank
J.P. Morgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. The clients of the Investment Bank ("IB") are corporations, financial institutions, governments and institutional investors. The Firm offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments, prime brokerage, and research.
Retail Financial Services
Retail Financial Services ("RFS") serves consumers and businesses through personal service at bank branches and through ATMs, online and mobile banking and telephone banking. RFS is organized into Consumer \& Business Banking and Mortgage Banking (including Mortgage Production and Servicing, and Real Estate Portfolios). Consumer \& Business Banking offers deposit and investment products and services to consumers and lending, deposit and cash management, and payment solutions to small businesses. Mortgage Production and Servicing includes
mortgage origination and servicing activities. Real Estate Portfolios comprises residential mortgages and home equity loans, including the PCI portfolio acquired in the Washington Mutual transaction. Customers can use nearly 5,600 bank branches (second largest nationally) and nearly 18,500 ATMs (largest nationally), as well as online and mobile banking around the clock. More than 32,800 branch salespeople assist customers with checking and savings accounts, mortgages, home equity and business loans, and investments across the 23-state footprint from New York and Florida to California. As one of the largest mortgage originators in the U.S., Chase helps customers buy or refinance homes resulting in more than $\$ 150$ billion of mortgage originations annually. Chase also services approximately 8 million mortgages and home equity loans.

# Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q 

Card Services \& Auto
Card Services \& Auto ("Card") is one of the nation's largest credit card issuers, with over $\$ 124$ billion in credit card loans. Customers have nearly 64 million open credit card accounts (excluding the commercial card portfolio), and used Chase credit cards to meet over $\$ 279$ billion of their spending needs in the nine months ended September 30, 2012. Consumers can obtain loans through more than 17,400 auto dealerships. Chase customers also can obtain student loans for attendance at eligible schools and universities nationwide. Through its Merchant Services business, Chase Paymentech Solutions, Card is a global leader in payment processing and merchant acquiring.
Commercial Banking
Commercial Banking ("CB") delivers extensive industry knowledge, local expertise and dedicated service to U.S. and U.S. multinational clients, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenue generally ranging from $\$ 10$ million to $\$ 2$ billion. In addition, CB provides financing to real estate investors and owners. Partnering with the Firm's other businesses, CB provides comprehensive financial solutions, including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.
Treasury \& Securities Services
Treasury \& Securities Services ("TSS") is a global leader in transaction, investment and information services. TSS is one of the world's largest cash management providers and a leading global custodian. Treasury Services ("TS") provides cash management, trade, wholesale card and liquidity products and services to small- and mid-sized companies, multinational corporations, financial institutions and government entities. TS partners with IB, CB, RFS and Asset Management businesses to serve clients firmwide. Certain TS revenue is included in other segments' results. Worldwide Securities Services ("WSS") holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.
Asset Management
Asset Management ("AM"), with assets under supervision of $\$ 2.0$ trillion as of September 30, 2012, is a global leader in investment and wealth management. AM clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world. AM offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity products, including money-market instruments and bank deposits. AM also provides trust and estate, banking and brokerage services to high-net-worth clients, and retirement services for corporations and individuals. The majority of AM's client assets are in actively managed portfolios.
In addition to the six major reportable business segments outlined above, the following is a description of Corporate/Private Equity.

## Corporate/Private Equity

The Corporate/Private Equity sector comprises Private Equity, Treasury, Chief Investment Office ("CIO"), and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO manage capital and liquidity of the Firm. The corporate staff units include Central Technology and Operations, Audit, Executive, Finance, Human Resources, Corporate Marketing, Internet \& Mobile, Legal \& Compliance, Global Real Estate, General Services, Risk Management, and Corporate Responsibility \& Public Policy. Other centrally managed expense includes the Firm's occupancy and pension-related expense that are subject to allocation to the businesses. Business segment changes
On July 27, 2012, the Firm announced that it will be reorganizing its business segments to reflect the manner in which the segments will be managed. The reorganization of the business segments is expected to be effective beginning in the fourth quarter of 2012. As a result, Retail Financial Services and Card Services \& Auto businesses will be combined to form the Consumer \& Community Banking segment. The Investment Bank and Treasury \& Securities Services businesses will be combined to form the Corporate \& Investment Bank segment. Asset Management and Commercial Banking will remain unchanged. In addition, Corporate/Private Equity will not be significantly affected.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## EXECUTIVE OVERVIEW

This executive overview of the MD\&A highlights selected information and may not contain all of the information that is important to readers of this Form 10-Q. For a complete description of events, trends and uncertainties, as well as the capital, liquidity, credit and market risks, and the critical accounting estimates affecting the Firm and its various lines of business, this Form 10-Q should be read in its entirety.
Economic environment
The global economy continued to expand in the third quarter of 2012, but reflected regional differences. The U.S. economy grew at a modest pace. The U.S. unemployment rate declined to $7.8 \%$ at the end of the third quarter as U.S. labor market conditions continued to improve at a slow pace. The U.S. housing sector continued to show signs of improvement: excess inventories were reduced, prices began to rise and affordability improved in most areas of the country as household incomes stabilized and mortgage rates declined. During the third quarter, homebuilder confidence improved to the highest level in six years and housing starts increased to the highest level in four years. The multifamily and rental sector continued to benefit from robust demand. Business fixed investment remained solid; although slower in recent months as nonresidential construction declined, investments in equipment and software remained strong.
The Board of Governors of the Federal Reserve System (the "Federal Reserve") maintained the target range for the
federal funds rate at zero to one quarter percent and guided that economic conditions are likely to warrant exceptionally low levels for the federal funds rate, at least through late 2015. Additionally, the Federal Reserve announced a new asset purchase program that would be open-ended and is intended to speed up the pace of the U.S. economic recovery and produce sustained improvement in the labor market.
Asia's developing economies continued to expand, although growth was significantly slower than earlier in the year, reducing global inflationary pressures.
During the third quarter of 2012, the European Central Bank ("ECB") announced a new government bond-buying program referred to as the Outright Monetary Transactions ("OMT") plan. The plan includes the ECB's conditional pledge to purchase "unlimited" amounts of the government bonds of the region's troubled nations and is intended shore up confidence in the Euro. With the announcement of the OMT plan and other actions by the ECB, concerns over the European monetary union have recently receded.
The U.S. economy is likely to be affected by the continuing uncertainty about Europe's financial crisis, the Federal Reserve's monetary policy, and the fiscal debate over taxes and spending that is expected to occur later in 2012, among other factors.

2012
2011
Change

JPMorgan Chase reported record third-quarter 2012 net income of $\$ 5.7$ billion, or a record $\$ 1.40$ per share, on net revenue of $\$ 25.1$ billion. Net income increased by $\$ 1.4$ billion, or $34 \%$, compared with net income of $\$ 4.3$ billion, or $\$ 1.02$ per share, in the third quarter of 2011. ROE for the quarter was $12 \%$, compared with $9 \%$ for the prior-year quarter. Results in the third quarter of 2012 included the following significant items: $\$ 900$ million pretax benefit ( $\$ 0.14$ per share after-tax increase in earnings) from a reduction in the allowance for loan losses in Real Estate

Portfolios; $\$ 825$ million pretax incremental charge-offs ( $\$ 0.13$ per share after-tax decrease in earnings) due to regulatory guidance on certain residential loans in Real Estate Portfolios; $\$ 888$ million pretax benefit ( $\$ 0.14$ per share after-tax increase in earnings) due to extinguishment gains on redeemed trust preferred capital debt securities in Corporate; $\$ 684$ million pretax expense ( $\$ 0.11$ per share after-tax decrease in earnings) for additional litigation reserves in Corporate. The tax rate used for each of the above significant items is $38 \%$; for additional information, see the discussion at the end of this section on pages 8-9.

6

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

The increase in net income from the third quarter of 2011 was driven by higher net revenue, a lower provision for credit losses and lower noninterest expense. The increase in net revenue as compared with the prior year was due to higher mortgage fees and related income, higher principal transactions revenue, and higher investment banking fees. Net interest income decreased compared with the prior year, reflecting the impact of low interest rates, as well as lower average trading balances, faster prepayment of mortgage-backed securities, limited reinvestment opportunities and the run off of higher-yielding loans, partially offset by lower deposit costs.
Results in the third quarter of 2012 reflected positive credit trends for the consumer real estate and credit card portfolios. The provision for credit losses was $\$ 1.8$ billion, down $\$ 622$ million, or $26 \%$, from the prior year. The total consumer provision for credit losses was $\$ 1.9$ billion, down $\$ 432$ million from the prior year. The decrease in the consumer provision reflected a $\$ 900$ million reduction of the allowance for loan losses related to the mortgage portfolio due to improved delinquency trends and lower estimated losses. Consumer net charge-offs were $\$ 2.8$ billion, compared with $\$ 2.7$ billion in the prior year, resulting in net charge-off rates of $3.10 \%$ and $2.84 \%$, respectively. The increase in consumer net charge-offs was primarily due to incremental charge-offs of $\$ 825$ million for certain residential real estate loans recorded in accordance with regulatory guidance requiring loans discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") to be charged off to the net realizable value of the collateral and to be considered nonaccrual, regardless of their delinquency status. The wholesale provision for credit losses was a benefit of $\$ 63$ million compared with an expense of $\$ 127$ million in the prior year. Wholesale net recoveries were $\$ 34$ million, compared with net recoveries of $\$ 151$ million in the prior year, resulting in net recovery rates of $0.05 \%$ and $0.24 \%$, respectively. The Firm's allowance for loan losses to end-of-period loans retained was $2.61 \%$, compared with $3.74 \%$ in the prior year.
The Firm's nonperforming assets totaled $\$ 12.5$ billion at September 30, 2012, up from the prior-quarter level of $\$ 11.4$ billion and flat compared with the prior-year level of $\$ 12.5$ billion. The current quarter included $\$ 1.7$ billion of Chapter 7 loans which were reported as nonaccrual as discussed above. The current quarter nonaccrual loans also reflected the effect of regulatory guidance implemented in the first quarter of 2012, as a result of which the Firm began reporting performing junior liens that are subordinate to senior liens that are 90 days or more past due, as nonaccrual loans. Such junior liens were $\$ 1.3$ billion in the current quarter and $\$ 1.5$ billion in the prior quarter. Loans increased $\$ 25.1$ billion from the third quarter of 2011; this increase was due to a $\$ 42.8$ billion increase in the wholesale loan portfolio across the lines of business, partially offset by a $\$ 17.7$ billion decrease in the consumer
loan portfolio, reflecting net runoff, primarily in the real estate portfolios.
Noninterest expense was $\$ 15.4$ billion, down $\$ 163$ million, or $1 \%$, compared with the prior year. The current quarter included pretax expense of $\$ 790$ million for additional litigation reserves. The prior year included pretax expense of $\$ 1.3$ billion for additional litigation reserves.
The Firm's results reflected continued momentum in all of its businesses. The Investment Bank reported favorable Fixed Income Markets results and maintained its \#1 ranking for Global Investment Banking fees. Consumer \& Business Banking average deposits were up $9 \%$ and Business Banking loan balances grew for the eighth consecutive quarter to a record $\$ 19$ billion, up $8 \%$ compared with the prior year. Mortgage Banking originations were $\$ 47$ billion, up $29 \%$, compared with the prior year. Credit Card sales volume, excluding Commercial Card, was up $11 \%$ compared with the prior year. Commercial Banking reported record revenue and grew loan balances for the ninth consecutive quarter to a record $\$ 124$ billion, up $15 \%$ compared with the prior year. Treasury \& Securities Services assets under custody rose to a record $\$ 18.2$ trillion, up $12 \%$ compared with the prior year. Asset Management reported positive net long-term product flows for the fourteenth consecutive quarter and record loan balances of $\$ 75$ billion. Net income for the first nine months of 2012 was $\$ 15.6$ billion, or $\$ 3.81$ per share, compared with $\$ 15.2$ billion, or $\$ 3.57$ per share, for the first nine months of 2011. The increase was driven by a lower provision for credit losses, partially offset by lower net revenue. The decline in net revenue for the first nine months of the year was driven by lower principal transactions revenue, reflecting losses from the synthetic credit portfolio, and lower investment banking fees, predominantly offset by higher mortgage fees and related income. The lower provision for credit losses reflected an improved consumer credit environment. Noninterest expense was flat compared with the first nine months of 2011.

The Firm strengthened its balance sheet, ending the third quarter with Basel I Tier 1 common capital of $\$ 135$ billion, or $10.4 \%$, compared with $\$ 120$ billion, or $9.9 \%$, in the third quarter of 2011. The Firm estimated that its Basel III Tier 1 common ratio was approximately $8.4 \%$ at September 30, 2012, taking into account the impact of final Basel 2.5 rules and the Federal Reserve's Notice of Proposed Rulemaking ("NPR"). (The Basel I and III Tier 1 common ratios are non-GAAP financial measures, which the Firm uses along with the other capital measures, to assess and monitor its capital position. For further discussion of the Tier 1 common capital ratios, see Regulatory capital on pages 59-61 of this Form 10-Q.)
JPMorgan Chase serves clients, consumers, companies, and communities around the globe. The Firm provided credit and raised capital of over $\$ 1.3$ trillion for commercial and consumer clients during the first nine months of 2012. This

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

included more than $\$ 15$ billion of credit provided for U.S. small businesses, an increase of $21 \%$ compared with the same period last year; and $\$ 52$ billion of capital raised and credit provided so far this year for more than 1,300 nonprofit and government entities, including states, municipalities, hospitals and universities.
Investment Bank net income decreased from the prior year, reflecting higher noninterest expense and lower net revenue, largely offset by a benefit from the provision for credit losses compared with a provision for credit losses in the prior year. Net revenue included a $\$ 211$ million loss from debit valuation adjustments ("DVA") on certain structured and derivative liabilities resulting from the tightening of the Firm's credit spreads, compared with a gain of $\$ 1.9$ billion in the prior year. Excluding the impact of DVA, Fixed Income and Equity Markets combined revenue was up 24\% compared with the prior year, driven by solid client revenue and broad-based strength across the Fixed Income businesses. The portion of the synthetic credit portfolio transferred from CIO in Corporate to IB on July 2, 2012, experienced a modest loss, which was included in Fixed Income Markets revenue. Investment banking fees were up $38 \%$ compared with the prior year primarily due to stronger results in debt underwriting. Noninterest expense increased compared with the prior year, driven by higher compensation expense, partially offset by lower noncompensation expense.
Retail Financial Services net income increased compared with the prior year, reflecting an increase in net revenue and a lower provision for credit losses, partially offset by increased noninterest expense. Net revenue increased as higher noninterest revenue was driven by higher mortgage fees and related income, partially offset by lower debit card revenue; while net interest income declined driven by lower deposit margins and lower loan balances due to portfolio runoff, largely offset by higher deposit balances. The provision for credit losses declined compared with the prior year. The current-quarter provision reflected a $\$ 900$ million reduction in the allowance for loan losses. Current-quarter total net charge-offs were $\$ 1.5$ billion, including $\$ 825$ million of incremental charge-offs of Chapter 7 loans. Noninterest expense increased from the prior year as a result of higher mortgage production expense and higher servicing expense, as well as investments in sales force and new branch builds.
Card Services \& Auto net income increased compared with the prior year as lower noninterest expense and lower provision for credit losses was partially offset by lower net revenue. The provision for credit losses was $\$ 1.2$ billion, compared with $\$ 1.3$ billion in the prior year. The current-quarter provision reflected lower net charge-offs and a small reduction in the allowance for loan losses. The prior-year provision included a $\$ 370$ million reduction in the allowance for loan losses. Noninterest expense declined compared with the prior year, driven by lower marketing expense.

Commercial Banking net income increased compared with the prior year, reflecting an increase in net revenue and lower provision for credit losses, partially offset by higher expense. Net revenue was a record reflecting growth in loan and liability balances and increased investment banking revenue, partially offset by spread compression on loan products. Noninterest expense increased compared with the prior year, reflecting higher headcount-related expense. Treasury \& Securities Services net income increased compared with the prior year, reflecting higher net revenue. Treasury Services net revenue increased compared with the prior year, driven by higher deposit balances and higher trade finance loan volumes. Worldwide Securities Services net revenue increased compared with the prior year, driven by higher deposit balances.
Asset Management net income increased compared with the prior year, reflecting higher net revenue, lower noninterest expense and lower provision for credit losses. Net revenue increased as higher valuations of seed capital investments and the impact of net product inflows were offset by the absence of a prior-year gain on the sale of an investment and lower loan-related revenue. Net interest income increased primarily due to higher deposit and loan balances. Noninterest expense decreased from the prior year, due to the absence of non-client-related litigation expense, partially offset by higher performance-based compensation.
Corporate/Private Equity reported net income, compared with a net loss in the prior year. Private Equity reported a lower net loss, compared with the prior year. Net revenue was a lower loss compared with the prior year, due to lower net valuation losses on both private and public investments. Treasury and CIO reported net income, compared with a net loss in the prior year. Net revenue increased compared with the prior year. The current-quarter revenue reflected $\$ 888$ million of pretax extinguishment gains related to the redemption of trust preferred capital debt securities. Principal transactions in CIO included $\$ 449$ million of losses on the index credit derivative positions that had been
retained by it following the transfer of the synthetic credit portfolio to IB on July 2, 2012, reflecting credit spread tightening during the quarter. By the end of the third quarter of 2012, CIO effectively closed out these positions. Net interest income was negative, reflecting the impact of lower portfolio yields and higher deposit balances across the Firm. Net revenue also included securities gains of $\$ 459$ million from sales of available-for-sale ("AFS") investment securities during the current quarter. Other Corporate reported a lower net loss, compared with the prior year. The third quarter included pretax expense of $\$ 684$ million for additional litigation reserves. The prior year included pretax expense of $\$ 1.0$ billion for additional litigation reserves, predominantly for mortgage-related matters.
Note: The Firm uses a single U.S.-based, blended marginal tax rate of $38 \%$ ("the marginal rate") to report the estimated

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

after-tax effects of each significant item affecting net income. This rate represents the weighted-average marginal tax rate for the U.S. consolidated tax group. The Firm uses this single marginal rate to reflect the tax effects of all significant items because (a) it simplifies the presentation and analysis for management and investors; (b) it has proved to be a reasonable estimate of the marginal tax effects; and (c) often there is uncertainty at the time a significant item is disclosed regarding its ultimate tax outcome.
2012 Business outlook
The following forward-looking statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. See Forward-Looking Statements on page 111 and Risk Factors on pages 220-222 of this Form 10-Q.
JPMorgan Chase's outlook for the remainder of 2012 should be viewed against the backdrop of the global and U.S. economies, financial markets activity, the geopolitical environment, the competitive environment, client activity levels, and regulatory and legislative developments in the U.S. and other countries where the Firm does business. Each of these linked factors will affect the performance of the Firm and its lines of business.
In the Consumer \& Business Banking business within RFS, the Firm estimates that, given the current low interest rate environment, continued deposit spread compression could negatively affect annual net income by over $\$ 400$ million. It is possible that this decline may be offset by deposit balance growth, although the exact extent of any such deposit growth cannot be determined at this time.
In the Mortgage Production and Servicing business within RFS, management expects to continue to incur elevated default- and foreclosure-related costs, including additional costs associated with the Firm's mortgage servicing processes, particularly its loan modification and foreclosure procedures. (See Mortgage servicing-related matters on pages 89-91 and Note 16 on pages 184-187 of this Form 10-Q.) In addition, management believes that the high production margins experienced in the third quarter of 2012 will not be sustainable over time. Management also expects there will be continued elevated levels of repurchases of mortgages previously sold, predominantly to U.S. government-sponsored entities ("GSEs"). However, based on current trends and estimates, management believes that the existing mortgage repurchase liability is sufficient to cover such losses.
For Real Estate Portfolios within RFS, management believes that total quarterly net charge-offs may be approximately $\$ 600$ million, subject to economic uncertainty. If positive credit trends in the residential real estate portfolio continue or accelerate and economic uncertainty does not increase, the related allowance for loan losses may be reduced over
time. Given management's current estimate of net portfolio runoff levels, the residential real estate portfolio is expected to decline by approximately $10 \%$ to $12 \%$ in 2012 from year-end 2011 levels. This reduction in the residential real estate portfolio can be expected to reduce annual net interest income by approximately $\$ 500$ million. However, over time, the reduction in net interest income should be offset by an improvement in credit costs and lower expenses. In Card Services \& Auto, the Firm expects that further reductions in the allowance for loan losses for the credit card portfolio may be at or near an end, given the current stage of the credit cycle within the credit card business. The currently anticipated results for RFS and Card described above could be affected by adverse economic conditions, including further declines in U.S. housing prices or increases in the unemployment rate. Management continues to closely monitor the portfolios in these businesses in light of current economic uncertainty.
In Private Equity, within the Corporate/Private Equity segment, earnings will likely continue to be volatile and influenced by capital markets activity, market levels, the performance of the broader economy and investment-specific issues.
For Treasury and CIO, within the Corporate/Private Equity segment, management currently believes that the segment may generate a net loss of approximately $\$ 300$ million for the fourth quarter of 2012 (which may vary positively or negatively by approximately $\$ 100$ million) driven by the implied yield curve and management decisions related to the positioning of the investment securities portfolio.
For Other Corporate, within the Corporate/Private Equity segment, management expects quarterly net income, excluding material litigation expense and significant nonrecurring items, if any, to be approximately $\$ 100$ million, but this is likely to vary each quarter.

The Firm's net yield on interest-earning assets is expected to be under continued modest pressure in the fourth quarter of 2012, reflecting the continued low interest rate environment. The Firm's total noninterest expense for the second half of 2012, excluding Corporate litigation expense and compensation expense for IB, is expected to be comparable to the level for the first half of 2012. This anticipated level of noninterest expense includes elevated costs in Mortgage Banking as a result of higher production costs associated with strong origination volumes and elevated default-related servicing costs, including costs associated with the Consent Orders entered into with the banking regulators relating to the Firm's residential mortgage servicing and higher costs across the Firm associated with compliance, legal fees and FDIC assessments. See Mortgage servicing-related matters on pages 89-91 of this Form 10-Q for a discussion of the Consent Orders.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

CIO synthetic credit portfolio update
On August 9, 2012, the Firm restated its previously-filed interim financial statements for the quarterly period ended March 31, 2012. The restatement related to valuations of certain positions in the synthetic credit portfolio of the Firm's CIO. The restatement had the effect of reducing the Firm's reported net income for the three months ended March 31, 2012, by $\$ 459$ million. The restatement had no impact on any of the Firm's Consolidated Financial Statements as of June 30, 2012, and December 31, 2011, or for the three and six months ended June 30, 2012 and 2011. For more information about the restatement and the related valuation matter, please see our second quarter report on Form 10-Q filed on August 9, 2012.
Management also determined that a material weakness existed in the Firm's internal control over financial reporting at March 31, 2012. Management has taken steps to remediate the material weakness, including enhancing management supervision of valuation matters. These remedial steps were substantially implemented by June 30, 2012; however, in accordance with the Firm's internal control compliance program, the material weakness designation could not be closed until the remedial processes were operational for a period of time and successfully tested. The testing was successfully completed during the third quarter of 2012 and the control deficiency was closed at September 30, 2012. For additional information concerning the remedial changes in, and related testing of, the Firm's internal control over financial reporting, see Part I, Item 4: Controls and Procedures on page 220 of this Form 10-Q.
On July 2, 2012, the majority of the synthetic credit portfolio was transferred from the CIO to the Firm's IB, which has the expertise, trading platforms and market franchise to manage these positions to maximize their economic value. An aggregate position of approximately $\$ 12$ billion notional was retained in CIO. Losses incurred by CIO on the portfolio retained by CIO were $\$ 449$ million (recorded in principal transactions revenue) during the third quarter of 2012, reflecting credit spread tightening. By the end of the third quarter of 2012, CIO effectively closed out the index credit derivative positions that had been retained by it following the transfer. IB continues to actively manage and reduce the risks in the remaining synthetic credit portfolio that was transferred to it on July 2, 2012; this portion of the portfolio experienced a modest loss during the third quarter of 2012, which was included in Fixed Income Markets Revenue for IB (and also recorded in the principal transactions revenue line item of the income statement).
On July 13, 2012, management summarized its observations arising out of its internal review of CIO-related matters. That review, which is being overseen by an independent Review Committee of the Board of Directors, is expected to be concluded early in the first quarter of 2013, along with the Review Committee's own independent work. The reported trading losses have resulted in litigation
against the Firm, as well as heightened regulatory scrutiny, and may lead to additional regulatory or legal proceedings. Such regulatory and legal proceedings may expose the Firm to fines, penalties, judgments or losses, harm the Firm's reputation or otherwise cause a decline in investor confidence. For a description of the regulatory and legal developments relating to the CIO matters described above, see Note 23 on pages 196-206 of this Form 10-Q. Regulatory developments
JPMorgan Chase is subject to regulation under state and federal laws in the U.S., as well as the applicable laws of each of the various other jurisdictions outside the U.S. in which the Firm does business. The Firm is currently experiencing a period of unprecedented change in regulation and supervision, and such changes could have a significant impact on how the Firm conducts business. The Firm continues to work diligently in assessing and understanding the implications of the regulatory changes it is facing, and is devoting substantial resources to implementing all the new rules and regulations while meeting the needs and expectations of its clients.
In June 2011, the Basel Committee announced an agreement to require global systemically important banks ("GSIBs") to maintain Tier 1 common requirements above the $7 \%$ minimum in amounts ranging from an additional $1 \%$ to an additional $2.5 \%$. In November 2012, the Financial Stability Board ("FSB") designated the Firm, as well as three other banks, as GSIBs and indicated that it would require such designated institutions to hold the additional $2.5 \%$ of Tier 1 common in accordance with these requirements. For additional information see Regulatory capital on pages 59-61 of this Form 10-Q.
The Firm expects heightened scrutiny by its regulators of its compliance with new and existing regulations, including those issued under the Unfair and Deceptive Acts or Practices laws, the Bank Secrecy Act, the Real Estate Settlement Procedures Act ("RESPA"), The Truth in Lending Act, and the laws administered by the Office of Foreign Assets

Control, among others. The Firm is also under scrutiny by its supervisors with respect to its controls and operational processes, such as those relating to model development, review, governance and approvals. The Firm expects that it will more frequently be the subject of more formal enforcement actions, rather than informal supervisory actions or criticisms. While the Firm has made a preliminary assessment of the likely impact of this heightened regulatory scrutiny and anticipated changes in law, given the current status of regulatory and supervisory developments, the Firm cannot quantify the possible effects on its business and operations of all the significant changes that are currently underway.

Comprehensive Capital Analysis and Review ("CCAR") update
In August 2012, the Firm resubmitted its capital plan to the Federal Reserve under the 2012 CCAR process. The resubmitted capital plan related to the repurchase of up to $\$ 3.0$ billion of common equity in the first quarter of 2013.

The Firm's resubmission provided for the continued payment of its current quarterly common stock dividend. On November 5, 2012, the Federal Reserve informed the Firm that it had completed its review and that it did not object to the Firm's resubmitted capital plan.
The timing and exact amount of common stock and warrant purchases under the repurchase program will be consistent with the Firm's capital plan and will depend on various factors, including market conditions; the Firm's capital position; internal capital generation; the amount of equity issued under the Firm's employee stock-based plans; organic and other investment opportunities; and legal and regulatory considerations affecting the amount and timing of repurchase activity. The repurchase program does not include specific price targets, may be executed through open market purchases or privately negotiated transactions, including utilizing Rule 10b5-1 programs, and may be suspended at any time.
Management expects to submit its capital plan for the last three quarters of 2013 and the first quarter of 2014 to the Federal Reserve under the Federal Reserve's 2013 CCAR process, pursuant to the Federal Reserve's schedule. Management expects to receive further details from the Federal Reserve related to the 2013 CCAR process by mid-November 2012.

## Subsequent events - Hurricane Sandy

On October 29, 2012, the mid-Atlantic and Northeast regions of the U.S. were affected by Hurricane Sandy, which caused major flooding and wind damage and resulted in major disruptions to individuals and businesses and significant damage to homes and communities in the affected regions. Despite the damage and disruption to many of its branches and facilities, the Firm has been assisting its customers, clients and borrowers in the affected areas. The Firm has continued to dispense cash via ATMs and branches, loan money, provide liquidity to customers, and settle trades, and has waived a number of checking account and loan fees, including late payment fees. The potential financial impact from Hurricane Sandy on the Firm will be dependent upon a number of factors, such as the amount of credit extended to affected persons and businesses, the extent of damage, and the borrower's financial condition, including the amount of insurance proceeds and governmental assistance available to them. The Firm is in the early stages of quantifying the potential impact from Hurricane Sandy on its financial results of operations.

## CONSOLIDATED RESULTS OF OPERATIONS

The following section provides a comparative discussion of JPMorgan Chase's Consolidated Results of Operations on a reported basis for the three and nine months ended September 30, 2012 and 2011. Factors that relate primarily to a single business segment are discussed in more detail within that business segment. For a discussion of the Critical Accounting Estimates Used by the Firm that affect the Consolidated Results of Operations, see pages 107-109 of this Form 10-Q and pages 168-172 of JPMorgan Chase's 2011 Annual Report.

| Noninterest revenue | 14,170 | 11,946 | 19 |  | 39,590 | 40,205 | $(2$ | $)$ |
| Net interest income | 10,976 | 11,817 | $(7$ | $)$ | 33,788 | 35,558 | $(5$ | $)$ |
| Total net revenue | $\$ 25,146$ | $\$ 23,763$ | 6 | $\%$ | $\$ 73,378$ | $\$ 75,763$ | $(3$ | $) \%$ |

Total net revenue for the third quarter of 2012 was $\$ 25.1$ billion, up by $\$ 1.4$ billion, or $6 \%$, from the third quarter of 2011. The increase in the third quarter of 2012 was due to higher mortgage fees and related income, principal transactions revenue, and other income, partially offset by lower net interest income. For the first nine months of 2012, total net revenue was $\$ 73.4$ billion, down by $\$ 2.4$ billion, or $3 \%$, from the first nine months of 2011. The decrease in the first nine months of 2012 was predominantly driven by lower principal transactions revenue and net interest income, partially offset by higher mortgage fees and related income.
Investment banking fees for the third quarter of 2012 increased significantly compared with the prior year, reflecting higher revenue across products, particularly debt underwriting. For the first nine months of 2012, investment banking fees decreased, largely driven by lower revenue across products, primarily due to lower industry-wide volumes. For additional information on investment banking fees, which are primarily recorded in IB, see IB segment results pages 19-23 of this Form 10-Q.
Principal transactions revenue increased in the third quarter of 2012 compared with the prior year. The increase primarily reflected lower net valuation losses on both private and public investments in Corporate/Private Equity. The third quarter of 2012 included a DVA loss on certain structured and derivative liabilities of $\$ 211$ million, compared with a gain of $\$ 1.9$ billion in the prior year. Excluding DVA, principal transactions revenue in IB increased significantly, driven by solid client revenue and broad-based strength across the Fixed Income businesses. The third quarter of 2012 also included $\$ 449$ million of losses recorded in CIO on the index credit derivative positions retained by CIO; the portfolio that was transferred
to IB effective on July 2, 2012, experienced a modest loss.
For the first nine months of 2012, principal transactions revenue decreased, reflecting $\$ 5.8$ billion of losses incurred by CIO for the six months ended June 30, 2012 and $\$ 449$ million of losses incurred by CIO for the three months ended September 30, 2012, and an additional modest loss incurred by the IB from the synthetic credit portfolio, and to a lesser extent, lower private equity gains in Corporate/Private Equity. The decrease for the nine-month period was partially offset by a $\$ 663$ million gain recognized in Other Corporate for the expected recovery on a Bear Stearns-related subordinated loan; and higher market-making revenue in IB, driven by solid client revenue (including a DVA loss of $\$ 363$ million resulting from the tightening of the Firm's credit spreads, compared with a gain of $\$ 2.0$ billion in 2011). For additional information on principal transactions revenue, see IB and Corporate/Private Equity segment results on pages 19-23 and 49-51, respectively, and Note 6 on pages 144-145 of this Form 10-Q.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Lending- and deposit-related fees decreased modestly in the third quarter and first nine months of 2012. The decrease was in both lending and deposit fees, and was spread across the wholesale and consumer businesses of the Firm. For additional information on lending- and deposit-related fees, which are mostly recorded in RFS, CB, TSS and IB, see RFS on pages 24-33, CB on pages 38-40, TSS on pages 41-44 and IB segment results on pages 19-23 of this Form 10-Q. Asset management, administration and commissions revenue decreased in the third quarter and first nine months of 2012. The decrease for both periods was largely driven by lower brokerage commissions in IB. The first nine months of 2012 also reflected lower asset management fees in AM, in particular, performance fees, which were offset by higher investment service fees in RFS, as a result
of growth in branch sales of investment products. For additional information on these fees and commissions, see the segment discussions for IB on pages 19-23, RFS on pages 24-33, AM on pages 45-48 and TSS on pages 41-44 of this Form 10-Q.
Securities gains for both the three and nine months ended September 30, 2012, compared with the prior year periods, reflected the results of repositioning of the CIO AFS portfolio. For additional information on securities gains see the Corporate/Private Equity segment discussion on pages 49-51 of this Form 10-Q.
Mortgage fees and related income increased significantly compared with both the third quarter and first nine months of 2011. The increase resulted from higher production revenue, reflecting wider margins driven by favorable market conditions, and higher volumes due to historically low interest rates and the Home Affordable Refinance Programs ("HARP"), as well as higher net mortgage servicing revenue. The increase in net mortgage servicing revenue for the first nine months of 2012 also included a favorable swing in the mortgage servicing rights ("MSR") risk management results (reflecting a gain of $\$ 577$ million in 2012 compared with a loss of $\$ 1.2$ billion in 2011). For additional information on mortgage fees and related income, which is recorded predominantly in RFS, see RFS's Mortgage Production and Servicing discussion on pages 28-30, and Note 16 on pages 184-187 of this Form 10-Q. For additional information on repurchase losses, see the Mortgage repurchase liability discussion on pages 55-58 and Note 21 on pages 192-196 of this Form 10-Q.
Credit card income decreased in both the third quarter and first nine months of 2012. The decrease for both periods was driven by lower debit card revenue, reflecting the impact of the Durbin Amendment, and to a lesser extent, higher amortization of direct loan origination costs. The decrease in credit card income was offset partially by
higher net interchange income associated with growth in credit card transaction volume, and higher merchant servicing revenue. For additional information on credit card income, see the Card and RFS segment results on pages 34-37, and pages 24-33, respectively, of this Form 10-Q.
Other income increased compared with the third quarter of 2011, driven by an $\$ 888$ million extinguishment gain in Corporate/Private Equity related to the redemption of trust preferred capital debt securities ("TruPS"). The extinguishment gain was related to adjustments applied to the cost basis of the TruPS during the period they were in a qualified hedge accounting relationship. Other income increased in the first nine months of 2012, predominantly due to a $\$ 1.1$ billion benefit recognized in the first quarter of 2012 from the Washington Mutual bankruptcy settlement and the aforementioned extinguishment gain; these were offset partially by the absence of a prior-year gain on the sale of an investment in AM.
Net interest income decreased in both the third quarter and first nine months of 2012 compared with the prior year. The declines in both periods reflected the impact of lower average trading asset balances, faster prepayment of mortgage-backed securities, limited reinvestment opportunities, the runoff of higher-yielding loans, and the impact of lower interest rates across the Firm's interest-earning assets. The decrease in net interest income was offset partially by lower deposit and other borrowing costs. The Firm's average interest-earning assets were $\$ 1.8$ trillion for the third quarter of 2012, and the net yield on those assets, on a fully taxable-equivalent ("FTE") basis, was $2.43 \%$, a decrease of 23 basis points from the third quarter of 2011. For the first nine months of 2012, average interest-earning assets were $\$ 1.8$ trillion, and the net yield on those assets, on a FTE basis, was $2.51 \%$, a decrease of 24 basis points from the first nine months of 2011.

Provision for credit losses

| (in millions) | Three months ended September 30, |  |  |  |  | Nine months ended September 30, |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2012 |  | 2011 | Chang |  | 2012 | 2011 |  | Chang |  |
| Wholesale | \$ 63 | ) | \$127 | NM\% |  | \$69 | \$(376 | ) | NM\% |  |
| Consumer, excluding credit card | 736 |  | 1,285 | (43 | ) | 313 | 3,731 |  | (92 | ) |
| Credit card | 1,116 |  | 999 | 12 |  | 2,347 | 2,035 |  | 15 |  |
| Total consumer | 1,852 |  | 2,284 | (19 | ) | 2,660 | 5,766 |  | (54 |  |
| Total provision for credit losses | \$1,789 |  | \$2,411 | (26 | )\% | \$2,729 | \$5,390 |  | (49 | )\% |

The provision for credit losses decreased compared with the third quarter and first nine months of 2011. The decrease for both periods was driven by a lower provision for consumer, excluding credit card loans, which reflected a
reduction in the allowance for loan losses, due primarily to lower estimated losses in the non-PCI residential real estate portfolio as delinquency trends improved, partially offset by the impact of incremental charge-offs of Chapter 7 loans, including $\$ 825$ million of residential real estate loans and $\$ 55$ million of auto loans. The increase in the provision for
credit card loans for both periods was due to a smaller reduction in the allowance for loan losses in 2012 compared with the prior year, partially offset by lower net charge-offs in 2012. The level of the wholesale provision in 2012 reflected stable credit trends. For a more detailed discussion of the loan portfolio and the allowance for credit losses, see the segment discussions for RFS on pages 24-33, Card on pages 34-37, IB on pages 19-23 and CB on pages 38-40, and the Allowance For Credit Losses section on pages 93-95 of this Form 10-Q.

| 1,312 | 1,248 | 5 |  | 3,865 | 3,665 | 5 |  |
| 1,759 | 1,860 | (5 | ) | 5,411 | 5,461 | (1 |  |
| 607 | 926 | (34 | ) | 1,929 | 2,329 | (17 |  |
| 3,035 | 3,445 | (12 | ) | 10,354 | 10,687 | (3) |  |
| 182 | 212 | (14 | ) | 566 | 641 | (12 |  |
| 7,868 | 8,626 | (9 | , | 25,139 | 25,631 | (2 |  |
| \$ 15,371 | \$ 15,534 | (1 | )\% | \$48,682 | \$48,371 | 1 | \% |

Included litigation expense of $\$ 790$ million and $\$ 1.3$ billion for the three months ended September 30, 2012 and (a) 2011, respectively, and $\$ 3.8$ billion and $\$ 4.3$ billion for the nine months ended September 30, 2012 and 2011, respectively.
Total noninterest expense for the third quarter of 2012 was $\$ 15.4$ billion, down by $\$ 163$ million, or $1 \%$, compared with the third quarter of 2011. The decrease in the third quarter of 2012 was driven by lower noncompensation expense, in particular, litigation and marketing expense, partially offset by higher compensation expense. Total noninterest expense for the first nine months of 2012 was $\$ 48.7$ billion, up by $\$ 311$ million, or $1 \%$, compared with the first nine months of 2011. The increase in the first nine months of 2012 was due to higher compensation expense offset partially by lower noncompensation expense.
Compensation expense increased from the third quarter of 2011, predominantly due to investments in the businesses, including the sales force and new branch builds in RFS, and higher compensation expense in IB. The increase for the nine months of 2012 was predominantly due to the aforementioned investments in the businesses, partially offset by lower compensation expense in IB.

The decrease in noncompensation expense in the third quarter of 2012 was due to lower litigation expense in Corporate and AM, as well as lower marketing expense in Card. The decrease in noncompensation expense was offset partially by higher foreclosure-related expense in RFS. Noncompensation expense for the first nine months of 2012 decreased due to a net decline in the Firm's overall litigation expense (although Corporate had a higher level of expense) compared with the prior year; lower foreclosure-related expense in RFS; and lower marketing expense in Card. The decrease in noncompensation expense was offset partially by continued investments in the businesses, expense related to a non-core product that is being exited in Card, higher regulatory deposit insurance assessments, and higher servicing expense in RFS (excluding foreclosure-related matters). For a further discussion of litigation expense, see Note 23 on pages 196-206 of this Form 10-Q. For a discussion of amortization of intangibles, refer to the Balance Sheet Analysis on pages 53-54, and Note 16 on pages $184-187$ of this Form 10-Q.

6,754
\% 30.7
\%

The increase in the effective tax rate during the third quarter of 2012 was largely the result of higher reported pretax income in combination with changes in the mix of income and expenses subject to U.S. federal and state and local taxes. The third quarter of 2012 included tax benefits associated with the resolution of tax audits; the prior year included tax benefits associated with the disposition of certain investments. The decrease in the effective tax rate
during the nine months ended September 30, 2012, was
largely the result of the impact of increased tax-exempt income and business tax credits. The current and prior periods include deferred tax benefits associated with state and local income taxes. For additional information on income taxes, see Critical Accounting Estimates Used by the Firm on pages 107-109 of this Form 10-Q.

14

## EXPLANATION AND RECONCILIATION OF THE FIRM'S USE OF NON-GAAP FINANCIAL MEASURES

The Firm prepares its consolidated financial statements using accounting principles generally accepted in the U.S. ("U.S. GAAP"); these financial statements appear on pages 112-116 of this Form 10-Q. That presentation, which is referred to as "reported" basis, provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.
In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's results and the results of the lines of business on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications to present total net revenue for the Firm (and each of the business segments) on a FTE basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable
investments and securities. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense. These adjustments have no impact on net income as reported by the Firm as a whole or by the lines of business.
Management also uses certain non-GAAP financial measures at the business-segment level, because it believes these other non-GAAP financial measures provide information to investors about the underlying operational performance and trends of the particular business segment and, therefore, facilitate a comparison of the business segment with the performance of its competitors. Non-GAAP financial measures used by the Firm may not be comparable to similarly named non-GAAP financial measures used by other companies.

The following summary table provides a reconciliation from the Firm's reported U.S. GAAP results to managed basis. Three months ended September 30,

[^0]Tangible common equity ("TCE"), ROTCE, tangible book value per share ("TBVS"), and Tier 1 common under Basel I and III rules are each non-GAAP financial measures. TCE represents the Firm's common stockholders' equity (i.e., total stockholders' equity less preferred stock) less goodwill and identifiable intangible assets (other than MSRs), net of related deferred tax liabilities. ROTCE measures the Firm's earnings as a percentage of TCE. TBVS represents the Firm's
tangible common equity divided by period-end common shares. Tier 1 common under Basel I and III rules are used by management, along with other capital measures, to assess and monitor the Firm's capital position. TCE, ROTCE, and TBVS are meaningful to the Firm, as well as analysts and investors, in assessing the Firm's use of equity. For additional information on Tier 1 common under Basel I and III, see Regulatory capital on pages 59-61 of this Form

10-Q. In addition, all of the aforementioned measures are useful to the Firm, as well as analysts and investors, in facilitating comparisons with competitors.

Average tangible common equity

|  | Three months ended <br> September |  | Nine months ended September |  |
| :--- | :--- | :--- | :--- | :--- |
| (in millions) | 2012 | 2011 | 30, |  |
| Common stockholders' equity | $\$ 186,590$ | $\$ 174,454$ | $\$ 181,791$ | $\$ 172,667$ |
| Less: Goodwill | 48,158 | 48,631 | 48,178 | 48,770 |
| Less: Certain identifiable intangible assets | 2,729 | 3,545 | 2,928 | 3,736 |
| Add: Deferred tax liabilities ${ }^{(\text {a }}$ | 2,765 | 2,639 | 2,741 | 2,617 |
| Tangible common equity | $\$ 138,468$ | $\$ 124,917$ | $\$ 133,426$ | $\$ 122,778$ |

(a) Represents deferred tax liabilities related to tax-deductible goodwill and to identifiable intangibles created in ${ }^{(a)}$ nontaxable transactions, which are netted against goodwill and other intangibles when calculating TCE.
Core net interest income
In addition to reviewing JPMorgan Chase's net interest income on a managed basis, management also reviews core net interest income to assess the performance of its core lending, investing (including asset-liability management) and deposit-raising activities, excluding the impact of IB's market-based activities. The table below presents an analysis of core net interest income, core average interest-earning assets, and the core net interest yield on core average interest-earning assets, on a managed basis. Each
of these amounts is a non-GAAP financial measure due to the exclusion of IB's market-based net interest income and the related assets. Management believes the exclusion of IB's market-based activities provides investors and analysts a more meaningful measure to analyze non-market-related business trends of the Firm and can be used as a comparable measure to other financial institutions primarily focused on core lending, investing and deposit-raising activities.

Core net interest income data ${ }^{(a)}$

(a) Includes core lending, investing and deposit-raising activities on a managed basis, across RFS, Card, CB, TSS, AM
(a) and Corporate/Private Equity, as well as IB loans.
(b) Interest includes the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable.
(c) For a reconciliation of net interest income on a reported and managed basis, see reconciliation from the Firm's
(c) reported U.S. GAAP results to managed basis on page 15.

Quarterly and year-to-date results
Core net interest income decreased by $\$ 294$ million to $\$ 9.8$ billion and by $\$ 348$ million to $\$ 30.1$ billion for the three and nine months ended September 30, 2012, respectively. Core average interest-earning assets increased by $\$ 60.1$
billion to $\$ 1,332.3$ billion and by $\$ 113.6$ billion to $\$ 1,333.8$ billion for the three and nine months ended September 30, 2012, respectively. The decline in net interest income for both periods reflected the impact of faster prepayment of mortgage-backed securities, limited reinvestment opportunities, the runoff of higher-yielding loans, as well as the impact of lower interest rates across the Firm's interest-earning assets. The decrease in net interest income was offset partially by lower deposit and other borrowing costs. The increase in average interest-
earning assets was driven by increased levels of loans, higher deposits with banks and other short-term investments, and an increase in investment securities. The core net interest yield decreased by 22 basis points to $2.92 \%$ and by 32 basis points to $3.01 \%$ for the three and nine months ended September 30, 2012, respectively. The decrease in yield was primarily driven by higher financing costs associated with mortgage-backed securities, runoff of higher-yielding loans as well as lower customer loan rates, and was slightly offset by lower customer deposit rates. Other financial measures
The Firm also discloses the allowance for loan losses to total retained loans, excluding residential real estate PCI loans. For a further discussion of this credit metric, see Allowance for Credit Losses on pages $93-95$ of this Form 10-Q.

## BUSINESS SEGMENT RESULTS

The Firm is managed on a line-of-business basis. The business segment financial results presented reflect the current organization of JPMorgan Chase. There are six major reportable business segments: the Investment Bank, Retail Financial Services, Card Services \& Auto, Commercial Banking, Treasury \& Securities Services and Asset Management. In addition, there is a Corporate/Private Equity segment.
The business segments are determined based on the products and services provided, or the type of customer served, and reflect the manner in which financial information is currently evaluated by management. Results of the lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures, on pages 15-16 of this Form 10-Q.
The reorganization of the business segments announced on July 27, 2012 is expected to be effective beginning in the fourth quarter of 2012. For further discussion, see Business segment changes on page 5 of this Form 10-Q. Description of business segment reporting methodology
Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. The management reporting process that derives business segment results allocates income and expense using market-based methodologies.

For a further discussion of those methodologies, see Business Segment Results - Description of business segment reporting methodology on pages 79-80 of JPMorgan Chase's 2011 Annual Report. The Firm continues to assess the assumptions, methodologies and reporting classifications used for segment reporting, and further refinements may be implemented in future periods.
Business segment capital allocation changes
Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, regulatory capital requirements (under Basel III) and economic risk measures. The amount of capital assigned to each business is referred to as equity. Effective January 1, 2012, the Firm revised the capital allocated to certain businesses, reflecting additional refinement of each segment's estimated Basel III Tier 1 common capital requirements and balance sheet trends. For further information about these capital changes, see Line of business equity on page 62 of this Form 10-Q.

Segment Results - Managed Basis
The following table summarizes the business segment results for the periods indicated.

|  | Total net revenue |  |  |  | Noninterest expense |  |  |  | Pre-provision profit/(loss) |  |  |

Corporate/Private Equity includes an adjustment to offset IB's inclusion of a credit allocation income/(expense) to
(a) TSS in total net revenue; TSS reports the credit allocation as a separate line item on its income statement (not within total net revenue).

## INVESTMENT BANK

For a discussion of the business profile of IB, see pages 81-84 of JPMorgan Chase's 2011 Annual Report and the Introduction on page 4 of this Form 10-Q.
IB provides several non-GAAP financial measures which exclude the impact of DVA: net revenue, net income, compensation ratio, and return on common equity. The ratio for the allowance for loan losses to end-of-period loans is calculated excluding the impact of consolidated Firm-administered multi-seller conduits, to provide a more meaningful assessment of IB's allowance coverage ratio. These measures are used by management to assess the underlying performance of the business and for comparability with peers.

Principal transactions included DVA related to derivatives and structured liabilities measured at fair value. DVA (a) gains/(losses) were $\$(211)$ million and $\$ 1.9$ billion for the three months ended September 30, 2012 and 2011, and $\$(363)$ million and $\$ 2.0$ billion for the nine months ended September 30, 2012 and 2011, respectively.
All other income included lending- and deposit-related fees. In addition, IB manages traditional credit exposures
(b) related to Global Corporate Bank ("GCB") on behalf of IB and TSS, and IB and TSS share the economics related to the Firm's GCB clients. IB recognizes this sharing agreement also within all other income.
Total net revenue included tax-equivalent adjustments, predominantly due to income tax credits related to
(c) affordable housing and alternative energy investments as well as tax-exempt income from municipal bond
${ }^{(c)}$ investments of $\$ 492$ million and $\$ 440$ million for the three months ended September 30, 2012 and 2011, and $\$ 1.5$ billion and $\$ 1.4$ billion for the nine months ended September 30, 2012 and 2011, respectively.
Return on common equity excluding DVA, a non-GAAP financial measure, was $17 \%$ and $5 \%$ for the three months
(d)ended September 30, 2012 and 2011, and $18 \%$ and $16 \%$ for the nine months ended September 30, 2012 and 2011, respectively.
(e)

Compensation expense as a percentage of total net revenue excluding DVA, a non-GAAP financial measure, was $32 \%$ and $41 \%$ for the three months ended September 30, 2012 and 2011 respectively, and $34 \%$ and $39 \%$ for the nine months ended September 30, 2012 and 2011 respectively.

The following table provides IB's total net revenue by business. Three months ended September 30, 20122011 Change

Fixed income markets primarily includes revenue related to market-making across global fixed income markets, including foreign exchange, interest rate, credit and commodities markets. Included DVA gains/(losses) of \$(41) million and $\$ 529$ million for the three months ended September 30, 2012 and 2011, and $\$(152)$ million and $\$ 688$ million for the nine months ended September 30, 2012 and 2011, respectively.
Equity markets primarily includes revenue related to market-making across global equity products, including cash

## (b)

 instruments, derivatives, convertibles and Prime Services. Included DVA gains of $\$ 29$ million and $\$ 377$ million for the three months ended September 30, 2012 and 2011, and $\$ 99$ million and $\$ 383$ million for the nine months ended September 30, 2012 and 2011, respectively.Credit portfolio revenue includes net interest income, fees and loan sale activity, as well as gains or losses on securities received as part of a loan restructuring, for IB's credit portfolio. Credit portfolio revenue also includes the

## (c)

 results of risk management related to the Firm's lending and derivative activities. Included DVA gains/(losses) of $\$(199)$ million and $\$ 979$ million for the three months ended September 30, 2012 and 2011, and $\$(310)$ million and $\$ 933$ million for the nine months ended September 30, 2012 and 2011, respectively. See pages 72-81 of the Credit Risk Management section of this Form 10-Q for further discussion.(d) IB manages traditional credit exposures related to GCB on behalf of IB and TSS, and IB and TSS share the ${ }^{(d)}$ economics related to the Firm's GCB clients. IB recognizes this sharing agreement also within Credit Portfolio. Quarterly results
Net income was $\$ 1.6$ billion, down $4 \%$ from the prior year. These results reflected higher noninterest expense and lower net revenue, largely offset by a benefit from the provision for credit losses compared with a provision for credit losses in the prior year.
Net revenue was $\$ 6.3$ billion, compared with $\$ 6.4$ billion in the prior year. Net revenue included a $\$ 211$ million loss from DVA on certain structured and derivative liabilities resulting from the tightening of the Firm's credit spreads compared with a gain of $\$ 1.9$ billion in the prior year. Excluding the impact of DVA, net income was $\$ 1.7$ billion, up $\$ 1.2$ billion from the prior year, and net revenue was $\$ 6.5$ billion, up $\$ 2.0$ billion from the prior year.
Investment banking fees were $\$ 1.4$ billion (up $38 \%$ ), which consisted of debt underwriting fees of $\$ 805$ million (up $62 \%$ ), equity underwriting fees of $\$ 235$ million (up $32 \%$ ), and advisory fees of $\$ 389$ million (up $7 \%$ ). Combined Fixed Income and Equity Markets revenue was $\$ 4.8$ billion, flat compared with the prior year. The portion of the synthetic credit portfolio transferred from CIO in Corporate to IB on July 2, 2012, experienced a modest loss, which was included in Fixed Income Markets revenue. Credit Portfolio reported net revenue of $\$ 90$ million.
Excluding the impact of DVA, Fixed Income and Equity Markets combined revenue was $\$ 4.8$ billion, up $24 \%$ from the prior year, driven by solid client revenue and broad-based strength across the Fixed Income businesses. Excluding the impact of DVA, Credit Portfolio net revenue was $\$ 289$ million, driven by net interest income on retained
loans and fees on lending-related commitments.
The provision for credit losses was a benefit of $\$ 48$ million, compared with a provision for credit losses in the prior year of $\$ 54$ million. The ratio of the allowance for loan losses to end-of-period loans retained was $2.06 \%$, compared with $2.30 \%$ in the prior year. Excluding the impact of the consolidation of Firm-administered multi-seller conduits the

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

ratio of the allowance for loan losses to end-of-period loans retained was $3.29 \%$, compared with $3.60 \%$ in the prior year.
Noninterest expense was $\$ 3.9$ billion, up $3 \%$ from the prior year, driven by higher compensation expense, partially offset by lower noncompensation expense. The compensation ratio for the current quarter was $32 \%$, excluding the impact of DVA.
Year-to-date results
Net income was $\$ 5.2$ billion, down $15 \%$ from the prior year, reflecting lower net revenue, predominantly offset by lower noninterest expense, and a lower net benefit for credit losses compared to the prior year.
Net revenue was $\$ 20.4$ billion, compared with $\$ 21.9$ billion in the prior year. Investment banking fees were $\$ 4.0$ billion (down $15 \%$ ), consisting of debt underwriting fees of $\$ 2.3$ billion (down $3 \%$ ), advisory fees of $\$ 1.0$ billion (down $26 \%$ ), and equity underwriting fees of $\$ 761$ million (down $25 \%$ ). Combined Fixed Income and Equity Markets revenue was $\$ 15.7$ billion down $7 \%$ from the prior year. Credit Portfolio reported revenue of $\$ 622$ million. Net revenue included a $\$ 363$ million loss from DVA on certain structured and derivative liabilities resulting from the tightening of the

Firm's credit spreads; this was composed of a loss of $\$ 152$ million in Fixed Income Markets, a loss of $\$ 310$ million in Credit Portfolio, partially offset by a gain of $\$ 99$ million in Equity Markets. Excluding the impact of DVA, net revenue was $\$ 20.7$ billion and net income was $\$ 5.4$ billion.
Excluding the impact of DVA, Fixed Income and Equity Markets combined revenue was $\$ 15.7$ billion, approximately flat from prior year, reflecting solid client revenue. Excluding the impact of DVA, Credit Portfolio net revenue was $\$ 932$ million primarily reflecting net interest income on retained loans and fees on lending-related commitments.

The provision for credit losses was a benefit of $\$ 32$ million, compared with a benefit of $\$ 558$ million in the prior year. Net recoveries were $\$ 61$ million, compared with net recoveries of $\$ 38$ million in the prior year.
Noninterest expense was $\$ 12.4$ billion, down $5 \%$ from the prior year, driven primarily by lower compensation expense. The ratio of compensation to net revenue was $34 \%$, excluding DVA. Noncompensation expense remained flat compared to prior year.

(a)Loans retained includes credit portfolio loans, leveraged leases and other held-for-investment loans.
(b) Adjusted assets, a non-GAAP financial measure, equals total assets minus: (1) securities purchased under resale agreements and securities borrowed less securities sold, not yet purchased; (2) assets of consolidated variable interest entities ("VIEs"); (3) cash and securities segregated and on deposit for regulatory and other purposes; (4) goodwill and intangibles; and (5) securities received as collateral. The amount of adjusted assets is presented to assist the reader in comparing IB's asset and capital levels to other investment banks in the securities industry. Asset-to-equity leverage ratios are commonly used as one measure to assess a company's capital adequacy. IB believes an adjusted asset amount that excludes the assets discussed above, which were considered to have a low
risk profile, provides a more meaningful measure of balance sheet leverage in the securities industry.

| Total IB trading and credit portfolio $\mathrm{VaR}^{(\mathrm{c})}$ | \$ 122 |  | \$70 |  | 74 | \% | \$93 |  | \$77 |  | 21 | \% |

(a) Allowance for loan losses of $\$ 177$ million and $\$ 320$ million was held against these nonaccrual loans at September (a) 30, 2012 and 2011, respectively. Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first (b) quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.
(c) On July 2, 2012, CIO transferred its synthetic credit portfolio, other than a portion aggregating to approximately $\$ 12$ billion of notional, to IB. During the third quarter of 2012, the Firm applied a new value-at-risk ("VaR") model to calculate VaR for the synthetic credit portfolio. The Firm believes this new model, which was applied to both the

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

portion of the synthetic credit portfolio held by IB, as well as the portion that was retained by CIO , more appropriately captures the risk of the portfolio. This new VaR model resulted in a reduction to the average fixed income and average total trading and credit portfolio VaR of $\$ 26$ million and $\$ 28$ million, respectively, for the three months ended September 30, 2012.
(d) Average VaR and period-end VaR was less than the sum of the VaR of the components described above, due to portfolio diversification. The diversification effect reflects the fact that the risks were not perfectly correlated. Trading VaR includes substantially all market-making and client-driven activities as well as certain risk management activities in IB, including the credit spread sensitivities of certain mortgage products and syndicated (e) lending facilities that the Firm intends to distribute; however, particular risk parameters of certain products are not fully captured, for example, correlation risk. Trading VaR does not include the DVA on derivative and structured liabilities to reflect the credit quality of the Firm. See VaR discussion on pages 96-99 and the DVA sensitivity table on page 100 of this Form 10-Q for further details.
Credit portfolio VaR includes the derivative credit valuation adjustments ("CVA"), hedges of the CVA and the fair
(f) value of hedges of the retained loan portfolio, which are all reported in principal transactions revenue. This VaR does not include the retained loan portfolio, which is not reported at fair value.

deposit intangibles ${ }^{(a)}$
RFS uses the overhead ratio (excluding the amortization of core deposit intangibles ("CDI")), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation would result in a higher overhead ratio in the earlier years and a lower overhead ratio in
(a) later years; this method would therefore result in an improving overhead ratio over time, all things remaining equal.

This non-GAAP ratio excluded Consumer \& Business Banking's CDI amortization expense related to prior business combination transactions of $\$ 51$ million and $\$ 60$ million for the three months ended September 30, 2012 and 2011, respectively, and $\$ 152$ million and $\$ 180$ million for the nine months ended September 30, 2012 and 2011, respectively.
Quarterly results
Retail Financial Services reported net income of $\$ 1.4$ billion, compared with $\$ 1.2$ billion in the prior year.
Net revenue was $\$ 8.0$ billion, an increase of $\$ 478$ million, or $6 \%$, compared with the prior year. Net interest income was $\$ 3.9$ billion, down $\$ 190$ million, or $5 \%$, driven by lower deposit margins and lower loan balances due to portfolio runoff, largely offset by higher deposit balances. Noninterest revenue was $\$ 4.1$ billion, an increase of $\$ 668$ million, or $19 \%$, driven by higher mortgage fees and related income, partially offset by lower debit card revenue.
The provision for credit losses was $\$ 631$ million, compared with $\$ 1.0$ billion in the prior year. The current-quarter provision reflected a $\$ 900$ million reduction in the allowance for loan losses. Current-quarter total net charge-offs were $\$ 1.5$ billion, including $\$ 825$ million of incremental charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs during the quarter would have been $\$ 706$ million compared with $\$ 1.0$ billion in the prior year. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 82-92
of this Form 10-Q.
Noninterest expense was $\$ 5.0$ billion, an increase of $\$ 474$ million, or $10 \%$, from the prior year.
Year-to-date results
Retail Financial Services reported net income of $\$ 5.4$ billion, compared with net income of $\$ 1.1$ billion in the prior year.
Net revenue was $\$ 23.6$ billion, an increase of $\$ 3.5$ billion, or $17 \%$, compared with the prior year. Net interest income was $\$ 11.7$ billion, down $\$ 477$ million, or $4 \%$, driven by lower deposit margins and lower loan balances due to portfolio runoff, largely offset by higher deposit balances. Noninterest revenue was $\$ 11.9$ billion, an increase of $\$ 3.9$ billion, driven by higher mortgage fees and related income, partially offset by lower debit card revenue.
The provision for credit losses was a benefit of $\$ 20$ million compared with a provision expense of $\$ 3.2$ billion in the prior year. The current-year provision reflected a $\$ 3.3$ billion reduction in the allowance for loan losses due to improved mortgage delinquency trends. Current-year total net charge-offs were $\$ 3.2$ billion, including $\$ 825$ million of incremental charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs during the year

24
would have been $\$ 2.4$ billion compared with $\$ 3.3$ billion in the prior year. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 82-92 of this Form 10-Q.

Noninterest expense was $\$ 14.8$ billion, flat from the prior year.

| Nonaccrual loans to total loans excluding PCI loans ${ }^{(\mathrm{b})(\mathrm{e})}$ | 5.40 | 4.25 | 5.40 | 4.25 |

Net charge-offs and net charge-off rates for the three and nine months ended September 30, 2012, included $\$ 825$ (a) million of incremental charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs for the third quarter of 2012 would have been $\$ 706$ million and the net charge-off rate for the same period excluding these incremental charge-offs and purchased credit-impaired loans would have been $1.77 \%$.
(b) Excludes PCI loans. Because the Firm is recognizing interest income on each pool of PCI loans, they are all considered to be performing.
(c) Certain of these loans are classified as trading assets on the Consolidated Balance Sheets. At September 30, 2012 and 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $\$ 11.0$ billion and $\$ 9.5$ billion, respectively, that are 90 or more days past due; and (2) real estate owned
(d) insured by U.S. government agencies of $\$ 1.5$ billion and $\$ 2.4$ billion, respectively. These amounts were excluded from nonaccrual loans as reimbursement of insured amounts is proceeding normally. For further discussion, see Note 13 on pages $154-175$ of this Form 10-Q, which summarizes loan delinquency information.
At September 30, 2012, included $\$ 1.7$ billion of Chapter 7 loans as well as $\$ 1.3$ billion of performing junior liens
(e)that are subordinate to senior liens that are 90 days or more past due. See Consumer Credit Portfolio on pages 82-92 of this Form $10-\mathrm{Q}$ for further details.
(f)Loans held-for-sale and loans accounted for at fair value were excluded when calculating the net charge-off rate. An allowance for loan losses of $\$ 5.7$ billion and $\$ 4.9$ billion was recorded for PCI loans at September 30, 2012 and g) 2011, respectively; these amounts were also excluded from the applicable ratios.

Consumer \& Business Banking uses the overhead ratio (excluding the amortization of CDI), a non-GAAP financial
(a) measure, to evaluate the underlying expense trends of the business. See footnote (a) to the selected income statement data table on page 24 of this Form 10-Q for further details.
Quarterly results
Consumer \& Business Banking reported net income of $\$ 785$ million, a decrease of $\$ 238$ million, or $23 \%$, compared with the prior year.
Net revenue was $\$ 4.3$ billion, down $7 \%$ from the prior year. Net interest income was $\$ 2.7$ billion, down $2 \%$ compared with the prior year, driven by the impact of lower deposit margin, predominantly offset by higher deposit balances. Noninterest revenue was $\$ 1.7$ billion, a decrease of $15 \%$, driven by lower debit card revenue, reflecting the impact of the Durbin Amendment.
The provision for credit losses was $\$ 107$ million, compared with $\$ 126$ million in the prior year. Net charge-offs were $\$ 107$ million, compared with $\$ 126$ million in the prior year.
Noninterest expense was $\$ 2.9$ billion, up $3 \%$ from the prior year, driven by investments in sales force and new branch builds.

Year-to-date results
Consumer \& Business Banking reported net income of $\$ 2.5$ billion, a decrease of $\$ 509$ million, or $17 \%$, compared with the prior year.
Net revenue was $\$ 12.9$ billion, down $6 \%$ from the prior year. Net interest income was $\$ 8.0$ billion, relatively flat compared with the prior year, driven by the impact of lower deposit margins, predominantly offset by higher deposit balances. Noninterest revenue was $\$ 4.9$ billion, a decrease of $13 \%$, driven by lower debit card revenue, reflecting the impact of the Durbin Amendment.
The provision for credit losses was $\$ 201$ million, compared with $\$ 287$ million in the prior year. Net charge-offs were $\$ 301$ million, compared with $\$ 362$ million in the prior year.
Noninterest expense was $\$ 8.5$ billion, up $2 \%$ from the prior year, due to investments in sales force and new branch builds.

Represents the aggregate impact of changes in model inputs and assumptions such as costs to service, home prices, (a) mortgage spreads, ancillary income, and assumptions used to derive prepayment speeds, as well as changes to the valuation models themselves.
Quarterly results
Mortgage Production and Servicing reported net income of $\$ 563$ million, an increase of $\$ 358$ million compared with the prior year.
Mortgage production reported record pretax income of $\$ 1.1$ billion, an increase of $\$ 594$ million from the prior year. Mortgage production-related revenue, excluding repurchase losses, was a record $\$ 1.8$ billion, an increase of $\$ 475$ million, or $36 \%$, from the prior year. These results reflected wider margins, driven by favorable market conditions, and higher volumes due to historically low interest rates and the Home Affordable Refinance Programs ("HARP"). Production expense was $\$ 678$ million, an increase of $\$ 182$ million, or $37 \%$, reflecting higher volumes. Repurchase losses were $\$ 13$ million, compared with $\$ 314$ million in the prior year. The current-quarter reflected a $\$ 218$ million reduction in the repurchase liability. For further information, see Mortgage repurchase liability on pages 55-58 of this Form 10-Q.
Mortgage servicing reported pretax loss of $\$ 159$ million, compared with a pretax loss of $\$ 153$ million in the prior year. Mortgage servicing revenue, including mortgage servicing rights ("MSR") asset amortization, was $\$ 754$ million, an increase of $\$ 57$ million, or $8 \%$, from the prior year due to lower MSR asset amortization, largely offset by lower servicing-related revenue. MSR risk management income was $\$ 150$ million, compared with $\$ 16$ million in the prior year. Servicing expense was $\$ 1.1$ billion, an increase of $\$ 197$ million, or $23 \%$, from the prior year. The current quarter includes approximately $\$ 100$ million of incremental expense for foreclosure-related matters. See Note 16 on pages 184-187 of this Form 10-Q for further information regarding changes in value of the MSR asset and related hedges.

Year-to-date results
Mortgage Production and Servicing reported net income of $\$ 1.6$ billion, compared with a net loss of $\$ 1.6$ billion in the prior year.

Mortgage production reported pretax income of $\$ 2.8$ billion, an increase of $\$ 1.9$ billion from the prior year. Mortgage production-related revenue, excluding repurchase losses, was $\$ 5.0$ billion, an increase of $\$ 1.8$ billion, or $57 \%$, from the prior year, reflecting wider margins and higher volumes, due to historically low interest rates and the expansion of HARP. Production expense was $\$ 1.9$ billion, an increase of $\$ 494$ million, or $36 \%$, reflecting higher volumes.
Repurchase losses were $\$ 325$ million, compared with $\$ 957$ million in the prior year. For further information, see Mortgage repurchase liability on pages 55-58 of this Form 10-Q.
Mortgage servicing reported a pretax loss of $\$ 254$ million, compared with a pretax loss of $\$ 3.2$ billion in the prior year. Mortgage servicing revenue, including MSR amortization, was $\$ 2.3$ billion, an increase of $\$ 435$ million, or 23\%, from the prior year. This increase reflected reduced amortization as a result of a lower MSR asset value. Servicing expense was $\$ 3.2$ billion, a decrease of $\$ 753$ million, or $19 \%$, from the prior year. The current-year servicing expense included approximately $\$ 300$ million for foreclosure-related matters compared with approximately $\$ 1.7$ billion in the prior year. MSR risk management income was $\$ 574$ million, compared with a loss of $\$ 1.2$ billion in the prior year. The prior year MSR risk management loss included a $\$ 1.1$ billion decrease in the fair value of the MSR asset for the estimated impact of increased servicing costs. See Note 16 on pages 184-187 of this Form 10-Q for further information regarding changes in value of the MSR asset and related hedges.

At September 30, 2012 and 2011, excluded mortgage loans insured by U.S. government agencies of $\$ 12.1$ billion (a) and $\$ 10.5$ billion, respectively, that are 30 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally. For further discussion, see Note 13 on pages 154-175 of this Form 10-Q which summarizes loan delinquency information.
At September 30, 2012 and 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $\$ 11.0$ billion and $\$ 9.5$ billion, respectively, that are 90 or more days past due; and (2) real estate owned
(b) insured by U.S. government agencies of $\$ 1.5$ billion and $\$ 2.4$ billion, respectively. These amounts were excluded from nonaccrual loans as reimbursement of insured amounts is proceeding normally. For further discussion, see Note 13 on pages 154-175 of this Form 10-Q which summarizes loan delinquency information. Includes rural housing loans sourced through brokers and correspondents, which are underwritten and closed with (c) pre-funding loan approval from the U.S. Department of Agriculture Rural Development, which acts as the guarantor in the transaction.
(d) Represents the ratio of MSR net carrying value (ending) to third-party mortgage loans serviced (ending) divided by the ratio of annualized loan servicing-related revenue to third-party mortgage loans serviced (average).

Quarterly results
Real Estate Portfolios reported net income of $\$ 60$ million, compared with a net loss of $\$ 67$ million in the prior year.
The increase was driven by a lower provision for credit losses.
Net revenue was $\$ 1.0$ billion, a decrease of $\$ 145$ million, or $13 \%$, from the prior year. The decrease was driven by a decline in net interest income, resulting from lower loan balances due to portfolio runoff.
The provision for credit losses was $\$ 520$ million, compared with $\$ 899$ million in the prior year. The current-quarter provision reflected a $\$ 900$ million reduction in the allowance for loan losses due to improved delinquency trends and lower estimated losses, primarily in the home equity portfolio. Net charge-offs totaled $\$ 1.4$ billion, including $\$ 825$ million of incremental charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs during the quarter would have been $\$ 595$ million, compared with $\$ 899$ million in the prior year. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 82-92 of this Form 10-Q.
Nonaccrual loans were $\$ 8.1$ billion, compared with $\$ 6.3$ billion in the prior year. Excluding the impact of certain regulatory guidance, nonaccrual loans would have been $\$ 5.1$ billion in the third quarter, down from $\$ 6.3$ billion in the prior year. For more information on the reporting of Chapter 7 loans and performing junior liens that are subordinate to senior liens that are 90 days or more past due as nonaccrual, see Consumer Credit Portfolio on pages 82-92 of this Form 10-Q.
Noninterest expense was $\$ 386$ million, up by $\$ 23$ million, or $6 \%$, from the prior year due to an increase in servicing costs.

Year-to-date results
Real Estate Portfolios reported net income of $\$ 1.3$ billion, compared with a net loss of $\$ 295$ million in the prior year. The increase was largely driven by a benefit from the provision for credit losses, reflecting an improvement in credit trends.
Net revenue was $\$ 3.1$ billion, down $\$ 405$ million, or $11 \%$, from the prior year. The decrease was driven by a decline in net interest income, resulting from lower loan balances due to portfolio runoff.
The provision for credit losses was a benefit of $\$ 226$ million, compared with a provision expense of $\$ 2.9$ billion in the prior year. The current-year provision benefit reflected a $\$ 3.15$ billion reduction in the allowance for loan losses due to improved delinquency trends. Current-year net charge-offs totaled $\$ 2.9$ billion, including $\$ 825$ million of incremental charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs during the period would have been $\$ 2.1$ billion compared with $\$ 2.9$ billion in the prior year. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 82-92 of this Form 10-Q.
Noninterest expense was $\$ 1.2$ billion, up by $\$ 128$ million, or $12 \%$, from the prior year due to an increase in servicing costs.
PCI Loans

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Included within Real Estate Portfolios are PCI loans that the Firm acquired in the Washington Mutual transaction. For PCI loans, the excess of the undiscounted gross cash flows expected to be collected over the carrying value of the loans (the "accretable yield") is accreted into interest income at a level rate of return over the expected life of the loans. The net spread between the PCI loans and the related liabilities are expected to be relatively constant over time, except for any basis risk or other residual interest rate risk that remains and for certain changes in the accretable yield percentage (e.g., from extended loan liquidation periods and from prepayments). As of September 30, 2012, the remaining weighted-average life of the PCI loan portfolio is expected to be 8.1 years. The loan balances are expected to
decline more rapidly over the next three to four years as the most troubled loans are liquidated, and more slowly thereafter as the remaining troubled borrowers have limited refinancing opportunities. Similarly, default and servicing expense are expected to be higher in the earlier years and decline over time as liquidations slow down.
To date the impact of the PCI loans on Real Estate Portfolios' net income has been negative. This is largely due
to the provision for loan losses recognized subsequent to its acquisition, and the higher level of default and servicing expense associated with the portfolio. Over time, the Firm expects that this portfolio will contribute positively to net income.
For further information, see Note 13, PCI loans, on pages 172-173 of this Form 10-Q.

Net charge-offs and net charge-off rates for the three and nine months ended September 30, 2012 included $\$ 825$
(a) million of incremental charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 82-92 of this Form $10-\mathrm{Q}$ for further details.
(b)The delinquency rate for PCI loans was $20.65 \%$ and $24.44 \%$ at September 30, 2012 and 2011, respectively.
(c) Excludes PCI loans. Because the Firm is recognizing interest income on each pool of PCI loans, they are all
${ }^{(c)}$ considered to be performing. At September 30, 2012, included $\$ 1.7$ billion of Chapter 7 loans as well as $\$ 1.3$ billion of performing junior liens
(d) that are subordinate to senior liens that are 90 days or more past due. See Consumer Credit Portfolio on pages 82-92 of this Form $10-\mathrm{Q}$ for further details.

## CARD SERVICES \& AUTO

For a discussion of the business profile of Card, see pages 94-97 of JPMorgan Chase's 2011 Annual Report and the Introduction on page 5 of this Form 10-Q.

| Overhead ratio | 41 |  | 44 |  |  |  | 43 |  | 42 |  |  |

Quarterly results
Net income was $\$ 954$ million, an increase of $\$ 105$ million, or $12 \%$, compared with the prior year. The increase was driven by lower noninterest expense and lower provision for credit losses, partially offset by lower net revenue. Net revenue was $\$ 4.7$ billion, a decrease of $\$ 52$ million, or $1 \%$, from the prior year. Net interest income was $\$ 3.4$ billion, down $\$ 78$ million, or $2 \%$, from the prior year. The decrease was driven by narrower loan spreads, lower average loan balances, and lower late fee income. These decreases were largely offset by lower revenue reversals associated with lower net charge-offs. Noninterest revenue was $\$ 1.3$ billion, an increase of $\$ 26$ million, or $2 \%$, from the prior year. The increase was driven by higher net interchange and merchant servicing revenue, largely offset by higher amortization of direct loan origination costs.
The provision for credit losses was $\$ 1.2$ billion, compared with $\$ 1.3$ billion in the prior year. The current-quarter provision reflected lower net charge-offs and a small reduction in the allowance for loan losses. The prior-year provision included a $\$ 370$ million reduction in the allowance for loan losses. The Credit Card net charge-off rate ${ }^{1}$ was $3.57 \%$, down from $4.70 \%$ in the prior year; and the $30+$ day delinquency rate ${ }^{1}$ was $2.15 \%$, down from $2.89 \%$ in the prior year. The Auto net charge-off rate was $0.74 \%$, up from $0.36 \%$ in the prior year, including $\$ 55$ million of incremental net charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, Auto net charge-
offs would have been $\$ 35$ million for the current quarter, and the net charge-off rate would have been $0.29 \%$. Noninterest expense was $\$ 1.9$ billion, a decrease of $\$ 195$ million, or $9 \%$, from the prior year, driven by lower marketing expense.
Year-to-date results
Net income was $\$ 3.2$ billion, a decrease of $\$ 326$ million, or $9 \%$, compared with the prior year. The decrease was driven by lower net revenue and higher provision for credit losses.
Net revenue was $\$ 14.0$ billion, a decrease of $\$ 365$ million, or $3 \%$, from the prior year. Net interest income was $\$ 10.2$ billion, down $\$ 535$ million, or $5 \%$, from the prior year. The decrease was driven by narrower loan spreads and lower
average loan balances, partially offset by lower revenue reversals associated with lower net charge-offs. Noninterest revenue was $\$ 3.8$ billion, an increase of $\$ 170$ million, or $5 \%$, from the prior year. The increase was driven by higher net interchange income and lower partner revenue-sharing, reflecting the impact of the Kohl's portfolio sale on April 1, 2011, as well as higher merchant servicing revenue, partially offset by higher amortization of direct loan origination costs.
The provision for credit losses was $\$ 2.7$ billion, compared with $\$ 2.6$ billion in the prior year. The current-year provision reflected lower net charge-offs and a $\$ 1.6$ billion reduction in the allowance for loan losses due to lower estimated losses. The prior-year provision included a $\$ 3.4$
billion reduction in the allowance for loan losses. The Credit Card net charge-off rate ${ }^{1}$ was $4.09 \%$, down from 5.78\% in the prior year. The net charge-off rate ${ }^{1}$ would have been $3.99 \%$ absent a policy change on restructured loans that do not comply with their modified payment terms. The Auto net charge-off rate was $0.40 \%$, up from $0.31 \%$ in the prior year. Excluding the $\$ 55$ million of incremental net charge-offs of Chapter 7 loans, the Auto net charge-off rate would have been $0.25 \%$.

Noninterest expense was $\$ 6.0$ billion, flat compared with the prior year, driven by expense related to a non-core product that is being exited, predominantly offset by lower marketing expense.
${ }^{1}$ The net charge-off and 30+ day delinquency rates presented for credit card loans, which include loans held-for-sale, are non-GAAP financial measures. Management uses this as an additional measure to assess the performance of the portfolio.

Net charge-offs and net charge-off rates for the three and nine months ended September 30, 2012, included \$55
(a) million of incremental charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs for ${ }^{(a)}$ the third quarter of 2012 would have been $\$ 35$ million, and the net charge-off rate for the same period would have been $0.29 \%$. Nonperforming assets at September 30, 2012, included $\$ 65$ million of Chapter 7 loans. Average credit card loans included loans held-for-sale of $\$ 109$ million and $\$ 1$ million for the three months ended
(b) September 30, 2012 and 2011, respectively, and $\$ 569$ million and $\$ 1.1$ billion for the nine months ended

September 30, 2012 and 2011, respectively. These amounts were excluded when calculating the net charge-off rate.
Period-end credit card loans included loans held-for-sale of $\$ 106$ million and $\$ 94$ million at September 30, 2012
(c) and 2011, respectively. No allowance for loan losses was recorded for these loans. These amounts were excluded when calculating delinquency rates and the allowance for loan losses to period-end loans.
Excluded student loans insured by U.S. government agencies under the Federal Family Education Loan Program
(d) ("FFELP") of $\$ 910$ million and $\$ 995$ million at September 30, 2012 and 2011, respectively, that are 30 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

Nonperforming assets excluded student loans insured by U.S. government agencies under the FFELP of $\$ 536$ (e) million and $\$ 567$ million at September 30, 2012 and 2011, respectively, that are 90 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

## COMMERCIAL BANKING

For a discussion of the business profile of CB, see pages 98-100 of JPMorgan Chase's 2011 Annual Report and the Introduction on page 5 of this Form 10-Q.
Selected income statement data

(a) CB client revenue from investment banking products and commercial card transactions is included in all other
income.
(b)Total net revenue included tax-equivalent adjustments from income tax credits related to equity investments in
designated community development entities that provide loans to qualified businesses in low-income communities,
as well as tax-exempt income from municipal bond activity, totaling $\$ 115$ million and $\$ 90$ million for the three
months ended September 30, 2012 and 2011, respectively, and $\$ 308$ million and $\$ 222$ million for the nine months
ended September 30, 2012 and 2011, respectively.
Effective July 1, 2012, certain Treasury Services product sales staff supporting CB were transferred from TSS to (c) CB . As a result, compensation expense for these sales staff is now reflected in CB's compensation expense rather than as an allocation from TSS in noncompensation expense. CB's and TSS's previously reported headcount, compensation expense and noncompensation expense have been revised to reflect this transfer.
(d) Represents the total revenue related to investment banking products sold to CB clients.

38

Quarterly results
Net income was $\$ 690$ million, an increase of $\$ 119$ million, or $21 \%$, from the prior year. The improvement was driven by an increase in net revenue and lower provision for credit losses, partially offset by higher expense.
Record net revenue was $\$ 1.7$ billion, an increase of $\$ 144$ million, or $9 \%$, from the prior year. Net interest income was $\$ 1.1$ billion, up by $\$ 82$ million, or $8 \%$, driven by growth in loan and liability balances, partially offset by spread compression on loan products. Noninterest revenue was $\$ 586$ million, up $\$ 62$ million, or $12 \%$, compared with the prior year, primarily driven by higher investment banking revenue.
Revenue from Middle Market Banking was $\$ 838$ million, an increase of $\$ 47$ million, or $6 \%$, from the prior year. Revenue from Commercial Term Lending was $\$ 298$ million, flat compared with the prior year. Revenue from Corporate Client Banking was $\$ 370$ million, an increase of $\$ 64$ million, or $21 \%$. Revenue from Real Estate Banking was $\$ 106$ million, an increase of $\$ 2$ million, or $2 \%$.
The provision for credit losses was a benefit of $\$ 16$ million, compared with provision for credit losses of $\$ 67$ million in the prior year. There were net recoveries of $\$ 18$ million in the current quarter ( $0.06 \%$ net recovery rate), compared with net charge-offs of $\$ 17$ million ( $0.06 \%$ net charge-off rate) in the prior year. The allowance for loan losses to period-end loans retained was $2.15 \%$, down from $2.50 \%$ in the prior year. Nonaccrual loans were $\$ 876$ million, down by $\$ 567$ million, or $39 \%$, from the prior year, due to commercial real estate repayments and loan sales.
Noninterest expense was $\$ 601$ million, an increase of $\$ 28$ million, or $5 \%$, from the prior year, reflecting higher headcount-related expense.

Year-to-date results
Net income was $\$ 2.0$ billion, an increase of $\$ 230$ million, or $13 \%$, from the prior year. The improvement was driven by an increase in net revenue and a decrease in the provision for credit losses, partially offset by higher expense. Net revenue was a record of $\$ 5.1$ billion, an increase of $\$ 349$ million, or $7 \%$, from the prior year. Net interest income was $\$ 3.4$ billion, up by $\$ 268$ million, or $9 \%$, driven by growth in loan and liability balances, partially offset by spread compression on loan and liability products. Noninterest revenue was $\$ 1.7$ billion, up by $\$ 81$ million, or 5\%, compared with the prior year, predominantly driven by increased community development investment-related revenue and other fee income.
Revenue from Middle Market Banking was $\$ 2.5$ billion, an increase of $\$ 161$ million, or $7 \%$, from the prior year. Revenue from Commercial Term Lending was $\$ 882$ million, an increase of $\$ 13$ million, or $1 \%$. Revenue from Corporate Client Banking was $\$ 1.1$ billion, an increase of $\$ 115$ million, or $12 \%$. Revenue from Real Estate Banking was $\$ 325$ million, an increase of $\$ 24$ million, or $8 \%$.
The provision for credit losses was $\$ 44$ million, compared with $\$ 168$ million in the prior year. Net recoveries were $\$ 15$ million ( $0.02 \%$ net recovery rate) compared with net charge-offs of $\$ 88$ million ( $0.12 \%$ net charge-off rate) in the prior year.
Noninterest expense was $\$ 1.8$ billion, an increase of $\$ 91$ million, or $5 \%$ from the prior year, primarily reflecting higher headcount-related expense.

Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

(a) Effective July 1, 2012, certain Treasury Services product sales staff supporting CB were transferred from TSS to
${ }^{(a)} \mathrm{CB}$. For further discussion of this transfer, see footnote (c) on page 38 of this Form 10-Q.
(b) Allowance for loan losses of $\$ 148$ million and $\$ 257$ million was held against nonaccrual loans retained at ${ }^{(b)}$ September 30, 2012 and 2011, respectively.
(c)Loans held-for-sale and loans at fair value were excluded when calculating the net (recovery)/charge-off rate.

## TREASURY \& SECURITIES SERVICES

IB manages traditional credit exposures related to GCB on behalf of IB and TSS, and IB and TSS share the
(a) economics related to the Firm's GCB clients. Included within this allocation are net revenue, provision for credit losses and expenses. IB recognizes this credit allocation as a component of all other income.
(b) Effective July 1, 2012, certain Treasury Services product sales staff supporting CB were transferred from TSS to
${ }^{(b)} \mathrm{CB}$. For further discussion of this transfer, see footnote (c) on page 38 of this Form 10-Q.
41

Quarterly results
Net income was $\$ 420$ million, an increase of $\$ 115$ million, or $38 \%$, from the prior year.
Net revenue was $\$ 2.0$ billion, an increase of $\$ 121$ million, or $6 \%$, from the prior year. Treasury Services ("TS") net revenue was $\$ 1.1$ billion, an increase of $\$ 95$ million, or $10 \%$. The increase was driven by higher deposit balances and higher trade finance loan volumes. Worldwide Securities Services ("WSS") net revenue was $\$ 1.0$ billion, an increase of $\$ 26$ million, or 3\%, compared with the prior year driven by higher deposit balances.
TSS generated firmwide net revenue of $\$ 2.7$ billion, including $\$ 1.7$ billion by TS; of that amount, $\$ 1.1$ billion was recorded in TS, $\$ 609$ million in Commercial Banking and $\$ 67$ million in other lines of business. The remaining $\$ 1.0$ billion of firmwide net revenue was recorded in WSS.
Noninterest expense was $\$ 1.4$ billion, a decrease of $\$ 27$ million, or $2 \%$, compared with the prior year.
Year-to-date results
Net income was $\$ 1.2$ billion, an increase of $\$ 280$ million, or $29 \%$, from the prior year.
Net revenue was $\$ 6.2$ billion, an increase of $\$ 515$ million, or $9 \%$, from the prior year. TS revenue was $\$ 3.2$ billion, an increase of $\$ 400$ million, or $14 \%$. The increase was primarily driven by higher deposit balances and higher trade finance loan volumes. WSS net revenue was $\$ 3.0$ billion, an increase of $\$ 115$ million, or $4 \%$ compared with the prior year, driven by higher deposit balances.
TSS generated firmwide net revenue of $\$ 8.2$ billion, including $\$ 5.2$ billion by TS; of that amount, $\$ 3.2$ billion was recorded in TS, $\$ 1.8$ billion in Commercial Banking, and $\$ 204$ million in other lines of business. The remaining $\$ 3.0$ billion of firmwide net revenue was recorded in WSS.
Noninterest expense was $\$ 4.4$ billion, an increase of $\$ 107$ million, or $2 \%$, from the prior year.

TSS firmwide metrics include revenue recorded in CB, Consumer \& Business Banking and AM lines of business
(a) and net TSS FX revenue (it excludes TSS FX revenue recorded in IB). In order to capture the firmwide impact of
${ }^{(a)}$ TS and TSS products and revenue, management reviews firmwide metrics in assessing financial performance of TSS. Firmwide metrics are necessary in order to understand the aggregate TSS business. IB executes FX transactions on behalf of TSS customers under revenue sharing agreements. FX revenue generated
(b) by TSS customers is recorded in TSS and IB. TSS total FX revenue reported above is the gross (pre-split) FX revenue generated by TSS customers. However, TSS firmwide revenue includes only the FX revenue booked in TSS, i.e., it does not include the portion of TSS FX revenue recorded in IB.
(c) Firmwide liability balances include liability balances recorded in CB.
(d) International electronic funds transfer includes non-U.S. dollar Automated Clearing House ("ACH") and clearing
(d) volume.
(e) Wholesale cards issued and outstanding include stored value, prepaid and government electronic benefit card products.

## ASSET MANAGEMENT

For a discussion of the business profile of AM, see pages 104-106 of JPMorgan Chase's 2011 Annual Report and the Introduction on page 5 of this Form 10-Q.

Quarterly results
Net income was $\$ 443$ million, an increase of $\$ 58$ million, or $15 \%$, from the prior year. These results reflected higher net revenue, lower noninterest expense and lower provision for credit losses.
Net revenue was $\$ 2.5$ billion, an increase of $\$ 143$ million, or $6 \%$, from the prior year. Noninterest revenue was $\$ 1.9$ billion, up $\$ 9$ million, flat compared with the prior year, as higher valuations of seed capital investments and net product inflows were offset by the absence of a prior-year gain on the sale of an investment and lower loan-related revenue. Net interest income was $\$ 552$ million, up by $\$ 134$ million, or $32 \%$, primarily due to higher deposit and loan balances.
Revenue from Private Banking was $\$ 1.4$ billion, up $5 \%$ from the prior year. Revenue from Institutional was $\$ 563$ million, up $18 \%$. Revenue from Retail was $\$ 531$ million, down $2 \%$.
The provision for credit losses was $\$ 14$ million, compared with $\$ 26$ million in the prior year.
Noninterest expense was $\$ 1.7$ billion, a decrease of $\$ 65$ million, or $4 \%$, from the prior year, due to the absence of non-client-related litigation expense, partially offset by higher performance-based compensation.
Year-to-date results
Net income was $\$ 1.2$ billion, a decrease of $\$ 70$ million, or $5 \%$, from the prior year. These results reflected lower net revenue and a higher provision for credit losses, offset by lower noninterest expense.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Net revenue was $\$ 7.2$ billion, a decrease of $\$ 66$ million, or $1 \%$, from the prior year. Noninterest revenue was $\$ 5.6$ billion, down by $\$ 411$ million, or $7 \%$, due to lower loan-related revenue, lower performance fees, the absence of a prior-year gain on the sale of an investment and the effect of lower market levels, partially offset by net product inflows. Net interest income was $\$ 1.5$ billion, up by $\$ 345$ million, or $29 \%$, due to higher deposit and loan balances. Revenue from Private Banking was $\$ 4.0$ billion, up $2 \%$ from the prior year. Revenue from Institutional was $\$ 1.7$ billion, down 3\%. Revenue from Retail was $\$ 1.6$ billion, down 5\%.

The provision for credit losses was $\$ 67$ million, compared with $\$ 43$ million in the prior year.
Noninterest expense was $\$ 5.2$ billion, a decrease of $\$ 89$ million, or $2 \%$, from the prior year, due to the absence of non-client-related litigation expense, partially offset by higher headcount-related expense and higher performance-based compensation.

Total net revenue included tax-equivalent adjustments, predominantly due to tax-exempt income from
(a) municipal bond investments of $\$ 109$ million and $\$ 73$ million for the three months ended September 30, 2012 and 2011, respectively, and $\$ 326$ million and $\$ 206$ million for the nine months ended September 30, 2012 and 2011, respectively.
Included litigation expense of $\$ 685$ million and $\$ 1.0$ billion for the three months ended September 30, 2012 and
(b) 2011, respectively, and $\$ 3.5$ billion and $\$ 2.6$ billion for the nine months ended September 30, 2012 and 2011, respectively.
Quarterly results
Net income was $\$ 221$ million, compared with a net loss of $\$ 645$ million in the prior year.

Private Equity reported a net loss of $\$ 89$ million, compared with a net loss of $\$ 347$ million in the prior year. Net revenue was a loss of $\$ 135$ million, compared with a loss of $\$ 546$ million in the prior year, due to lower net valuation losses on both private and public investments.
Treasury and CIO reported net income of $\$ 369$ million, compared with a net loss of $\$ 94$ million in the prior year. Net revenue was $\$ 713$ million, compared with net revenue of $\$ 102$ million in the prior year. The current-quarter revenue reflected $\$ 888$ million of pretax extinguishment
gains related to the redemption of trust preferred capital debt securities. The extinguishment gains were related to adjustments applied to the cost basis of the trust preferred capital debt securities during the period they were in a qualified hedge accounting relationship.
During the third quarter, CIO effectively closed out the index credit derivative positions that were retained following the transfer of the synthetic credit portfolio to IB on July 2, 2012. Principal transactions in CIO included $\$ 449$ million of losses on this portfolio reflecting credit spread tightening during the quarter. Net revenue also included securities gains of $\$ 459$ million from sales of AFS investment securities during the current quarter. Net interest income
was negative, reflecting the impact of lower portfolio yields and higher deposit balances across the Firm. Other Corporate reported a net loss of $\$ 59$ million, compared with a net loss of $\$ 204$ million in the prior year. The current quarter included pretax expense of $\$ 684$ million for additional litigation reserves, largely offset by other items, including tax adjustments. The prior year included pretax expense of $\$ 1.0$ billion for additional litigation reserves. Year-to-date results
Net loss was $\$ 2.6$ billion, compared with net income of $\$ 579$ million in the prior year.
Private Equity reported net income of $\$ 242$ million, compared with net income of $\$ 480$ million in the prior year. Net revenue of $\$ 529$ million, compared with $\$ 949$ million in the prior year, due to lower net valuation gains on private investments and lower gains on sales, partially offset by higher net valuation gains on public securities. Noninterest expense was $\$ 150$ million, down from $\$ 210$ million in the prior year.
Treasury and CIO reported a net loss of $\$ 1.9$ billion, compared with net income of $\$ 932$ million in the prior year. Net revenue was a loss of $\$ 3.0$ billion, compared with net revenue of $\$ 2.4$ billion in the prior year. The current year loss reflected $\$ 5.8$ billion of principal transactions losses for the sixth months ended June 30, 2012 and $\$ 449$ million
of principal transactions losses for the three months ended September 30, 2012, from the synthetic credit portfolio recorded in CIO. These losses were partially offset by securities gains of $\$ 1.9$ billion. The current-year revenue reflected $\$ 888$ million of pretax extinguishment gains related to the redemption of trust preferred capital debt securities. The extinguishment gains were related to adjustments applied to the cost basis of the trust preferred capital debt securities during the period they were in a qualified hedge accounting relationship. Net interest income was negative $\$ 295$ million, compared with $\$ 926$ million in the prior year, primarily reflecting the impact of lower portfolio yields and higher deposit balances across the Firm.
Other Corporate reported a net loss of $\$ 884$ million, compared with a net loss of $\$ 833$ million in the prior year. Noninterest revenue of $\$ 1.8$ billion was driven by a $\$ 1.1$ billion benefit from the Washington Mutual bankruptcy settlement and a $\$ 663$ million gain for the expected recovery on a Bear Stearns-related subordinated loan. Noninterest expense of $\$ 3.5$ billion was up $\$ 1.2$ billion compared with the prior year. The current year included pretax expense of $\$ 3.5$ billion for additional litigation reserves, largely for mortgage-related matters. The prior year included pretax expense of $\$ 2.6$ billion for additional litigation reserves.

## Treasury and CIO overview

Treasury and CIO are responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding, capital, interest rate and foreign exchange risks, and other risks. The risks managed by Treasury and CIO arise from the activities undertaken by the Firm's six major reportable business segments to serve their respective client bases, which generate both on- and off-balance sheet assets and liabilities.
Treasury is responsible for, among other functions, funds transfer pricing. Funds transfer pricing is used to transfer interest rate risk and foreign exchange risk of the Firm to Treasury and CIO and allocate interest income and expense to each business based on market rates. CIO, through its management of the investment portfolio, generates net interest income to pay the lines of business market rates. Any variance (whether positive or negative) between amounts generated by CIO through its investment portfolio activities and amounts paid to or received by the lines of business are retained by CIO, and are not reflected in line of business segment results. Treasury and CIO activities operate in support of the overall Firm.
CIO achieves the Firm's asset-liability management objectives generally by investing in high-quality securities that are managed for the longer-term as part of the Firm's AFS investment portfolio. Unrealized gains and losses on securities held in the AFS portfolio are recorded in other comprehensive income. For further information about
securities in the AFS portfolio, see Note 3 and Note 11 on pages 119-133 and 148-153, respectively, of this Form 10-Q. CIO also uses securities that are not classified within the AFS portfolio, as well as derivatives, to meet the Firm's asset-liability management objectives. Securities not classified within the AFS portfolio are recorded in trading assets and liabilities; realized and unrealized gains and losses on such securities are recorded in the principal transactions revenue line in the Consolidated Statements of Income. For further information about securities included in trading

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

assets and liabilities, see Note 3 on pages 119-133 of this Form 10-Q. Derivatives used by CIO are also classified as trading assets and liabilities. For further information on derivatives, including the classification of realized and unrealized gains and losses, see Note 5 on pages 136-144 of the Form 10-Q.
CIO's AFS portfolio consists of U.S. and non-U.S. government securities, agency and non-agency mortgage-backed securities, other asset-backed securities and corporate and municipal debt securities. At September 30, 2012, the total CIO AFS portfolio was approximately $\$ 338$ billion; the average credit rating of the securities comprising the AFS portfolio was AA+ (based upon external ratings where available and where not available, based primarily upon internal ratings which correspond to ratings as defined by S\&P and Moody's). See Note 11 on pages 148-153 of this Form 10-Q for further information on the details of the AFS portfolio.

For further information on liquidity and funding risk, see Liquidity Risk Management on pages 66-72 of this Form $10-$ Q. For information on interest rate, foreign exchange and other risks, and CIO VaR and the Firm's nontrading
interest rate-sensitive revenue at risk, see Market Risk Management on pages 96-102 of this
Form 10-Q.

(c) For more information on the Firm's policies regarding the valuation of the private equity portfolio, see Note 3 on pages 119-133 of this Form 10-Q.
(d) Unfunded commitments to third-party private equity funds were $\$ 398$ million and $\$ 789$ million at September 30, 2012, and December 31, 2011, respectively.
The carrying value of the private equity portfolio at September 30, 2012, was $\$ 8.1$ billion, up from $\$ 7.7$ billion at December 31, 2011. The increase in the portfolio was predominantly driven by new investments and net valuation gains, partially offset by sales of investments. The portfolio represented $5.3 \%$ of the Firm's stockholders' equity less goodwill at September 30, 2012, down from 5.7\% at December 31, 2011.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## INTERNATIONAL OPERATIONS

During the three and nine months ended September 30, 2012, the Firm recorded approximately $\$ 5.3$ billion and $\$ 12.9$ billion, respectively, of managed revenue derived from clients, customers and counterparties domiciled outside of North America. Of those amounts, approximately $63 \%$ and $53 \%$, respectively, were derived from Europe/Middle East/Africa ("EMEA"); approximately $26 \%$ and $33 \%$, respectively, from Asia/Pacific; and approximately $11 \%$ and $14 \%$, respectively, from Latin America/Caribbean.
During the three and nine months ended September 30, 2011, the Firm recorded approximately $\$ 5.6$ billion and $\$ 19.1$ billion, respectively, of managed revenue derived from clients, customers and counterparties domiciled outside of North America. Of those amounts, approximately $64 \%$ and $66 \%$, respectively, were derived from EMEA; approximately $28 \%$ and $25 \%$, respectively, from Asia/Pacific; and approximately $8 \%$ and $9 \%$, respectively, from Latin America/Caribbean. For additional information regarding international operations, see Note 32 on pages 299-300 of JPMorgan Chase's 2011 Annual Report.

International wholesale activities
The Firm is committed to further expanding its wholesale business activities outside of the United States, and it continues to add additional client-serving bankers, as well as product and sales support personnel, to address the needs of the Firm's clients located in these regions. With a comprehensive and coordinated international business strategy and growth plan, efforts and investments for growth outside of the United States continue to be prioritized.
Set forth below are certain key metrics related to the Firm's wholesale international operations, including, for each of EMEA, Asia/Pacific and Latin America/Caribbean, the number of countries in each such region in which they operate, front-office headcount, number of clients, revenue and selected balance-sheet data.

Note: International wholesale operations is comprised of IB, AM, TSS, CB and Treasury and CIO, and prior-period amounts have been revised to conform with current allocation methodologies.
Revenue is based predominantly on the domicile of the client, the location from which the client relationship is (a) managed, or the location of the trading desk.
(b) Total headcount includes all employees, including those in service centers, located in the region.
(c) Significant clients are defined as companies with over $\$ 1$ million in revenue over a trailing 12-month period in the (c) region (excludes private banking clients).
(d) Deposits are based on the location from which the client relationship is managed.

Loans outstanding are based predominantly on the domicile of the borrower and exclude loans held-for-sale and
(e) loans carried at fair value.

Consolidated Balance Sheets overview
For a description of each of the significant line item captions on the Consolidated Balance Sheets, see pages 110-112 of JPMorgan Chase's 2011 Annual Report.
JPMorgan Chase's total assets and total liabilities increased by $2 \%$ from December 31, 2011. The increase in total assets was predominantly due to higher securities purchased under resale agreements and deposits with banks, partially offset by lower securities borrowed. The net increase in these categories reflected the Firm's deployment of its excess funds. The increase in total liabilities was
predominantly due to higher securities sold under repurchase agreements associated with financing the Firm's assets. Also contributing to the increase in total liabilities was higher deposits predominantly from growth in retail deposits, which was more than offset by lower long-term debt, largely related to the redemption of TruPS. The increase in stockholders' equity was predominantly due to the Firm's net income.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

The following is a discussion of the significant changes in the specific line item captions on the Consolidated Balance Sheets from December 31, 2011.
Cash and due from banks and deposits with banks
The net increase in cash and due from banks and deposits with banks reflected the placement of the Firm's excess funds with various central banks, including Federal Reserve Banks. For additional information, refer to the Liquidity Risk Management discussion on pages 66-72 of this Form 10-Q.
Federal funds sold and securities purchased under resale agreements; and securities borrowed
The net increase in securities purchased under resale agreements and securities borrowed was predominantly due to deployment of excess cash by Treasury.
Trading assets and liabilities-debt and equity instruments
Trading assets-debt and equity instruments increased, driven by client market-making activity in IB; this resulted in higher levels of non-U.S. government debt securities, U.S government debt securities and equity securities. Increases were partially offset by a decrease in physical commodities. For additional information, refer to Note 3 on pages 119-133 of this Form 10-Q.
Trading assets and liabilities-derivative receivables and payables
Derivative receivables and payables decreased, primarily due to the impact of changes in the underlying parameters, including FX rates, interest rates, and credit spreads. The changes resulted in reductions in derivative receivables related to foreign exchange, interest rate and credit derivative contracts, partially offset by increases in equity derivative receivables. Derivative payables decreased, reflecting lower credit derivative payables, partially offset by higher equity derivative payables. For additional information, refer to Derivative contracts on page 80, and Notes 3 and 5 on pages 119-133 and 136-144, respectively, of this Form 10-Q.

## Securities

Securities increased largely due to reinvestment and repositioning of the CIO AFS portfolio, which increased the levels of non-U.S. government debt and residential mortgage-backed securities ("MBS") as well as obligations of U.S. states and municipalities; the increase was partially offset by decreases in corporate debt securities and U.S. government agency issued MBS. For additional information related to securities, refer to the discussion in the Corporate/Private Equity segment on pages 49-51, and

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Notes 3 and 11 on pages 119-133 and 148-153, respectively, of this Form 10-Q.
Loans and allowance for loan losses
Loans decreased slightly, due to lower consumer loans, offset by higher wholesale loans. The decline in consumer, excluding credit card loans was due to paydowns, portfolio run-off and charge-offs; the decline in credit card loans was due to seasonality and higher repayment rates. The increase in wholesale loans was driven by increased client activity across most regions and most businesses.
The allowance for loan losses decreased as a result of a reduction in the consumer allowances, predominantly related to the continuing trend of improved delinquencies across most consumer portfolios, notably non-PCI residential real estate and credit card. The wholesale allowance for loan losses was relatively unchanged. For a more detailed discussion of the loan portfolio and the allowance for loan losses, refer to Credit Portfolio and Allowance for Credit Losses on pages $72-95$, and Notes $3,4,13$ and 14 on pages $119-133,133-135,154-175$ and 176 , respectively, of this Form 10-Q.
Mortgage servicing rights
MSRs decreased slightly, as the combined effects of changes in market interest rates and modeled amortization were predominantly offset by new MSR originations. For additional information on MSRs, see Note 16 on pages 184-187 of this Form 10-Q.
Other intangible assets
Other intangible assets decreased, due to amortization. For additional information on other intangible assets, see Note 16 on pages $184-187$ of this Form 10-Q.
Deposits
Deposits increased, predominantly due to growth in retail deposits. For more information on deposits, refer to the RFS and AM segment discussions on pages 24-33 and 45-48, respectively; the Liquidity Risk Management discussion on pages 66-72; and Notes 3 and 17 on pages 119-133 and 188, respectively, of this Form 10-Q. For more information on liability balances in the wholesale businesses, which includes deposits, refer to the TSS and CB segment discussions on pages 41-44 and 38-40, respectively, of this Form 10-Q.

Federal funds purchased and securities loaned or sold under repurchase agreements
Securities loaned or sold under repurchase agreements increased predominantly because of higher secured financing of the Firm's assets and a change in the mix of the Firm's liabilities. For additional information on the Firm's Liquidity Risk Management, see pages 66-72 of this Form 10-Q.
Commercial paper and other borrowed funds
Commercial paper increased due to higher commercial paper liabilities sourced from wholesale funding markets to meet short-term funding needs, partially offset by a decline in the volume of liability balances in sweep accounts related to TSS's cash management product. Other borrowed funds remained relatively unchanged. For additional information on the Firm's Liquidity Risk Management and other borrowed funds, see pages 66-72 of this Form 10-Q. Beneficial interests issued by consolidated VIEs
Beneficial interests issued by consolidated VIEs decreased primarily due to a reduction in outstanding conduit commercial paper held by third parties and credit card maturities, partially offset by new credit card issuances and new consolidated municipal bond vehicles. For additional information on Firm-sponsored VIEs and loan securitization trusts, see Off-Balance Sheet Arrangements on pages 55-58, and Note 15 on pages 177-184 of this Form 10-Q.
Long-term debt
Long-term debt decreased due to net redemptions and maturities of long-term borrowings, largely related to the redemption of TruPS. For additional information on the Firm's long-term debt activities, see the Liquidity Risk Management discussion on pages 66-72 of this Form 10-Q.
Stockholders' equity
Total stockholders' equity increased, predominantly due to net income; a net increase in accumulated other comprehensive income ("AOCI") reflecting net unrealized market value increases on AFS securities predominantly driven by declining interest rates and the tightening of spreads across the portfolio, partially offset by sales; net issuances and commitments to issue under the Firm's employee stock-based compensation plans; and the issuance of
preferred stock. The increase was partially offset by the declaration of cash dividends on common and preferred stock and repurchases of common equity.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## OFF-BALANCE SHEET ARRANGEMENTS

JPMorgan Chase is involved with several types of off-balance sheet arrangements, including through unconsolidated special-purpose entities ("SPEs"), which are a type of VIE, and through lending-related financial instruments (e.g., commitments and guarantees). For further discussion, see Off-Balance Sheet Arrangements and Contractual Cash Obligations on pages 113-118 of JPMorgan Chase's 2011 Annual Report.
Special-purpose entities
The most common type of VIE is an SPE. SPEs are commonly used in securitization transactions in order to isolate certain assets and distribute the cash flows from those assets to investors. SPEs are an important part of the financial markets, including the mortgage- and asset-backed securities and commercial paper markets, as they provide market liquidity by facilitating investors' access to specific portfolios of assets and risks. The Firm holds capital, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments and guarantees. For further information on the types of SPEs, see Note 15 on pages 177-184 of this Form 10-Q, and Note 1 on pages 182-183 and Note 16 on pages 256-267 of JPMorgan Chase's 2011 Annual Report.
Implications of a credit rating downgrade to JPMorgan Chase Bank, N.A.
For certain liquidity commitments to SPEs, JPMorgan Chase Bank, N.A., could be required to provide funding if its short-term credit rating were downgraded below specific levels, primarily "P-1," "A-1" and "F1" for Moody's, Standard \& Poor's and Fitch, respectively. These liquidity commitments support the issuance of asset-backed commercial paper by both Firm-administered consolidated and third-party-sponsored nonconsolidated SPEs. In the event of a short-term credit rating downgrade, JPMorgan Chase Bank, N.A., absent other solutions, would be required to provide funding to the SPE, if the commercial paper could not be reissued as it matured. The aggregate amounts of commercial paper outstanding, issued by both Firm-administered and third-party-sponsored SPEs, that are held by third parties as of September 30, 2012, and December 31, 2011, was $\$ 12.6$ billion and $\$ 19.7$ billion, respectively. In addition, the aggregate amounts of commercial paper outstanding could increase in future periods should clients of the Firm-administered consolidated or third-party-sponsored nonconsolidated SPEs draw down on certain unfunded lending-related commitments. JPMorgan Chase Bank, N.A. had unfunded lending-related commitments to clients to fund an incremental $\$ 12.2$ billion and $\$ 11.0$ billion at September 30, 2012, and December 31, 2011, respectively. The Firm could facilitate the refinancing of some of the clients' assets in order to reduce the funding obligation.

Off-balance sheet lending-related financial instruments, guarantees, and other commitments
JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. For further discussion of lending-related commitments and guarantees, see Lending-related commitments on page 79, and Note 21 on pages 192-196 of this Form 10-Q, and Lending-related commitments on page 144, and Note 29 on pages 283-289 of JPMorgan Chase's 2011 Annual Report.
Mortgage repurchase liability
In connection with the Firm's mortgage loan sale and securitization activities with Fannie Mae and Freddie Mac (the "GSEs") and other mortgage loan sale and private-label securitization transactions, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm may be, and has been, required to repurchase loans and/or indemnify the GSEs and other investors for losses due to material breaches of these representations and warranties. For additional information regarding loans sold to the GSEs, see Mortgage repurchase liability on pages 115-118 of JPMorgan Chase's 2011 Annual Report.
The Firm also sells loans in securitization transactions with Ginnie Mae; these loans are typically insured or guaranteed by another government agency. The Firm, in its role as servicer, may elect, but is typically not required, to repurchase delinquent loans securitized by Ginnie Mae, including those that have been sold back to Ginnie Mae

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

subsequent to modification. Principal amounts due under the terms of these repurchased loans continue to be insured and the reimbursement of insured amounts is proceeding normally. Accordingly, the Firm has not recorded any mortgage repurchase liability related to these loans.
From 2005 to 2008, the Firm and certain acquired entities made certain loan level representations and warranties in connection with approximately $\$ 450$ billion of residential mortgage loans that were sold or deposited into private-label securitizations. Of the $\$ 450$ billion originally sold or deposited (including $\$ 165$ billion by Washington Mutual, as to which the Firm maintains that certain of the repurchase obligations remain with the Federal Deposit Insurance

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Corporation ("FDIC") receivership), approximately $\$ 195$ billion of principal has been repaid (including $\$ 71$ billion related to Washington Mutual). In addition, approximately $\$ 113$ billion of the principal amount of loans has been liquidated (including $\$ 41$ billion related to Washington Mutual), with an average loss severity of $59 \%$. Accordingly, the remaining outstanding principal balance of these loans (including Washington Mutual) was, as of September 30, 2012, approximately $\$ 142$ billion, of which $\$ 42$ billion was 60 days or more past due. The remaining outstanding principal balance of loans related to Washington Mutual was approximately $\$ 53$ billion, of which $\$ 15$ billion were 60 days or more past due. For additional information regarding loans sold to private investors, see Mortgage repurchase liability on pages 115-118 of JPMorgan Chase's 2011 Annual Report.
There have been generalized allegations, as well as specific demands, that the Firm repurchase loans sold or deposited into private-label securitizations (including claims from insurers that have guaranteed certain obligations of the securitization trusts). Although the Firm encourages parties to use the contractual repurchase process established in the governing agreements, these private-label repurchase claims have generally manifested themselves through threatened or pending litigation. Accordingly, the liability related to repurchase demands associated with all of the private-label securitizations described above is separately evaluated by the Firm in establishing its litigation reserves. For additional information regarding litigation, see Note 23
on pages 196-206 of this Form 10-Q, and Note 31 on pages 290-299 of JPMorgan Chase's 2011 Annual Report. Estimated mortgage repurchase liability
The Firm has recognized a mortgage repurchase liability of $\$ 3.1$ billion and $\$ 3.6$ billion, as of September 30, 2012, and December 31, 2011, respectively. The Firm's mortgage repurchase liability is intended to cover losses associated with all loans previously sold in connection with loan sale and securitization transactions with the GSEs, regardless of when those losses occur or how they are ultimately resolved (e.g., repurchase, make-whole payment). While uncertainties continue to exist with respect to both GSE behavior and the economic environment, the Firm believes that the model inputs and assumptions that it uses to estimate its mortgage repurchase liability are becoming increasingly seasoned and stable. Based on these model inputs and taking into consideration its projections regarding future uncertainty, including the GSEs' behavior, the Firm has become increasingly confident in its ability to estimate reliably its mortgage repurchase liability. For these reasons, the Firm believes that its existing mortgage repurchase liability at September 30, 2012, is sufficient to cover probable future repurchase losses arising from loan sale and securitization transactions with the GSEs. For additional information about the process that the Firm uses to estimate its mortgage repurchase liability and the factors it considers in connection with that process, see Mortgage repurchase liability on pages 115-118 of JPMorgan Chase's 2011 Annual Report.

The following table provides information about outstanding repurchase demands and unresolved mortgage insurance rescission notices, excluding those related to Washington Mutual, at each of the past five quarter-end dates. Outstanding repurchase demands and unresolved mortgage insurance rescission notices by counterparty type

Represents repurchase demands received from parties other than the GSEs that have been presented to the Firm by trustees who assert authority to present such claims under the terms of the underlying sale or securitization
(a) agreement, and excludes repurchase demands asserted in or in connection with pending repurchase litigation. All mortgage repurchase demands associated with private-label securitizations are separately evaluated by the Firm in establishing its litigation reserves.
(b)

Because the GSEs and others may make repurchase demands based on mortgage insurance rescission notices that remain unresolved, certain loans may be subject to both an unresolved mortgage insurance rescission notice and an outstanding repurchase demand.

The following tables show repurchase demands and mortgage insurance rescission notices received by loan origination vintage, excluding those related to Washington Mutual, for the past five quarters. The Firm expects repurchase demands to remain at elevated levels or to increase if there is a significant increase in private-label repurchase demands outside of pending repurchase litigation.

received
(a) Mortgage insurance rescissions typically result in a repurchase demand from the GSEs. This table includes ${ }^{(a)}$ mortgage insurance rescission notices for which the GSEs or others also have issued a repurchase demand.
Since the beginning of 2011, the Firm's overall cure rate (excluding loans originated by Washington Mutual) has been approximately $55 \%$. A significant portion of repurchase demands now relate to loans with a longer pay history, which have historically had higher cure rates. Repurchases that have resulted from mortgage insurance rescissions are reflected in the Firm's overall cure rate. While the actual cure rate may vary from quarter to quarter, the Firm expects that the overall cure rate will remain at approximately $50-60 \%$ for the foreseeable future.
The Firm has not observed a direct relationship between the type of defect that allegedly causes the breach of representations and warranties and the severity of the realized loss. Therefore, the loss severity assumption is estimated using the Firm's historical experience and projections regarding changes in home prices. Actual principal loss severities on finalized repurchases and "make-whole" settlements to date (excluding loans originated by Washington Mutual) currently average approximately $50 \%$, but may vary from quarter to quarter based on the characteristics of the underlying loans and changes in home prices.
When a loan was originated by a third-party originator, the Firm typically has the right to seek a recovery of related repurchase losses from the third-party originator. Estimated and actual third-party recovery rates may vary from
quarter to quarter based upon the underlying mix of third-party originators (e.g., active, inactive, out-of-business originators) from which recoveries are being sought.
Substantially all of the estimates and assumptions underlying the Firm's established methodology for computing its recorded mortgage repurchase liability - including the amount of probable future demands from the GSEs (which is

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

largely based on historical experience), the ability of the Firm to cure identified defects, the severity of loss upon repurchase or foreclosure and recoveries from third parties - require application of a significant level of management judgment. While the Firm uses the best information available to it in estimating its mortgage repurchase liability, the estimation process is inherently uncertain and imprecise.

The following table summarizes the change in the mortgage repurchase liability for each of the periods presented. Summary of changes in mortgage repurchase liability ${ }^{(a)}$

## (a)

 insurance rescissions; while the rescission of mortgage insurance typically results in a repurchase demand from the GSEs, the mortgage insurers themselves do not present repurchase demands to the Firm. This table excludes mortgage loan repurchases associated with repurchase demands asserted in or in connection with pending repurchase litigation.In substantially all cases, these repurchases represent the Firm's voluntary repurchase of certain delinquent loans from loan pools as permitted by Ginnie Mae guidelines (i.e., they do not result from repurchase demands due to
(b) breaches of representations and warranties). The Firm typically elects to repurchase these delinquent loans as it continues to service them and/or manage the foreclosure process in accordance with applicable requirements of Ginnie Mae, the Federal Housing Administration ("FHA"), Rural Housing Services ("RHS") and/or the U.S. Department of Veterans Affairs ("VA").
Nonaccrual loans held-for-investment included $\$ 484$ million and $\$ 477$ million at September 30, 2012, and
${ }^{(c)}$ December 31, 2011, respectively, of loans repurchased as a result of breaches of representations and warranties.
(d) Represents loans repurchased from parties other than the GSEs, excluding those repurchased in connection with ${ }^{(d)}$ pending repurchase litigation.

For additional information regarding the mortgage repurchase liability, see Note 21 on pages 192-196 of this Form 10-Q, and Note 29 on pages 283-289 of JPMorgan Chase's 2011 Annual Report.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

In addition, the Firm faces a variety of exposures resulting from repurchase demands and litigation arising out of its various roles as issuer and/or underwriter of mortgage-backed securities ("MBS") offerings in private-label securitizations. It is possible that these matters will take a number of years to resolve and their ultimate resolution is currently uncertain. Reserves for such matters may need to be increased in the future; however, with the additional litigation reserves taken to date, absent any materially adverse developments that could change management's current views, JPMorgan Chase does not currently anticipate further material additions to its litigation reserves for mortgage-backed securities-related matters over the remainder of the year. For further information, see Note 23, Litigation on pages 196-206 of the Form 10-Q.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## CAPITAL MANAGEMENT

The following discussion of JPMorgan Chase's capital management highlights developments since December 31, 2011, and should be read in conjunction with Capital Management on pages 119-124 of JPMorgan Chase's 2011 Annual Report.
The Firm's capital management objectives are to hold capital sufficient to:
Cover all material risks underlying the Firm's business activities;
Maintain "well-capitalized" status under regulatory requirements;
Maintain debt ratings that enable the Firm to optimize its funding mix and liquidity sources while minimizing costs;
Retain flexibility to take advantage of future investment opportunities; and
Build and invest in businesses, even in a highly stressed environment.
Regulatory capital
The Federal Reserve establishes capital requirements, including well-capitalized standards, for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A. As of September 30, 2012, and December 31, 2011, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and each met all capital requirements to which it was subject. For more information, see Note 20 on pages 191-192 of this Form 10-Q.
At September 30, 2012, and December 31, 2011, JPMorgan Chase maintained Tier 1 and Total capital ratios in excess of the well-capitalized standards established by the Federal Reserve, as indicated in the tables below. In addition, the Firm's Tier 1 common ratio was significantly above the $5 \%$ well-capitalized standard established at the time of the 2012 CCAR process. Tier 1 common, introduced by U.S. banking regulators in 2009, is defined as Tier 1 capital less elements of Tier 1 capital not in the form of common equity, such as perpetual preferred stock, noncontrolling interests in subsidiaries, and trust preferred capital debt securities. Tier 1 common, a non-GAAP financial measure, is used by banking regulators, investors and analysts to assess and compare the quality and composition of the Firm's capital with the capital of other financial services companies. The Firm uses Tier 1 common along with other capital measures to assess and monitor its capital position.
The following table presents the regulatory capital, assets and risk-based capital ratios for JPMorgan Chase at September 30, 2012, and December 31, 2011. These amounts are determined in accordance with regulations issued by the Federal Reserve.

| Total qualifying capital | $\$ 190,491$ | $\$ 188,088$ |
| Risk-weighted assets | $\$ 1,297,016$ | $\$ 1,221,198$ |
| Total adjusted average assets | $\$ 2,186,292$ | $\$ 2,202,087$ |

(a) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

The Firm's Tier 1 common was $\$ 135.1$ billion at September 30, 2012, an increase of $\$ 12.1$ billion from December 31, 2011. The increase was predominantly due to net income (adjusted for DVA) of $\$ 15.8$ billion and net issuances and commitments to issue common stock under the Firm's employee stock-based compensation plans of $\$ 1.5$ billion. The increase was partially offset by $\$ 4.0$ billion of dividends on common and preferred stock and $\$ 1.6$ billion (on a
trade-date basis) of repurchases of common stock and warrants. The Firm's Tier 1 capital was $\$ 154.7$ billion at September 30, 2012, an increase of $\$ 4.3$ billion from December 31, 2011. The increase in Tier 1 capital was due to the increase in Tier 1 common and the issuance of $\$ 1.3$ billion of fixed-rate noncumulative perpetual preferred stock on August 27, 2012, partially offset by the redemption of $\$ 9.0$ billion of trust preferred capital debt securities on July 12, 2012.

Risk-weighted assets were $\$ 1,297$ billion at September 30, 2012, an increase of $\$ 76$ billion from December 31, 2011. In addition to the growth in the Firm's assets, the increase in risk-weighted assets also reflected an adjustment to RWA to reflect regulatory guidance regarding a limited number of market risk models used for certain positions held by the Firm, including the synthetic credit portfolio. The Firm believes that, as a result of portfolio management actions and enhancements it will be making to certain of its market risk models, these adjustments will be reduced over time. Additional information regarding the Firm's capital ratios and the federal regulatory capital standards to which it is subject is presented in Part II, Item 1A, Risk Factors on pages 220-222, and Note 20 on pages 191-192 of this Form $10-\mathrm{Q}$.
Basel II
The minimum risk-based capital requirements adopted by the U.S. federal banking agencies follow the Capital Accord of the Basel Committee on Banking Supervision ("Basel I"). In 2004, the Basel Committee published a revision to the Accord ("Basel II"). The goal of the Basel II Framework is to provide more risk-sensitive regulatory capital calculations and promote enhanced risk management practices among large, internationally active banking organizations. U.S. banking regulators published a final Basel II rule in December 2007, which requires JPMorgan Chase to implement Basel II at the holding company level, as well as at certain of its key U.S. banking subsidiaries.
Prior to full implementation of the new Basel II Framework, JPMorgan Chase is required to complete a qualification period of four consecutive quarters during which it needs to demonstrate that it can meet the requirements of the rule to the satisfaction of its U.S. banking regulators. JPMorgan Chase is currently in the qualification period and expects to be in compliance with all relevant Basel II rules within the established timelines. In addition, the Firm has adopted, and will continue to adopt, based on various established timelines, Basel II rules in certain non-U.S. jurisdictions, as required.
Basel 2.5
In June 2012 the U.S. federal banking agencies published final rules that will go into effect on January 1, 2013, that would result in additional capital requirements for trading positions and securitizations. It is currently estimated that implementation of these rules could result in approximately a 100 basis point decrease in the Firm's current Basel I Tier

1 common ratio, but the actual impact on the Firm's capital ratios upon implementation could differ depending on final implementation guidance from the regulators, as well as regulatory approval of certain of the Firm's internal risk models.
Basel III
In June 2012 the U.S. federal banking agencies published for comment a NPR for implementing the Capital Accord, commonly referred to as "Basel III", in the United States. Basel III revised Basel II by, among other things, narrowing the definition of capital, and increasing capital requirements for specific exposures. Basel III also includes higher capital ratio requirements and provides that the Tier 1 common capital requirement will be increased to $7 \%$, comprised of a minimum ratio of $4.5 \%$ plus a $2.5 \%$ capital conservation buffer. Implementation of the $7 \%$ Tier 1 common capital requirement is required by January 1,2019.
In addition, U.S. federal banking agencies have published proposed risk-based capital floors pursuant to the requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") to establish a permanent Basel I floor under Basel II and Basel III capital calculations.
The U.S. federal banking agencies also included, as part of the NPR, revised prompt corrective action treatment of the existing U.S. leverage ratio and a new supplemental leverage ratio which takes into account off-balance sheet assets, such as lending-related commitments and derivative exposures.
In addition, the Basel Committee announced in June 2011 an agreement to require GSIBs to maintain Tier 1 common requirements above the $7 \%$ minimum in amounts ranging from an additional $1 \%$ to an additional $2.5 \%$. In November

2012, the FSB indicated that it would require the Firm, as well as three other banks, to hold the additional $2.5 \%$ of Tier 1 common, which requirement will be phased in beginning in 2016 as discussed below. The Basel Committee also stated it intended to require certain GSIBs to maintain a further Tier 1 common requirement of an additional $1 \%$ under certain circumstances, to act as a disincentive for the GSIB from taking actions that would further increase its systemic importance. The Firm has not been notified that it must meet this additional requirement. The GSIB assessment methodology reflects an approach based on five broad categories: size, interconnectedness, lack of substitutability, cross-jurisdictional activity, and complexity.
The following table presents a comparison of the Firm's Tier 1 common under Basel I rules to its estimated Tier 1 common under Basel III rules, along with the Firm's estimated risk-weighted assets and the Tier 1 common ratio under Basel III rules, all of which are non-GAAP financial measures. Tier 1 common under Basel III includes additional adjustments and deductions not included in Basel I Tier 1 common, such as the inclusion of AOCI related to AFS securities and defined benefit pension and other
postretirement employee benefit ("OPEB") plans.
Including the impact of the final Basel 2.5 rules and the Basel III NPR, the Firm estimates that its Tier 1 common ratio under Basel III rules would be $8.4 \%$ as of September 30, 2012. Management considers the Basel III Tier 1 common estimate a key measure to assess the Firm's capital position in conjunction with its capital ratios under Basel I requirements; this measure enables management, investors and analysts to compare the Firm's capital under the Basel III capital standards with similar estimates provided by other financial services companies.

8.4

Key differences in the calculation of risk-weighted assets between Basel I and Basel III include: (1) Basel III credit risk RWA is based on risk-sensitive approaches which largely rely on the use of internal credit models and parameters, whereas Basel I RWA is based on fixed supervisory risk weightings which vary only by counterparty
(a) type and asset class; (2) Basel III market risk RWA reflects the new capital requirements related to trading assets and securitizations, which include incremental capital requirements for stress VaR, correlation trading, and re-securitization positions; and (3) Basel III includes RWA for operational risk, whereas Basel I does not. The actual impact on the Firm's capital ratios upon implementation could differ depending on final implementation guidance from the regulators, as well as regulatory approval of certain of the Firm's internal risk models.
(b) The Tier 1 common ratio is Tier 1 common divided by RWA.

The Firm's estimate of its Tier 1 common ratio under Basel III reflects its current understanding of the Basel III rules based on information currently published by the Basel Committee and U.S. federal banking agencies and on the application of such rules to its businesses as currently conducted; it excludes the impact of any changes the Firm may make in the future to its businesses as a result of implementing the Basel III rules, possible enhancements to certain market risk models, and any further implementation guidance from the regulators.
The Basel III revisions governing capital requirements are subject to prolonged transition periods. The transition period for banks to meet the Tier 1 common requirement under Basel III will begin in 2013, with full implementation on January 1, 2019. The Firm fully expects to be in compliance with the higher Basel III capital standards, as well as any additional Dodd-Frank Act capital requirements, as they become effective. The additional capital requirements for GSIBs will be phased in starting January 1, 2016, with full implementation on January 1, 2019.
In December 2010, the Basel Committee introduced minimum standards for short-term liquidity coverage (the liquidity coverage ratio ("LCR")) and term funding (the net stable funding ratio ("NSFR")). See Liquidity Risk

Management on pages 66-72 of this Form 10-Q for further information.
The Firm will continue to monitor the ongoing rule-making process to assess both the timing and the impact of Basel III on its businesses and financial condition.

Broker-dealer regulatory capital
JPMorgan Chase's principal U.S. broker-dealer subsidiaries are J.P. Morgan Securities LLC ("JPMorgan Securities") and J.P. Morgan Clearing Corp. ("JPMorgan Clearing"). JPMorgan Clearing is a subsidiary of JPMorgan Securities and provides clearing and settlement services. JPMorgan Securities and JPMorgan Clearing are each subject to Rule 15c3-1 under the Securities Exchange Act of 1934 (the "Net Capital Rule"). JPMorgan Securities and JPMorgan Clearing are also each registered as futures commission merchants and subject to Rule 1.17 of the Commodity Futures Trading Commission ("CFTC").
JPMorgan Securities and JPMorgan Clearing have elected to compute their minimum net capital requirements in accordance with the "Alternative Net Capital Requirements" of the Net Capital Rule. At September 30, 2012, JPMorgan

Securities' net capital, as defined by the Net Capital Rule, was $\$ 11.6$ billion, exceeding the minimum requirement by $\$ 10.0$ billion, and JPMorgan Clearing's net capital was $\$ 6.9$ billion, exceeding the minimum requirement by $\$ 5.1$ billion.
In addition to its minimum net capital requirement, JPMorgan Securities is required to hold tentative net capital in excess of $\$ 1.0$ billion and to notify the U.S. Securities and Exchange Commission in the event that tentative net capital is less than $\$ 5.0$ billion, in accordance with the market and credit risk standards of Appendix E of the Net Capital Rule. As of September 30, 2012, JPMorgan Securities had tentative net capital in excess of the minimum and notification requirements.
Economic risk capital
The Firm measures economic capital using internal risk-assessment methodologies and models primarily based on four risk factors: credit, market, operational and private equity risk. The growth in economic risk capital during the nine months ended September 30, 2012, was predominantly driven by higher operational risk capital due to increased mortgage-related litigation, and continued model enhancements to better capture large historical loss events and better align the model with the advanced measurement rules under the Basel II Framework; and to higher market risk capital driven by increased risk in the synthetic credit portfolio. These increases were partially offset by a decrease in credit risk capital driven by consumer portfolio runoff and continued model enhancements to better estimate future stress credit losses.

(a) Reflects additional capital required, in the Firm's view, to meet its regulatory and debt rating objectives.

Line of business equity
Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, considering capital levels for similarly rated peers, regulatory capital requirements (under Basel III) and economic risk measures. Capital is also allocated to each line of business for, among other things, goodwill and other intangibles associated with acquisitions effected by the line of business. ROE is measured and internal targets for expected returns are established as key measures of a business segment's performance.

Effective January 1, 2012, the Firm further revised the capital allocated to certain businesses, reflecting additional refinement of each segment's estimated Basel III Tier 1 common capital requirements and balance sheet trends. The Firm continues to assess the level of capital required for each line of business, as well as the assumptions and methodologies used to allocate capital to the business segments, and further refinements may be implemented in the near term.

Capital actions
Issuance of preferred stock
On August 27, 2012, the Firm issued $\$ 1.3$ billion of fixed-rate noncumulative perpetual preferred stock.
Dividends
On March 13, 2012, the Board of Directors increased the Firm's quarterly common stock dividend from $\$ 0.25$ to $\$ 0.30$ per share, effective with the dividend paid on April 30, 2012, to shareholders of record on April 5, 2012. The Firm's
common stock dividend policy reflects JPMorgan Chase's earnings outlook, desired dividend payout ratio, capital objectives, and alternative investment opportunities. The Firm's current expectation is to return to a payout ratio of approximately $30 \%$ of normalized earnings over time.
For information regarding dividend restrictions, see Note 22 and Note 27 on page 276 and 281, respectively, of JPMorgan Chase's 2011 Annual Report.
Common equity repurchases
On March 13, 2012, the Board of Directors authorized a $\$ 15.0$ billion common equity (i.e., common stock and warrants) repurchase program, of which up to $\$ 12.0$ billion is approved for repurchase in 2012 and up to an additional $\$ 3.0$ billion is approved through the end of the first quarter of 2013. During the nine months ended September 30, 2012, the Firm repurchased (on a trade-date basis) an aggregate of 49 million shares of common stock and warrants for $\$ 1.6$ billion; the Firm did not make any repurchases after May 17, 2012. As of September 30, 2012, $\$ 13.4$ billion of authorized repurchase capacity remained under the program. For additional information regarding repurchases of the Firm's equity securities, see 2012 Business outlook, on page 9 of this Form 10-Q.
The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity - for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information. For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 2, Unregistered Sales of Equity Securities and Use of Proceeds, on pages 222-223 of this Form 10-Q.

Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## RISK MANAGEMENT

Risk is an inherent part of JPMorgan Chase's business activities. The Firm's risk management framework and governance structure are intended to provide comprehensive controls and ongoing management of the major risks inherent in its business activities. The Firm employs a holistic approach to risk management to ensure the broad spectrum of risk types are considered in managing its business activities. The Firm's risk management framework is intended to create a culture of risk awareness and personal responsibility throughout the Firm where collaboration, discussion, escalation and sharing of information are encouraged.
The Firm's overall risk appetite is established in the context of the Firm's capital, earnings power, and diversified business model. The Firm employs a formalized risk appetite framework to clearly link risk appetite and return targets, controls and capital management. The Firm's Chief Executive Officer and Chief Risk Officer ("CRO") are responsible for setting the overall firmwide risk appetite. The lines of business CEOs and CROs and Corporate/Private Equity senior management are responsible for setting the risk appetite for their respective lines of business, within the Firm's limits. The Risk Policy Committee of the Firm's Board of Directors approves the risk appetite policy on behalf of the entire Board of Directors.
Risk governance
The Firm's risk governance structure is based on the principle that each line of business is responsible for managing the risk inherent in its business, albeit with appropriate corporate oversight. Each line of business risk committee is responsible for decisions regarding the business' risk strategy, policies and controls. There are nine major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, interest rate risk, country risk, private equity risk, operational risk, legal and fiduciary risk, and reputation risk.
Overlaying line of business risk management are the following corporate functions with risk management-related responsibilities: Risk Management, Treasury and CIO and Legal and Compliance.

Risk Management operates independently of the lines of business to provide oversight of firmwide risk management and controls, and is viewed as a partner in achieving appropriate business risk and reward objectives. Risk
Management coordinates and communicates with each line of business through the line of business risk committees and CROs to manage risk. The Risk Management function is headed by the Firm's Chief Risk Officer, who is a member of the Firm's Operating Committee and who reports to the Chief Executive Officer and is accountable to the Board of Directors, primarily through the Board's Risk Policy Committee. The Chief Risk Officer is also a member of the line of business risk committees. Within the Firm's Risk Management function are units responsible for credit risk, market risk, country risk, private equity risk and the governance of operational risk, as well as risk reporting and risk policy. Risk management is supported by risk technology and operations functions that are responsible for building the information technology infrastructure used to monitor and manage risk.
Treasury and CIO are responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding, capital, interest rate and foreign exchange risks, and other risks.
Legal and Compliance has oversight for legal risk.
In addition to the risk committees of the lines of business and the above-referenced risk management functions, the Firm also has a Finance Committee, an Asset-Liability Committee ("ALCO"), an Investment Committee and three other risk-related committees - the Firmwide Risk Committee, the Risk Governance Committee and the Global Counterparty Committee. All of these committees are accountable to the Chief Executive Officer and Operating Committee. The membership of these committees is composed of senior management of the Firm, including representatives of the lines of business, CIO, Treasury, Risk Management, Finance, Legal and Compliance and other senior executives. The committees meet regularly to discuss a broad range of topics including, for example, current market conditions and other external events, risk exposures, and risk concentrations to ensure that the effects of risk issues are considered broadly across the Firm's businesses.

The Finance Committee, chaired by the Chief Financial Officer, oversees the firmwide funding, liquidity, capital and balance sheet management strategy, including targeted levels, composition and line of business allocations.
The Asset-Liability Committee, chaired by the Corporate Treasurer, monitors the Firm's overall interest rate risk and liquidity risk. ALCO is responsible for reviewing and approving the Firm's liquidity policy and contingency funding plan. ALCO also reviews the Firm's funds transfer pricing policy (through which lines of business "transfer" interest rate and foreign exchange risk to Treasury), nontrading interest rate-sensitive revenue-at-risk, overall interest rate position, funding requirements and strategy, and the Firm's securitization programs (and any required liquidity support by the Firm of such programs).
The Investment Committee, chaired by the Firm's Chief Financial Officer, oversees global merger and acquisition activities undertaken by JPMorgan Chase for its own account that fall outside the scope of the Firm's private equity and other principal finance activities.
The Firmwide Risk Committee is co-chaired by the Firm's CEO and CRO. The Risk Governance Committee is chaired by the Firm's CRO. These committees meet monthly to review cross-line of business issues such as risk appetite, certain business activity and aggregate risk measures, risk policy, risk methodology, risk concentrations, regulatory capital and other regulatory issues, and other topics referred by line of business risk committees. The Risk Governance

Committee is also responsible for ensuring that line of business and firmwide risk reporting and compliance with risk appetite levels are monitored periodically, in conjunction with the Firm's capital assessment process. Line of business risk committees each meet at least on a monthly basis. Each line of business risk committee is co-chaired by the line of business CRO and CEO, except for the Consumer Risk Committee which is chaired solely by the CRO. Each line of business risk committee is also attended by individuals from outside the line of business. It is the responsibility of attendees of the line of business risk committees who are members of the Firmwide Risk Committee (including individuals from outside the line of business) to escalate line of business risk topics to the Firmwide Risk Committee. The Global Counterparty Committee, chaired by the Firm's Wholesale Chief Credit Risk Officer, reviews exposures to our largest interbank trading counterparties. The Committee meets periodically to review total exposures with these counterparties to ensure that such exposures are deemed appropriate and to direct changes in exposure levels as needed.
The Board of Directors exercises its oversight of risk management principally through the Board's Risk Policy Committee and Audit Committee. The Board's Risk Policy Committee oversees senior management risk-related responsibilities, including reviewing management policies and performance against these policies and related benchmarks. The Board's Risk Policy Committee also reviews firm level market risk limits at least annually.

The CROs for each line of business meet with the Risk Policy Committee on a regular basis. In addition, in conjunction with the Firm's capital assessment process, the CEO or Chief Risk Officer is responsible for notifying the Risk Policy Committee of any results which are projected to exceed line of business or firmwide risk appetite tolerances. The CEO or CRO will notify the Chairman of the Board's Risk Policy Committee if certain firmwide limits are modified or exceeded. The Audit Committee is responsible for oversight of guidelines and policies that govern the process by which risk assessment and management is undertaken. In addition, the Audit Committee reviews with management the system of internal controls that is relied upon to provide reasonable assurance of compliance with the Firm's operational risk management processes.
Risk monitoring and control
The Firm's ability to properly identify, measure, monitor and report risk is critical to both its soundness and profitability.
Risk identification: The Firm's exposure to risk through its daily business dealings, including lending and capital markets activities, is identified and aggregated through the Firm's risk management infrastructure. There are nine major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, interest rate risk, country risk, private equity risk, operational risk, legal and fiduciary risk, and reputation risk.
Risk measurement: The Firm measures risk using a variety of methodologies, including calculating probable loss, unexpected loss and value-at-risk, and by conducting stress tests and making comparisons to external benchmarks. Measurement models and related assumptions are routinely subject to internal model review, empirical validation and benchmarking with the goal of ensuring that the Firm's risk estimates are reasonable and reflective of the risk of the underlying positions.
Risk monitoring/control: The Firm's risk management policies and procedures incorporate risk mitigation strategies and include approval limits by customer, product, industry, country and business. These limits are monitored on a daily, weekly and monthly basis, as appropriate.
Risk reporting: The Firm reports risk exposures on both a line of business and a consolidated basis. This information is reported to management on a daily, weekly and monthly basis, as appropriate.

CIO risk management matters
As part of its internal review of CIO's activities, management concluded that CIO's risk management had been ineffective in dealing with the growth in size and change in characteristics of the synthetic credit portfolio during the first quarter of 2012. The Firm has taken several steps to address these risk management issues, including introducing more granular risk limits for CIO; enhancing risk management talent and resourcing of key support functions in CIO; and enhancing the Firm's risk governance, including establishing the joint CIO, Treasury and Corporate Risk ("CTC") Committee co-chaired by CTC's CRO and the Firm's co- Chief Operating Officer. The committee meets weekly to monitor risk and has enhanced membership from Treasury and Corporate, as well as other Firm senior management.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## LIQUIDITY RISK MANAGEMENT

Liquidity risk management is intended to ensure that the Firm has the appropriate amount, composition and tenor of funding and liquidity in support of its assets. The primary objective of effective liquidity management is to ensure that the Firm's core businesses are able to operate in support of client needs and meet contractual and contingent obligations through normal economic cycles as well as during market stress.
The Firm manages liquidity and funding using a centralized, global approach in order to actively manage liquidity for the Firm as a whole, to monitor exposures and identify constraints on the transfer of liquidity within the Firm, and to maintain the appropriate amount of surplus liquidity as part of the Firm's overall balance sheet management strategy. In the context of the Firm's liquidity management, Treasury is responsible for:
Measuring, managing, monitoring and reporting the Firm's current and projected liquidity sources and uses;
Understanding the liquidity characteristics of the Firm's assets and liabilities;
Defining and monitoring Firmwide and legal entity liquidity strategies, policies, guidelines, and contingency funding plans;
Managing funding mix and deployment of excess short-term cash;
Defining and implementing Funds Transfer Pricing ("FTP") across all lines of business and regions; and Defining and addressing the impact of regulatory changes on funding and liquidity.
The Firm has a liquidity risk governance framework to review, approve and monitor the implementation of liquidity risk policies and funding and capital strategies, at the Firmwide, regional and line of business levels.
Specific risk committees responsible for liquidity risk governance include ALCO and the Finance Committee, as well as lines of business and regional asset and liability management committees. For further discussion of the risk committees, see Risk Management on pages 63-65 of this Form 10-Q.
Management considers the Firm's liquidity position to be strong, based on its liquidity metrics as of September 30, 2012, and believes that the Firm's unsecured and secured funding capacity is sufficient to meet its on- and off-balance sheet obligations.

## LCR and NSFR

In December 2010, the Basel Committee introduced the minimum standards for short-term liquidity coverage (the liquidity coverage ratio ("LCR")) and term funding (the net stable funding ratio ("NSFR")). The Firm intends to maintain its strong liquidity position in the future as the LCR and NSFR standards of the Basel III rules are implemented. In
order to do so the Firm believes it may need to modify the liquidity profile of certain of its assets and liabilities. Implementation of the Basel III rules may also cause the Firm to increase prices on, or alter the types of, products it offers to its customers and clients.

The Basel III revisions governing liquidity requirements are subject to prolonged observation and transition periods. The observation periods for both the LCR and NSFR began in 2011, with implementation in 2015 and 2018, respectively.

## Funding

The Firm funds its global balance sheet through diverse sources of funding, including a stable deposit franchise as well as secured and unsecured funding in the capital markets. Funding objectives include maintaining diversification, maximizing market access and optimizing funding cost. Access to funding markets is executed regionally through hubs in New York, London, Hong Kong and other locations which enables the Firm to observe and respond effectively to local market dynamics and client needs. The Firm manages and monitors its use of wholesale funding markets to ensure diversification of its funding profile across geographic regions, tenors, currencies, product types and counterparties, using key metrics including: short-term unsecured funding as a percentage of total liabilities, and as a percentage of highly liquid assets; and counterparty concentration.
Sources of funds
A key strength of the Firm is its diversified deposit franchise, through the RFS, CB, TSS and AM lines of business, which provides a stable source of funding and limits reliance on the wholesale funding markets. As of September 30,

2012, the Firm's deposits-to-loans ratio was $158 \%$, compared with $156 \%$ at December 31, 2011.
As of September 30, 2012, total deposits for the Firm were $\$ 1,139.6$ billion, compared with $\$ 1,127.8$ billion at December 31, 2011 ( $54 \%$ of total liabilities for both periods). The increase in deposits was predominantly due to growth in retail deposits.
The Firm typically experiences higher customer deposit inflows at period-ends. Therefore, average deposit balances are more representative of deposit trends. The table below summarizes by line of business average deposits for the three and nine months ended September 30, 2012 and 2011, respectively.

Average deposits

|  | Three months ended <br> September 30, | Nine months ended |  |
| :--- | :--- | :--- | :--- | :--- |
| September 30, |  |  |  |

(a)Includes remaining lines of business (i.e., Investment Bank, Card and Corporate/Private Equity).

A significant portion of the Firm's deposits are retail deposits ( $37 \%$ and $35 \%$ at September 30, 2012, and
December 31, 2011, respectively), which are considered particularly stable as they are less sensitive to interest rate changes or market volatility. Additionally, the majority of the Firm's institutional deposits are also considered to be stable sources of funding since they are generated from customers that maintain operating service relationships with the Firm. For further discussions of deposit and liability balance trends, see the discussion of the results for the Firm's business segments and the Balance Sheet Analysis on pages 17-51 and 53-54, respectively, of this Form 10-Q. Short-term funding
Short-term unsecured funding sources include federal funds and Eurodollars purchased, which represent overnight funds; certificates of deposit; time deposits; commercial paper, and other borrowed funds that generally have maturities of one year or less.
The Firm's reliance on short-term unsecured funding sources is limited. A significant portion of the total commercial paper liabilities, approximately $64 \%$ as of September 30, 2012, as shown in the table below, were originated from deposits that customers choose to sweep into commercial paper liabilities as a cash management
product offered by TSS and are not sourced from wholesale funding markets.
The Firm's sources of short-term secured funding primarily consist of securities loaned or sold under agreements to repurchase. Securities loaned or sold under agreements to repurchase generally mature between one day and three months, are secured predominantly by high-quality securities collateral, including government-issued debt, agency debt and agency MBS, and constitute a significant portion of the federal funds purchased and securities loaned or sold under purchase agreements. The increase in the balance at September 30, 2012, compared with the balance at December 31, 2011, and the average balance for the three and nine months ended September 30, 2012, was predominantly because of higher secured financing of the Firm's assets and a change in the mix of the Firm's liabilities. The balances associated with securities loaned or sold under agreements to repurchase fluctuate over time due to customers' investment and financing activities; the Firm's demand for financing; the ongoing management of the mix of the Firm's liabilities, including its secured and unsecured financing (for both the investment and market-making portfolios); and other market and portfolio factors.
At September 30, 2012, the balance of total unsecured and secured other borrowed funds remained flat, compared with the balance at December 31, 2011. The average balance for the three and nine months ended September 30, 2012, decreased compared with the same period in the prior year, predominantly driven by maturities of short-term unsecured bank notes and other unsecured borrowings, short-term Federal Home Loan Bank ("FHLB") advances, and other secured short-term borrowings.
For additional information, see the Balance Sheet Analysis on pages 53-54 and Note 12 on page 154 of this Form 10-Q. The following table summarizes by source short-term unsecured funding as of September 30, 2012, and December 31, 2011, and average balances for the three and nine months ended September 30, 2012 and 2011, respectively.

Long-term funding and issuance
Long-term funding provides additional sources of stable funding and liquidity for the Firm. The majority of the Firm's long-term unsecured funding is issued by the parent holding company to provide maximum flexibility in support of both bank and nonbank subsidiary funding.
The following table summarizes long-term unsecured issuance and maturities or redemption for the three and nine months ended September 30, 2012 and 2011, respectively. For additional information, see Note 21 on pages 273-275 of JPMorgan Chase's 2011 Annual Report.

| Long-term unsecured funding | Three months ended September 30, |  | Nine months ended September 30, |  |

Following the Federal Reserve's announcement on June 7, 2012, of proposed rules which will implement the phase-out of Tier 1 capital treatment for trust preferred capital debt securities, the Firm announced on June 11, 2012, that it would redeem $\$ 9.0$ billion of trust preferred capital debt securities pursuant to redemption provisions relating to the occurrence of a "Capital Treatment Event" (as defined in the documents governing those securities). The redemption was completed on July 12, 2012.

The Firm raises secured long-term funding through securitization of consumer credit card loans, residential mortgages, auto loans and student loans as well as through advances from the FHLBs, all of which increase funding and investor diversity.

The following table summarizes the securitization issuance and FHLB advances and their respective maturities or redemption for the three and nine months ended September 30, 2012 and 2011.

Three months ended September 30, Nine months ended September 30,

| funding |  |  |  |  |  |  |  |  |  |

(a) Other securitizations includes securitizations of residential mortgages, auto loans and student loans.

The Firm's wholesale businesses also securitize loans for client-driven transactions; those client-driven loan securitizations are not considered to be a source of funding for the Firm and are not included in the table above. For
further description of the client-driven loan securitizations, see Note 15 on pages 177-184 of this Form 10-Q.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Parent holding company and subsidiary funding
The parent holding company acts as an important source of funding to its subsidiaries. The Firm's liquidity management is therefore intended to ensure that liquidity at the parent holding company is maintained at levels sufficient to fund the operations of the parent holding company and its subsidiaries and affiliates for an extended period of time in a stress environment where access to normal funding sources is disrupted.
To effectively monitor the adequacy of liquidity and funding at the parent holding company, the Firm uses three primary measures:
Number of months of pre-funding: The Firm targets pre-funding of the parent holding company to ensure that both contractual and non-contractual obligations can be met for at least 12 months assuming no access to wholesale funding markets. However, due to conservative liquidity management actions taken by the Firm, the current pre-funding of such obligations is significantly greater than target.
Excess cash: Excess cash is managed to ensure that daily cash requirements can be met in both normal and stressed environments. Excess cash generated by parent holding company issuance activity is placed on deposit with or as advances to both bank and nonbank subsidiaries or held as liquid collateral purchased through reverse repurchase agreements.
Stress testing: The Firm conducts regular stress testing for the parent holding company and major bank subsidiaries as well as the Firm's principal U.S. and U.K. broker-dealer subsidiaries to ensure sufficient liquidity for the Firm in a stress environment. The Firm's liquidity management takes into consideration its subsidiaries' ability to generate replacement funding in the event the parent holding company requires repayment of the aforementioned deposits and advances. For further information, see the "Stress testing" discussion below.
Global Liquidity Reserve
The Global Liquidity Reserve includes cash on deposit at central banks, and cash proceeds reasonably expected to be received in secured financings of highly liquid, unencumbered securities, such as sovereign debt, government-guaranteed corporate debt, U.S. government agency debt, and agency MBS. The liquidity amount estimated to be realized from secured financings is based on management's current judgment and assessment of the Firm's ability to quickly raise funds from secured financings.
The Global Liquidity Reserve also includes the Firm's borrowing capacity at various FHLBs, the Federal Reserve Bank discount window and various other central banks as a result of collateral pledged by the Firm to such banks. Although considered as a source of available liquidity, the Firm does not view borrowing capacity at the Federal Reserve Bank discount window and various other central banks as a primary source of funding.
As of September 30, 2012, the Global Liquidity Reserve was
estimated to be approximately $\$ 449$ billion, compared with approximately $\$ 379$ billion at December 31, 2011. The Global Liquidity Reserve fluctuates due to changes in deposits, the Firm's purchase and investment activities and general market conditions.
In addition to the Global Liquidity Reserve, the Firm has significant amounts of other high-quality, marketable securities such as corporate debt and equity securities available to raise liquidity, if required.
Stress testing
Liquidity stress tests are intended to ensure sufficient liquidity for the Firm under a variety of adverse conditions. Results of stress tests are therefore considered in the formulation of the Firm's funding plan and assessment of its liquidity position. Liquidity outflow assumptions are modeled across a range of time horizons and varying degrees of market and idiosyncratic stress. Standard stress tests are performed on a regular basis and ad hoc stress tests are performed as required. Stress scenarios are produced for the parent holding company and the Firm's major bank subsidiaries as well as the Firm's principal U.S. and U.K. broker-dealer subsidiaries. In addition, separate regional liquidity stress testing is performed.
Liquidity stress tests assume all of the Firm's contractual obligations are met and also take into consideration varying levels of access to unsecured and secured funding markets. Additionally, assumptions with respect to potential non-contractual and contingent outflows include, but are not limited to, the following:
Deposits

For bank deposits that have no contractual maturity, the range of potential outflows reflect the type and size of deposit account, and the nature and extent of the Firm's relationship with the depositor.
Secured funding
Range of haircuts on collateral based on security type and counterparty.

## Derivatives

Margin calls by exchanges or clearing houses;
Collateral calls associated with ratings downgrade triggers and variation margin;
Outflows of excess client collateral;
Novation of derivative trades.
Unfunded commitments
Potential facility drawdowns reflecting type of commitment and counterparty.
Contingency funding plan
The Firm's contingency funding plan ("CFP"), which is reviewed and approved by ALCO, provides a documented framework for managing both temporary and longer-term unexpected adverse liquidity situations. It sets out a list of indicators and metrics that are reviewed on a daily basis to identify the emergence of increased risks or vulnerabilities in the Firm's liquidity position. The CFP identifies alternative contingent liquidity resources that can be accessed under adverse liquidity circumstances.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## Credit ratings

The cost and availability of financing are influenced by credit ratings. Reductions in these ratings could have an adverse effect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral or funding requirements and decrease the number of investors and counterparties willing to lend to the Firm. Additionally, the Firm's funding requirements for VIEs and other third-party commitments may be adversely affected by a decline in credit ratings. For additional information on the impact of a credit ratings downgrade on the funding requirements for

VIEs, and on derivatives and collateral agreements, see Special-purpose entities on page 55, and Note 5 on page 142, of this Form 10-Q.
Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources, and disciplined liquidity monitoring procedures.

The credit ratings of the parent holding company and certain of the Firm's significant operating subsidiaries as of September 30, 2012, were as follows.

|  | JPMorgan Chase \& Co. |  |  | JPMorgan Chase Bank, N.A. Chase Bank USA, N.A. |  |  | J.P. Morgan Securities LLC |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Senior unsecured | Commercial paper | Outlook | Long-term deposits | Short-term deposits | Outlook | Long-te issuer rating | Shortissuer rating | Outlook |
| Moody's Investor Services | A2 | P-1 | Negative | Aa3 | P-1 | Stable | NR | NR | NR |
| Standard \& Poor's | A | A-1 | Negative | A+ | A-1 | Negative | A+ | A-1 | Negative |
| Fitch Ratings | A+ | F1 | RWN ${ }^{(a)}$ | AA- | F1+ | RWN ${ }^{(a)}$ | A+ | F1 | RWN ${ }^{(a)}$ |

(a) Refers to "Ratings Watch Negative" on long-term ratings.

On June 21, 2012, Moody's downgraded the long-term ratings of the Firm and affirmed all its short-term ratings. The outlook for the parent holding company was left on negative reflecting Moody's view that government support for U.S. bank holding company creditors is becoming less certain and less predictable. Such ratings actions concluded Moody's review of 17 banks and securities firms with global capital markets operations, including the Firm, as a result of which all of these institutions were downgraded by various degrees.
Following the disclosure by the Firm, on May 10, 2012, of losses from the synthetic credit portfolio held by CIO. Fitch placed all parent and subsidiary long-term ratings on Ratings Watch Negative. Subsequently, on October 10, 2012, Fitch revised the outlook to Stable and affirmed the Firm's ratings.
The above-mentioned rating actions did not have a material adverse impact on the Firm's cost of funds and its ability to fund itself. Further downgrades of the Firm's long-term ratings by one notch or two notches could result in a downgrade of the Firm's short-term ratings. If this were to occur, the Firm believes its cost of funds could increase and access to certain funding markets could be reduced. The nature and magnitude of the impact of further ratings downgrades depends on numerous contractual and behavioral factors (which the Firm believes are incorporated in the Firm's liquidity risk and stress testing metrics). The Firm believes it maintains sufficient liquidity to withstand any potential decrease in funding capacity due to further ratings downgrades.

JPMorgan Chase's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings, or stock price.
Rating agencies continue to evaluate various ratings factors, such as regulatory reforms, rating uplift assumptions surrounding government support, and economic uncertainty and sovereign creditworthiness, and their potential impact
on ratings of financial institutions. Although the Firm closely monitors and endeavors to manage factors influencing its credit ratings, there is no assurance that its credit ratings will not be changed in the future.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Cash flows
As of September 30, 2012 and 2011, cash and due from banks was $\$ 53.3$ billion and $\$ 56.8$ billion, respectively. These balances decreased by $\$ 6.3$ billion and increased by $\$ 29.2$ billion from December 31, 2011 and 2010, respectively. The following discussion highlights the major activities and transactions that affected JPMorgan Chase's cash flows for the nine months ended September 30, 2012 and 2011.
Cash flows from operating activities
JPMorgan Chase's operating assets and liabilities support the Firm's capital markets and lending activities, including the origination or purchase of loans initially designated as held-for-sale. Operating assets and liabilities can vary significantly in the normal course of business due to the amount and timing of cash flows, which are affected by client-driven and risk management activities, and market conditions. Management believes cash flows from operations, available cash balances and the Firm's ability to generate cash through short- and long-term borrowings are sufficient to fund the Firm's operating liquidity needs.
For the nine months ended September 30, 2012, net cash provided by operating activities was $\$ 29.6$ billion. Net cash generated from operating activities was higher than net income, partially as a result of adjustments for noncash items such as depreciation and amortization, provision for credit losses, and stock-based compensation. In addition, net cash provided by operating activities was driven by a decrease in securities borrowed due to a shift in the deployment of excess cash by Treasury. Cash proceeds received from sales and paydowns of loans was higher than the cash used to acquire such loans originated and purchased with an initial intent to sell, and also reflected a lower level of activity over the prior-year period.
For the nine months ended September 30, 2011, net cash provided by operating activities was $\$ 66.5$ billion. This resulted from a decrease in trading assets-debt and equity instruments, driven by lower client market-making activity in IB, resulting in declines in equity securities and U.S. government agency mortgage-backed securities, partially offset by an increase in U.S. treasury securities; an increase in accounts payable and other liabilities largely due to higher IB customer balances; an increase in trading liabilities-derivative payables predominantly due to increases in interest rate derivative balances driven by declining interest rates and increases in commodity derivative balances driven by price movements in base metals and energy. Partially offsetting these cash proceeds was an increase in trading assets-derivative receivables predominantly due to the aforementioned declining interest rates and increases in commodity derivative balances. Net cash generated from operating activities was higher than net income largely as a result of adjustments for noncash items such as the provision for credit losses, depreciation and amortization, and stock-based compensation. Additionally, cash provided by proceeds from sales and paydowns of loans originated or purchased with an initial
intent to sell was higher than cash used to acquire such loans, and also reflected a higher level of activity over the prior-year period.
Cash flows from investing activities
The Firm's investing activities predominantly include loans originated to be held for investment, the AFS securities portfolio and other short-term interest-earning assets. For the nine months ended September 30, 2012, net cash of $\$ 69.7$ billion was used in investing activities. This resulted from an increase in securities purchased under resale agreements predominantly due to deployment of excess cash by Treasury; an increase in deposits with banks reflecting the placement of the Firm's excess funds with various central banks, including Federal Reserve Banks; and an increase in wholesale loans driven by increased client activity across most regions and businesses. Partially offsetting these cash outflows were proceeds from maturities and sales of AFS securities being higher than cash used to acquire such securities; and a decline in the level of consumer, excluding credit card loans due to paydowns, portfolio run-off, and a decrease in credit card loans due to seasonality and higher repayment rates.
For the nine months ended September 30, 2011, net cash of $\$ 169.7$ billion was used in investing activities. This resulted from a significant increase in deposits with banks reflecting the placement of funds with various central banks, including Federal Reserve Banks during the third quarter of 2011, predominantly resulting from the overall growth in wholesale client deposits; an increase in securities purchased under resale agreements, predominantly in IB, reflecting higher client financing activity; an increase in loans reflecting continued growth in client activity across all of the Firm's wholesale businesses; and net purchases of AFS securities, largely due to repositioning of the portfolio in

Corporate in response to changes in the market environment. Partially offsetting these cash outflows were a decline in loans from the continued portfolio runoff in RFS, as well as lower seasonal balances, higher repayment rates, continued runoff of the Washington Mutual portfolio and the sale of the Kohl's portfolio.
Cash flows from financing activities
The Firm's financing activities primarily reflect cash flows related to taking customer deposits, and issuing long-term debt as well as preferred and common stock. For the nine months ended September 30, 2012, net cash provided by financing activities was $\$ 33.6$ billion. This was driven by an increase in securities loaned or sold under repurchase agreements, predominantly because of higher secured financing of the Firm's assets and a change in the mix of the Firm's liabilities; an increase in deposits predominantly due to growth in retail deposits; an increase in commercial paper due to higher commercial paper liabilities sourced from wholesale funding markets to meet short-term funding needs, partially offset by a decline in the volume of liability balances in sweep accounts related to TSS's cash management product; and proceeds from the issuance of
preferred stock. Partially offsetting these cash inflows were net redemptions and maturities of long-term borrowings, largely related to the redemption of TruPS; and payments of cash dividends on common and preferred stock and repurchases of common stock and warrants.
For the nine months ended September 30, 2011, net cash provided by financing activities was $\$ 132.4$ billion. This was largely driven by a significant increase in deposits, predominantly due to an overall growth in wholesale client balances and, to a lesser extent, consumer deposit balances; and an increase in commercial paper due to growth in the volume of liability balances in sweep accounts related to TSS's cash management product. Cash was used to reduce securities sold under repurchase agreements, predominantly in IB, due to lower financing of the Firm's trading assets; for net repayments of long-term borrowings, including a decline in long-term beneficial interests issued by consolidated VIEs due to maturities of Firm-sponsored credit card securitization transactions; to reduce other borrowed funds, predominantly driven by maturities of short-term unsecured bank notes and short-term FHLB advances; for repurchases of common stock and warrants, and payments of cash dividends on common and preferred stock.

## CREDIT PORTFOLIO

For a further discussion of the Firm's Credit Risk Management framework, see pages 132-134 of JPMorgan Chase's 2011 Annual Report. For further information regarding the credit risk inherent in the Firm's investment securities portfolio, see Note 11 on pages 148-153 of this Form 10-Q and Note 12 on pages 225-230 of JPMorgan Chase's 2011 Annual Report.
The following table presents JPMorgan Chase's credit portfolio as of September 30, 2012, and December 31, 2011. Total credit exposure was $\$ 1.8$ trillion at September 30, 2012, an increase of $\$ 30.5$ billion from December 31, 2011, primarily reflecting an increase in the wholesale portfolio of $\$ 48.0$ billion, partially offset by a decrease in the consumer portfolio of $\$ 17.5$ billion.
For further information on the changes in the credit portfolio, see Wholesale Credit Portfolio on pages 74-81, and Consumer Credit Portfolio on pages 82-92, of this Form 10-Q.

The Firm provided credit to and raised capital of over $\$ 1.3$ trillion for its commercial and consumer clients during the nine months ended September 30, 2012; this included more than $\$ 15$ billion of credit provided to U.S. small businesses, up $21 \%$ compared with the prior year and $\$ 52$ billion to more than 1,300 not-for-profit and government entities, including states, municipalities, hospitals and universities. The Firm also originated more than 664,000 mortgages and provided credit cards to approximately 4.9 million consumers during the nine months ended September 30, 2012. The Firm remains committed to helping homeowners and preventing foreclosures. Since the beginning of 2009, the Firm has offered nearly 1.4 million mortgage modifications and of these more than 578,000 have achieved permanent modification as of September 30, 2012.

In the following table, reported loans include loans retained (i.e., held-for-investment); loans held-for-sale (which are carried at the lower of cost or fair value, with changes in value recorded in noninterest revenue); and certain loans accounted for at fair value. The Firm also records certain loans accounted for at fair value in trading assets. For further information regarding these loans see Note 3 on pages 119-133 of this Form 10-Q. For additional information on the Firm's loans and derivative receivables, including the Firm's accounting policies, see Note 13 and Note 5 on pages 154-175 and 136-144, respectively, of this Form 10-Q.
Total credit portfolio
 Represents the net notional amount of protection purchased and sold through credit derivatives used to manage
(a) both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio. For additional information, see Credit derivatives on pages $80-81$ and Note 5 on pages 136-144 of this Form 10-Q.
(b) Nonperforming includes nonaccrual loans, nonperforming derivatives, commitments that are risk rated as b) nonaccrual and real estate owned.
(c) At September 30, 2012, and December 31, 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $\$ 11.0$ billion and $\$ 11.5$ billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of $\$ 1.5$ billion and $\$ 954$ million, respectively; and (3)

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

student loans insured by U.S. government agencies under the FFELP of $\$ 536$ million and $\$ 551$ million, respectively, that are 90 or more days past due. These amounts were excluded from nonaccrual loans as reimbursement of insured amounts are proceeding normally. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance issued by the Federal Financial Institutions Examination Council ("FFIEC").
Excludes PCI loans. Because the Firm is recognizing interest income on each pool of PCI loans, they are all
(d) considered to be performing.

At September 30, 2012, and December 31, 2011, total nonaccrual loans represented $1.57 \%$ and $1.38 \%$,
(e) respectively, of total loans. At September 30, 2012, included $\$ 1.7$ billion of residential real estate Chapter 7 loans and $\$ 1.3$ billion of performing junior liens that are subordinate to senior liens that are 90 days or more past due. For more information, see Consumer Credit Portfolio on pages 82-92 of this Form 10-Q.
Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first
(f) quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.
Net charge-offs and net charge-off rates for the three months and nine months ended September 30, 2012, included
(g) $\$ 880$ million of incremental charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 82-92 of this Form 10-Q for further details.

Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## WHOLESALE CREDIT PORTFOLIO

As of September 30, 2012, wholesale exposure (IB, CB, TSS and AM) increased by $\$ 48.0$ billion from December 31, 2011, primarily driven by increases of $\$ 39.8$ billion in lending-related commitments and $\$ 19.3$ billion in loans due to increased client activity across most regions and most businesses. These increases were partially offset by a $\$ 12.5$ billion decrease in derivative receivables, primarily due to the impact of changes in the underlying parameters, including FX rates, interest rates and credit spreads, which resulted in reductions in derivative receivables related to foreign exchange, interest rate and credit derivative contracts, partially offset by increases in equity derivative receivables.

(a) Predominantly includes receivables from customers, which represent margin loans to prime and retail brokerage ${ }^{(a)}$ customers; these are classified in accrued interest and accounts receivable on the Consolidated Balance Sheets. Represents the net notional amount of protection purchased and sold through credit derivatives used to manage
(b) both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio. For additional information, see Credit derivatives on pages 80-81, and Note 5 on pages 136-144 of this Form 10-Q.
(c)Excludes assets acquired in loan satisfactions.

Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first
(d)quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.

The following table summarizes the maturity and ratings profile of the wholesale portfolio at September 30, 2012, and December 31, 2011. The ratings scale is based on the Firm's internal risk ratings, which generally correspond to the ratings as defined by S\&P and Moody's.

(a)

Represents loans held-for-sale primarily related to syndicated loans and loans transferred from the retained portfolio, and loans at fair value.
Excludes the synthetic credit portfolio. Represents the net notional amounts of protection purchased and sold,
(b) through credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. The ratings profile shown is based on the rating of the derivative counterparty; the counterparties to these positions are predominantly investment-grade banks and finance companies.
The maturity profiles of retained loans and lending-related commitments are based on the remaining contractual
(c) maturity. The maturity profiles of derivative receivables are based on the maturity profile of average exposure. For
${ }^{(c)}$ further discussion of average exposure, see Derivative receivables on pages 141-143 of JPMorgan Chase's 2011 Annual Report.
Wholesale credit exposure - selected industry exposures
The Firm focuses on the management and diversification of its industry exposures, with particular attention paid to industries with actual or potential credit concerns. As of September 30, 2012, the Firm revised its definition of the criticized component of the wholesale portfolio to align with the banking regulators' definition of criticized exposures, which consist of the special mention, substandard and doubtful categories. Prior periods have been reclassified to conform with the current presentation. While this reclassification resulted in an increase in the level of reported criticized exposure by $\$ 4.9$ billion and $\$ 4.5$ billion as of September 30, 2012, and December 31, 2011, respectively, it did not result in material changes to the

Firm's underlying risk ratings or nonaccrual loans. Accordingly, this reclassification did not result in material changes to the allowance for credit losses or additional provision for credit losses. Furthermore, this change had no effect on reported net interest income with respect to the affected loans. The total criticized component of the portfolio, excluding loans held-for-sale and loans at fair value, decreased by $17 \%$ to $\$ 16.9$ billion at September 30, 2012, from $\$ 20.3$ billion at December 31, 2011, primarily due to repayments.

75

Below are summaries of the top 25 industry exposures as of September 30, 2012, and December 31, 2011.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Total \$775,693
The industry rankings presented in the table as of December 31, 2011, are based on the industry rankings of the a) corresponding exposures at September 30, 2012, not actual rankings of such exposures at December 31, 2011. In addition to the credit risk exposure to states and municipal governments (both U.S. and non-U.S.) at September 30, 2012, and December 31, 2011, noted above, the Firm held $\$ 17.7$ billion and $\$ 16.7$ billion,
(b) respectively, of trading securities and $\$ 22.4$ billion and $\$ 16.5$ billion, respectively, of AFS securities issued by U.S. state and municipal governments. For further information, see Note 3 and Note 11 on pages 119-133 and 148-153, respectively, of this Form 10-Q.
Credit exposure is net of risk participations and excludes the benefit of "Credit Portfolio Management derivatives
(c) notional, net" held against derivative receivables or loans and "Liquid securities and other cash collateral held against derivative receivables".
As of September 30, 2012, exposures deemed criticized correspond to special mention, substandard and doubtful
(d) categories as defined by bank regulatory agencies. Prior periods have been reclassified to conform with the current presentation.
Represents the net notional amounts of protection purchased and sold through credit derivatives to manage the
(e) credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. The All other category
${ }^{\text {e) }}$ includes purchased credit protection on certain credit indices. Credit Portfolio Management derivatives excludes the synthetic credit portfolio.
Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first
(f) quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.

The following table presents the geographic distribution of wholesale credit exposure including nonperforming assets and past due loans as of September 30, 2012, and December 31, 2011. The geographic distribution of the wholesale portfolio is determined based predominantly on the domicile (legal residence) of the borrower. For further information on Country Risk Management, see pages 103-105 of this Form 10-Q.

Loans
In the normal course of business, the Firm provides loans to a variety of wholesale customers, from large corporate and institutional clients to high-net-worth individuals. For further discussion on loans, including information on credit quality indicators, see Note 13 on pages 154-175 of this Form 10-Q.
The Firm actively manages wholesale credit exposure. One way of managing credit risk is through sales of loans and lending-related commitments. During the nine months ended September 30, 2012 and 2011, the Firm sold $\$ 2.8$ billion and $\$ 6.3$ billion, respectively, of loans and commitments. These sale activities are not related to the Firm's securitization activities. For further discussion of securitization activity, see Liquidity Risk Management and Note 15 on pages 66-72 and 177-184, respectively, of this Form 10-Q.
The following table presents the change in the nonaccrual loan portfolio for the nine months ended September 30, 2012 and 2011. Nonaccrual wholesale loans decreased by $\$ 672$ million from December 31, 2011, primarily reflecting repayments.

Receivables from customers
Receivables from customers primarily represent margin loans to prime and retail brokerage clients and are collateralized through a pledge of assets maintained in clients' brokerage accounts that are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's position may be liquidated by the Firm to meet the minimum collateral requirements.
Lending-related commitments
JPMorgan Chase uses lending-related financial instruments, such as commitments and guarantees, to meet the financing needs of its customers. The contractual amounts of these financial instruments represent the maximum
possible credit risk should the counterparties draw down on these commitments or the Firm fulfills its obligations under these guarantees, and the counterparties subsequently fails to perform according to the terms of these contracts. In the Firm's view, the total contractual amount of these wholesale lending-related commitments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these commitments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based on average portfolio historical experience, to become drawn upon in an event of a default by an obligor. The loan-equivalent amount of the Firm's lending-related commitments was $\$ 221.8$ billion and $\$ 206.5$ billion as of September 30, 2012, and December 31, 2011, respectively.

## Derivative contracts

In the normal course of business, the Firm uses derivative instruments predominantly for market-making activities. Derivatives enable customers and the Firm to manage exposures to fluctuations in interest rates, currencies and other markets. The Firm also uses derivative instruments to manage its credit exposure. For further discussion of derivative contracts, see Note 5 on pages 136-144 of this Form 10-Q.
The following tables summarize the net derivative receivables for the periods presented.
Derivative receivables

|  | Derivative receivables |  |
| :--- | :--- | :--- |
| (in millions) | Sep 30, | Dec 31, |
|  | 2012 | 2011 |
| Interest rate | $\$ 42,727$ | $\$ 46,369$ |
| Credit derivatives | 3,384 | 6,684 |
| Foreign exchange | 11,751 | 17,890 |
| Equity | 9,618 | 6,793 |
| Commodity | 12,483 | 14,741 |
| Total, net of cash collateral | 79,963 | 92,477 |
| Liquid securities and other cash collateral held against derivative | $(13,999$ | $)(21,807$ |
| receivables | $\$ 65,964$ | $\$ 70,670$ |

Derivative receivables reported on the Consolidated Balance Sheets were $\$ 80.0$ billion and $\$ 92.5$ billion at September 30, 2012, and December 31, 2011, respectively. These amounts represent the fair value of the
derivative contracts after giving effect to legally enforceable master netting agreements, cash collateral held by the Firm and the CVA. However, in management's view, the appropriate measure of current credit risk should also take into consideration additional liquid securities (primarily U.S. government and agency securities and other G7 government bonds) and other cash collateral held by the Firm of $\$ 14.0$ billion and $\$ 21.8$ billion at September 30, 2012, and December 31, 2011, respectively, that may be used as security when the fair value of the client's exposure is in the Firm's favor, as shown in the table above.
In addition to the collateral described in the preceding paragraph the Firm also holds additional collateral (including cash, U.S. government and agency securities, and other G7 government bonds) delivered by clients at the initiation of transactions, as well as collateral related to contracts that have a non-daily call frequency and collateral that the Firm has agreed to return but has not yet settled as of the reporting date. Though this collateral does not reduce the balances and is not included in the table above, it is available as security against potential exposure that could arise should the fair value of the client's derivative transactions move in the Firm's favor. As of September 30, 2012, and December 31, 2011, the Firm held $\$ 20.4$ billion and $\$ 17.6$ billion, respectively, of this additional collateral. The derivative receivables fair value, net of all collateral, also do not include other credit enhancements, such as letters of credit. For additional information on the Firm's use of collateral agreements, see Note 5 on pages 136-144 of this Form 10-Q.

The following table summarizes the ratings profile, of the derivative counterparty, of the Firm's derivative receivables, including credit derivatives, net of other liquid securities collateral, for the dates indicated.
Ratings profile of derivative receivables

| :--- | :--- | :--- | :--- | :--- | :--- |
| collateral | collateral | collateral |  |  |  |
| $\$ 24,252$ | 37 | $\%$ | $\$ 25,100$ | 35 | $\%$ |
| 12,369 | 19 | 22,942 | 32 |  |  |
| 16,658 | 25 | 9,595 | 14 |  |  |
| 11,178 | 17 | 10,545 | 15 |  |  |

| CCC+/Caa1 and below | 1,507 | 2 |  | 2,488 | 4 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Total | $\$ 65,964$ | 100 | $\%$ | $\$ 70,670$ | 100 | $\%$ |

As noted above, the Firm uses collateral agreements to mitigate counterparty credit risk. The percentage of the Firm's derivatives transactions subject to collateral agreements - excluding foreign exchange spot trades, which are not typically covered by collateral agreements due to their short maturity - was $88 \%$ as of September 30, 2012, unchanged compared with December 31, 2011.

Credit derivatives
Credit derivatives are financial instruments whose value is derived from the credit risk associated with the debt of a third-party issuer (the reference entity) and which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller) when the reference entity suffers a credit event. If no credit event has occurred, the protection seller makes no payments to the protection purchaser.

For a more detailed description of credit derivatives, see Credit derivatives in Note 5 on pages 143-144 of this Form 10-Q; and on pages 143-144 and Note 6 on pages 209-210 of JPMorgan Chase's 2011 Annual Report.
The Firm uses credit derivatives for two primary purposes: first, in its capacity as a market-maker; and second, as an end-user, to manage the Firm's own credit risk associated with various exposures.
Included in end-user activities are credit derivatives used to mitigate the credit risk associated with traditional lending activities (loans and unfunded commitments) and derivatives counterparty exposure in the Firm's wholesale businesses ("Credit Portfolio Management" activities). Information on Credit Portfolio Management activities is provided in the table below.
In addition, the Firm uses credit derivatives as an end-user to manage other exposures, including credit risk arising from certain AFS securities and from certain securities held in the Firm's market making businesses. These credit derivatives, as well as the synthetic credit portfolio, are not included in Credit Portfolio Management activities; for further information on these credit derivatives as well as credit derivatives used in the Firm's capacity as a market maker in credit derivatives, see Credit derivatives in Note 5 on pages 143-144 of this Form 10-Q.

Notional amount of protection purchased and sold ${ }^{\text {(a) }}$
(a) Amounts are presented net, considering the Firm's net protection purchased or sold with respect to each underlying (a) reference entity or index.

The credit derivatives used in Credit Portfolio Management activities do not qualify for hedge accounting under U.S. GAAP; these derivatives are reported at fair value, with gains and losses recognized in principal transactions revenue. In contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives used in credit portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure. In addition, the effectiveness of the Firm's CDS protection as a hedge of the Firm's exposures may vary depending upon a number of factors, including the contractual terms of the CDS. The fair value related to the Firm's credit derivatives used for managing credit exposure, as well as the fair value related to the CVA (which reflects the credit quality of derivatives counterparty exposure), are included in the gains and losses realized on credit derivatives disclosed in the table below. These results can vary from period to period due to market conditions that affect specific positions in the portfolio. For further information on credit derivative protection purchased in the context of country risk, see Country Risk Management on pages 103-105 of this Form 10-Q, and pages 163-165 of JPMorgan Chase's 2011 Annual Report.

## CONSUMER CREDIT PORTFOLIO

JPMorgan Chase's consumer portfolio consists primarily of residential real estate loans, credit card loans, auto loans, business banking loans, and student loans. The Firm's primary focus is on serving the prime segment of the consumer credit market. For further information on consumer loans, see Note 13 on pages $154-175$ of this Form 10-Q. A substantial portion of the consumer loans acquired in the Washington Mutual transaction were identified as PCI based on an analysis of high-risk characteristics, including product type, loan-to-value ("LTV") ratios, FICO scores and delinquency status. These PCI loans are accounted for on a pool basis, and the pools are considered to be performing. For further information on PCI loans see Note 13 on pages 154-175 of this Form 10-Q.
Credit performance of the consumer portfolio improved as the economy continued to slowly expand during the nine months ended September 30, 2012, resulting in a reduction in estimated future losses, particularly in the residential real estate and credit card portfolios. However, high unemployment relative to the historical norm and weak housing prices continue to negatively impact the number of residential real estate loans being charged off and the severity of loss recognized on defaulted residential
real estate loans. Early-stage residential real estate delinquencies (30-89 days delinquent), excluding government guaranteed loans, declined during the first half of the year, but increased during the third quarter primarily due to seasonal impacts. Late-stage delinquencies (150+ days delinquent) continued to decline but remain elevated. The elevated level of the late-stage delinquent loans is due, in part, to loss mitigation activities currently being undertaken and to elongated foreclosure processing timelines. Losses related to these loans continue to be recognized in accordance with the Firm's standard charge-off practices, but some delinquent loans that would otherwise have been foreclosed upon remain in the mortgage and home equity loan portfolios. In addition to these elevated levels of delinquencies, high unemployment and weak housing prices, uncertainties regarding the ultimate success of loan modifications, and the risk attributes of certain loans within the portfolio (e.g., loans with high LTV ratios, junior lien loans that are subordinate to a delinquent or modified senior lien) continue to contribute to uncertainty regarding overall residential real estate portfolio performance and have been considered in estimating the allowance for loan losses.

The following table presents managed consumer credit-related information (including RFS, Card, and residential real estate loans reported in the AM business segment and in Corporate/Private Equity) for the dates indicated. For further information about the Firm's nonaccrual and charge-off accounting policies, see Note 13 on pages 154-175 of this Form $10-\mathrm{Q}$.

(a) At September 30, 2012, and December 31, 2011, excluded operating lease-related assets of $\$ 4.6$ billion and $\$ 4.4$
a) billion, respectively.

Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses that were recorded as
(b) purchase accounting adjustments at the time of acquisition. To date, no charge-offs have been recorded for these loans.
Credit card and home equity lending-related commitments represent the total available lines of credit for these
(c) products. The Firm has not experienced, and does not anticipate, that all available lines of credit would be used at c) the same time. For credit card and home equity commitments (if certain conditions are met), the Firm can reduce or cancel these lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law.

## (d)

Receivables from customers primarily represent margin loans to retail brokerage customers, which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets.
(e) Includes accrued interest and fees net of an allowance for the uncollectible portion of accrued interest and fee income.
At September 30, 2012, and December 31, 2011, nonaccrual loans excluded: (1) mortgage loans insured by U.S. government agencies of $\$ 11.0$ billion and $\$ 11.5$ billion, respectively, that are 90 or more days past due; and (2)

## (f)

student loans insured by U.S. government agencies under the FFELP of $\$ 536$ million and $\$ 551$ million, respectively, that are 90 or more days past due. These amounts were excluded from nonaccrual loans as reimbursement of insured amounts are proceeding normally. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.

## (g)

Excludes PCI loans. Because the Firm is recognizing interest income on each pool of PCI loans, they are all considered to be performing.
At September 30, 2012, included $\$ 1.7$ billion of Chapter 7 loans as well as $\$ 1.3$ billion of performing junior liens
(h) that are subordinate to senior liens that are 90 days or more past due. See Consumer Credit Portfolio on pages 82-92 of this Form $10-\mathrm{Q}$ for further details.
Charge-offs and net charge-off rates for the three and nine months ended September 30, 2012, included incremental net charge-offs of Chapter 7 loans of $\$ 93$ million for senior lien home equity, $\$ 625$ million for junior lien home equity, $\$ 46$ million for prime mortgage, including option ARMs, $\$ 61$ million for subprime mortgage and $\$ 55$
(i) million for auto loans. Net charge-off rates for the for the three months ended September 30, 2012, excluding these incremental net charge-offs would have been $0.81 \%, 2.80 \%, 0.53 \%, 4.13 \%$ and $0.29 \%$ for the senior lien home equity, junior lien home equity, prime mortgage, including option ARMs, subprime mortgages and auto loans, respectively. See Consumer Credit Portfolio on pages 82-92 of this Form 10-Q for further details.
Average consumer loans held-for-sale were $\$ 109$ million for the three months ended September 30, 2012 and 2011,
(j) and $\$ 570$ million and $\$ 1.2$ billion, respectively, for the nine months ended September 30, 2012 and 2011. These amounts were excluded when calculating net charge-off rates.
Consumer, excluding credit card
Portfolio analysis
Consumer loan balances declined during the nine months ended September 30, 2012, due to paydowns, portfolio run-off and charge-offs. Credit performance has improved across most portfolios but charge-offs and delinquent loans remain above normal levels.
At September 30, 2012, the Firm reported, in accordance with regulatory guidance, $\$ 1.7$ billion of residential real estate and auto loans that have been discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual TDRs, regardless of their delinquency status. Pursuant to that guidance, these Chapter 7 loans were charged off to the net realizable value of the collateral, resulting in an incremental $\$ 880$ million of charge-offs for the three and nine months ended September 30, 2012. The Firm expects to recover a significant amount of these losses over time as principal payments are received. Prior to September 30, 2012, the Firm's policy was to charge down to net realizable value loans to borrowers who had filed for bankruptcy when such loans became 60 days past due, and reported such loans as nonaccrual at that time. However, the Firm did not previously report loans discharged under Chapter 7 bankruptcy as TDRs unless otherwise modified under one of the Firm's loss mitigation programs. Prior periods have not been restated for this policy change. For more information regarding the impact of these changes to nonaccrual loans and net charge-offs, see the Nonaccrual loans section on page 89 of this Form 10-Q and the Consumer Credit Portfolio table on pages $82-92$ of this Form 10-Q.
The following discussion relates to the specific loan
and lending-related categories. PCI loans are generally excluded from individual loan product discussions and are addressed separately below. For further information about the Firm's consumer portfolio, including information about delinquencies, loan modifications and other credit quality indicators, see Note 13 on pages $154-175$ of this Form $10-\mathrm{Q}$.

Home equity: Home equity loans at September 30, 2012, were $\$ 69.7$ billion, compared with $\$ 77.8$ billion at December 31, 2011. The decrease in this portfolio primarily reflected loan paydowns and charge-offs. Early-stage
delinquencies showed improvement from December 31, 2011, for both senior and junior lien home equity loans; however, net charge-offs for the three and nine months ended September 30, 2012, increased from the same periods in the prior year due to the incremental charge-offs of Chapter 7 loans. Senior lien and junior lien nonaccrual loans increased $\$ 820$ million in the third quarter of 2012 due to the inclusion of Chapter 7 loans. Junior lien nonaccrual loans also increased from December 31, 2011, due to the addition of $\$ 1.3$ billion of performing junior liens that are subordinate to senior liens that are 90 days or more past due based upon regulatory guidance issued during the first quarter of 2012.
Approximately $20 \%$ of the Firm's home equity portfolio consists of home equity loans ("HELOANs") and the remainder consists of home equity lines of credit ("HELOCs"). HELOANs are generally fixed-rate, closed-end, amortizing loans, with terms ranging from 3-30 years. Approximately half of the HELOANs are senior liens and the remainder are junior liens. In general, HELOCs are revolving loans for a 10-year period, after which time the HELOC converts to a loan with a 20-year amortization period. At the time of origination, the borrower typically selects one of two minimum payment options that will generally remain in effect during the revolving period: a monthly payment of $1 \%$ of the outstanding balance, or interest-only payments based on a variable index (typically Prime).
The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial difficulty or when the collateral does not support the loan amount. Because the majority of the HELOCs were funded in 2005 or later, a fully-amortizing payment is not required until 2015 or later for the most significant portion of the HELOC portfolio. The Firm regularly evaluates both the near-term and longer-term repricing and recast risks inherent in its HELOC portfolio to ensure that the allowance

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

for credit losses and the Firm's account management practices are appropriate given the portfolio risk profile. At September 30, 2012, the Firm estimated that its home equity portfolio contained approximately $\$ 3.2$ billion of current junior lien loans where the borrower has a first mortgage loan that is either delinquent or has been modified ("high-risk seconds"), compared with $\$ 3.7$ billion at December 31, 2011. Such loans are considered to pose a higher risk of default than that of junior lien loans for which the senior lien is neither delinquent nor modified. The Firm estimates the balance of its total exposure to high-risk seconds on a quarterly basis using internal data, loan level credit bureau data, which typically provides the delinquency status of the senior lien, as well as information from a database maintained by one of the bank regulatory agencies. The estimated balance of these high-risk seconds may vary from quarter to quarter for reasons such as the movement of related senior liens into and out of the 30+ day delinquency bucket.

Senior lien 90 days or more delinquent
Total current high risk junior liens
\$1.1
0.9
1.2
(a)
\$3.2

Junior liens subordinate to senior liens that are 90 days or more past due are classified as nonaccrual loans.
(a) Excludes approximately $\$ 100$ million of junior liens that are performing but not current, which were also placed on nonaccrual in accordance with the regulatory guidance.
Of this estimated $\$ 3.2$ billion balance at September 30, 2012, the Firm owns approximately 5\% and services approximately $25 \%$ of the related senior lien loans to these borrowers. The performance of the Firm's junior lien loans is generally consistent regardless of whether the Firm owns, services or does not own or service the senior lien. The increased probability of default associated with these higher-risk junior lien loans was considered in estimating the allowance for loan losses.
Based upon regulatory guidance, the Firm began reporting performing junior liens that are subordinate to senior liens that are 90 days or more past due as nonaccrual loans in the first quarter of 2012. The prior year was not restated for this policy change. The classification of certain of these higher-risk junior lien loans as nonaccrual did not have an impact on the allowance for loan losses, because as noted above, the Firm has previously considered the risk characteristics of this portfolio in estimating its allowance for loan losses. This policy change had a minimal impact on the Firm's net interest income during the three and nine months ended September 30, 2012, because predominantly all of the reclassified loans are currently making payments.

Mortgage: Mortgage loans at September 30, 2012, including prime, subprime and loans held-for-sale, were $\$ 84.2$ billion, compared with $\$ 85.9$ billion at December 31, 2011. Balances declined slightly as paydowns, portfolio run-off and the charge-off or liquidation of delinquent loans were largely offset by new prime mortgage originations. Net charge-offs decreased from the same period of the prior year, as a result of improvement in delinquencies, but remained elevated.
Prime mortgages, including option adjustable-rate mortgages ("ARMs"), were $\$ 75.6$ billion at September 30, 2012, compared with $\$ 76.2$ billion at December 31, 2011. These loans decreased slightly as charge-off or liquidation of delinquent loans, paydowns, and portfolio run-off of option ARM loans were largely offset by prime mortgage originations and government insured loans that the Firm repurchased. Excluding loans insured by U.S. government agencies, both early-stage and late-stage delinquencies showed improvement during the nine months ended September 30, 2012, but early-stage delinquent loans increased during the quarter due in part to seasonal factors. Nonaccrual loans increased due to the inclusion of Chapter 7 loans. Nonaccrual loans remained elevated as a result of ongoing foreclosure processing delays. Net charge-offs declined year-over-year but remained high. Option ARM loans, which are included in the prime mortgage portfolio, were $\$ 6.7$ billion and $\$ 7.4$ billion and represented $9 \%$ and $10 \%$ of the prime mortgage portfolio at September 30, 2012, and December 31, 2011, respectively. The decrease in option ARM loans resulted from portfolio run-off. As of September 30, 2012, approximately $6 \%$ of option ARM borrowers were delinquent, $3 \%$ were making interest-only or negatively amortizing payments, and $91 \%$ were making amortizing payments (such payments are not necessarily fully amortizing).

Approximately $84 \%$ of borrowers within the portfolio are subject to risk of payment shock due to future payment recast, as only a limited number of these loans have been modified. The cumulative amount of unpaid interest added to the unpaid principal balance due to negative amortization of option ARMs was not material at either September 30, 2012, or December 31, 2011. The Firm estimates the following balances of option ARM loans will undergo a payment recast that results in a payment increase: $\$ 59$ million in 2012, $\$ 547$ million in 2013 and $\$ 868$ million in 2014. The Firm's option ARM loans, other than those held in the PCI portfolio, are primarily loans with lower LTV ratios and higher borrower FICO scores. Accordingly, the Firm expects substantially lower losses on this portfolio when compared with the PCI option ARM pool. The option ARM portfolio was acquired by the Firm as part of the Washington Mutual transaction.
Subprime mortgages at September 30, 2012, were $\$ 8.6$ billion, compared with $\$ 9.7$ billion at December 31, 2011. The decrease was due to portfolio run-off and the charge-off or liquidation of delinquent loans. Both early-stage and

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

late-stage delinquencies have improved from December 31, 2011, but remain at elevated levels. Early-stage delinquencies increased during the quarter due in part to seasonal factors, and nonaccrual loans and net charge-offs increased due to the inclusion of Chapter 7 loans.
Auto: Auto loans at September 30, 2012, were $\$ 48.9$ billion, compared with $\$ 47.4$ billion at December 31, 2011. Loan balances increased due to new originations partially offset by paydowns and payoffs. Delinquent loans were relatively flat compared to December 31, 2011, while nonaccrual loans increased due to the inclusion of Chapter 7 loans. Net charge-offs also increased for the three months and nine months ended September 30, 2012, compared with the same periods in the prior year as a result of incremental charge-offs of the Chapter 7 loans. Excluding the incremental net charge-offs of the Chapter 7 loans, net charge-offs remain low as a result of favorable trends in both loss frequency and loss severity, mainly due to enhanced underwriting standards and a strong used car market. The auto loan portfolio reflected a high concentration of prime-quality credits.
Business banking: Business banking loans at September 30, 2012, were $\$ 18.6$ billion, compared with $\$ 17.7$ billion at December 31, 2011. The increase was due to growth in new loan origination volumes. These loans primarily include loans that are collateralized, often with personal loan guarantees, and may also include Small Business Administration guarantees. Delinquent loans and nonaccrual loans showed improvement from December 31, 2011. Net charge-offs declined for the three months and nine months ended September 30, 2012, compared with the same periods in the prior year.
Student and other: Student and other loans at September 30, 2012, were $\$ 12.5$ billion, compared with $\$ 14.1$ billion at December 31, 2011. The decrease was primarily due to paydowns and charge-offs of student loans. Other loans primarily include other secured and unsecured consumer loans. Nonaccrual loans increased slightly from December 31, 2011 while charge-offs decreased for the three months and nine months ended September 30, 2012, compared with the same periods in the prior year.
Purchased credit-impaired loans: PCI loans at September 30, 2012, were $\$ 61.2$ billion, compared with $\$ 65.5$ billion at December 31, 2011. This portfolio represents loans acquired in the Washington Mutual transaction, which were recorded at fair value at the time of acquisition.
During the nine months ended September 30, 2012, no additional impairment was recognized in connection with the Firm's review of the PCI portfolios' expected cash flows. At both September 30, 2012, and December 31, 2011, the allowance for loan losses for the home equity, prime mortgage, option ARM and subprime mortgage PCI portfolios was $\$ 1.9$ billion, $\$ 1.9$ billion, $\$ 1.5$ billion and $\$ 380$ million, respectively.

As of September 30, 2012, approximately $28 \%$ of the option ARM PCI loans were delinquent and $47 \%$ have been modified into fixed-rate, fully amortizing loans. Substantially all of the remaining loans are making amortizing payments, although such payments are not necessarily fully amortizing; in addition, substantially all of these loans are subject to the risk of payment shock due to future payment recast. The cumulative amount of unpaid interest added to the unpaid principal balance of the option ARM PCI pool was $\$ 915$ million and $\$ 1.1$ billion at September 30, 2012, and December 31, 2011, respectively. The Firm estimates the following balances of option ARM PCI loans will undergo a payment recast that results in a payment increase: $\$ 874$ million in 2012 and $\$ 309$ million in 2013 and $\$ 459$ million in 2014.
The following table provides a summary of lifetime principal loss estimates included in both the nonaccretable difference and the allowance for loan losses. Lifetime principal loss estimates were relatively unchanged from December 31, 2011, to September 30, 2012. Principal charge-offs will not be recorded on these pools until the nonaccretable difference has been fully depleted.
Summary of lifetime principal loss estimates

|  | Lifetime loss estimates $^{(\mathrm{a})}$ |  | LTD liquidation losses $^{(\mathrm{b})}$ |  |
| :--- | :--- | :--- | :--- | :--- |
| (in billions) | Sep 30, | Dec 31, | Sep 30, | Dec 31, |
| Home equity | 2012 | 2011 | 2012 | 2011 |
| Prime mortgage | $\$ 14.9$ | $\$ 14.9$ | $\$ 11.3$ | $\$ 10.4$ |
| Subprime mortgage | 4.3 | 4.6 | 2.8 | 2.3 |
| Option ARMs | 3.6 | 3.8 | 2.1 | 1.7 |
|  | 11.4 | 11.5 | 7.8 | 6.6 |

Total $\quad \$ 34.2 \quad \$ 34.8 \quad \$ 24.0 \quad \$ 21.0$

Includes the original nonaccretable difference established in purchase accounting of $\$ 30.5$ billion for principal losses only plus additional principal losses recognized subsequent to acquisition through the provision and allowance for loan losses. The remaining nonaccretable difference for principal losses only was $\$ 6.4$ billion and $\$ 9.4$ billion at September 30, 2012, and December 31, 2011, respectively.
(b) Life-to-date ("LTD") liquidation losses represent realization of loss upon loan resolution.

Geographic composition and current estimated LTVs of residential real estate loans: At both September 30, 2012, and December 31, 2011, California had the greatest concentration of residential real estate loans with $24 \%$ of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans. Of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans, $\$ 75.0$ billion, or $54 \%$, were concentrated in California, New York, Arizona, Florida and Michigan at September 30, 2012, compared with $\$ 79.5$ billion, or $54 \%$, at December 31, 2011. The unpaid principal balance of PCI loans concentrated in these five states represented $72 \%$ of total PCI loans at both September 30, 2012, and December 31, 2011.

86

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

The current estimated average LTV ratio for residential real estate loans retained, excluding mortgage loans insured by U.S. government agencies and PCI loans, was $82 \%$ at September 30, 2012, compared with $83 \%$ at December 31, 2011. Excluding mortgage loans insured by U.S. government agencies and PCI loans, $21 \%$ of the retained portfolio had a current estimated LTV ratio greater than $100 \%$, and $9 \%$ of the retained portfolio had a current estimated LTV ratio greater than $125 \%$ at September 30, 2012, compared with $24 \%$ and $10 \%$, respectively, at December 31, 2011. The decline in home prices since 2007
has had a significant impact on the collateral values underlying the Firm's residential real estate loan portfolio. In general, the delinquency rate for loans with high LTV ratios is greater than the delinquency rate for loans in which the borrower has equity in the collateral. While a large portion of the loans with current estimated LTV ratios greater than $100 \%$ continue to pay and are current, the continued willingness and ability of these borrowers to pay remains uncertain.

The following table for PCI loans presents the current estimated LTV ratio, as well as the ratio of the carrying value of the underlying loans to the current estimated collateral value. Because such loans were initially measured at fair value, the ratio of the carrying value to the current estimated collateral value will be lower than the current estimated LTV ratio, which is based on the unpaid principal balance. The estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting ratios are necessarily imprecise and should therefore be viewed as estimates.
LTV ratios and ratios of carrying values to current estimated collateral values - PCI loans

September 30, 2012
December 31, 2011

| (in millions, except ratios) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Unpaid principal balance | Current estimated LTV ratio ${ }^{(a)}$ | Net carrying value ${ }^{(c)}$ | Ratio of net carrying value to current estimated collateral value ${ }^{(c)}$ | Unpaid principal balance | Current <br> estimated <br> LTV <br> ratio ${ }^{(a)}$ | Net carrying value ${ }^{(c)}$ | Ratio of net carrying value to current estimated collateral value ${ }^{\text {(c) }}$ |
| Home equity | \$23,005 | $113 \%$ (b) | \$19,524 | 96 \% | \$25,064 | 117 \% (b) | \$20,789 | 97 |
| Prime mortgage | 14,351 | 105 | 12,109 | 89 | 16,060 | 110 | 13,251 | 91 |
| Subprime mortgage | 6,496 | 109 | 4,322 | 73 | 7,229 | 115 | 4,596 | 73 |
| Option ARMs | 23,372 | 103 | 19,530 | 86 | 26,139 | 109 | 21,199 | 89 |

Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current
(a) property values are estimated at least quarterly based on home valuation models that utilize nationally recognized
a) home price index valuation estimates; such models incorporate actual data to the extent available and forecasted data where actual data is not available.
Represents current estimated combined LTV for junior home equity liens, which considers all available lien
(b) positions related to the property. All other products are presented without consideration of subordinate liens on the property.
Net carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at
(c) the date of acquisition and is also net of the allowance for loan losses of $\$ 1.9$ billion for home equity, $\$ 1.9$ billion 2012, and December 31, 2011.
The current estimated average LTV ratios were $112 \%$ and $125 \%$ for California and Florida PCI loans, respectively, at September 30, 2012, compared with $117 \%$ and $140 \%$, respectively, at December 31, 2011. Pressure on housing prices in California and Florida have contributed negatively to both the current estimated average LTV ratio and the ratio of net carrying value to current estimated collateral value for loans in the PCI portfolio. Of the PCI portfolio, $57 \%$ had a current estimated LTV ratio greater than $100 \%$, and $26 \%$ had a current LTV ratio of greater than $125 \%$ at

September 30, 2012, compared with 62\% and 31\%, respectively, at December 31, 2011.
While the current estimated collateral value is greater than the net carrying value of PCI loans, the ultimate performance of this portfolio is highly dependent on borrowers' behavior and ongoing ability and willingness to continue to make payments on homes with negative equity, as well as on the cost of alternative housing. For further information on the geographic composition and current
estimated LTVs of residential real estate - non-PCI and PCI loans, see Note 13 on pages 154-175 of this Form 10-Q. Loan modification activities - residential real estate loans
For both the Firm's on-balance sheet loans and loans serviced for others, nearly 1.4 million mortgage modifications have been offered to borrowers and approximately 592,000 have been approved since the beginning of 2009. Of these, more than 578,000 have achieved permanent modification as of September 30, 2012. Of the remaining modifications offered, $17 \%$ are in a trial period or still being reviewed for a modification, while $83 \%$ have dropped out of the modification program or otherwise were not eligible for final modification.
The Firm is participating in the U.S. Treasury's Making Home Affordable ("MHA") programs and is continuing to expand its other loss-mitigation efforts for financially distressed borrowers who do not qualify for the U.S. Treasury's programs. The MHA programs include the Home Affordable Modification Program ("HAMP") and the Second Lien Modification Program (" 2 MP "). The Firm's other loss-

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

mitigation programs for troubled borrowers who do not qualify for HAMP include the traditional modification programs offered by the GSEs and other governmental agencies, as well as the Firm's proprietary modification programs, which include concessions similar to those offered under HAMP and 2MP but with expanded eligibility criteria. In addition, the Firm has offered specific targeted modification programs to higher risk borrowers, many of whom were current on their mortgages prior to modification. For further information about how loans are modified, see Note 13, Loan modifications, on pages 165-169 of this Form 10-Q.
Loan modifications under HAMP and under one of the Firm's proprietary modification programs, which are largely modeled after HAMP, require at least three payments to be made under the new terms during a trial modification period, and must be successfully re-underwritten with income verification before the loan can be permanently modified. In the case of specific targeted modification programs, re-underwriting the loan or a trial modification period is generally not required, unless the targeted loan is delinquent at the time of modification. When the Firm modifies home equity lines of credit, future lending commitments related to the modified loans are canceled as part of the terms of the modification.
The primary indicator used by management to monitor the success of the modification programs is the rate at which the modified loans redefault. Modification redefault rates are affected by a number of factors, including the type of loan modified, the borrower's overall ability and willingness to repay the modified loan and macroeconomic factors. Reduction in payment size for a borrower has shown to be the most significant driver in improving redefault rates. The performance of modified loans generally differs by product type and also on whether the underlying loan is in the PCI portfolio, due both to differences in credit quality and in the types of modifications provided. Performance metrics for modifications to the residential real estate portfolio, excluding PCI loans, that have been seasoned more than six months show weighted average redefault rates of $22 \%$ for senior lien home equity, $17 \%$ for junior lien home equity, $15 \%$ for prime mortgages including option ARMs, and $27 \%$ for subprime mortgages. The cumulative performance metrics for modifications to the PCI residential real estate portfolio seasoned more than six months show weighted average redefault rates of $17 \%$ for home equity, $17 \%$ for prime mortgages, $12 \%$ for option ARMs and $29 \%$ for subprime mortgages. The favorable performance of the option ARM modifications is the result of a targeted proactive program which fixes the borrower's payment at the current level. The cumulative redefault rates reflect the performance of modifications completed under both HAMP and the Firm's proprietary modification programs from October 1, 2009, through September 30, 2012.

The following table presents information as of September 30, 2012, and December 31, 2011, relating to modified on-balance sheet residential real estate loans for which concessions have been granted to borrowers experiencing financial difficulty. Modifications of PCI loans continue to be accounted for and reported as PCI loans, and the impact of the modification is incorporated into the Firm's quarterly assessment of estimated future cash flows. Modifications of consumer loans other than PCI loans are generally accounted for and reported as troubled debt restructurings ("TDRs"). For further information on
TDRs for the three and nine months ended September 30, 2012 and 2011, see Note 13 on pages 154-175 of this Form 10-Q.
Modified residential real estate loans

| (in millions) | September 30, 2012 |  | December 31, 2011 |  |

| Total modified PCI loans | $\$ 28,137$ | NA | $\$ 24,012$ | NA |

(a) Amounts represent the carrying value of modified residential real estate loans. At September 30, 2012, and December 31, 2011, $\$ 7.1$ billion and $\$ 4.3$ billion, respectively, of loans modified subsequent to repurchase from Ginnie Mae in accordance with the standards of the appropriate government agency
(b) (i.e., FHA, VA, RHS) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure. For additional information about sales of loans in securitization transactions with Ginnie Mae, see Note 15 on pages 177-184 of this Form 10-Q.
At September 30, 2012, included $\$ 1.7$ billion of Chapter 7 loans, consisting of $\$ 507$ million of senior lien home equity loans, $\$ 398$ million of junior lien home equity loans, $\$ 493$ million of prime, including option ARMs, and
(c) $\$ 254$ million of subprime mortgages. Certain of these individual loans were previously reported as nonaccrual loans (e.g. based upon the delinquency status of the loan). See Consumer Credit Portfolio on pages 82-92 of this Form 10-Q for further details.
(d) Amounts represent the unpaid principal balance of modified PCI loans.
(e) Loans modified in a TDR that are on nonaccrual status may be returned to accrual status when repayment is ${ }^{(e)}$ reasonably assured and
the borrower has made a minimum of six payments under the new terms. As of September 30, 2012, and December 31, 2011, nonaccrual loans included $\$ 2.7$ billion and $\$ 886$ million, respectively, of TDRs for which the borrowers had not yet made six payments under the modified terms and other TDRs placed on nonaccrual status under regulatory guidance.

Nonperforming assets
The following table presents information as of September 30, 2012, and December 31, 2011, about consumer, excluding credit card, nonperforming assets.
Nonperforming assets ${ }^{(a)}$

Assets acquired in loan satisfactions
Real estate owned
664
44
Other
Total assets acquired in loan satisfactions
Total nonperforming assets
\$10,165
\$8,257
At September 30, 2012, and December 31, 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $\$ 11.0$ billion and $\$ 11.5$ billion, respectively, that are 90 or more days past due; (2)
(a) real estate owned insured by U.S. government agencies of $\$ 1.5$ billion and $\$ 954$ million, respectively; and (3)
a) student loans insured by U.S. government agencies under the FFELP of $\$ 536$ million and $\$ 551$ million, respectively, that are 90 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally.
Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate
(b) expectation of cash flows, the past-due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

Nonaccrual loans: Total consumer, excluding credit card, nonaccrual loans were $\$ 9.5$ billion at September 30, 2012, compared with $\$ 7.4$ billion at December 31, 2011.
Nonaccrual loans in the residential real estate portfolio totaled $\$ 8.7$ billion at September 30, 2012, of which $44 \%$ were greater than 150 days past due; this compared with nonaccrual residential real estate loans of $\$ 6.5$ billion at December 31, 2011, of which $69 \%$ were greater than 150 days past due. In the aggregate, the unpaid principal balance of residential real estate loans greater than 150 days past due was charged down by approximately $50 \%$ to estimated net realizable value of the collateral at both September 30, 2012, and December 31, 2011.
At September 30, 2012, consumer, excluding credit card,
nonaccrual loans included $\$ 1.7$ billion of Chapter 7 loans, consisting of $\$ 480$ million of senior lien home equity, $\$ 340$ million of junior lien home equity, $\$ 481$ million of prime mortgage, including option ARMs, $\$ 356$ million of subprime mortgages and $\$ 65$ million of auto loans. Approximately $97 \%$ of these Chapter 7 loans were current at September 30, 2012. Because the Chapter 7 loans are accounted for as collateral-dependent loans and reported at the

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

net realizable value of the collateral, these loans did not require an additional allowance for loan losses. Certain of these individual loans have previously been reported as performing TDRs (e.g., those loans that have been previously modified under one of the Firm's loss mitigation programs and that subsequently made at least six payments under the modified payment terms).
At September 30, 2012, nonaccrual loans in the residential real estate portfolio also included $\$ 1.3$ billion of performing junior lien home equity loans that are subordinate to senior liens that are 90 days or more past due. For more information on the change in reporting of these junior liens, as well as information about how the Firm considers these loans in its allowance for loan losses, see the home equity portfolio analysis discussion on pages 84-85 of this Form 10-Q.
In addition to the combined impacts of the Chapter 7 loans and the performing junior lien home equity loans discussed above, elongated foreclosure processing timelines are expected to continue to result in elevated levels of nonaccrual loans in the residential real estate portfolios.
Modified loans have also contributed to the elevated level of nonaccrual loans, since the Firm's policy requires modified loans that are on nonaccrual status to remain on nonaccrual status until payment is reasonably assured and the borrower has made a minimum of six payments under the modified terms. At September 30, 2012, and December 31, 2011, modified residential real estate loans of $\$ 4.4$ billion and $\$ 2.0$ billion, respectively, were classified as nonaccrual loans, of which $\$ 2.7$ billion and $\$ 886$ million, respectively, had yet to make six payments under their modified terms or were placed on nonaccrual status based on regulatory guidance; the remaining nonaccrual modified loans have redefaulted.
Real estate owned ("REO"): REO assets are managed for prompt sale and disposition at the best possible economic value. REO assets are those individual properties where the Firm gains ownership and possession at the completion of the foreclosure process. REO assets, excluding those insured by U.S. government agencies, decreased by $\$ 138$ million from $\$ 802$ million at December 31, 2011, to $\$ 664$ million at September 30, 2012.
Mortgage servicing-related matters
The recent financial crisis resulted in unprecedented levels of delinquencies and defaults of 1-4 family residential real estate loans. Such loans require varying degrees of loss mitigation activities. It is the Firm's goal that foreclosure in these situations be a last resort, and accordingly, the Firm

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

has made, and continues to make, significant efforts to help borrowers stay in their homes. Since the third quarter of 2010, the Firm has prevented two foreclosures for every foreclosure completed; foreclosure-prevention methods include loan modification, short sales and other means.
The Firm has a well-defined foreclosure prevention process when a borrower fails to pay on his or her loan. The Firm attempts to contact the borrower multiple times and in various ways in an effort to pursue home retention or other options other than foreclosure. In addition, if the Firm is unable to contact a borrower, the Firm completes various reviews of the borrower's facts and circumstances before a foreclosure sale is completed. The delinquency period for the average borrower at the time of foreclosure over the last year has been approximately 24 months.
The high volume of delinquent and defaulted mortgages experienced by the Firm has placed a significant amount of stress on the Firm's servicing operations. The Firm has made, and is continuing to make, significant changes to its mortgage operations in order to enhance its mortgage servicing, loss mitigation and foreclosure processes. It has also entered into a global settlement with certain federal and state agencies, and Consent Orders with its banking regulators with respect to these matters.
Global settlement with federal and state agencies: On February 9, 2012, the Firm announced that it had agreed to a settlement in principle (the "global settlement") with a number of federal and state government agencies, including the U.S. Department of Justice, the U.S. Department of Housing and Urban Development, the Consumer Financial Protection Bureau and the State Attorneys General, relating to the servicing and origination of mortgages. The global settlement, which became effective on April 5, 2012, calls for the Firm to, among other things: (i) make cash payments of approximately $\$ 1.1$ billion, a portion of which will be set aside for payments to borrowers ("Cash Settlement Payment"); (ii) provide approximately $\$ 500$ million of refinancing relief to certain "underwater" borrowers whose loans are owned and serviced by the Firm ("Refi Program"); and (iii) provide approximately $\$ 3.7$ billion of additional relief for certain borrowers, including reductions of principal on first and second liens, payments to assist with short sales, deficiency balance waivers on past foreclosures and short sales, and forbearance assistance for unemployed homeowners ("Consumer Relief Program"). The Cash Settlement Payment was made on April 13, 2012. The purpose of the Refi Program is to allow eligible borrowers who are current on their Firm-owned mortgage loans to refinance those loans and take advantage of the current low interest rate environment. Borrowers who may be eligible for the Refi Program are those who are unable to refinance their mortgage loans under standard refinancing programs because they have no equity or, in many cases, negative equity in their homes. The initial interest rate on loans refinanced under the Refi Program will be lower than the borrower's interest rate prior to the refinancing and will
be capped at the greater of 100 basis points over Freddie Mac's then-current Primary Mortgage Market Survey Rate or $5.25 \%$. Under the Refi Program, the interest rate on each loan that is refinanced may be reduced either for the remaining life of the loan or for five years. The Firm has determined that it will reduce the interest rates on loans that it refinances under the Refi Program for the remaining lives of those loans. In substance, these refinancings are more similar to loan modifications than traditional refinancings. Substantially all of the refinancings originally expected to be performed under the Refi Program have been finalized as of September 30, 2012.
The first and second lien loan modifications provided for in the Consumer Relief Program will typically involve principal reductions for borrowers who have negative equity in their homes and who are experiencing financial difficulty. These loan modifications are primarily expected to be executed under the terms of either MHA (e.g., HAMP, 2MP) or one of the Firm's proprietary modification programs. The Firm began to provide relief to borrowers under the Consumer Relief Program in the first quarter of 2012.
If the Firm does not meet certain targets set forth in the global settlement agreement for providing either refinancings under the Refi Program or other borrower relief under the Consumer Relief Program within certain prescribed time periods, the Firm must instead make additional cash payments. In general, $75 \%$ of the targets must be met within two years of the date of the global settlement and $100 \%$ must be achieved within three years of that date. The Firm expects to file its first quarterly report concerning its compliance with the global settlement with the Office of Mortgage Settlement Oversight in November 2012. The report will include information regarding refinancings completed under the Refi Program and relief provided to borrowers under the Consumer Relief Program, as well as credits earned by the Firm under the global settlement as a result of such actions. The Firm continues to expect that it will meet the targets for providing refinancings and other borrower relief well within the prescribed time periods.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

The global settlement also requires the Firm to adhere to certain enhanced mortgage servicing standards. The servicing standards include, among other items, the following enhancements to the Firm's servicing of loans: a pre-foreclosure notice to all borrowers, which will include account information, holder status, and loss mitigation steps taken; enhancements to payment application and collections processes; strengthening procedures for filings in bankruptcy proceedings; deploying specific restrictions on the "dual track" of foreclosure and loss mitigation; standardizing the process for appeal of loss mitigation denials; and implementing certain restrictions on fees, including the waiver of certain fees while a borrower's loss mitigation application is being evaluated. The Firm has made significant progress in implementing the prescribed servicing standards.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

The global settlement releases the Firm from certain further claims by the participating government entities related to servicing activities, including foreclosures and loss mitigation activities; certain origination activities; and certain bankruptcy-related activities. Not included in the global settlement are any claims arising out of securitization activities, including representations made to investors with respect to mortgage-backed securities; criminal claims; and repurchase demands from the GSEs, among other items.
The Firm expects to account for all refinancings performed under the Refi Program and all first and second lien loans modified under the Consumer Relief Program as TDRs. The estimated impacts of both the Refi Program and the Consumer Relief Program have been considered in the Firm's allowance for loan losses. For additional information, see Allowance for Credit Losses on pages 93-95 of this Form 10-Q.
Also, on February 9, 2012, the Firm entered into agreements with the Federal Reserve and the OCC for the payment of civil money penalties related to conduct that was the subject of consent orders entered into with the banking regulators in April 2011, as discussed further below. The Firm's payment obligations under those agreements will be deemed satisfied by the Firm's payments and provisions of relief under the global settlement.
For further information on the global settlement, see Critical Accounting Estimates Used by the Firm on pages 107-109, Note 2 on pages 117-118, Note 13 on pages 154-175, and Note 23 on pages 196-206 of this Form 10-Q.
Consent Orders: During the second quarter of 2011, the Firm entered into Consent Orders ("Orders") with banking regulators relating to its residential mortgage servicing, foreclosure and loss-mitigation activities. In the Orders, the regulators have mandated significant changes to the Firm's servicing and default business and outlined requirements to implement these changes. During 2011, in accordance with the requirements of the Orders, the Firm submitted comprehensive action plans, the plans have been approved, and the Firm has commenced their implementation. The plans set forth the steps necessary to ensure the Firm's residential mortgage servicing, foreclosure and loss-mitigation activities are conducted in accordance with the requirements of the Orders.
To date, the Firm has implemented a number of corrective actions, including the following:
Established an independent Compliance Committee which meets regularly and monitors progress against the Orders. Launched a new Customer Assistance Specialist organization for borrowers to facilitate the single point of contact initiative and ensure effective coordination and communication related to foreclosure, loss-mitigation and loan modification.

Enhanced its approach to oversight over third-party vendors for foreclosure or other related functions.
Standardized the processes for maintaining appropriate controls and oversight of the Firm's activities with respect to *he Mortgage Electronic Registration system ("MERS") and compliance with MERSCORP's membership rules, terms and conditions.
Strengthened its compliance program so as to ensure mortgage-servicing and foreclosure operations, including loss-mitigation and loan modification, comply with all applicable legal requirements.
Enhanced management information systems for loan modification, loss-mitigation and foreclosure activities.
Developed a comprehensive assessment of risks in servicing operations including, but not limited to, operational, transaction, legal and reputational risks.
Made technological enhancements to automate and streamline processes for the Firm's document management, training, skills assessment and payment processing initiatives.
Deployed an internal validation process to monitor progress under the comprehensive action plans. In addition, pursuant to the Orders, the Firm is required to enhance oversight of its mortgage servicing activities, including oversight by compliance, management and audit personnel and, accordingly, has made and continues to make changes in its organization structure, control oversight and customer service practices.
Pursuant to the Orders, the Firm has retained an independent consultant to conduct a review of its residential foreclosure actions during the period from January 1, 2009, through December 31, 2010 (including foreclosure actions brought in respect of loans being serviced), and to remediate any errors or deficiencies identified by the independent consultant, including, if required, by reimbursing borrowers for any identified financial injury they may have incurred. The borrower outreach process was launched in the fourth quarter of 2011, and the independent consultant is conducting its review. For additional information, see Mortgage Foreclosure Investigations and Litigation in Note 23
on pages 203-204 of this Form 10-Q.
Credit Card
Total credit card loans were $\$ 124.5$ billion at September 30, 2012, a decrease of $\$ 7.7$ billion from December 31, 2011, due to seasonality and higher repayment rates.
For the retained credit card portfolio, the 30+ day delinquency rate decreased to $2.15 \%$ at September 30, 2012, from $2.81 \%$ at December 31, 2011. For the three months ended September 30, 2012 and 2011, the net charge-off rates were $3.57 \%$ and $4.70 \%$, respectively. For the nine months ended September 30, 2012 and 2011, the net charge-off rates were $4.11 \%$ and $5.83 \%$ respectively.

The delinquency trend showed improvement from the prior year, but was relatively flat compared with the prior quarter. Charge-offs have improved as a result of lower delinquent loans. The credit card portfolio continues to reflect a well-seasoned, largely rewards-based portfolio that has good U.S. geographic diversification. The greatest geographic concentration of credit card retained loans is in California, which represented $13 \%$ of total retained loans at both September 30, 2012, and December 31, 2011. Loan concentration for the top five states of California, New York, Texas, Florida and Illinois consisted of $\$ 50.8$ billion in receivables, or $41 \%$ of the retained loan portfolio, at September 30, 2012, compared with $\$ 53.6$ billion, or $40 \%$, at December 31, 2011.
Modifications of credit card loans
At September 30, 2012, and December 31, 2011, the Firm had $\$ 5.3$ billion and $\$ 7.2$ billion, respectively, of credit card loans outstanding that have been modified in TDRs. These balances included both credit card loans with modified payment terms and credit card loans that reverted back to
their pre-modification payment terms because the cardholder did not comply with the modified payment terms. The decrease in modified credit card loans outstanding from December 31, 2011, was attributable to a reduction in new modifications as well as ongoing payments and charge-offs on previously modified credit card loans. In the second quarter of 2012, the Firm revised its policy for recognizing charge-offs on restructured loans that do not comply with their modified payment terms. These loans will now charge-off when they are 120 days past due rather than 180 days past due.
Consistent with the Firm's policy, all credit card loans typically remain on accrual status. However, the Firm establishes an allowance, which is offset against loans and interest income, for the estimated uncollectible portion of accrued interest and fee income.
For additional information about loan modification programs to borrowers, see Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report.

## COMMUNITY REINVESTMENT ACT PORTFOLIO

The Community Reinvestment Act ("CRA") encourages banks to meet the credit needs of borrowers in all segments of their communities, including neighborhoods with low or moderate incomes. JPMorgan Chase is a national leader in community development by providing loans, investments and community development services in communities across the United States.
At September 30, 2012, and December 31, 2011, the Firm's CRA loan portfolio was approximately $\$ 16$ billion and $\$ 15$ billion, respectively. At September 30, 2012, and December 31, 2011, $61 \%$ and $63 \%$, respectively, of the

CRA portfolio were residential mortgage loans; $18 \%$ and $17 \%$, respectively, were business banking loans; $13 \%$ and $14 \%$, respectively, were commercial real estate loans; and $8 \%$, and $6 \%$, respectively, were other loans. CRA nonaccrual loans were $4 \%$ and $6 \%$, respectively, of the Firm's total nonaccrual loans. As a percentage of the Firm's net charge-offs, net charge-offs in the CRA portfolio were $3 \%$ for both the three months ended September 30, 2012 and 2011, and 3\% for both the nine months ended September 30, 2012 and 2011.

## ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for loan losses covers the wholesale (risk-rated); consumer, excluding credit card; and credit card portfolios (primarily scored). The allowance represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also determines an allowance for wholesale and certain consumer, excluding credit card, lending-related commitments.
For a further discussion of the components of the allowance for credit losses, see Critical Accounting Estimates Used by the Firm on pages $107-109$ and Note 14 on page 176 of this Form 10-Q.
At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of September 30, 2012, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb probable credit losses inherent in the portfolio).
The allowance for credit losses was $\$ 23.6$ billion at September 30, 2012, a decrease of $\$ 4.7$ billion from $\$ 28.3$ billion at December 31, 2011.
The consumer, excluding credit card, allowance for loan losses decreased $\$ 3.3$ billion from December 31, 2011, predominantly due to a reduction in the allowance for the non-PCI residential real estate portfolio, primarily related to the continuing trend of improving delinquencies, which resulted in a lower level of estimated losses based on the Firm's statistical loss calculation. For the three-month period ended September 30, 2012, this decrease in the consumer, excluding credit card, allowance for loan losses included a $\$ 900$ million reduction in the formula-based allowance for the non-PCI residential real estate portfolio, largely due to an ongoing trend of generally improving delinquencies that resulted in a lower level of estimated losses based on the Firm's statistical loss calculation. Nonaccrual loans increased due to the inclusion of Chapter 7 loans at September 30, 2012, as well as due to the impact of performing junior lien home equity loans that are subordinate to senior loans that are 90 days or more past due that have been included as nonaccrual loans beginning in the first quarter of 2012. The nine-month period also
included a $\$ 488$ million reduction attributable to a refinement of the loss estimates associated with the Firm's compliance with its obligations under the global settlement, which reflected changes in implementation strategies adopted in the second quarter of 2012. For additional information about delinquencies and nonaccrual loans in the consumer, excluding credit card, loan portfolio, see Consumer Credit Portfolio on pages 82-92 and Note 13 on pages 154-175 of this Form 10-Q.
The credit card allowance for loan losses decreased by $\$ 1.5$ billion since December 31, 2011, and was materially unchanged from June 30, 2012. The decrease since December 31, 2011, included reductions in both the asset-specific allowance and the formula-based allowance. The reduction in the asset-specific allowance, which relates to loans restructured in TDRs, largely reflects the changing profile of the TDR portfolio. The volume of new TDRs, which have higher loss rates due to expected redefaults, continues to decrease, and the loss rate on existing TDRs also tends to decrease over time as previously restructured loans season and continue to perform. In addition, effective June 30, 2012, the Firm changed its policy for recognizing charge-offs on restructured loans that do not comply with their modified payment terms based upon guidance received from the banking regulators; this policy change resulted in an acceleration of charge-offs against the asset-specific allowance. For the nine-month period ended September 30, 2012, the reduction in the formula-based allowance was primarily driven by the continuing trend of improving delinquencies and bankruptcies, which resulted in a lower level of estimated losses based on the Firm's statistical loss calculation, and by lower levels of credit card outstandings. For additional information about delinquencies in the credit card loan portfolio, see Consumer Credit Portfolio on pages 82-92 and Note 13 on pages 154-175 of this Form 10-Q.
The allowance for lending-related commitments for both the wholesale and consumer, excluding credit card portfolios, which is reported in other liabilities, was $\$ 752$ million and $\$ 673$ million at September 30, 2012, and December 31, 2011, respectively.
The credit ratios in the following table are based on retained loan balances, which exclude loans held-for-sale and loans accounted for at fair value.

(b) regulatory guidance.
(c) Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses recorded as purchase
${ }^{(c)}$ accounting adjustments at the time of acquisition.
(d) Excludes the impact of PCI loans acquired as part of the Washington Mutual transaction.
Net charge-offs and net charge-off rates for the nine months ended September 30, 2012, included $\$ 880$
(e) million of incremental charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 82-92 of this Form 10-Q for further details.

Provision for credit losses
For the three and nine months ended September 30, 2012, the provision for credit losses was $\$ 1.8$ billion and $\$ 2.7$ billion, respectively, down $26 \%$ and $49 \%$, respectively, from the prior year periods. For the three and nine months ended September 30, 2012, the credit card provision for credit losses was $\$ 1.1$ billion and $\$ 2.3$ billion, respectively, compared with $\$ 999$ million and $\$ 2.0$ billion, respectively, in the prior-year periods. The credit card provision for the three months ended September 30, 2012, increased from the prior year period as the prior year provision included a reduction in the allowance for loan losses. This reduction was partially offset by lower net charge-offs in the current period. The credit card provision for the nine months ended September 30, 2012, increased from the prior year due to a smaller current year reduction in the allowance for loan losses compared with the prior year, partially offset by lower net charge-offs in the current period.

For the three and nine months ended September 30, 2012, the consumer, excluding credit card, provision for credit losses was $\$ 736$ million and $\$ 313$ million, respectively, compared with $\$ 1.3$ billion and $\$ 3.7$ billion, respectively, for the prior year periods, reflecting reductions in the allowance for loan losses due primarily to lower estimated losses in the non-PCI residential real estate portfolio as delinquency trends improved. These reductions were partially offset by the impact of incremental charge-offs of Chapter 7 loans.
For the three and nine months ended September 30, 2012, the wholesale provision for credit losses was a benefit of $\$ 63$ million and a expense of $\$ 69$ million, respectively, compared with a expense of $\$ 127$ million and a benefit of $\$ 376$ million, respectively, in the prior-year periods. The current period wholesale provision reflected stable credit trends.

## MARKET RISK MANAGEMENT

Market risk is the exposure to an adverse change in the market value of portfolios and financial instruments caused by a change in their market prices.
Market risk management
Market Risk is an independent risk management function that works in close partnership with the lines of business, including Corporate/Private Equity, to identify and monitor market risks throughout the Firm and to define market risk policies and procedures. The market risk function reports to the Firm's Chief Risk Officer.
Market Risk seeks to control risk, facilitate efficient risk/return decisions, reduce volatility in operating performance and provide transparency into the Firm's market risk profile for senior management, the Board of Directors and regulators. Market Risk is responsible for the following functions:
Establishing a market risk policy framework
Independent measurement, monitoring and control of line of business market risk
Definition, approval and monitoring of limits
Performance of stress testing and qualitative risk assessments
Risk identification and classification
Each line of business is responsible for the management of the market risks within its units. The independent risk management group responsible for overseeing each line of business ensures that all material market risks are appropriately identified, measured, monitored and managed in accordance with the risk policy framework set out by Market Risk. The Firm's market risks arise primarily from the activities in IB, Mortgage Production and Servicing, and CIO in Corporate/Private Equity.
IB makes markets in products across fixed income, foreign exchange, equities and commodities markets. This activity gives rise to market risk and may lead to a potential decline in net income as a result of changes in market prices and rates. In addition, IB's credit portfolio exposes the Firm to market risk related to derivative CVA, hedges of the CVA and the fair value of hedges of the retained loan portfolio. Additional market risk positions result from the DVA taken on certain structured liabilities and derivatives to reflect the credit quality of the Firm; DVA is not included in VaR.
The Firm's Mortgage Production and Servicing business includes the Firm's mortgage pipeline and warehouse loans, MSRs and all related hedges. These activities give rise to complex, non-linear interest rate risks, as well as basis risk. Non-linear risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly originated mortgage commitments actually closing. Basis risk results from differences in the relative movements of the rate indices underlying mortgage exposure and other interest rates.

Risk measurement
Tools used to measure risk
Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:
Value-at-risk
Economic-value stress testing
Nonstatistical risk measures
Loss advisories
Profit and loss drawdowns
Risk identification for large exposures ("RIFLEs")
Nontrading interest rate-sensitive revenue-at-risk stress testing
Value-at-risk
JPMorgan Chase utilizes VaR, a statistical risk measure, to estimate the potential loss from adverse market moves in a normal market environment.
The Firm has one overarching VaR model framework used for risk management purposes across the Firm, which utilizes historical simulation. Historical simulation is based on data for the previous 12 months. The framework's approach assumes that historical changes in market values are representative of the distribution of potential outcomes in the immediate future. VaR is calculated assuming a one-day holding period and an expected tail-loss methodology, which approximates a $95 \%$ confidence level. This means that, assuming current changes in market values are
consistent with the historical changes used in the simulation, the Firm would expect to incur losses greater than that predicted by VaR estimates five times in every 100 trading days.
Underlying the overall VaR model framework are individual VaR models that simulate historical market returns for individual products and/or risk factors. To capture material market risks as part of the Firm's risk management framework, comprehensive VaR model calculations are performed daily for businesses whose activities give rise to market risk. These VaR models are granular and incorporate numerous risk factors and inputs to simulate daily changes in market values over the historical period; inputs are selected based on the risk profile of each portfolio as sensitivities and historical time series used to generate daily market values may be different for different products or risk management systems. The VaR model results across all portfolios are aggregated at the Firm level.
VaR provides a consistent framework to measure risk profiles and levels of diversification across product types and is used for aggregating risks across businesses and monitoring limits. These VaR results are reported to senior management and regulators.

The Firm uses VaR as a statistical risk management tool for assessing risk under normal market conditions consistent with the day-to-day risk decisions made by the lines of business. VaR is not used to estimate the impact of stressed market conditions or to manage any impact from potential stress events. The Firm uses economic stress testing and other techniques to capture and manage market risk arising under stressed scenarios, as described further below. Because VaR is based on historical data, it is an imperfect measure of market risk exposure and potential losses. For example, differences between current and historical market price volatility may result in fewer or greater VaR exceptions than the number indicated by the historical simulation. The VaR measurement also does not provide an estimate of the extent to which losses may exceed VaR results. In addition, based on their reliance on available historical data, limited time horizons, and other factors, VaR measures are inherently limited in their ability to measure certain risks and to predict losses, particularly those associated with market illiquidity and sudden or severe shifts in market conditions. As VaR cannot be used to
determine future losses in the Firm's market risk positions, the Firm considers other metrics in addition to VaR to monitor and manage its market risk positions.
Separately, the Firm calculates a daily aggregate VaR in accordance with regulatory rules, which is used to derive the Firm's regulatory VaR based capital requirements. This regulatory VaR model framework currently assumes a ten business day holding period and an expected tail loss methodology, which approximates a $99 \%$ confidence level. Regulatory VaR is applied to "covered positions" as defined by the banking regulators, "Market Risk Rule", consisting of all positions classified as trading, as well as all foreign exchange and commodity positions, whether or not in the trading account. Certain of these positions (for example, net investment foreign exchange hedging) are not included in the Firm's internal risk management VaR, while the Firm's internal risk management VaR includes some positions such as CVA and its related credit hedges that are not included in regulatory VaR. For further information, see "Capital Management" on pages 59-62 of this Form 10-Q.

The table below shows the results of the Firm's VaR measure using a 95\% confidence level. Total IB trading VaR by risk type, Credit portfolio VaR and other VaR

Diversification
 $\begin{array}{llllllllllll}\text { Total VaR } & \$ 115 & \$ 94 & \$ 135 & \$ 108 & \$ 72 & \$ 147 & \$ 135 & \$ 126 & \$ 162 & \$ 97\end{array}$ Average portfolio VaR and period-end portfolio VaR were less than the sum of the VaR of the components
(a)described above, which is due to portfolio diversification. The diversification effect reflects the fact that the risks were not perfectly correlated.
(b) Designated as not meaningful ("NM"), because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio-diversification effect.
Reference is made to CIO synthetic credit portfolio update on page 10 of this Form 10-Q regarding the Firm's
(c) restatement of its 2012 first quarter financial statements. The CIO VaR amount has not been recalculated for the first quarter to reflect the restatement. The nine months VaR does not include recalculated amounts for the first quarter of 2012.
On July 2, 2012, CIO transferred its synthetic credit portfolio, other than a portion aggregating approximately $\$ 12$ billion notional, to IB; CIO's retained portfolio was effectively closed out during the three months ended September
(d) 30 , 2012. During the third quarter of 2012, the Firm applied a new VaR model to calculate VaR for both the portion of the synthetic credit portfolio held by IB, as well as the portion that was retained by CIO which was effectively closed out at September 30, 2012.
(e) Total IB trading and credit portfolio VaR increased from $\$ 74$ million on June 30, 2012 to $\$ 113$ million on July 2, 2012, due to the transfer of a portion of the synthetic credit portfolio from CIO.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## VaR measurement

IB trading VaR includes substantially all market-making and client-driven activities as well as certain risk management activities in IB. This includes the credit spread sensitivities of certain mortgage products and syndicated lending facilities that the Firm intends to distribute. The Firm uses proxies to estimate the VaR for these and other products when daily time series are not available. It is likely that using an actual price-based time series for these products, if available, would affect the VaR results presented. For certain products included in IB trading and credit portfolio VaR, certain risk parameters that do not have daily observable values are not captured, such as correlation risk. The Firm uses alternative methods to capture and measure the impact of parameters not otherwise captured in VaR, including economic-value stress testing, nonstatistical measures and risk identification for large exposures as described further below.
Credit portfolio VaR includes the derivative CVA, hedges of the CVA and hedges of the retained portfolio, which are reported in principal transactions revenue. Credit portfolio VaR does not include the retained portfolio, which is not reported at fair value.
Other VaR includes certain positions employed as part of the Firm's risk management function within the CIO and in the Mortgage Production and Servicing business. CIO VaR includes positions, primarily in debt securities and derivatives, which are measured at fair value through earnings. Mortgage Production and Servicing VaR includes the Firm's mortgage pipeline and warehouse loans, MSRs and all related hedges.
As noted above, IB, Credit portfolio and other VaR does not include the retained Credit portfolio, which is not reported at fair value; however, it does include hedges of those positions, which are reported at fair value. It also does not include DVA on derivative and structured liabilities to reflect the credit quality of the Firm; principal investments, certain foreign exchange positions used for net investment hedging of foreign currency operations, and longer-term securities investments managed by CIO that are primarily classified as available for sale. These positions are managed through the Firm's nontrading interest rate-sensitive revenue-at-risk and other cash flow-monitoring processes, rather than by using a VaR measure. Principal investing activities (including mezzanine financing, tax-oriented investments, etc.) and private equity positions are managed using stress and scenario analyses and are not included in VaR. See the DVA sensitivity table on page 100 of this Form 10-Q for further details. For a discussion of Corporate/Private Equity, see pages $49-51$ of this Form 10-Q.
The Firm's VaR model calculations are continuously evaluated and enhanced in response to changes in the composition of the Firm's portfolios, changes in market conditions, improvements in the Firm's modeling techniques, system capabilities, and other factors. Model changes go through a review and approval process by the

Model Review Group prior to implementation into the operating environment. For further information, see the Model review in this section on page 102 of this Form 10-Q.
During the third quarter of 2012, the Firm applied a new VaR model to calculate VaR for the synthetic credit portfolio. The Firm believes this new model, which was applied to both the portion of the synthetic credit portfolio held by IB, as well as the portion that was retained by CIO more appropriately captures the risks of the portfolio. This new VaR model resulted in a reduction to average fixed income VaR of $\$ 26$ million, average Total IB trading and credit portfolio VaR of $\$ 28$ million, average CIO VaR of $\$ 17$ million, and average Total VaR of $\$ 36$ million for the three months ended September 30, 2012. Prior period VaR results have not been recalculated using the new model. Third-quarter and year-to-date 2012 VaR results
As presented in the table above, average Total VaR increased for the three and nine months ended September 30, 2012, when compared with the respective 2011 periods. These increases were primarily driven by increased risk in the synthetic credit portfolio partially offset by changes in the risk profile of the MSR portfolio and the new VaR model used for the synthetic credit portfolio.
Average total IB trading and credit portfolio VaR for the three and nine months ended September 30, 2012, increased compared with the respective 2011 periods. These increases were driven primarily by the addition of synthetic credit portfolio in IB, partially offset by the model change for that portfolio as described above.
Average CIO VaR for the nine months ended September 30, 2012, increased from the comparable 2011 periods predominantly reflecting the synthetic credit portfolio. On July 2, 2012, CIO transferred its synthetic credit portfolio, other than a portion aggregating approximately $\$ 12$ billion notional, to IB; CIO's retained portfolio was effectively

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

closed out during the three months ended September 30, 2012, which resulted in the spot VaR decreasing to $\$ 7$ million at September 30, 2012.
Average Mortgage Production and Servicing VaR for the three and nine months ended September 30, 2012, decreased compared with the respective 2011 periods. These decreases were primarily driven by changes in the risk profile of the MSR Portfolio.
The Firm's average IB and other VaR diversification benefit was $\$ 68$ million or $37 \%$ of the sum for the three months ended September 30, 2012, compared with $\$ 35$ million or $24 \%$ of the sum for the three months ended September 30, 2011. The Firm's average IB and other VaR diversification benefit was $\$ 57$ million or $26 \%$ of the sum for the nine months ended September 30, 2012, compared with $\$ 45$ million or $32 \%$ of the sum for the nine months ended September 30, 2011. In general, over the course of the year, VaR exposure can vary significantly as positions change, market volatility fluctuates and diversification
benefits change.
VaR back-testing
The Firm conducts daily back-testing of VaR against its market risk-related revenue.
The following histogram illustrates the daily market risk related gains and losses for IB, CIO and Mortgage
Production and Servicing positions for the nine months ended September 30, 2012. This market risk-related revenue is defined as the change in value of: principal transactions revenue for IB and CIO (excludes Private Equity gains/losses and unrealized and realized gains/losses from AFS securities and other investments held for the longer term); market-based related net interest income for IB, CIO and Mortgage Production and Servicing; IB brokerage commissions, underwriting fees or other revenue; revenue from syndicated lending facilities that the Firm intends to distribute; and mortgage fees and related income for the Firm's mortgage pipeline and warehouse loans, MSRs, and all related hedges. Daily Firmwide market risk-related revenue excludes gains and losses from DVA.

The chart shows that for the nine months ended September 30, 2012, the Firm posted market risk related gains on 156 of the 195 days in this period, with gains on seven days exceeding $\$ 200$ million. The chart includes year to date losses incurred in the synthetic credit portfolio. IB and Credit Portfolio posted market risk-related gains on 190 days in the period.
The inset graph looks at those days on which the Firm experienced losses and depicts the amount by which VaR exceeded the actual loss on each of those days. Of the losses that were sustained on the 39 days of the 195 days in the trading period, the Firm sustained losses that exceeded the VaR measure on three of those days. These losses in excess of the VaR all occurred in the second quarter of 2012 and were due to the adverse effect of market movements on risk positions in the synthetic credit portfolio held by CIO. During the nine months ended September 30, 2012, IB and Credit Portfolio experienced five loss days; none of the losses on those days exceeded their respective VaR measures.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Other risk measures
Debit valuation adjustment sensitivity
The following table provides information about the gross sensitivity of DVA to a one-basis-point increase in JPMorgan Chase's credit spreads. This sensitivity represents the impact from a one-basis-point parallel shift in JPMorgan Chase's entire credit curve. As credit curves do not typically move in a parallel fashion, the sensitivity multiplied by the change in spreads at a single maturity point may not be representative of the actual revenue recognized.
Debit valuation adjustment sensitivity
(in millions)
September 30, 2012
One basis-point increase in
JPMorgan Chase's credit spread
December 31, 2011 \$36

Economic-value stress testing
Along with VaR, stress testing is important in measuring and controlling risk. While VaR reflects the risk of loss due to adverse changes in markets using recent historical market behavior as an indicator of losses, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets using multiple scenarios that assume significant changes in credit spreads, equity prices, interest rates, currency rates or commodity prices. Stress scenarios estimate extreme losses based on assumptions by risk management of potential macroeconomic market stress events, such as an equity market collapse or credit crisis. Scenarios are updated dynamically and may be redefined on an ongoing basis to reflect current market conditions. Stress testing is also employed in cross-business risk management. Stress-test results, trends and explanations based on current market risk positions are reported to the Firm's senior management and to the lines of business to allow them to better understand event risk-sensitive positions and manage their risks with more transparency.
Nonstatistical risk measures
Nonstatistical risk measures include sensitivities to variables used to value positions, such as credit spread sensitivities, interest rate basis point values and market values. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line-of-business and by risk type, and are used for tactical control and monitoring limits.
Loss advisories and profit and loss drawdowns
Loss advisories and profit and loss drawdowns are tools used to highlight trading losses above certain levels of risk tolerance. Profit and loss drawdowns are defined as the decline in net profit and loss since the year-to-date peak revenue level.
Risk identification for large exposures
Individuals who manage risk positions are responsible for identifying potential losses that could arise from specific, unusual events, such as a potential change in tax legislation, or a particular combination of unusual market moves. This
information allows the Firm to monitor further earnings vulnerability not adequately covered by standard risk measures.

Nontrading interest rate-sensitive revenue-at-risk
(i.e., "earnings-at-risk")

Interest rate risk represents one of the Firm's significant market risk exposures. This risk arises not only from trading activities but also from the Firm's traditional banking activities which include extension of loans and credit facilities, taking deposits and issuing debt (i.e., asset/liability management positions, accrual loans within IB and CIO, and off-balance sheet positions). ALCO establishes the Firm's interest rate risk policies and sets risk guidelines. Treasury, working in partnership with the lines of business, calculates the Firm's interest rate risk profile weekly and reviews it with senior management.
Interest rate risk for nontrading activities can occur due to a variety of factors, including:

Differences in the timing among the maturity or repricing of assets, liabilities and off-balance sheet instruments. For example, if liabilities reprice more quickly than assets and funding interest rates are declining, net interest income will increase initially.
Differences in the amounts of assets, liabilities and off-balance sheet instruments that are repricing at the same time. For example, if more deposit liabilities are repricing than assets when general interest rates are declining, net interest income will increase initially.
Differences in the amounts by which short-term and long-term market interest rates change (for example, changes in the slope of the yield curve) because the Firm has the ability to lend at long-term fixed rates and borrow at variable or short-term fixed rates. Based on these scenarios, the Firm's net interest income would be affected negatively by a sudden and unanticipated increase in short-term rates paid on its liabilities (e.g., deposits) without a corresponding increase in long-term rates received on its assets (e.g., loans). Conversely, higher long-term rates received on assets generally are beneficial to net interest income, particularly when the increase is not accompanied by rising short-term rates paid on liabilities.
The impact of changes in the maturity of various assets, liabilities or off-balance sheet instruments as interest rates ehange. For example, if more borrowers than forecasted pay down higher-rate loan balances when general interest rates are declining, net interest income may decrease initially.
The Firm manages interest rate exposure related to its assets and liabilities on a consolidated, corporate-wide basis. Business units transfer their interest rate risk to Treasury through a transfer-pricing system, which takes into account the elements of interest rate exposure that can

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

be risk-managed in financial markets. These elements include asset and liability balances and contractual rates of interest, contractual principal payment schedules, expected prepayment experience, interest rate reset dates and maturities, rate indices used for repricing, and any interest rate ceilings or floors for adjustable rate products. All transfer-pricing assumptions are dynamically reviewed.
The Firm manages this interest rate risk generally through its investment securities portfolio and related derivatives. The Firm evaluates its nontrading interest rate risk exposure through the stress testing of earnings-at-risk, which measures the extent to which changes in interest rates will affect the Firm's core net interest income (see page 16 of this Form 10-Q for further discussion of core net interest income) and interest rate-sensitive fees ("nontrading interest rate-sensitive revenue"). Earnings-at-risk excludes the impact of trading activities and MSRs as these sensitivities are captured under VaR.
The Firm conducts simulations of changes in nontrading interest rate-sensitive revenue under a variety of interest rate scenarios. Earnings-at-risk tests measure the potential change in this revenue, and the corresponding impact to the Firm's pretax net interest income, over the following 12 months. These tests highlight exposures to various interest rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests include forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior. Mortgage prepayment assumptions are based on current interest rates compared with underlying contractual rates, the time since origination, and other factors which are updated periodically based on historical experience and forward market expectations. The amount and pricing assumptions of deposits that have no stated maturity are based on historical performance, the competitive environment, customer behavior, and product mix.
Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios are also reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's
earnings-at-risk over a wide range of outcomes.
JPMorgan Chase's 12-month pretax net interest income sensitivity profiles. (Excludes the impact of trading activities and MSRs)

Immediate change in rates

| (in millions) | +200 bp | +100 bp | -100 bp |  | -200 bp |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| September 30,2012 | $\$ 3,905$ | $\$ 2,183$ | NM | (a) | NM | (a) |
|  | (a) | NM | (a) | NM | (a) |  |

December 31, 2011
4,046 2,326
(a) NM
(a)
(a) Downward 100- and 200-basis-point parallel shocks result in a federal funds target rate of zero and negative three${ }^{\text {(a) }}$ and six-month treasury rates. The earnings-at-risk results of such a low-probability scenario are not meaningful.

The change in earnings-at-risk from December 31, 2011, resulted from investment portfolio repositioning, partially offset by higher expected deposit balances. The Firm's risk to rising rates was largely the result of widening deposit margins, which are currently compressed due to very low short-term interest rates, and ALM investment portfolio positioning.
Additionally, another interest rate scenario used by the Firm - involving a steeper yield curve with long-term rates rising by 100 basis points and short-term rates staying at current levels - results in a 12 -month pretax net interest income benefit of $\$ 779$ million. The increase in net interest income under this scenario is due to reinvestment of maturing assets at the higher long-term rates, with funding costs remaining unchanged.
Risk monitoring and control
Limits
Market risk is controlled primarily through a series of limits, which reflect the Firm's risk appetite in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as the Firm's overall risk appetite, market volatility, product liquidity, accommodation of client business and management experience. The Firm maintains different levels of limits. Corporate level limits include VaR and stress limits. Similarly, line of business limits include VaR and stress limits and may be supplemented by loss advisories, nonstatistical measurements and profit and loss drawdowns. Limits may also be allocated within the lines of business, as well at the portfolio level.

Limits are established by Market Risk in agreement with the lines of business, and in accordance with the overall risk appetite of the Firm. Limits are reviewed regularly by Market Risk and updated as appropriate, with any changes approved by lines of business management and Market Risk. Senior management, including the Firm's Chief Executive Officer and Chief Risk Officer, are responsible for reviewing and approving certain of these risk limits on an ongoing basis. All limits that have not been reviewed within specified time periods by Market Risk are escalated to senior management. The lines of business are responsible for adhering to established limits against which exposures are monitored and reported by a group within Market Risk.
Limit breaches are required to be reported by a group within risk management in a timely manner to the appropriate persons in senior management. Market risk management consults with Firm senior management and lines of business senior management to determine the appropriate course of action required to return to compliance, which may include the reduction in risk in order to remedy the excess. Any limit excesses for three days or longer, or that are over limit by more than $30 \%$, are escalated to senior management and the Firmwide Risk Committee.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## Model review

The Firm uses risk management models, including VaR and stress models, for the measurement, monitoring and management of risk positions. Valuation models are employed by the Firm to value certain financial instruments which cannot otherwise be valued using quoted prices. These valuation models may also be employed as inputs to risk management models, for example in VaR and economic stress models. The Firm also makes use of models for a number of other purposes, including the calculation of regulatory capital requirements.
Models are owned by various functions within the Firm based on the specific purposes of such models. For example, VaR models and certain regulatory capital models are owned by the line-of-business aligned risk management functions. Owners of the models are responsible for the development, implementation and testing of models, as well as referral of models to the Model Review Group (within the Model Risk and Development Group) for review and approval. Once models have been approved, the model owners are required to maintain a robust operating environment and to monitor and evaluate the performance of models on an ongoing basis. It is also their responsibility to enhance models in response to changes in the portfolios and for changes in product and market developments, as well as improvements in available modeling techniques and systems capabilities, and to submit such enhancements to the Model Review Group for review.
The Model Review Group reports within the Model Risk and Development Group, which in turn reports to the Chief Risk Officer. The Model Review Group is independent of the model owners and is responsible for reviewing and approving a wide range of models including risk management, valuation and certain regulatory capital models used by the Firm.
Models are tiered by the model owner based on an internal standard according to their complexity, the exposure associated with the model and the Firm's reliance on the model. This tiering is subject to the approval of the Model Review Group. The model reviews conducted by the Model Review Group consider a number of factors about the model's suitability for valuation or risk management of a particular product, or other purposes. The factors considered include the assigned model tier, whether the model accurately reflects the characteristics of the instruments and its significant risks, the selection and reliability of model inputs, consistency with models for similar products, the appropriateness of any model-related adjustments, and sensitivity to input parameters and assumptions that cannot be observed from the market. When reviewing a model, the Model Review Group analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes. Model reviews are approved by the appropriate level of management within the Model Review Group based on the relevant tier of the model.

Under the Firm's model risk policy, new significant valuation, risk management and regulatory capital models, as well as major changes to such models, are required to be reviewed and approved by the Model Review Group prior to implementation into the operating environment. In addition, previously approved models are reviewed and re-approved periodically. The Model Review Group performs an annual Firmwide model risk assessment where developments in the product or market are considered in determining whether models which have already been reviewed need to be examined again.
In the event that the Model Review Group does not approve a model, escalation to senior management is required and the model owner is required to remediate the model within a time period as agreed upon with the Model Review Group. The model owner is also required to resubmit the model for review to the Model Review Group and to take appropriate actions to mitigate the model risk in the interim. The actions taken will depend on the model that is disapproved and may include, for example, limitation of trading activity. The Firm also ensures that there are other appropriate risk measurement tools in place to augment the model that is subject to remediation.
In limited circumstances, exceptions to the Firm's model risk policy may be granted by the Model Review Group to allow a model to be used prior to review or approval. Such exceptions have been applied to a small number of models and where this is the case, compensating controls similar to those described above have been put in place.
For a summary of valuations based on models, see Critical Accounting Estimates Used by the Firm on page 108 of this Form 10-Q and Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report.
Risk reporting

Nonstatistical risk measures, VaR, loss advisories and limit excesses are reported daily to the lines of business and to senior management. Market risk exposure trends, VaR trends, profit-and-loss changes and portfolio concentrations are reported weekly. Stress-test results are also reported weekly to the lines of business and to senior management.

## COUNTRY RISK MANAGEMENT

For a discussion of the Firm's Country Risk Management organization, and country risk identification, measurement, monitoring and control, see pages 163-165 of JPMorgan Chase's 2011 Annual Report.
The Firm is exposed to country risk through its wholesale lending, investing, and market-making activities, whether cross-border or locally funded. Country exposure includes activity with both government and private-sector entities in a country. Under the Firm's internal risk management approach, country exposure is reported based on the country where the majority of the assets of the obligor, counterparty, issuer or guarantor are located or where the majority of its revenue is derived, which may be different than the domicile (legal residence) of the obligor, counterparty, issuer or guarantor (and therefore may be different that the basis on which the Firm's wholesale credit exposure is reported.) Exposures are generally measured by considering the Firm's risk to an immediate default of the counterparty or obligor, with zero recovery. Assumptions are sometimes required in determining the measurement and allocation of country exposure, particularly in the case of certain tranched credit derivatives. Different measurement approaches or assumptions would affect the amount of reported country exposure.
The Firm's internal risk reporting differs from the reporting provided under FFIEC bank regulatory requirements. There are significant reporting differences in reporting methodology, including with respect to the treatment of collateral received and the benefit of credit derivative protection. For further information on the FFIEC's reporting methodology, see Cross-border outstandings on page 322 of JPMorgan Chase's 2011 Form 10-K.
The following table presents the Firm's top 20 country exposures (excluding U.S.). The selection of countries is based solely on the Firm's largest total exposures by country, based on the Firm's internal risk management approach, and does not represent its view of any actual or potentially adverse credit conditions.

Top 20 country exposures

|  | September 30, 2012 |  |
| :--- | :--- | :--- | :--- | :--- |
| Lending ${ }^{(\mathrm{a})}$ |  |  |\(\left.\quad \begin{array}{l}Trading and <br>

investing{ }^{(\mathrm{b})(\mathrm{c})}\end{array}\right)\)

Lending includes loans and accrued interest receivable, net of the allowance for loan losses, deposits with banks, (a) acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit.
(b) Includes market-making inventory, securities held in AFS accounts and hedging.
(c)

Includes single-name and index and tranched credit derivatives for which one or more of the underlying reference entities is in a country listed in the above table. Beginning on March 31, 2012, the Firm's country risk reporting reflects enhanced measurement of tranched credit derivatives.

Includes capital invested in local entities and physical commodity
storage.
Selected European exposure
Several European countries, including Spain, Italy, Ireland, Portugal and Greece, have been subject to continued credit deterioration due to weaknesses in their economic and fiscal situations. The Firm is closely monitoring its exposures in these countries and believes its nominal exposure to these five countries is modest relative to the Firm's aggregate nominal exposures. The Firm continues to conduct business and support client activity in these countries and, therefore, the Firm's aggregate net exposures and sector distribution may vary over time. In addition, the net exposures may be affected by changes in market conditions, including the effects of interest rates and credit spreads on market valuations and may return to more recent historical levels.

The following table presents the Firm's direct exposure to these five countries at September 30, 2012, as measured under the Firm's internal risk management approach. For individual exposures, corporate clients represent approximately $81 \%$ of the Firm's non-sovereign exposure in these five countries, and substantially all of the remaining $19 \%$ of the non-sovereign exposure is to the banking sector.

$\$ 3.4 \quad \$ 0.4 \quad \$ 4.5 \quad \$(3.3 \quad) \$(0.3 \quad) \$ 4.7$

Lending includes loans and accrued interest receivable, deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit. Amounts are presented net
(a) of the allowance for credit losses of $\$ 112$ million (Spain), $\$ 57$ million (Italy), $\$ 3$ million (Ireland), $\$ 18$ million
${ }^{(a)}$ (Portugal), and $\$ 12$ million (Greece) specifically attributable to these countries. Includes $\$ 2.4$ billion of unfunded lending exposure at September 30, 2012. These exposures consist typically of committed, but unused corporate credit agreements, with market-based lending terms and covenants.
(b) Both the notional and the fair value of AFS securities were approximately $\$ 0.8$ billion at September 30, 2012. Primarily includes: $\$ 18.5$ billion of counterparty exposure on derivative and securities financings, $\$ 3.3$ billion of issuer exposure on debt and equity securities held in trading, $\$(5.8)$ billion of net protection from credit derivatives,
(c)including $\$(4.3)$ billion related to the synthetic credit portfolio managed by IB. Securities financings of approximately $\$ 15.6$ billion were collateralized with approximately $\$ 17.3$ billion of cash and marketable securities as of September 30, 2012.
(d) Beginning on March 31, 2012, the Firm's country risk reporting reflects enhanced measurement of tranched credit derivatives.
(e) Includes cash and marketable securities pledged to the Firm, of which approximately $98 \%$ of the collateral was (e) cash at September 30, 2012.
(f)

Reflects net protection purchased through the Firm's credit portfolio management activities, which are managed separately from its market-making activities. Predominantly includes single-name CDS and also includes index credit derivatives and short bond positions. It does not include the synthetic credit portfolio.

Effect of credit derivatives on selected European exposures
Country exposures in the Selected European exposure table have been reduced by purchasing protection through single-name, index, and tranched credit derivatives.

The following table presents the effect of purchased and sold credit derivatives on the Trading and Portfolio Hedging activities in the Selected European exposure table.

| September 30, 2012 <br> (in billions) | Trading |  | Portfolio hedging |  |  |  |  |  |

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Under the Firm's internal risk management approach, all credit derivatives are reported based on the country where the majority of the assets of the reference entity are located. Exposures are measured assuming that all of the reference entities in a particular country default simultaneously with zero recovery. For example, single-name and index credit derivatives are measured at the notional amount, net of the fair value of the derivative receivable or payable. Exposures for index credit derivatives, which may include several underlying reference entities, are determined by evaluating the relevant country for each of the reference entities underlying the named index, and allocating the applicable amount of the notional and fair value of the index credit derivative to each of the relevant countries. Tranched credit derivatives are measured by assuming simultaneous default of all reference entities in that country. The total line represents the simple sum of the individual countries. Changes in the Firm's methodology or assumptions would produce different results.
The credit derivatives reflected in the "Trading" column include those from the Firm's market-making activities as well as $\$(4.3)$ billion of net purchased protection in the synthetic credit portfolio managed by IB beginning in July 2012. Based on scheduled maturities and risk reduction actions being taken in the synthetic credit portfolio, the amount of protection provided by the synthetic credit portfolio relative to the five named countries is likely to be substantially reduced over time.
The credit derivatives reflected in the "Portfolio hedging" column are used in the Firm's Credit Portfolio Management activities, which are intended to mitigate the credit risk associated with traditional lending activities and derivative counterparty exposure. These credit derivatives include both purchased and sold protection, where the sold protection is generally used to close out purchased protection when appropriate under the Firm's risk mitigation strategies. In its Credit Portfolio Management activities, the Firm generally seeks to purchase credit protection with a maturity date that is the same or similar to the maturity date of the exposures for which the protection was purchased. However, there are instances where the purchased protection has a shorter maturity date than the maturity date of the exposure for which the protection was purchased. These exposures are actively monitored and managed by the Firm. The effectiveness of the Firm's CDS protection as a hedge of the Firm's exposures may vary depending upon a number of factors, including the contractual terms of the CDS. For further information about credit derivatives see Credit derivatives on pages 80-81, and Note 5 on pages 136-144 of this Form 10-Q.
The Firm's net presentation in the table above reflects the manner in which this exposure is managed, and reflects, in the Firm's view, the substantial mitigation of market and counterparty credit risk in its credit derivative activities. Market risk is substantially mitigated because market-making activities, and to a lesser extent, hedging activities,
often result in selling and purchasing protection related to the same underlying reference entity. For example, in each of the five countries as of September 30, 2012, the protection sold by the Firm was more than $88 \%$ offset by protection purchased on the identical reference entity.
In addition, counterparty credit risk has been substantially mitigated by the master netting and collateral agreements in place for these credit derivatives. As of September 30, 2012, $99 \%$ of the purchased protection presented in the table above is purchased under contracts that require posting of cash collateral; $91 \%$ is purchased from investment-grade counterparties domiciled outside of the select European countries; and $69 \%$ of the protection purchased offsets protection sold on the identical reference entity, with the identical counterparty subject to a master netting agreement.

## Eurozone developments

During the third quarter of 2012, there was a continuation of structural challenges related to ongoing fiscal austerity, anemic growth, weak banking sectors and political turbulence in the Eurozone. These were reflected in elevated credit spreads throughout the peripheral Eurozone for much of the quarter. However, the ECB's announcement of its OMT program in early September helped reduce the possibility of tail risk scenarios, leading to an easing of government bond yields towards the end of the quarter. The Firm performs multiple stress tests in order to estimate the potential economic loss to its assets and liabilities under a variety of macroeconomic market stress events (See Economic-value stress testing on page 100 of this Form 10-Q). However, stress testing cannot predict the full consequences of a systemic market event, such as what might occur if the situation worsens or a country or countries exit the Eurozone. For further information see Part II, Item 1A, Risk Factors on pages 220-222 of this Form 10-Q.

## PRIVATE EQUITY RISK MANAGEMENT

For a discussion of Private Equity Risk Management, see page 166 of JPMorgan Chase's 2011 Annual Report. At September 30, 2012, and December 31, 2011, the carrying value of the Private Equity portfolio was
$\$ 8.1$ billion and $\$ 7.7$ billion, respectively, of which $\$ 637$ million and $\$ 805$ million, respectively, represented securities with publicly available market quotations.

## OPERATIONAL RISK MANAGEMENT

For a discussion of JPMorgan Chase's Operational Risk Management, see pages 166-167 of JPMorgan Chase's 2011 Annual Report. Cybersecurity
The Firm devotes significant resources to maintain and regularly update its systems and processes that are designed to protect the security of the Firm's computer systems, software, networks and other technology assets against attempts by third parties to obtain unauthorized access to confidential information, destroy data, disrupt or degrade service, sabotage systems or cause other damage.
The Firm and several other U.S. financial institutions have recently experienced significant distributed denial-of-
service attacks from technically sophisticated and well-resourced third parties which were intended to disrupt consumer online banking services. The Firm has also experienced other attempts to breach the security of the Firm's systems and data. These cyberattacks have not, to date, resulted in any material disruption of the Firm's operations, material harm to the Firm's customers, or have had a material adverse effect on the Firm's results of operations.

## LEGAL, FIDUCIARY AND REPUTATION RISK MANAGEMENT

For a discussion of the Firm's Legal, Fiduciary and Reputation Risk Management, see page 167 of JPMorgan Chase's 2011 Annual Report.

## SUPERVISION AND REGULATION

The following discussion should be read in conjunction with Regulatory developments on pages 10-11 of this Form 10-Q, and the Supervision and Regulation section on pages 1-7 of JPMorgan Chase's 2011 Form 10-K.

Dividends
At September 30, 2012, JPMorgan Chase's banking subsidiaries could pay, in the aggregate, $\$ 15.5$ billion in dividends to their respective bank holding companies without the prior approval of their relevant banking regulators.

## CRITICAL ACCOUNTING ESTIMATES USED BY THE FIRM

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the appropriate carrying value of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. The methods used and judgments made reflect, among other factors, the nature of the assets or liabilities and the related business and risk management strategies, which may vary across the Firm's businesses and portfolios. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the carrying value of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses
JPMorgan Chase's allowance for credit losses covers the retained wholesale and consumer loan portfolios, as well as the Firm's wholesale and consumer lending-related commitments. The allowance for loan losses is intended to adjust the value of the Firm's loan assets to reflect probable credit losses inherent in the loan portfolio as of the balance sheet date. Similarly, the allowance for lending-related commitments is established to cover probable credit losses inherent in the lending-related commitments portfolio as of the balance sheet date. For further discussion of the methodologies used in establishing the Firm's allowance for credit losses, see Allowance for Credit Losses on pages 155-157 and Note 15 on pages 252-255 of JPMorgan Chase's 2011 Annual Report; for amounts recorded as of September 30, 2012 and 2011, see Allowance for Credit Losses on pages $93-95$ and Note 14 on page 176 of this Form 10-Q.
As noted in the discussion on page 168 of JPMorgan Chase's 2011 Annual Report, the Firm's allowance for credit losses is sensitive to numerous factors, depending on the portfolio. Changes in economic conditions or in the Firm's assumptions could affect the Firm's estimate of probable credit losses inherent in the portfolio at the balance sheet date. For example, deterioration in the following inputs would have the following effects on the Firm's modeled loss estimates as of September 30, 2012, without consideration of any offsetting or correlated effects of other inputs in the Firm's allowance for loan losses:
A one-notch downgrade in the Firm's internal risk ratings for its entire wholesale loan portfolio could imply an increase in the Firm's modeled loss estimates of approximately $\$ 2.0$ billion.

A 5\% decline in housing prices from current levels could result in an increase in credit loss estimates for PCI loans of approximately $\$ 700$ million.
A 5\% decline in housing prices from current levels for the residential real estate portfolio, excluding PCI loans, could result in an increase to modeled annual loss estimates of approximately $\$ 300$ million.
A 50 basis point deterioration in forecasted credit card loss rates could imply an increase to modeled annualized credit card loan loss estimates of approximately $\$ 800$ million.
The purpose of these sensitivity analyses is to provide an indication of the isolated impacts of hypothetical alternative assumptions on credit loss estimates. The changes in the inputs presented above are not intended to imply management's expectation of future deterioration of those risk factors.
It is difficult to estimate how potential changes in specific factors might affect the allowance for credit losses because management considers a variety of factors and inputs in estimating the allowance for credit losses. Changes in these factors and inputs may not occur at the same rate and may not be consistent across all geographies or product types, and changes in factors may be directionally inconsistent, such that improvement in one factor may offset deterioration in other factors. In addition, it is difficult to predict how changes in specific economic conditions or assumptions could affect borrower behavior or other factors considered by management in estimating the allowance for credit losses. Given the process the Firm follows in evaluating the risk factors related to its loans, including risk ratings, home price assumptions, and credit card loss estimates, management believes that its current estimate of the allowance for credit loss is appropriate.

Fair value of financial instruments, MSRs and commodities inventory
JPMorgan Chase carries a portion of its assets and liabilities at fair value. The majority of such assets and liabilities are measured at fair value on a recurring basis. Certain assets and liabilities are measured at fair value on a nonrecurring basis, including mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral.
Assets measured at fair value
The following table includes the Firm's assets measured at fair value and the portion of such assets that are classified within level 3 of the valuation hierarchy. For further information, see Note 3 on pages 119-133 of this
Form 10-Q.

## Valuation

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Firm has an established and well-documented process for determining fair value. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available for an instrument or a similar instrument, fair value is generally based on models that consider relevant transaction data such as maturity and use as inputs market-based or independently sourced parameters. Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the hierarchy, judgments used to estimate fair
value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.
In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs - including, for example, transaction details, yield curves, interest rates, prepayment rates, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves. Finally, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's credit-worthiness, liquidity considerations, unobservable parameters, and for certain portfolios that meet specified criteria, the size of the net open risk position. The judgments made are typically affected by the type of product and its specific contractual terms, and

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

the level of liquidity for the product or within the market as a whole. For further discussion of the valuation of level 3 instruments, including unobservable inputs used, see Note 3 on pages 119-133 of this Form 10-Q.
Imprecision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.
The Firm uses various methodologies and assumptions in the determination of fair value. The use of different methodologies or assumptions to those used by the Firm could result in a different estimate of fair value at the reporting date. For a detailed discussion of the Firm's valuation process and hierarchy, and determination of fair value for individual financial instruments, see Note 3 on pages 119-133 of this Form 10-Q and Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Goodwill impairment
Management applies significant judgment when testing goodwill for impairment. For a description of the significant valuation judgments associated with goodwill impairment, see Goodwill impairment on page 171 of JPMorgan Chase's 2011 Annual Report.
During the nine months ended September 30, 2012, the Firm updated the discounted cash flow valuations of certain consumer lending businesses in RFS and Card, which continue to have elevated risk for goodwill impairment due to their exposure to U.S. consumer credit risk and the effects of economic, regulatory and legislative changes. The assumptions used in the valuation of these businesses include: (a) estimates of future cash flows for the business (which are dependent on outstanding loan balances, net interest margin, operating expense, credit losses and the amount of capital necessary given the risk of business activities to meet regulatory capital requirements), and (b) the cost of equity used to discount those cash flows to a present value. Each of these factors requires significant judgment and the assumptions used are based on management's best estimate and most current projections, including the anticipated effects of regulatory and legislative changes, derived from the Firm's business forecasting process reviewed with senior management. These projections are consistent with the short-term assumptions discussed in the Business outlook on page 9 of this Form 10-Q, and, in the longer term, incorporate a set of macroeconomic assumptions and the Firm's best estimates of long-term growth and returns of its businesses. Where possible, the Firm uses third-party and peer data to benchmark its assumptions and estimates.
The estimated fair value of the Firm's consumer lending businesses in RFS and Card each exceeded their carrying values at September 30, 2012 by approximately $15 \%$. Deterioration in economic market conditions, increased estimates of the effects of recent regulatory or legislative changes, or additional regulatory or legislative changes may result in declines in projected business performance beyond management's current expectations. For example, in RFS, such declines could result from increases in costs to resolve foreclosure-related matters or from deterioration in economic conditions that result in increased credit losses, including decreases in home prices beyond management's current expectations. In Card, declines in business performance could result from deterioration in economic conditions such as increased unemployment claims or bankruptcy filings that result in increased credit losses or changes in customer behavior that cause decreased account activity or receivable balances.
For its other businesses, the Firm reviewed current conditions (including the estimated effects of regulatory and legislative changes and current estimated market cost of equity) and prior projections of business performance. Based upon the updated valuations and reviews, the Firm concluded that goodwill allocated to all of its reporting
units was not impaired at September 30, 2012.
In addition, the earnings or estimated cost of equity of the Firm's capital markets businesses could also be affected by regulatory or legislative changes.
Declines in business performance, increases in allocated equity capital, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.
For additional information on goodwill, see Note 16 on pages 184-187 of this Form 10-Q.
Income taxes
For a description of the significant assumptions, judgments and interpretations associated with the accounting for income taxes, see Income taxes on pages 171-172 of JPMorgan Chase's 2011 Annual Report.
Litigation reserves
For a description of the significant estimates and judgments associated with establishing litigation reserves, see Note 23 on pages 196-206 of this Form 10-Q, and Note 31 on pages 290-299 of JPMorgan Chase's 2011 Annual Report.

## ACCOUNTING AND REPORTING DEVELOPMENTS

Fair value measurement and disclosures
In May 2011, the Financial Accounting Standards Board ("FASB") issued guidance that amends the requirements for fair value measurement and disclosure. The guidance changes and clarifies certain existing requirements related to portfolios of financial instruments and valuation adjustments, requires additional disclosures for fair value measurements categorized in level 3 of the fair value hierarchy (including disclosure of the range of inputs used in certain valuations), and requires additional disclosures for certain financial instruments that are not carried at fair value. The guidance was effective in the first quarter of 2012, and the Firm adopted the new guidance, effective January 1, 2012. The application of this guidance did not have a material effect on the Firm's Consolidated Balance Sheets or results of operations.
Accounting for repurchase and similar agreements
In April 2011, the FASB issued guidance that amends the criteria used to assess whether repurchase and similar agreements should be accounted for as financings or sales (purchases) with forward agreements to repurchase (resell). Specifically, the guidance eliminates circumstances in which the lack of adequate collateral maintenance requirements could result in a repurchase agreement being accounted for as a sale. The guidance was effective for new transactions or existing transactions that were modified beginning January 1, 2012. The Firm has accounted for its repurchase and similar agreements as secured financings, and therefore, the application of this guidance did not have an impact on the Firm's Consolidated Balance Sheets or results of operations.

Presentation of other comprehensive income
In June 2011, the FASB issued guidance that modifies the presentation of other comprehensive income in the Consolidated Financial Statements. The guidance requires that items of net income, items of other comprehensive income, and total comprehensive income be presented in one continuous statement or in two separate but consecutive statements. The guidance was effective in the first quarter of 2012, and the Firm adopted the new guidance by electing the two statement approach, effective January 1, 2012. The application of this guidance only affected the presentation of the Consolidated Financial Statements and had no impact on the Firm's Consolidated Balance Sheets or results of operations.
Balance sheet netting
In December 2011, the FASB issued guidance that requires enhanced disclosures about derivatives and securities financing agreements that are subject to legally enforceable master netting or similar agreements, or that have otherwise been offset on the balance sheet under certain specific conditions that permit net presentation. The guidance will become effective in the first quarter of 2013. The application of this guidance will only affect the disclosure of these instruments and will have no impact on the Firm's Consolidated Balance Sheets or results of operations.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## FORWARD-LOOKING STATEMENTS

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this Form 10-Q contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission. In addition, the Firm's senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.
All forward-looking statements are, by their nature, subject to risks and uncertainties, many of which are beyond the Firm's control. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ from those in the forward-looking statements:
Local, regional and international business, economic and political conditions and geopolitical events;
Changes in laws and regulatory requirements, including as a result of recent financial services legislation;
Changes in trade, monetary and fiscal policies and laws;
Securities and capital markets behavior, including changes in market liquidity and volatility;
Changes in investor sentiment or consumer spending or savings behavior;
Ability of the Firm to manage effectively its capital and liquidity, including approval of its capital plans by banking regulators;
Changes in credit ratings assigned to the Firm or its subsidiaries;
Damage to the Firm's reputation;
Ability of the Firm to deal effectively with an economic slowdown or other economic or market disruption;
Technology changes instituted by the Firm, its counterparties or competitors;
Mergers and acquisitions, including the Firm's ability to integrate acquisitions;
Ability of the Firm to develop new products and services, and the extent to which products or services previously sold by the Firm (including but not limited to mortgages and asset-backed securities) require the Firm to incur liabilities or absorb losses not contemplated at their initiation or origination;

Ability of the Firm to address enhanced regulatory requirements affecting its mortgage business;
Acceptance of the Firm's new and existing products and services by the marketplace and the ability of the Firm to increase market share;
Ability of the Firm to attract and retain employees;
Ability of the Firm to control expense;
Competitive pressures;
Changes in the credit quality of the Firm's customers and counterparties;
Adequacy of the Firm's risk management framework, disclosure controls and procedures and internal control over financial reporting;
Adverse judicial or regulatory proceedings;
Changes in applicable accounting policies;
Ability of the Firm to determine accurate values of certain assets and liabilities;
Occurrence of natural or man-made disasters or calamities or conflicts, including any effect of any such disasters, calamities or conflicts on the Firm's power generation facilities and the Firm's other commodity-related activities; Ability of the Firm to maintain the security of its financial, accounting, technology, data processing and other operating systems and facilities;
The other risks and uncertainties detailed in Part II, Item 1A: Risk Factors on pages 220-222 of this Form 10-Q; Part II, Item 1A: Risk Factors, on pages 175-175A of the Firm's Quarterly Report on Form 10-Q/A for the quarter ended March 31, 2012; Part II, Item 1A: Risk Factors, on pages 219-222 of the Firm's Quarterly Report on Form 10-Q for the quarter ended June 30, 2012; and Part I, Item 1A: Risk Factors, on pages 7-17 of JPMorgan Chase's Annual Report on

Form 10-K for the year ended December 31, 2011.
Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made, and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, or Current Reports on Form 8-K.

The following table presents information on assets and liabilities related to VIEs that are consolidated by the Firm at September 30, 2012, and December 31, 2011. The difference between total VIE assets and liabilities represents the Firm's interests in those entities, which were eliminated in consolidation.

| (in millions) | September <br> December |  |
| :--- | :--- | :--- |
| Assets | 30,2012 | 31,2011 |
| Trading assets |  |  |
| Loans | 713,025 | $\$ 12,079$ |
| All other assets | 77,086 | 86,754 |
| Total assets | 2,028 | 2,638 |
| Liabilities | $\$ 92,139$ | $\$ 101,471$ |
| Beneficial interests issued by consolidated variable interest entities | $\$ 57,918$ | $\$ 65,977$ |
| All other liabilities | 1,323 | 1,487 |
| Total liabilities | $\$ 59,241$ | $\$ 67,464$ |

The assets of the consolidated VIEs are used to settle the liabilities of those entities. The holders of the beneficial interests do not have recourse to the general credit of JPMorgan Chase. At both September 30, 2012, and December 31, 2011, the Firm provided limited program-wide credit enhancement of $\$ 3.1$ billion related to its Firm-administered multi-seller conduits, which are eliminated in consolidation. For further discussion, see Note 15 on pages 177-184 of this Form 10-Q.

See Glossary of Terms on pages 213-216 of this Form 10-Q for definitions of terms used throughout the Notes to Consolidated Financial Statements.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
Note 1 - Basis of presentation
JPMorgan Chase \& Co. ("JPMorgan Chase" or the "Firm"),
a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and small business, commercial banking, financial transaction processing, asset management and private equity. For a discussion of the Firm's business segments, see Note 24 on pages 207-209 of this Form
10-Q.
The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the U.S. ("U.S. GAAP"). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by regulatory authorities.
The unaudited consolidated financial statements prepared in conformity with U.S. GAAP require management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue and expense, and the disclosures of contingent assets and liabilities. Actual results could be different from these estimates. In the opinion of management, all normal, recurring adjustments have been included for a fair statement of this interim financial information.
These unaudited consolidated financial statements should be read in conjunction with the audited consolidated financial statements, and related notes thereto, included in JPMorgan Chase's Annual Report on Form 10-K for the year ended December 31, 2011, as filed with the U.S. Securities and Exchange Commission (the "2011 Annual Report").
Certain amounts reported in prior periods have been reclassified to conform with the current presentation.
Note 2 - Business changes and developments
Increase in common stock dividend
On March 13, 2012, the Board of Directors increased the Firm's quarterly common stock dividend from $\$ 0.25$ to $\$ 0.30$
per share, effective with the dividend paid on April 30, 2012, to shareholders of record on April 5, 2012.
Issuance of preferred stock
On August 27, 2012, the Firm issued $\$ 1.3$ billion of fixed-rate noncumulative perpetual preferred stock.
Redemption of outstanding trust preferred capital debt securities
On July 12, 2012, JPMorgan Chase redeemed $\$ 9.0$ billion, or $100 \%$ of the liquidation amount, of the following trust
preferred capital debt securities: JPMorgan Chase Capital XV, JPMorgan Chase Capital XVII, JPMorgan Chase Capital XVIII, JPMorgan Chase Capital XX, JPMorgan Chase Capital XXII, JPMorgan Chase Capital XXV, JPMorgan Chase Capital XXVI, JPMorgan Chase Capital XXVII, and JPMorgan Chase Capital XXVIII. Other income for the three months ended September 30, 2012, reflected $\$ 888$ million of pretax extinguishment gains related to adjustments applied to the cost basis of the redeemed trust preferred capital debt securities during the period they were in a qualified hedge accounting relationship. For a further discussion of trust preferred capital debt securities, see Note 21 Long-term debt on pages 273-275 of JPMorgan Chase's 2011 Annual Report.
Common equity repurchases
On March 13, 2012, the Board of Directors authorized a $\$ 15.0$ billion common equity (i.e., common stock and warrants) repurchase program, of which $\$ 12.0$ billion is approved for repurchase in 2012. The $\$ 15.0$ billion authorization includes shares to be repurchased to offset issuances under the Firm's employee stock-based incentive plans. For additional information on repurchases see Part II, Item 2, Unregistered Sales of Equity Securities and Use of Proceeds, on pages 222-223 of this Form 10-Q.
Global settlement on servicing and origination of mortgages

On February 9, 2012, the Firm announced that it had agreed to a settlement in principle (the "global settlement") with a number of federal and state government agencies, including the U.S. Department of Justice ("DOJ"), the U.S. Department of Housing and Urban Development, the Consumer Financial Protection Bureau and the State Attorneys General, relating to the servicing and origination of mortgages. The global settlement, which became effective on April 5, 2012, calls for the Firm to, among other things: (i) make cash payments of approximately $\$ 1.1$ billion, a portion of which will be set aside for payments to borrowers ("Cash Settlement Payment"); (ii) provide approximately $\$ 500$ million of refinancing relief to certain "underwater" borrowers whose loans are owned and serviced by the Firm ("Refi Program"); and (iii) provide approximately $\$ 3.7$ billion of additional relief for certain borrowers, including reductions of principal on first and second liens, payments to assist with short sales, deficiency balance waivers on past foreclosures and short sales, and forbearance assistance for unemployed homeowners ("Consumer Relief Program"). In addition, the global settlement requires the Firm to adhere to certain enhanced mortgage servicing standards. The Cash Settlement Payment was made on April 13, 2012.
As the Firm provides relief to borrowers under the Refi and

Consumer Relief Programs, the Firm receives credits that reduce its remaining obligation under these programs. If the Firm does not meet certain targets set forth in the global settlement agreement for providing relief under these programs within certain prescribed time periods, the Firm must instead make additional cash payments. In general, $75 \%$ of the targets must be met within two years of the date of the global settlement and $100 \%$ must be achieved within three years of that date. The Firm expects to file its first quarterly report concerning its compliance with the global settlement with the Office of Mortgage Settlement Oversight in November 2012. The report will include information regarding refinancings completed under the Refi Program and relief provided to borrowers under the Consumer Relief Program, as well as credits earned by the Firm under the global settlement as a result of performing such actions.
The global settlement releases the Firm from certain further claims by participating government entities related to servicing activities, including foreclosures and loss mitigation activities; certain origination activities; and certain bankruptcy-related activities. Not included in the global settlement are any claims arising out of securitization activities, including representations made to investors respecting mortgage-backed securities; criminal claims; and repurchase demands from the GSEs, among other items.
Also on February 9, 2012, the Firm entered into agreements with the Board of Governors of the Federal Reserve System ("Federal Reserve") and the Office of the Comptroller of the Currency ("OCC") for the payment of civil money penalties related to conduct that was the subject of consent orders entered into with the banking regulators in April 2011. The Firm's payment obligations under those agreements will be deemed satisfied by the Firm's payments and provisions of relief under the global settlement.
For further information on this global settlement, see Loans in Note 13 on pages 154-175 and Mortgage Foreclosure Investigations and Litigation in Note 23 on pages 203-204 of this Form 10-Q.
Washington Mutual, Inc. bankruptcy plan confirmation
On February 17, 2012, a bankruptcy court confirmed the joint plan containing the global settlement agreement resolving numerous disputes among Washington Mutual, Inc. ("WMI"), JPMorgan Chase and the Federal Deposit Insurance Corporation ("FDIC") as well as significant creditor groups (the "WaMu Global Settlement"). The WaMu Global Settlement was finalized on March 19, 2012, pursuant to the execution of a definitive agreement and court approval, and the Firm recognized additional assets, including certain pension-related assets, as well as tax refunds, resulting in a pretax gain of $\$ 1.1$ billion for the three months ended March 31, 2012. For additional information related to the WaMu Global Settlement, see Washington Mutual Litigations in Note 23 on pages 205-206 of this Form $10-\mathrm{Q}$.

## Subsequent events

## Hurricane Sandy

On October 29, 2012, the mid-Atlantic and Northeast regions of the U.S. were affected by Hurricane Sandy, which caused major flooding and wind damage and resulted in major disruptions to individuals and businesses and significant damage to homes and communities in the affected regions. Despite the damage and disruption to many of its branches and facilities, the Firm has been assisting its customers, clients and borrowers in the affected areas. The Firm has continued to dispense cash via ATMs and branches, loan money, provide liquidity to customers, and settle trades, and has waived a number of checking account and loan fees, including late payment fees. The potential financial impact from Hurricane Sandy on the Firm will be dependent upon a number of factors, such as the amount of credit extended to affected persons and businesses, the extent of damage, and the borrower's financial condition, including the amount of insurance proceeds and governmental assistance available to them. The Firm is in the early stages of quantifying the potential impact from Hurricane Sandy on its financial results of operations.

Note 3 - Fair value measurement
Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.
Valuation process
The Firm has an established and well-documented process for determining fair values.
Risk-taking functions are responsible for providing fair value estimates for assets and liabilities carried on the Consolidated Balance Sheet at fair value. A valuation control function, which is independent of the risk-taking function, verifies the fair value estimates leveraging independently derived prices, valuation inputs and other market data, where available.
Where independent prices or inputs are not available, additional review is performed by the valuation control function to ensure the reasonableness of information that cannot be verified to external independent data, and may include: evaluating the limited market activity including client unwinds; benchmarking of valuations inputs to those for similar instruments; decomposition of the valuation of structured instruments into individual components; comparing expected to actual cash flows; review of detailed profit and loss components, which are analyzed over time; review of trends in collateral valuation; and additional levels of management review for larger, more complex holdings. The valuation control function is also responsible for determining any valuation adjustments that may be required, based on market conditions and other specific facts and circumstances, to ensure that the Firm's positions are recorded at fair value. Judgment is required to assess the need for valuation adjustments to appropriately reflect counterparty credit quality; the Firm's creditworthiness; liquidity considerations; unobservable parameters; and, for certain portfolios that meet specified criteria, the size of the net open risk position. The determination of such adjustments follows a consistent framework across the Firm.
Valuation model review and approval
If prices or quotes are not available for an instrument or a similar instrument, fair value is generally determined using valuation models that consider relevant transaction data such as maturity and use as inputs market-based or independently sourced parameters. Where this is the case the price verification process described above is applied to the inputs to those models.

The Firm's Model Review Group within the Firm's Model Risk and Development Group, which in turn reports to the Chief Risk Officer, is responsible for reviewing and approving valuation models used by the Firm. Model reviews consider a number of factors about the model's suitability for valuation of a particular product including whether it accurately reflects the significant risk characteristics of a particular product; the selection and reliability of model inputs; consistency with models for similar products; the appropriateness of any model-related adjustments; and sensitivity to input parameters and assumptions that cannot be observed from the market. In addition, the model reviews consider the reasonableness of model methodology and assumptions, and additional testing is conducted, including back-testing of model outcomes.
All new significant valuation models, as well as major changes to existing models, are reviewed and approved prior to implementation except where specified conditions are met. Previously approved models are reviewed and re-approved periodically.
For a further discussion of the Firm's valuation methodologies for assets, liabilities and lending-related commitments measured at fair value and the fair value hierarchy, see Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report.

The following table presents the asset and liabilities reported at fair value as of September 30, 2012, and December 31, 2011, by major product category and fair value hierarchy.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

At September 30, 2012, and December 31, 2011, included within trading loans were $\$ 22.9$ billion and $\$ 20.1$ billion, respectively, of residential first-lien mortgages, and $\$ 2.3$ billion and $\$ 2.0$ billion, respectively, of (b) commercial first-lien mortgages. Residential mortgage loans include conforming mortgage loans originated with the intent to sell to U.S. government agencies of $\$ 13.8$ billion and $\$ 11.0$ billion, respectively, and reverse mortgages of $\$ 4.0$ billion and $\$ 4.0$ billion, respectively.
Physical commodities inventories are generally accounted for at the lower of cost or market. "Market" is a term defined in U.S. GAAP as not exceeding fair value less costs to sell ("transaction costs"). Transaction costs for the Firm's physical commodities inventories are either not applicable or immaterial to the value of the inventory. Therefore, market approximates fair value for the Firm's physical commodities inventories. When fair value (c)hedging has been applied (or when market is below cost), the carrying value of physical commodities approximates fair value, because under fair value hedge accounting, the cost basis is adjusted for changes in fair value. For a further discussion of the Firm's hedge accounting relationships, see Note 5 on pages 136-144 of this Form 10-Q. To provide consistent fair value disclosure information, all physical commodities inventories have been included in each period presented.
Balances reflect the reduction of securities owned (long positions) by the amount of securities sold but not yet (d) purchased (short positions) when the long and short positions have identical Committee on Uniform Security Identification Procedures numbers ("CUSIPs").
As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. For purposes of the tables above, the Firm does not reduce derivative receivables and derivative payables balances for this netting adjustment, either within or across the levels of the fair value hierarchy, as such netting is not relevant to a
(e)presentation based on the transparency of inputs to the valuation of an asset or liability. Therefore, the balances reported in the fair value hierarchy table are gross of any counterparty netting adjustments. However, if the Firm were to net such balances within level 3, the reduction in the level 3 derivative receivables and payables balances would be $\$ 9.6$ billion and $\$ 11.7$ billion at September 30, 2012, and December 31, 2011, respectively; this is exclusive of the netting benefit associated with cash collateral, which would further reduce the level 3 balances. Private equity instruments represent investments within the Corporate/Private Equity line of business. The cost
(f) basis of the private equity investment portfolio totaled $\$ 8.5$ billion and $\$ 9.5$ billion at September 30, 2012, and December 31, 2011, respectively.
Includes investments in hedge funds, private equity funds, real estate and other funds that do not have readily determinable fair values. The Firm uses net asset value per share when measuring the fair value of these
(g)investments. At September 30, 2012, and December 31, 2011, the fair values of these investments were $\$ 5.0$ billion and $\$ 5.5$ billion, respectively, of which $\$ 1.1$ billion and $\$ 1.2$ billion, respectively were classified in level 2 , and $\$ 3.9$ billion and $\$ 4.3$ billion, respectively, in level 3.
For the three and nine months ended September 30, 2012 and 2011, there were no significant transfers between levels 1 and 2 and from level 2 into level 3. For the nine months ended September 30, 2012, transfers from level 3 into level 2 included $\$ 1.2$ billion of derivative payables based on increased observability of certain structured
(h) equity derivatives and $\$ 1.6$ billion of long-term debt due to a decrease in valuation uncertainty of certain equity structured notes. There were no significant transfers from level 3 into level 2 during the three months ended September 30, 2012. For the three and nine months ended September 30, 2011, transfers from level 3 into level 2 were not significant. All transfers are assumed to occur at the beginning of the reporting period.
Level 3 valuations
The Firm has established well-documented processes for determining fair value, including for instruments where fair value is estimated using significant unobservable inputs (level 3). For further information on the Firm's valuation process and a detailed discussion of the determination of fair value for individual financial instruments, see Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report.
Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the fair value hierarchy, judgments used to estimate fair value are more significant than those required when estimating
the fair value of instruments classified within levels 1 and 2.
In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs - including, but not limited to, transaction details, yield curves, interest rates, prepayment rates, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves. Finally, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's credit worthiness, constraints on liquidity and unobservable
parameters, where relevant. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole.
The following table presents the Firm's primary level 3 financial instruments, the valuation techniques used to measure the fair value of those financial instruments, the significant unobservable inputs and the range of values for those inputs. While the determination to classify an instrument within level 3 is based on the significance of the unobservable inputs to the overall fair value measurement, level 3 financial instruments typically include observable components (that is, components that are actively quoted and can be validated to external sources) in addition to the unobservable components. The level 1 and/or level 2 inputs are not included in the table. In addition, the Firm manages the risk of the observable components of level 3 financial instruments using securities and derivative positions that are classified within levels 1 or 2 of the fair value hierarchy.
The range of values presented in the table is representative of the highest and lowest level input used to value the significant instruments within a classification. The input range does not reflect the level of input uncertainty, instead it is driven by the different underlying characteristics of the various instruments within the classification.
For more information on valuation inputs and control, see Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report.

[^5]Approximately $19 \%$ of instruments in this category include price as an unobservable input. This balance includes certain securities and illiquid trading loans, which are generally valued using comparable prices and/or yields for similar instruments.
Collateralized loan obligations ("CLOs") are securities backed by corporate loans. At September 30, 2012, \$26.2 billion of CLOs were held in the available-for-sale ("AFS") securities portfolio and $\$ 3.9$ billion were included in
(d) asset-backed securities held in the trading portfolio. Substantially all of the securities are rated "AAA", "AA" and "A". For a further discussion of CLOs held in the AFS securities portfolio, see Note 11 on pages 148-153 of this Form 10-Q.
Long-term debt, other borrowed funds, and deposits include structured notes issued by the Firm that are financial (e) instruments containing embedded derivatives. The estimation of the fair value of structured notes is predominantly based on the derivative features embedded within the instruments. The significant unobservable inputs are broadly consistent with those presented for derivative receivables.
(f) The range has not been disclosed due to the wide range of possible values given the diverse nature of the underlying investments.

Changes in and ranges of unobservable inputs
The following provides a description of the impact on a fair value measurement of a change in an unobservable input, and the interrelationship between unobservable inputs, where relevant and significant. The impact of changes in inputs may not be independent as a change in one unobservable input may give rise to a change in another unobservable input. The descriptions provided below indicate the impact of a change in an input in isolation. Where relationships exist between two unobservable inputs,
those relationships are discussed below. Relationships may also exist between observable and unobservable inputs (for example, as observable interest rates rise, unobservable prepayment rates decline). Such relationships have not been included in the discussion below. In addition, for each of the individual relationships described below, the inverse relationship would also generally apply.
For each of the level 3 inputs the range of values used in the valuation of the Firm's position will vary, potentially
significantly, based on the attributes of the underlying instruments that are being valued. Therefore, the ranges of inputs provided are not indicative of the level of valuation uncertainty for the underlying instruments. For example, two option contracts may have similar levels of market risk exposure and valuation uncertainty, but have significantly different implied volatility levels because the option contracts have different underlyings, tenors, or strike prices. The following provides a description of attributes of the underlying instruments and external market factors that affect the range of the inputs used in the valuation of the Firm's positions.
Discount rates and spreads
Yield - The yield of an asset is the interest rate used to discount future cash flows in a discounted cash flow calculation. An increase in the yield, in isolation, would result in a decrease in a fair value measurement.
Credit spread - The credit spread is the amount of additional annualized return over the market interest rate that a market participant would demand for taking exposure to the credit risk of an instrument. The credit spread for an instrument forms part of the discount rate used in a discounted cash flow calculation. Generally an increase in the credit spread would result in a decrease in a fair value measurement.
The yield and the credit spread of a particular mortgage backed security or CLO primarily reflect the risk inherent in the instrument. The yield is also impacted by the absolute level of the coupon paid by the instrument (which may not correspond directly to the level of inherent risk). Therefore, the range of yield and credit spreads reflects the range of risk inherent in various instruments owned by the Firm. The risk inherent in mortgage backed securities is driven by the subordination of the security being valued and the characteristics of the underlying mortgages within the collateralized pool, including borrower FICO scores, loan to value ratios for residential mortgages and the nature of the property and/or any tenants for commercial mortgages. For CLOs, credit spread reflects the subordination of the investment, the credit quality of underlying borrowers and the specific terms of the loans within the CLO structure. For corporate debt securities, obligations of US States and municipals and other similar instruments, credit spreads reflect the credit quality of the obligor and the tenor of the obligation.
Performance rates of underlying collateral in collateralized obligations (e.g., MBS, CLOs, etc.)
Prepayment speed - The prepayment speed is a measure of the voluntary unscheduled principal repayments of a prepayable obligation in a collateralized pool. Prepayment speeds generally decline as borrower delinquencies rise. An increase in prepayment speeds, in isolation, would result in a decrease in a fair value measurement of assets valued at a premium to par and an increase in a fair value measurement of assets valued at a discount to par.

Prepayment speeds may vary from collateral pool to collateral pool, and are driven by the type and location of the underlying borrower, the remaining tenor of the obligation as well as the level and type (e.g. fixed or floating) of interest rate being paid by the borrower.
Conditional default rate - The conditional default rate is a measure of the reduction in the outstanding collateral balance underlying a collateralized obligation as a result of defaults. While there is typically no direct relationship between conditional default rates and prepayment speeds, collateralized obligations for which the underlying collateral have high prepayment speeds will tend to have lower conditional default rates. An increase in conditional default rates would generally be accompanied by an increase in loss severity and an increase in credit spreads. An increase in the conditional default rate, in isolation, would result in a decrease in a fair value measurement. Conditional default rates reflect the quality of the collateral underlying a securitization and the structure of the securitization itself. Based on the types of securities owned in the Firm's market making portfolios, conditional default rates are most typically at the lower end of the range presented.
Loss severity - The loss severity (the inverse concept is termed the recovery rate) is the expected amount of future realized losses resulting from the ultimate liquidation of a particular loan, expressed as the net amount of loss relative to the outstanding loan balance. An increase in loss severity is generally accompanied by an increase in conditional default rates. An increase in the loss severity, in isolation, would result in a decrease in a fair value measurement. The loss severity applied in valuing a mortgage backed security or a CLO investment depends on a host of factors relating to the underlying obligations (i.e. mortgages or loans). For mortgages this includes the loan to value ratio, the nature of the lender's charge over the property and various other instrument-specific factors. For CLO investments, loss severity is driven by the characteristics of the underlying loans including the seniority of the loans and the type and amount of any security provided by the obligor.

## Correlation

Correlation is a measure of the relationship between the movements of two variables (e.g., how the change of one variable influences change in the other). Correlation is a pricing input for a derivative product where the payoff is driven by one or more underlying risks. Correlation inputs are related to the type of derivative (e.g., interest rate, credit, equity and foreign exchange) due to the nature of the underlying risks. When parameters are positively correlated, an increase for one will result in an increase for the other. When parameters are negatively correlated, an increase for one will result in a decrease for the other. An increase in correlation can result in an increase or a decrease in a fair value measurement. Given a short correlation position, an increase in correlation, in isolation, would generally result in a decrease in a fair value measurement.

Default correlation - Default correlation measures whether the loans that collateralize an issued CLO are more likely to default together or separately. An increase in default correlation would result in a decrease in a fair value measurement of a senior tranche in the capital structure of a collateralized obligation.
The level of correlation used in the valuation of derivatives with multiple underlying risks depends on a number of factors including the nature of those risks. For example, the correlation between two credit risk exposures would be different to that between two interest rate risk exposures. Similarly, the tenor of the transaction may also impact the correlation input as the relationship between the underlying risks may be different over different time periods.
Volatility
Volatility is a measure of the variability in possible returns for an instrument, parameter or market index given how much the particular instrument, parameter or index changes in value over time. Volatility is a pricing input for options, including equity options, commodity options, and interest rate options. Generally, the higher the volatility of the underlying, the riskier the instrument. Given a long position in an option, an increase in volatility, in isolation, would generally result in an increase in a fair value measurement.
The level of volatility used in the valuation of a particular option based derivative depends on a number of factors, including the nature of the risk underlying the option (e.g., the volatility of a particular equity security may be significantly different from that of a particular commodity index), the tenor of the derivative as well as the strike price of the option.
EBITDA multiple
EBITDA multiples refer to the input (often derived from the value of a comparable company) that is multiplied by the historic and/or expected earnings before interest, tax,
depreciation and amortization ("EBITDA") of a company in order to estimate the company's value. An increase in the EBITDA multiple, in isolation, net of adjustments, would result in an increase in a fair value measurement. The EBITDA multiple used to value a private equity investment varies depending on the industry, size and performance of the investee company.
Net asset value
Net asset value is the total value of a fund's assets less liabilities. An increase in net asset value would result in an increase in a fair value measurement.
Changes in level 3 recurring fair value measurements
The following tables include a rollforward of the Consolidated Balance Sheet amounts (including changes in fair value) for financial instruments classified by the Firm within level 3 of the fair value hierarchy for the three and nine months ended September 30, 2012 and 2011. When a determination is made to classify a financial instrument within level 3 , the determination is based on the significance of the unobservable parameters to the overall fair value measurement. However, level 3 financial instruments typically include, in addition to the unobservable or level 3 components, observable components (that is, components that are actively quoted and can be validated to external sources); accordingly, the gains and losses in the table below include changes in fair value due in part to observable factors that are part of the valuation methodology. Also, the Firm risk-manages the observable components of level 3 financial instruments using securities and derivative positions that are classified within level 1 or 2 of the fair value hierarchy; as these level 1 and level 2 risk management instruments are not included below, the gains or losses in the following tables do not reflect the effect of the Firm's risk management activities related to such level 3 instruments.

Level 3 liabilities as a percentage of total Firm liabilities accounted for at fair value (including liabilities measured
(a) at fair value on a nonrecurring basis) were $19 \%$ and $22 \%$ at September 30, 2012, and December 31, 2011, respectively.
Predominantly reported in principal transactions revenue, except for changes in fair value for Retail Financial
(b)Services ("RFS") mortgage loans and lending-related commitments originated with the intent to sell, which are reported in mortgage fees and related income.
(c) Realized gains/(losses) on AFS securities, as well as other-than-temporary impairment losses that are recorded in earnings, are reported in securities gains. Unrealized gains/

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

(losses) are reported in OCI. Realized gains/(losses) and foreign exchange remeasurement adjustments recorded in income on AFS securities were $\$ 83$ million and $\$(426)$ million for the three months ended September 30, 2012 and 2011, and were $\$(81)$ million and $\$ 8$ million for the nine months ended September 30, 2012 and 2011, respectively. Unrealized gains/(losses) recorded on AFS securities in OCI were $\$ 86$ million and $\$(29)$ million for the three months ended September 30, 2012 and 2011, and were $\$(54)$ million and $\$ 119$ million for the nine months ended September 30, 2012 and 2011, respectively.
(d) Changes in fair value for RFS mortgage servicing rights are reported in mortgage fees and related income.
(e)Predominantly reported in other income and principal transactions revenue.
(f)Loan originations are included in purchases.
(g) All transfers into and/or out of level 3 are assumed to occur at the beginning of the reporting period.

Level 3 analysis
Consolidated Balance Sheets changes
Level 3 assets (including assets measured at fair value on a nonrecurring basis) were $4.6 \%$ of total Firm assets at September 30, 2012. Level 3 assets (including assets measured at fair value on a nonrecurring basis) were $12.0 \%$ of total Firm assets measured at fair value at September 30, 2012. The following describes significant changes to level 3 assets since December 31, 2011, for those items measured at fair value on a recurring basis. For further information on changes impacting items measured at fair value on a nonrecurring basis, see Assets and liabilities measured at fair value on a nonrecurring basis on page 131 of this Form 10-Q.
Three months ended September 30, 2012
Level 3 assets were $\$ 102.3$ billion at September 30, 2012, reflecting a decrease of $\$ 1.6$ billion from the second quarter due to the following:
$\$ 1.4$ billion decrease in asset-backed trading securities, predominantly driven by sales of CLOs;
$\$ 849$ million decrease in derivative receivables, largely driven by a $\$ 2.7$ billion decrease from the impact of
\&ightening reference entity credit spreads and risk reductions of credit derivatives, partially offset by a $\$ 1.2$ billion increase due to market movements on equity derivatives;
$\$ 1.1$ billion increase in AFS securities, predominantly driven by purchases of CLOs and residential mortgage-backed securities.
Nine months ended September 30, 2012
Level 3 assets decreased by $\$ 11.2$ billion in the first nine months of 2012 due to the following: $\$ 7.9$ billion decrease in derivative receivables, largely driven by a $\$ 8.9$ billion decrease from the impact of

- tightening reference entity credit spreads and risk reductions of credit derivatives, partially offset by a $\$ 1.2$ billion increase due to market movements on equity derivatives;
$\$ 6.1$ billion decrease in trading assets - debt and equity instruments, predominantly driven by sales and settlements of CLOs, trading loans, and corporate debt; and
$\$ 1.4$ billion increase in asset-backed AFS securities, predominantly driven by purchases of CLOs.

Gains and losses
The following describes significant components of total realized/unrealized gains/(losses) for instruments measured at fair value on a recurring basis for the periods indicated. For further information on these instruments, see Changes in level 3 recurring fair value measurements rollforward tables on pages 125-130 of this Form 10-Q.
Three months ended September 30, 2012
$\$ 53$ million of net gains on derivatives, driven by $\$ 2.3$ billion of gains on interest rate lock commitments due to increased volumes and declining interest rates, partially offset by $\$ 1.5$ billion of losses on credit derivatives as a result of tightening of reference entity credit spreads.
Three months ended September 30, 2011
$\$ 4.6$ billion of losses on MSRs. For further discussion of the change, refer to Note 16 on pages $184-187$ of this Form $10-\mathrm{Q}$; and
4.9 billion of net gains on derivatives, predominantly driven by widening of credit spreads.

Nine months ended September 30, 2012
$\$ 1.2$ billion of net gains on trading assets - debt and equity instruments, largely driven by sales and settlements of trading loans;
$\$ 852$ million of losses on MSRs. For further discussion of the change, refer to Note 16 on pages 184-187 of this Form 10-Q; and
$\$ 802$ million of net gains on derivatives, driven by $\$ 5.7$ billion of gains predominantly on interest rate lock
commitments due to increased volumes and declining interest rates, partially offset by $\$ 3.7$ billion of losses on credit derivatives largely as a result of tightening of reference entity credit spreads.
Nine months ended September 30, 2011
$\$ 1.2$ billion gain on private equity investments, predominately driven by gains on sales and net increases in investment valuations;
$\$ 6.1$ billion of net gains on derivatives, related to widening of credit spreads and changes in interest rates, partially offset by losses due to fluctuation in foreign exchange rates; and
$\$ 6.3$ billion of losses on MSRs. For further discussion of the change, refer to Note 16 on pages 184-187 of this Form 10-Q.

## Credit adjustments

When determining the fair value of an instrument, it may be necessary to record a valuation adjustment to arrive at an exit price under U.S. GAAP. Valuation adjustments include, but are not limited to, amounts to reflect counterparty credit quality (credit valuation adjustments or "CVA") and the Firm's own creditworthiness (debit valuation adjustments or "DVA"). The market's view of the Firm's credit quality is reflected in credit spreads observed in the credit default swap ("CDS") market. For a detailed discussion of the valuation adjustments the Firm considers, see the valuation discussion in Note 3 on pages 184-188 of JPMorgan Chase's 2011 Annual Report.
The following table provides the credit adjustments, excluding the effect of any hedging activity, reflected within the Consolidated Balance Sheets as of the dates indicated.
(in millions)
Derivative receivables balance (net of derivatives CVA)

(a) Derivatives CVA, gross of hedges, includes results managed by the Credit Portfolio and other lines of business
(a) within IB.
(b) Structured notes are measured at fair value based on the Firm's election under the fair value option. For further (b) information on these elections, see Note 4 on pages 133-135 of this Form 10-Q.

Assets and liabilities measured at fair value on a nonrecurring basis
Certain assets, liabilities and unfunded lending-related commitments are measured at fair value on a nonrecurring
basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments only in certain circumstances (for example, when there is evidence of impairment). At September 30, 2012, assets measured at fair value on a nonrecurring basis were $\$ 4.1$ billion comprised predominantly of loans that had fair value adjustments in the first nine months of 2012, including collateral-dependent residential real estate loans. At December 31,2011 , assets measured at fair value on a nonrecurring basis were $\$ 5.3$ billion, comprised predominantly of residential real estate loans that had fair value adjustments during 2011.
At September 30, 2012, $\$ 381$ million and $\$ 3.7$ billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. At December 31, 2011, $\$ 369$ million and $\$ 4.9$ billion of these assets were classified in levels 2
and 3 of the fair value hierarchy, respectively. Liabilities measured at fair value on a nonrecurring basis were not significant at September 30, 2012, and December 31, 2011. For the three and nine months ended September 30, 2012 and 2011, there were no significant transfers between levels 1,2 , and 3.
For the nine months ended September 30, 2012, the Firm measured $\$ 3.0$ billion of residential real estate loans at the net realizable value of the underlying collateral (i.e., collateral-dependent loans). These measurements are classified as level 3, as they are valued using a broker's price opinion and discounted based upon the Firm's experience with actual liquidation values. These discounts to the broker price opinions ranged from $22 \%$ to $65 \%$.
The total change in the recorded value of assets and liabilities for which a fair value adjustment has been included in the Consolidated Statements of Income for the three months ended September 30, 2012 and 2011, related to financial instruments held at those dates, was a reduction of $\$ 1.1$ billion and $\$ 623$ million, respectively; and for the nine months ended September 30, 2012 and 2011, was a reduction of $\$ 1.9$ billion and $\$ 1.8$ billion, respectively. These reductions in recorded value were predominantly associated with loans. The changes reported in the three and nine months ended September 30, 2012, included the impact of charge-offs recognized on residential real estate loans discharged under Chapter 7 bankruptcy, as described in Note 13 on pages 161-171 of this Form 10-Q.
For additional information about the measurement of impaired collateral-dependent loans, and other loans where the carrying value is based on the fair value of the underlying collateral (e.g., residential real estate loans written down in accordance with regulatory charge-off guidance), see Note 13 on pages $154-175$ of this Form 10-Q, and Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report.

Additional disclosures about the fair value of financial instruments that are not carried on the Consolidated Balance Sheets at fair value
The following table presents the carrying values and estimated fair values at September 30, 2012, of financial assets and liabilities, excluding financial instruments which are carried at fair value on a recurring basis, and information is provided on their classification within the fair value hierarchy. For additional information regarding the financial instruments within the scope of this disclosure, and the methods and significant assumptions used to estimate their fair value, see Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report.

debentures
Fair value is typically estimated using a discounted cash flow model that incorporates the characteristics of the underlying loans (including principal, contractual interest rate and contractual fees) and other key inputs, including expected lifetime credit losses, interest rates, prepayment rates, and primary origination or secondary market spreads. For certain loans, the fair value is measured based on the value of the underlying collateral. The difference between the estimated fair value and carrying value of a financial asset or liability is the result of the different
(a)methodologies used to determine fair value as compared with carrying value. For example, credit losses are estimated for a financial asset's remaining life in a fair value calculation but are estimated for a loss emergence period in a loan loss reserve calculation; future loan income (interest and fees) is incorporated in a fair value calculation but is generally not considered in the allowance for loan losses. For a further discussion of the Firm's methodologies for estimating the fair value of loans and lending-related commitments, see Note 3 on pages 184-198 of JPMorgan Chase's 2011 Annual Report and pages 119-133 of this Note.
The majority of the Firm's lending-related commitments are not carried at fair value on a recurring basis on the Consolidated Balance Sheets, nor are they actively traded. The carrying value and estimated fair value of the Firm's wholesale lending-related commitments were as follows for the periods indicated.

| (in billions) | Carrying <br> value $^{\text {(a) }}$ | Level 1 | Level 2 | Level 3 | Total <br> estimated <br> fair value | Carrying <br> value $^{(\mathrm{a})}$ | Estimated <br> fair value |

December 31, 2011

Wholesale lending-related commitments
(a) Represents the allowance for wholesale lending-related commitments. Excludes the current carrying values of the guarantee liability and the offsetting asset, each of which are recognized at fair value at the inception of guarantees. The Firm does not estimate the fair value of consumer lending-related commitments. In many cases, the Firm can reduce or cancel these commitments by providing the borrower notice or, in some cases, without notice as permitted by law. For a further discussion of the valuation of lending-related commitments, see pages 119-133 of this Note.

Trading assets and liabilities - average balances
Average trading assets and liabilities were as follows for the periods indicated.

Three months ended September 30,
(in millions)
Trading assets - debt and equity instruments)

(a) Balances reflect the reduction of securities owned (long positions) by the amount of securities sold, but not yet ${ }^{(a)}$ purchased (short positions) when the long and short positions have identical CUSIP numbers.
(b)Primarily represent securities sold, not yet purchased.

Note 4 - Fair value option
For a discussion of the primary financial instruments for which the fair value option was previously elected, including the basis for those elections and the determination of instrument-specific credit risk, where relevant, see Note 4 on pages 198-200 of JPMorgan Chase's 2011 Annual Report.
Changes in fair value under the fair value option election
The following table presents the changes in fair value included in the Consolidated Statements of Income for the three and nine months ended September 30, 2012 and 2011, for items for which the fair value option was elected. The profit and loss information presented below only includes the financial instruments that were elected to be measured at fair value; related risk management instruments, which are required to be measured at fair value, are not included in the table.

| Other changes in fair value ${ }^{(b)}$ | $(565$ | $)$ | $(565$ | $)$ | 662 | - |

Total changes in instrument-specific credit risk related to structured notes were $\$ 8$ million and $\$ 901$ million for the three months ended September 30, 2012 and 2011, and $\$(45)$ million and $\$ 1.1$ billion for the nine months ended ${ }^{(a)}$ September 30, 2012 and 2011, respectively. These totals include adjustments for structured notes classified within deposits and other borrowed funds, as well as long-term debt.
Structured notes are debt instruments with embedded derivatives that are tailored to meet a client's need. The
(b) embedded derivative is the primary driver of risk. Although the risk associated with the structured notes is actively managed, the gains/(losses) reported in this table do not include the income statement impact of such risk management instruments.
(c) Reported in mortgage fees and related income.
(d) Reported in other income.

Difference between aggregate fair value and aggregate remaining contractual principal balance outstanding The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding as of September 30, 2012, and December 31, 2011, for loans, long-term debt and long-term beneficial interests for which the fair value option has been elected.

September 30, 2012

Total long-term debt
Long-term beneficial interests
Nonprincipal-protected debt ${ }^{(b)}$
Total long-term beneficial interests NA $\$ 1,176$ NA NA $\$ 1,250$ NA
(a) There were no performing loans w

Remaining contractual principal is not applicable to nonprincipal-protected notes. Unlike principal-protected structured notes, for which the Firm is obligated to return a stated amount of principal at the maturity of the note,
(b) nonprincipal-protected structured notes do not obligate the Firm to return a stated amount of principal at maturity, but to return an amount based on the performance of an underlying variable or derivative feature embedded in the note.
(c) Where the Firm issues principal-protected zero-coupon or discount notes, the balance reflected as the remaining contractual principal is the final principal payment at maturity.
At September 30, 2012, and December 31, 2011, the contractual amount of letters of credit for which the fair value option was elected was $\$ 4.5$ billion and $\$ 3.9$ billion, respectively, with a corresponding fair value of $\$(75)$ million and $\$(5)$ million, respectively. For further information regarding off-balance sheet lending-related financial instruments, see Note 29 on pages 283-289 of JPMorgan Chase's 2011 Annual Report.

Note 5 - Derivative instruments
JPMorgan Chase makes markets in derivatives for customers and also uses derivatives to hedge or manage its market and credit risk exposures. For a further discussion of the Firm's use of and accounting policies regarding derivative instruments, see Note 6 on pages 202-210 of JPMorgan Chase's 2011 Annual Report.
The Firm's disclosures are based on the accounting treatment and purpose of these derivatives. A limited number of the Firm's derivatives are designated in hedge
accounting relationships and are disclosed according to the type of hedge (fair value hedge, cash flow hedge, or net investment hedge). Derivatives not designated in hedge accounting relationships include certain derivatives that are used to manage certain risks associated with specified assets or liabilities ("specified risk management" positions) as well as derivatives used in the Firm's market-making businesses or for other purposes.

The following table outlines the Firm's primary uses of derivatives and the related hedge accounting designation or disclosure category.
Type of $\quad$ Use of Derivative
Derivative
Manage identified risk exposures in qualifying hedge accounting relationships:

| Interest rate | Hedge fixed rate assets and liabilities |
| :---: | :---: |
| Interest rate | Hedge floating rate assets and liabilities |
| Foreign ex | Hedge foreign currency-denominated |

Foreign exchangHedge forecasted revenue and expense
Hedge the value of the Firm's investments in
Foreign exchange ${ }_{\text {non-U.S. }}^{\text {nod }}$. subsidiaries
Commodity Hedge commodity inventory
Manage specifically identified exposures:
Interest rate Manage the risk of the mortgage pipeline, warehouse loans and MSRs Manage the credit risk of wholesale lending exposures
Credif) Manage the credit risk of certain AFS securities
Commodity Manage the risk of certain commodities-related contracts and investments
Interest rate and Manage the risk of certain other specified assets foreign exchange and liabilities
Make markets in derivatives and other activity:

- Various Market-making and related risk management
- Various Other derivatives, including the synthetic credit portfolio

(a) Includes a limited number of single-name credit derivatives used to mitigate the credit risk arising from specified
AFS securities.

Synthetic credit portfolio
The synthetic credit portfolio is a portfolio of index credit derivatives, including short and long positions, that was held by CIO. On July 2, 2012, CIO transferred the synthetic credit portfolio, other than a portion that aggregated to a
notional amount of approximately $\$ 12$ billion, to IB. The positions making up the portion of the synthetic credit portfolio retained by CIO on July 2, 2012, have been effectively closed out as of September 30, 2012. Both the portion of the synthetic credit portfolio transferred to IB, as well as the portion retained by CIO, have been included in the gains and losses on derivatives related to market-making activities and other derivatives category on page 141 of this Note.

136

Notional amount of derivative contracts
The following table summarizes the notional amount of derivative contracts outstanding as of September 30, 2012, and December 31, 2011.

| (in billions) | September 30, | December 31, <br> 2011 |
| :--- | :--- | :--- |
| Interest rate contracts | 2012 |  |
| Swaps | $\$ 34,730$ | $\$ 38,704$ |
| Futures and forwards | 11,852 | 7,888 |
| Written options | 3,884 | 3,842 |
| Purchased options | 3,997 | 4,026 |
| Total interest rate contracts | 54,463 | 54,460 |
| Credit derivatives ${ }^{(a)}$ | 6,198 | 5,774 |
| Foreign exchange contracts |  |  |
| Cross-currency swaps | 3,393 | 2,931 |
| Spot, futures and forwards | 4,447 | 4,512 |
| Written options | 674 | 674 |
| Purchased options | 681 | 670 |
| Total foreign exchange contracts | 9,195 | 8,787 |
| Equity contracts |  |  |
| Swaps | 161 | 119 |
| Futures and forwards | 53 | 38 |
| Written options | 561 | 460 |

| Total equity contracts | 1,294 | 1,022 |
| Commodity contracts | 336 |  |
| Swaps | 228 | 341 |
| Spot, futures and forwards | 340 | 188 |
| Written options | 329 | 310 |
| Purchased options | 274 |  |
| Total commodity contracts | $\$ 72,383$ | 1,113 |
| Total derivative notional amounts | $\$ 71,156$ |  |

(a) Primarily consists of credit default swaps. For more information on volumes and types of credit derivative
${ }^{(a)}$ contracts, see the Credit derivatives discussion on pages 143-144 of this Note.
(b) Represents the sum of gross long and gross short third-party notional derivative contracts.

While the notional amounts disclosed above give an indication of the volume of the Firm's derivatives activity, the notional amounts significantly exceed, in the Firm's view, the possible losses that could arise from such transactions. For most derivative transactions, the notional amount is not exchanged; it is used simply as a reference to calculate payments.

137

Impact of derivatives on the Consolidated Balance Sheets
The following table summarizes information on derivative receivables and payables (before and after netting adjustments) that are reflected on the Firm's Consolidated Balance Sheets as of September 30, 2012, and December 31, 2011, by accounting designation (e.g., whether the derivatives were designated in hedge accounting relationships or not) and contract type.

(a) Balances exclude structured notes for which the fair value option has been elected. See Note 4 on pages 133-135 of
(a) this Form 10-Q for further information.
(b) Excludes $\$ 11$ million of foreign currency-denominated debt designated as a net investment hedge at December 31,
(b) 2011. There was no such hedge designation at September 30, 2012.
(c) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the
${ }^{(c)}$ related cash collateral received and paid, respectively, when a legally enforceable master netting agreement exists.

Impact of derivatives on the Consolidated Statements of Income
The following tables provide information related to gains and losses recorded on derivatives based on their hedge accounting designation or purpose.
Fair value hedge gains and losses
The following tables present derivative instruments, by contract type, used in fair value hedge accounting relationships, as well as pretax gains/(losses) recorded on such derivatives and the related hedged items for the three and nine months ended September 30, 2012 and 2011, respectively. The Firm includes gains/(losses) on the hedging derivative and the related hedged item in the same line item in the Consolidated Statements of Income.

| Three months September 30, 2011 (in <br> millions) | Derivatives | Hedged <br> items | income <br> statement <br> impact | Hedge <br> ineffectiveness | Excluded |

(a) Primarily consists of hedges of the benchmark (e.g., London Interbank Offered Rate ("LIBOR")) interest rate risk of ${ }^{(a)}$ fixed-rate long-term debt and AFS securities. Gains and losses were recorded in net interest income. Primarily consists of hedges of the foreign currency risk of long-term debt and AFS securities for changes in spot (b) foreign currency rates. Gains and losses related to the derivatives and the hedged items, due to changes in foreign currency rates, were recorded in principal transactions revenue and net interest income.
(c) Consists of overall fair value hedges of physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value). Gains and losses were recorded in principal transactions revenue. Included $\$(2.7)$ billion and $\$ 6.4$ billion for the three months ended September 30, 2012 and 2011, respectively, and
(d) $\$(1.2)$ billion and $\$ 1.4$ billion for the nine months ended September 30, 2012 and 2011, respectively, of revenue related to certain foreign exchange trading derivatives designated as fair value hedging instruments.
(e) Hedge ineffectiveness is the amount by which the gain or loss on the designated derivative instrument does not ${ }^{(e)}$ exactly offset the gain or loss on the hedged item attributable to the hedged risk. Certain components of hedging derivatives are permitted to be excluded from the assessment of hedge (f)effectiveness, such as forward points on foreign exchange forward contracts. Amounts related to excluded components are recorded in current-period income.

Cash flow hedge gains and losses
The following tables present derivative instruments, by contract type, used in cash flow hedge accounting relationships, and the pretax gains/(losses) recorded on such derivatives, for the three and nine months ended September 30, 2012 and 2011, respectively. The Firm includes the gain/(loss) on the hedging derivative in the same line item as the offsetting change in cash flows on the hedged item in the Consolidated Statements of Income.

Contract type
$\left.\begin{array}{llllll}\text { Interest rate }{ }^{(\mathrm{a})} & \$ 237 & \$ 14 & \$ 251 & \$ 29 & \$(208 \\ \text { Foreign exchange }{ }^{(\mathrm{b})} & (2 & )- & (2 & )(40 & )(38 \\ \text { Total } & \$ 235 & \$ 14 & \$ 249 & \$(11 & ) \$(246\end{array}\right)$
(a) Primarily consists of benchmark interest rate hedges of LIBOR-indexed floating-rate assets and floating-rate
${ }^{(a)}$ liabilities. Gains and losses were recorded in net interest income.
Primarily consists of hedges of the foreign currency risk of non-U.S. dollar-denominated revenue and expense. The (b)income statement classification of gains and losses follows the hedged item - primarily noninterest revenue and compensation expense.
(c) The Firm did not experience any forecasted transactions that failed to occur for the three and nine months ended
${ }^{(c)}$ September 30, 2012 and 2011.
Hedge ineffectiveness is the amount by which the cumulative gain or loss on the designated derivative instrument
(d)exceeds the present value of the cumulative expected change in cash flows on the hedged item attributable to the hedged risk.
Over the next 12 months, the Firm expects that $\$ 33$ million (after-tax) of net gains recorded in accumulated other comprehensive income ("AOCI") at September 30, 2012, related to cash flow hedges will be recognized in income. The maximum length of time over which forecasted transactions are hedged is 9 years, and such transactions primarily relate to core lending and borrowing activities.

140

Net investment hedge gains and losses
The following table presents hedging instruments, by contract type, that were used in net investment hedge accounting relationships, and the pretax gains/(losses) recorded on such instruments for the three and nine months ended September 30, 2012 and 2011.

2011

Nine months ended September 30, (in millions)
from the assessment of hedge ats. Amounts related to excluded effectiveness, such as forward points on foreign exchange forward contracts. Amounts related to excluded (a) components are recorded in current-period income. The Firm measures the ineffectiveness of net investment hedge accounting relationships based on changes in spot foreign currency rates, and therefore there was no ineffectiveness for net investment hedge accounting relationships during the three and nine months ended September 30, 2012 and 2011.

Gains and losses on derivatives used for specified risk management purposes The following table presents pretax gains/(losses) recorded on a limited number of derivatives, not designated in hedge accounting relationships, that are used to manage risks associated with certain specified assets and liabilities, including certain risks arising from the mortgage pipeline, warehouse loans, MSRs, wholesale lending exposures, AFS securities, foreign currency-denominated liabilities, and commodities-related contracts and investments.

Derivatives gains/(losses)
recorded in income

| Total | 87 | 13 | 90 | 13 |

Primarily relates to interest rate derivatives used to hedge the interest rate risks associated with the mortgage (a) pipeline, warehouse loans and MSRs. Gains and losses were recorded predominantly in mortgage fees and related income.
(b)

Relates to credit derivatives used to mitigate credit risk associated with lending exposures in the Firm's wholesale businesses, and single-name credit derivatives used to mitigate credit risk arising from certain AFS securities. These derivatives do not include the synthetic credit portfolio or credit derivatives used to mitigate counterparty credit risk arising from derivative receivables, both of which are included in gains and losses on derivatives related to market-making activities and other derivatives below. Gains and losses were recorded in principal transactions revenue.
(c) Primarily relates to hedges of the foreign exchange risk of specified foreign currency-denominated liabilities. Gains c) and losses were recorded in principal transactions revenue and net interest income.
(d) Primarily relates to commodity derivatives used to mitigate energy price risk associated with energy-related contracts and investments. Gains and losses were recorded in principal transactions revenue.

Gains and losses on derivatives related to market-making activities and other derivatives
The Firm makes markets in derivatives in order to meet the needs of customers and uses derivatives to manage certain risks associated with net open risk positions from the Firm's market-making activities, including the counterparty credit risk arising from derivative receivables. These derivatives, as well as all other derivatives (including the synthetic credit portfolio) that are not included in the hedge accounting or specified risk management categories above, are included in this category. Gains and losses on these derivatives are recorded in principal transactions revenue. See Note 6 on pages 144-145 of this Form 10-Q for information on principal transactions revenue.

Credit risk, liquidity risk and credit-related contingent features
For a more detailed discussion of credit risk, liquidity risk and credit-related contingent features, see Note 6 on pages 202-210 of JPMorgan Chase's 2011 Annual Report.
The following table shows the aggregate fair value of net derivative payables that contain contingent collateral or termination features that may be triggered upon a downgrade and the associated collateral the Firm has posted in the normal course of business at September 30, 2012, and December 31, 2011.
Derivative payables containing downgrade triggers
(in millions)
Aggregate fair value of net derivative payables ${ }^{(a)}$
Collateral posted ${ }^{(a)}$
(a) The current period presentation excludes contracts with contingent credit features that were in a net receivable (a) position. Prior period amounts have been revised to conform with the current presentation.

The following table shows the impact of a single-notch and two-notch ratings downgrade to JPMorgan Chase \& Co. and its subsidiaries, predominantly JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), at September 30, 2012, and December 31, 2011, related to derivative contracts with contingent collateral or termination features that may be triggered upon a downgrade. Derivatives contracts generally require additional collateral to be posted or terminations to be triggered when the predefined threshold rating is breached. A downgrade by a single rating agency that does not result in a rating lower than a preexisting corresponding rating provided by another major rating agency will generally not result in additional collateral or termination payment requirements. The liquidity impact in the table is calculated based upon a downgrade below the lowest current rating provided by major rating agencies.
Liquidity impact of derivative downgrade triggers

Additional liquid securities and cash collateral ${ }^{(c)}$
Total collateral for derivative transactions $\quad \$ 114,592 \quad \$ 120,919 \quad \$ 91,616 \quad \$ 82,019$
(a) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists.
(b) Represents cash collateral received and paid that is not subject to a legally enforceable master netting agreement, and liquid securities collateral held and transferred.
Represents liquid securities and cash collateral held and transferred at the initiation of derivative transactions, which is available as security against potential exposure that could arise should the fair value of the transactions move, as well as collateral held and transferred related to contracts that have non-daily call frequency for collateral
(c) to be posted, and collateral that the Firm or a counterparty has agreed to return but has not yet settled as of the reporting date. These amounts were not netted against the derivative receivables and payables in the tables above, because, at an individual counterparty level, the collateral exceeded the fair value exposure at both September 30, 2012, and December 31, 2011.

142

Credit derivatives
For a more detailed discussion of credit derivatives, see Note 6 on pages 202-210 of JPMorgan Chase's 2011 Annual Report.
The Firm is both a purchaser and seller of protection in the credit derivatives market and uses these derivatives for two primary purposes. First, in its capacity as a market-maker, the Firm actively manages a portfolio of credit derivatives by purchasing and selling credit protection, predominantly on corporate debt obligations, to meet the needs of customers. Second, as an end-user, the Firm uses credit derivatives to manage credit risk associated with lending exposures (loans and unfunded commitments) and derivatives counterparty exposures in the Firm's wholesale businesses, and to manage the credit risk arising from certain AFS securities and from certain financial instruments in the Firm's market-making businesses. For more information on the synthetic credit portfolio, see the discussion on page 136 of this Note.
The following tables present the notional amounts of credit derivatives and credit-related notes the Firm sold and purchased as of September 30, 2012, and December 31,
2011. The amounts shown include all of the Firm's credit derivative activities, including market-making, credit portfolio activities, and the synthetic credit portfolio.
As shown in the table below, the Firm manages the credit risk on contracts to sell protection by purchasing protection with identical or similar underlying reference instruments (including single-name, portfolio coverage or specified indices). Other purchased protection referenced in the following tables includes credit derivatives purchased on reference instruments where the Firm has not sold any protection on the identical reference instrument, as well as protection purchased through credit-related notes.
The Firm does not use notional amounts of credit derivatives as the primary measure of risk management for such derivatives, because the notional amount does not take into account the probability of the occurrence of a credit event, the recovery value of the reference obligation (which typically reduces the amount actually required to be paid on the credit derivative contract), or related cash instruments and economic hedges, each of which reduces, in the Firm's view, the risks associated with such derivatives.

Total
$\$(2,919,945) \quad \$ 2,803,161 \quad \$(116,784) \$ 55,375$
(a)Primarily consists of total return swaps and CDS options.

Represents the total notional amount of protection purchased where the underlying reference instrument
(b) (single-name, portfolio or index) is identical to the reference instrument on protection sold; the notional amount of protection purchased for each individual identical underlying reference instrument may be greater or lower than the notional amount of protection sold.
(c) Does not take into account the fair value of the reference obligation at the time of settlement, which would generally reduce the amount the seller of protection pays to the buyer of protection in determining settlement value. (d) Represents protection purchased by the Firm on referenced instruments (single-name, portfolio or index) where the ${ }^{(d)}$ Firm has not sold any protection on the identical reference instrument.

The following tables summarize the notional and fair value amounts of credit derivatives and credit-related notes as of September 30, 2012, and December 31, 2011, where JPMorgan Chase is the seller of protection. The maturity profile is based on the remaining contractual maturity of the credit derivative contracts. The ratings profile is based on the rating of the reference entity on which the credit derivative contract is based. The ratings and maturity profile of credit derivatives and credit-related notes where JPMorgan Chase is the purchaser of protection are comparable to the profile reflected below.
Protection sold - credit derivatives and credit-related notes rating(f)/maturity profile

(a) and Moody's.
(b) Amounts are shown on a gross basis, before the benefit of legally enforceable master netting agreements and cash (b) collateral received by the Firm.

Note 6 - Noninterest revenue
For a discussion of the components of and accounting policies for the Firm's noninterest revenue, see Note 7 on pages 211-212 of JPMorgan Chase's 2011 Annual Report.
The following table presents the components of investment banking fees.

|  | Three months ended September 30, |  |
| :--- | :--- | :--- | :--- | :--- | | Nine months ended |
| :--- |
| September 30, |
| (in millions) |

The following table presents all realized and unrealized gains and losses recorded in principal transactions revenue by major underlying type of risk exposures.
Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, private equity investments, and physical commodities used in market-making and client-driven activities.
In addition, principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities disclosed separately in Note 5, including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specified risk management purposes, primarily to mitigate
credit risk, foreign exchange risk and commodity risk, and (c) other derivatives, including the synthetic credit portfolio. See Note 5 on pages 136-144 of this Form 10-Q for information on the income statement classification of gains and losses on derivatives.

|  | Three months ended September 30, |
| :--- | :--- | :--- | :--- | :--- | | Nine months ended |
| :--- |
| September 30, |
| (in millions) |

(a) Includes a pretax gain of $\$ 98$ million and $\$ 663$ million for the three and nine months ended September 30, 2012, ${ }^{(a)}$ respectively, reflecting the expected recovery on a Bear Stearns-related subordinated loan. Includes $\$ 5.8$ billion of losses incurred by CIO for the six months ended June 30, 2012 and $\$ 449$ million of losses
(b)incurred by CIO for the three months ended September 30, 2012 and an additional modest loss incurred by the IB from the synthetic credit portfolio.
Includes realized gains and losses and unrealized losses on physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value), subject to any applicable fair value hedge
(c) accounting adjustments, and gains and losses on commodity derivatives and other financial instruments that are carried at fair value through income. Commodity derivatives are frequently used to manage the Firm's risk exposure to its physical commodities inventories. Gains/(losses) related to commodity fair value hedges were $\$(800)$ million and $\$(567)$ million for the three months ended September 30, 2012 and 2011, respectively. Gains/(losses) related to

144
commodity fair value hedges were $\$(1.1)$ billion and $\$(705)$ million for the nine months ended September 30, 2012 and 2011, respectively.
(d) Includes revenue on private equity investments held in the Private Equity business within Corporate/Private

Equity, as well as those held in other business segments.
Principal transactions revenue included DVA related to derivatives and structured liabilities measured at fair value
(e)in IB. DVA gains/(losses) were $\$(211)$ million and $\$ 1.9$ billion for the three months ended September 30, 2012 and 2011, and $\$(363)$ million and $\$ 2.0$ billion for the nine months ended September 30, 2012 and 2011, respectively. The following table presents components of asset management, administration and commissions.

| (in millions) | Three months ended September 30, |  | Nine months ended September 30, |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2012 | 2011 | 2012 | 2011 |
| Asset management |  |  |  |  |
| Investment management fees | \$ 1,523 | \$1,463 | \$4,468 | \$4,612 |
| All other asset management fees | 220 | 159 | 558 | 451 |
| Total asset management fees | 1,743 | 1,622 | 5,026 | 5,063 |
| Total administration fees ${ }^{(a)}$ | 515 | 523 | 1,609 | 1,653 |
| Commission and other fees |  |  |  |  |
| Brokerage commissions | 506 | 705 | 1,746 | 2,167 |
| All other commissions and fees | 572 | 598 | 1,808 | 1,874 |
| Total commissions and fees | 1,078 | 1,303 | 3,554 | 4,041 |
| Total asset management, administration and commissions | \$3,336 | \$3,448 | \$10,189 | \$ 10,757 |

(a) Includes fees for custody, securities lending, funds services and securities clearance.

Note 7 - Interest income and Interest expense
For a description of JPMorgan Chase's accounting policies regarding interest income and interest expense, see Note 8 on page 212 of JPMorgan Chase's 2011 Annual Report.
Details of interest income and interest expense were as follows.

| (in millions) | Three months ended September 30, |  |  | Nine months ended September 30, |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2012 |  | 2011 | 2012 | 2011 |

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

| Total interest expense | 2,653 | 3,343 | 8,641 | 10,681 |
| :--- | :--- | :--- | :--- | :--- |
| Net interest income | 10,976 | 11,817 | 33,788 | 35,558 |
| Provision for credit losses | 1,789 | 2,411 | 2,729 | 5,390 |
| Net interest income after provision | $\$ 9,187$ | $\$ 9,406$ | $\$ 31,059$ | $\$ 30,168$ |
| for credit losses |  |  |  |  |

(a)Predominantly margin loans.
(b) Includes brokerage customer payables.

Negative interest income for the three months ended September 30, 2012, is a result of increased client-driven (c) demand for certain securities combined with the impact of low interest rates; the offset of this matched book
${ }^{(c)}$ activity is reflected as lower net interest expense reported within trading liabilities - debt, short-term borrowings and other liabilities.

Note 8 - Pension and other postretirement employee benefit plans
For a discussion of JPMorgan Chase's pension and other postretirement employee benefit ("OPEB") plans, see Note 9 on pages 213-222 of JPMorgan Chase's 2011 Annual Report.

The following table presents the components of net periodic benefit costs reported in the Consolidated Statements of Income for the Firm's U.S. and non-U.S. defined benefit pension, defined contribution and OPEB plans.

|  | Pension plans U.S. |  | Non-U.S. |  | OPEB plans |  |

| Total defined contribution plans | 288 | 289 | 230 | 212 | NA | NA |
| Total pension and OPEB cost included in compensation expense | \$396 | \$327 | \$284 | \$280 | \$(34 | )\$(32 |

(a) Includes various defined benefit pension plans which are individually immaterial.

The fair values of plan assets for the U.S. defined benefit pension and OPEB plans and for the material non-U.S. defined benefit pension plans were $\$ 14.5$ billion and $\$ 3.2$ billion, respectively, as of September 30, 2012, and $\$ 11.9$ billion and $\$ 3.0$ billion, respectively, as of December 31, 2011. See Note 19 on pages 189-190 of this Form 10-Q for further information on unrecognized amounts (i.e., net loss and prior service costs/(credit)) reflected in AOCI for the three and nine month periods ended September 30, 2012 and 2011.

The Firm does not anticipate any contribution to the U.S. defined benefit pension plan in 2012 at this time. For 2012, the cost associated with funding benefits under the Firm's U.S. non-qualified defined benefit pension plans is expected to total $\$ 39$ million. The 2012 contributions to the non-U.S. defined benefit pension and OPEB plans are expected to be $\$ 49$ million and $\$ 2$ million, respectively.
Effective March 19, 2012, JPMorgan Chase Bank, N.A. became the sponsor of the Washington Mutual Pension Plan and it is anticipated that this plan's net assets will be merged into the JPMorgan Chase Retirement Plan on December 31, 2012.

Note 9 - Employee stock-based incentives
For a discussion of the accounting policies and other information relating to employee stock-based incentives, see Note 10 on pages 222-224 of JPMorgan Chase's 2011 Annual Report. The Firm recognized the following noncash compensation expense related to its various employee stock-based incentive plans in its Consolidated Statements of Income.

|  | Three months ended <br> September 30, <br> 2012 |  | 2011 | Nine months ended <br> September 30, <br> 2012 |  | 2011 |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: |
| (in millions) |  |  |  |  |  |  |
| Cost of prior grants of restricted stock units ("RSUs") <br> stock appreciation rights ("SARs") that are amortized ove $\$ 402$ <br> their applicable vesting periods | $\$ 458$ | $\$ 1,434$ | $\$ 1,539$ |  |  |  |
| Accrual of estimated costs of RSUs and SARs to be <br> granted in future periods including those to full-career <br> eligible employees | 180 | 80 | 589 | 556 |  |  |
| Total noncash compensation expense related to <br> employee stock-based incentive plans | $\$ 582$ | $\$ 538$ | $\$ 2,023$ | $\$ 2,095$ |  |  |

In the first quarter of 2012, in connection with its annual incentive grant, the Firm granted 57 million RSUs and 14 million SARs with weighted-average grant date fair values of $\$ 35.62$ per RSU and $\$ 8.89$ per SAR.
Note 10 - Noninterest expense
The following table presents the components of noninterest expense.
(in millions)
Compensation expense
Three months ended Nine months ended
September 30, September 30,
$2012 \quad 2011 \quad 2012 \quad 2011$
Noncompensation expense:

| Total noninterest expense | $\$ 15,371$ | $\$ 15,534$ | $\$ 48,682$ | $\$ 48,371$ |

(a) Included litigation expense of $\$ 790$ million and $\$ 1.3$ billion for the three months ended September 30, 2012 and
(a) 2011 , and $\$ 3.8$ billion and $\$ 4.3$ billion for the nine months ended September 30, 2012 and 2011, respectively.

147

Note 11 - Securities
Securities are primarily classified as AFS or trading. Securities classified as trading are discussed in Note 3 on pages 119-133 of this Form 10-Q. Predominantly all of the AFS securities portfolio is held by CIO in connection with its asset-liability management objectives. At September 30, 2012, the average credit rating of the debt securities comprising the AFS portfolio was AA+ (based upon external ratings where available, and where not available, based primarily upon internal ratings which correspond to ratings as defined by S\&P and Moody's). For additional information regarding AFS securities, see Note 12 on pages 225-230 of JPMorgan Chase's 2011 Annual Report.

(a) Proceeds from securities sold were within approximately $6 \%$ and $4 \%$ of amortized cost for the three and nine
${ }^{(a)}$ months ended September 2012, respectively, and $4 \%$ for both the three and nine months ended September 2011. Includes OTTI losses recognized in income on certain prime mortgage-backed securities for the three (b) months ended September 30, 2012, certain obligations of U.S. states and municipalities and prime mortgage-backed securities for the nine months ended September 30, 2012, and on certain prime mortgage-backed securities for the three and nine months ended September 30, 2011.

(d) During the three months ended September 30, 2012, the Firm realized losses of $\$ 24$ million on sales of corporate
(d) debt securities that had been reported as an OTTI loss in prior periods due to the intention to sell the securities.

The amortized costs and estimated fair values of AFS and held-to-maturity ("HTM") securities were as follows for the dates indicated.

Other-than-temporary impairment
The following table presents OTTI losses that are included in the securities gains and losses table above.

Three months ended September 30, 20122011

Nine months ended September 30, 2012 2011
(in millions)
Debt securities the Firm does not intend to sell that have credit losses
Total OTTI ${ }^{(\mathrm{a})} \quad \$$ - ${ }^{2}$ - $\quad \$(113 \quad$ ) $\$(27)$

Losses recorded in/(reclassified from) AOCI (2 ) (15) 85 (31 )
Total credit-related losses recognized in income ${ }^{(b)} \$(2 \quad) \quad \$(15 \quad) \quad \$(28 \quad) \quad \$(58)$

For initial OTTI, represents the excess of the amortized cost over the fair value of AFS debt securities. For
(a) subsequent impairments of the same security, represents additional declines in fair value subsequent to previously recorded OTTI, if applicable.

Represents the credit loss component on certain prime mortgage-backed securities for the three months ended September 30, 2012, certain obligations of U. S. states and municipalities and prime
(b) mortgage-backed securities for the nine months ended September 30, 2012, and on certain prime mortgage-backed securities for the three and nine months ended September 30, 2011, that the Firm does not intend to sell. Subsequent credit losses may be recorded on securities without a corresponding further decline in fair value if there has been a decline in expected cash flows.
(c) Represents the excess of the amortized cost over the fair value of certain non-U.S. corporate debt, non-U.S.
(c) government debt and certain asset-backed securities the Firm intends to sell.
(d) During the three months ended September 30, 2012, the Firm realized losses of $\$ 24$ million on sales of corporate
${ }^{(d)}$ debt securities that had been reported as an OTTI loss in prior periods due to the intention to sell the securities.
Changes in the credit loss component of credit-impaired debt securities
The following table presents a rollforward for the three and nine months ended September 30, 2012 and 2011, of the credit loss component of OTTI losses that have been recognized in income, related to debt securities that the Firm does not intend to sell.

|  | Three months ended <br> September |  | Nine months ended September |  |
| :--- | :--- | :--- | :--- | :--- |
| (in millions) | 2012 | 2011 | 30, | 2011 |
| Balance, beginning of period | $\$ 734$ | $\$ 675$ | 2012 | $\$ 708$ |
| Newly credit-impaired securities | - | - | 21 | $\$ 632$ |

| Balance, end of period | $\$ 736$ | $\$ 690$ | $\$ 736$ | $\$ 690$ |

Gross unrealized losses
Gross unrealized losses have generally decreased since December 31, 2011, including those that have been in an unrealized loss position for 12 months or more. Except for certain securities that the Firm intends to sell for which the unrealized losses have been recognized in income, as of

September 30, 2012, the Firm does not intend to sell the securities with a loss position in AOCI, and it is not likely that the Firm will be required to sell these securities before recovery of their amortized cost basis. Except for the securities reported in the table above for which credit losses have been recognized in income, the Firm believes that the securities with an unrealized loss in AOCI are not other-than-temporarily impaired as of September 30, 2012. Following is a description of the Firm's principal AFS securities positions with the most significant unrealized losses that have existed for 12 months or more as of September 30, 2012, and the key assumptions used in the Firm's estimate of the present value of the cash flows expected to be collected from these investments.
Mortgage-backed securities - Prime and Alt-A nonagency

As of September 30, 2012, gross unrealized losses related to prime and Alt-A residential mortgage-backed securities issued by private issuers were $\$ 159$ million, of which $\$ 156$ million related to securities that have been in an unrealized loss position for 12 months or more. The Firm has recognized OTTI on securities that are backed primarily by mortgages with higher credit risk characteristics based on collateral type, vintage and geographic concentration. The remaining securities that have not experienced OTTI generally either do not possess all of these characteristics or have sufficient credit enhancements to protect the investments. These credit enhancements are primarily in the form of subordination, which is a form of structural enhancement where realized losses associated with assets held in the vehicle that issued the securities are allocated to the various tranches of securities and considers the relative priority of claims on the assets and earnings of the issuing vehicle. The average credit enhancements associated with the below investment-grade positions that have experienced OTTI losses and those that have not are $1 \%$ and $16 \%$, respectively. The Firm's cash flow estimates are based on a loan-level analysis that considers housing prices, loan-to-value ("LTV") ratio, loan type, geographical location of the underlying property and unemployment rates, among other factors. The weighted-average underlying conditional default rate on the positions was forecasted to be $27 \%$; the related weighted-average loss severity forecast was $46 \%$; and estimated prepayment speeds ranged from $2 \%$ to $39 \%$. Based on the results of this analysis, an OTTI loss of $\$ 2$ million and $\$ 22$ million was recognized for the three and nine months ended September 30, 2012, respectively, on certain securities due to their higher loss assumptions, and the unrealized loss of $\$ 159$ million is considered temporary as management believes that the credit enhancement levels for those securities remain sufficient to support the Firm's investment.
Mortgage-backed securities - Non-U.S.
As of September 30, 2012, gross unrealized losses related to non-U.S. residential mortgage-backed securities were $\$ 67$ million, of which $\$ 62$ million related to securities that
have been in an unrealized loss position for 12 months or more. Substantially all of these securities are rated "AAA," "AA" or "A", and primarily represent mortgage exposures in the United Kingdom and the Netherlands. The key assumptions used in analyzing non-U.S. residential mortgage-backed securities for potential credit losses include credit enhancements, loss severities, conditional default rates, and prepayment speeds. Credit enhancement is primarily in the form of subordination and was approximately $10 \%$ of the outstanding principal balance of securitized mortgage loans, compared with expected lifetime losses of $1 \%$ of the outstanding principal. In assessing potential credit losses, the weighted-average conditional default rate was forecasted to be approximately $1 \%$, the related weighted-average loss severity was forecasted at approximately $30 \%$ and prepayment speeds ranged from $4 \%$ to $15 \%$. The unrealized loss is considered temporary, based on management's assessment that the estimated future cash flows together with the credit enhancement levels for those securities remain sufficient to support the Firm's investment. Corporate debt securities
As of September 30, 2012, gross unrealized losses related to corporate debt securities were $\$ 148$ million, of which $\$ 133$ million related to securities that have been in an unrealized loss position for 12 months or more. Substantially all of the corporate debt securities are currently rated investment-grade, including those in an unrealized loss position. Various factors were considered in assessing whether the Firm expects to recover the amortized cost of corporate debt securities including, but not limited to, the strength of issuer credit ratings, the financial condition of guarantors and the length of time and the extent to which a security's fair value has been less than its amortized cost. The fair values of securities in an unrealized loss position were on average within approximately $1 \%$ of amortized cost. Based on management's assessment, the Firm expects to recover the entire amortized cost basis of all corporate debt securities that the Firm does not intend to sell as of September 30, 2012. In addition, during the nine months ended September 30, 2012, the Firm recorded losses of $\$ 13$ million on corporate debt securities based on the Firm's intention to sell certain of these securities; there were no such losses during the three months ended September 30, 2012. Furthermore, during the three months ended September 30, 2012, the Firm realized losses of $\$ 24$ million on sales of corporate debt securities that had been reported as an OTTI loss in prior periods due to the intention to sell the securities.

Asset-backed securities - Collateralized loan obligations
As of September 30, 2012, gross unrealized losses related to CLOs were $\$ 108$ million, of which $\$ 82$ million related to securities that were in an unrealized loss position for 12 months or more. Substantially all of these securities are rated "AAA," "AA" or "A" and have an average credit enhancement of $30 \%$. The Firm assumed conditional default rates of $2 \%$, based on current default trends for the collateral underlying the securities. The unrealized loss is considered temporary, based on management's assessment that the estimated future cash flows together with the credit enhancement levels for those securities remain sufficient to support the Firm's investment.

Contractual maturities and yields

(a) U.S. government-sponsored enterprises were the only issuers whose securities exceeded $10 \%$ of JPMorgan Chase's total stockholders' equity at September 30, 2012.
The average yield is calculated using the effective yield of each security at the end of the period, weighted based on the amortized cost of each security. The effective yield includes the contractual coupon, amortization of
(b) premiums and accretion of discounts, and the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable. The effective yield excludes unscheduled principal prepayments; and accordingly, actual maturities of securities may differ from their contractual or expected maturities as certain securities may be prepaid.
Includes securities with no stated maturity. Substantially all of the Firm's residential mortgage-backed securities and collateralized mortgage obligations are due in 10 years or more, based on contractual maturity. The estimated
(c)duration, which reflects anticipated future prepayments based on a consensus of dealers in the market, is approximately three years for agency residential mortgage-backed securities, two years for agency residential collateralized mortgage obligations and three years for nonagency residential collateralized mortgage obligations.

Note 12 - Securities financing activities
For a discussion of accounting policies relating to securities financing activities, see Note 13 on page 231 of JPMorgan Chase's 2011 Annual Report. For further information regarding securities borrowed and securities lending agreements for which the fair value option has been elected, see Note 4 on pages 133-135 of this Form 10-Q.
The following table details the Firm's securities financing agreements, all of which are accounted for as collateralized financings during the periods presented.

(a) At September 30, 2012, and December 31, 2011, included resale agreements of $\$ 26.3$ billion and $\$ 22.2$ billion, ${ }^{(a)}$ respectively, accounted for at fair value.
(b) At September 30, 2012, and December 31, 2011, included securities borrowed of $\$ 11.4$ billion and $\$ 15.3$ billion, ${ }^{(b)}$ respectively, accounted for at fair value.
(c) At September 30, 2012, and December 31, 2011, included repurchase agreements of $\$ 8.1$ billion and $\$ 6.8$ billion, ${ }^{(c)}$ respectively, accounted for at fair value.
The amounts reported in the table above were reduced by $\$ 93.5$ billion and $\$ 115.7$ billion at September 30, 2012, and December 31, 2011, respectively, as a result of
agreements in effect that meet the specified conditions for net presentation under applicable accounting guidance. For further information regarding assets pledged and collateral received in securities financing agreements, see Note 22 on page 196 of this Form 10-Q.

Note 13 - Loans
Loan accounting framework
The accounting for a loan depends on management's strategy for the loan, and on whether the loan was credit-impaired at the date of acquisition. The Firm accounts for loans based on the following categories:
Originated or purchased loans held-for-investment (i.e., "retained"), other than purchased credit-impaired ("PCI") loans
Loans held-for-sale
Loans at fair value
PCI loans held-for-investment
For a detailed discussion of loans, including accounting policies, see Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report. See Note 4 on pages 133-135 of this Form 10-Q for further information on the Firm's elections of fair value accounting under the fair value option. See Note 3 on pages 119-133 of this Form 10-Q for further information on loans carried at fair value and classified as trading assets.

Loan portfolio
The Firm's loan portfolio is divided into three portfolio segments, which are the same segments used by the Firm to determine the allowance for loan losses: Wholesale; Consumer, excluding credit card; and Credit card. Within each portfolio segment, the Firm monitors and assesses the credit risk in the following classes of loans, based on the risk characteristics of each loan class:

Wholesale ${ }^{(a)}$

- Commercial and industrial
- Real estate
- Financial institutions
- Government agencies
- Other

Consumer, excluding credit card ${ }^{\text {(b) }}$
Residential real estate - excluding PCI • Credit card loans

- Home equity - senior lien
- Home equity - junior lien
- Prime mortgage, including option ARMs
- Subprime mortgage

Other consumer loans

- Aut ${ }^{(6)}$
- Business bankingc)
- Student and other

Residential real estate - PCI

- Home equity
- Prime mortgage
- Subprime mortgage
- Option ARMs
(a)Includes loans reported in IB, CB, TSS and AM business segments and in Corporate/Private Equity.
(b) Includes loans reported in RFS, auto and student loans reported in Card, and residential real estate loans reported in the AM business segment and in Corporate/Private Equity. Includes auto and business banking risk-rated loans that apply the wholesale methodology for determining the
(c)allowance for loan losses; these loans are managed by Card and RFS, respectively, and therefore, for consistency in presentation, are included with the other consumer loan classes.
Prior to January 1, 2012, the Credit card portfolio segment was reported as two classes: Chase, excluding Washington Mutual, and Washington Mutual. The Washington Mutual class is a run-off portfolio that has been
(d) declining since the Firm acquired the portfolio in 2008. Effective January 1, 2012, management determined that the Washington Mutual portfolio class is no longer significant, and therefore, the Credit card portfolio segment is now being reported as one class of loans.

The following table summarizes the Firm's loan balances by portfolio segment.

| (in millions) | September 30, 2012 |  |  |  |  | December 31, 2011 |  |  |  |

(a) Includes billed finance charges and fees net of an allowance for uncollectible amounts.

Loans (other than PCI loans and those for which the fair value option has been selected) are presented net of (b) unearned income, unamortized discounts and premiums, and net deferred loan costs of $\$ 2.7$ billion at both September 30, 2012, and December 31, 2011.
The following tables provide information about the carrying value of retained loans purchased, sold and reclassified to held-for-sale during the periods indicated. These tables exclude loans recorded at fair value. On an ongoing basis, the Firm manages its exposure to credit risk. Selling loans is one way that the Firm reduces its credit exposures.

Wholesale loan portfolio
Wholesale loans include loans made to a variety of customers from large corporate and institutional clients to certain high-net worth individuals. The primary credit
quality indicator for wholesale loans is the risk rating assigned each loan. For further information on these risk ratings, see Notes 14 and 15 on pages 231-255 of JPMorgan Chase's 2011 Annual Report.

The table below provides information by class of receivable for the retained loans in the Wholesale portfolio segment. Commercial and industrial Real estate

As of September 30, 2012, exposures deemed criticized correspond to special mention, substandard and doubtful
(a)categories as defined by bank regulatory agencies. Prior periods have been reclassified to conform with the current presentation.
(b) The U.S. and non-U.S. distribution is determined based predominantly on the domicile of the borrower.

The credit quality of wholesale loans is assessed primarily through ongoing review and monitoring of an obligor's
(c) ability to meet contractual obligations rather than relying on the past due status, which is generally a lagging
${ }^{(c)}$ indicator of credit quality. For a discussion of more significant risk factors, see Note 14 on page 235 of JPMorgan Chase's 2011 Annual Report.
(d)Represents loans that are considered well-collateralized and therefore still accruing interest.
(e) Other primarily includes loans to SPEs and loans to private banking clients. See Note 1 on pages 182-183 of
${ }^{(e)}$ JPMorgan Chase's 2011 Annual Report for additional information on SPEs.
The following table presents additional information on the real estate class of loans within the Wholesale portfolio segment for the periods indicated. For further information on real estate loans, see Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report.

Wholesale impaired loans and loan modifications
Wholesale impaired loans include loans that have been placed on nonaccrual status and/or that have been modified in a troubled debt restructuring ("TDR"). All impaired loans are evaluated for an asset-specific allowance as described in Note 14 on page 176 of this Form 10-Q.
The table below provides information about the Firm's wholesale impaired loans.

| (in millions) | Commercial and industrial |  | Real estate |  | Financial institutions |  | Gove agen | rnment <br> cies | Other |  | Total retained | loans |

When the discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the (a)loan, then the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged-off and/or there have been interest payments received and applied to the loan balance.
Represents the contractual amount of principal owed at September 30, 2012, and December 31, 2011. The unpaid (b) principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the carrying value; net deferred loan fees or costs; and unamortized discount or premiums on purchased loans.
The following table presents the Firm's average impaired loans for the periods indicated.

|  | Three months |  |  |  |

(a) The related interest income on accruing impaired loans and interest income recognized on a cash basis were not ${ }^{(a)}$ material for the three and nine months ended September 30, 2012 and 2011.

Loan modifications
Certain loan modifications are considered to be TDRs as they provide various concessions to borrowers who are experiencing financial difficulty. All TDRs are reported as impaired loans in the tables above. For further information, see Note 14 on pages 233-234 and 238-239 of JPMorgan Chase's 2011 Annual Report.
The following table provides information about the Firm's wholesale loans that have been modified in TDRs as of the dates presented.

| Ending balance of TDRs | \$377 | \$625 |  | \$122 | \$261 |  | \$21 | \$42 |  | \$520 |  | \$928 |

Sales and other are largely sales and paydowns, but also includes performing loans restructured at market rates that
(a) were removed from the reported TDR balance of $\$ 3$ million and $\$ 54$ million during the three months ended
${ }^{(a)}$ September 30, 2012 and 2011, respectively, and $\$ 43$ million and $\$ 132$ million during the nine months ended September 30, 2012 and 2011, respectively.
(b)Includes loans to Financial institutions, Government agencies and Other.

Financial effects of modifications and redefaults
Loans modified as TDRs are typically term or payment extensions and, to a lesser extent, deferrals of principal and/or interest on commercial and industrial and real estate loans. For the three months ended September 30, 2012 and 2011, the average term extension granted on loans with term or payment extensions was 0.3 years and 1.5 years, respectively. The weighted-average remaining term for all loans modified during these periods was 4.9 years and 2.7 years, respectively. For the nine months ended September 30, 2012 and 2011, the average term extension granted on loans with term or payment extensions was 1.0 years and 3.4 years, respectively. The weighted-average remaining term for all loans modified during these periods was 3.8 years and 4.6 years, respectively. Wholesale TDR loans that redefaulted within one year of the modification were $\$ 4$ million and $\$ 5$ million during the three months ended September 30, 2012 and 2011, respectively, and $\$ 80$ million and $\$ 88$ million during the nine months ended September 30, 2012 and 2011, respectively. A payment default is deemed to occur when the borrower has not made a loan payment by its scheduled due date after giving effect to any contractual grace period.

Consumer, excluding credit card loan portfolio
Consumer loans, excluding credit card loans, consist primarily of residential mortgages, home equity loans and lines of credit, auto loans, business banking loans, and student and other loans, with a primary focus on serving the prime consumer credit market. The portfolio also includes home equity loans secured by junior liens and mortgage loans with interest-only payment options to predominantly prime borrowers, as well as certain payment-option loans originated by Washington Mutual that may result in negative amortization.
The table below provides information about consumer retained loans by class, excluding the Credit card loan portfolio segment.
(in millions)

| Sep 30, | Dec 31, |
| :--- | :--- |
| 2012 | 2011 |

Residential real estate - excluding PCI
Home equity:

| Senior lien | $\$ 19,990$ | $\$ 21,765$ |
| :--- | :--- | :--- |
| Junior lien | 49,696 | 56,035 |
| Mortgages: | 75,636 | 76,196 |
| Prime, including option ARMs | 8,552 | 9,664 |
| Subprime |  |  |
| Other consumer loans | 48,920 | 47,426 |
| Auto | 18,568 | 17,652 |
| Business banking | 12,521 | 14,143 |

| Subprime mortgage | 21,024 | 22,693 |
| Option ARMs | $\$ 295,079$ | $\$ 308,427$ |

Delinquency rates are a primary credit quality indicator for consumer loans, excluding credit card. Other indicators that are taken into consideration for consumer loans, excluding credit card, include:
For residential real estate loans, including both non-PCI and PCI portfolios: The current estimated LTV ratio, or the combined LTV ratio in the case of loans with a junior lien; the geographic distribution of the loan collateral; and the borrowers' current or "refreshed" FICO score.
For scored auto, scored business banking and student loans: The geographic distribution of the loans.

- For risk-rated business banking and auto loans: The risk rating of the loan; the geographic considerations relevant to the loan; and whether the loan is considered to be criticized and/or nonaccrual.
For all business banking loans: The industry specific conditions relevant to the loans.
For further information on consumer credit quality indicators, see Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report.
Residential real estate - excluding PCI loans
The following table provides information by class for residential real estate - excluding PCI retained loans in the Consumer, excluding credit card, portfolio segment.
The following factors should be considered in analyzing certain credit statistics applicable to the Firm's residential real estate - excluding PCI loans portfolio: (i) junior lien home equity loans may be fully charged off when the loan becomes 180 days past due, the borrower is either unable or unwilling to repay the loan, and the value of the collateral does not support the repayment of the loan, resulting in relatively high charge-off rates for this product class; and (ii) the lengthening of loss-mitigation timelines may result in higher delinquency rates for loans carried at the net realizable value of the collateral that remain on the Firm's Consolidated Balance Sheets.

Residential real estate - excluding PCI loans

Individual delinquency classifications included mortgage loans insured by U.S. government agencies as follows:
(a) current includes $\$ 3.4$ billion and $\$ 3.0$ billion; 30-149 days past due includes $\$ 2.3$ billion and $\$ 2.3$ billion; and 150 or more days past due includes $\$ 9.8$ billion and $\$ 10.3$ billion at September 30, 2012, and December 31, 2011, respectively.

These balances, which are 90 days or more past due but insured by U.S. government agencies, are excluded from nonaccrual loans. In predominately all cases, $100 \%$ of the principal balance of the loans is insured and interest is guaranteed at a specified reimbursement rate subject to meeting agreed-upon servicing guidelines. These amounts

## (b)

 are excluded from nonaccrual loans because reimbursement of insured and guaranteed amounts is proceeding normally. At September 30, 2012, and December 31, 2011, these balances included $\$ 7.2$ billion and $\$ 7.0$ billion, respectively, of loans that are no longer accruing interest because interest has been curtailed by the U.S. government agencies although, in predominantly all cases, $100 \%$ of the principal is still insured. For the remaining balance, interest is being accrued at the guaranteed reimbursement rate.At September 30, 2012, included an incremental $\$ 1.7$ billion of loans recorded in accordance with regulatory guidance requiring loans discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower to be reported as nonaccrual loans, regardless of their delinquency status. This $\$ 1.7$ billion consisted of $\$ 480$ million, $\$ 340$
(c) million, $\$ 481$ million, and $\$ 356$ million for home equity - senior lien, home equity - junior lien, prime mortgage, including option ARMs, and subprime mortgages, respectively. Certain of these individual loans have previously been reported as performing TDRs (e.g., loans that were previously modified under one of the Firm's loss mitigation programs and that have made at least six payments under the modified payment terms).
Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally
(d)recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates.

## (e)

Junior lien represents combined LTV, which considers all available lien positions related to the property. All other products are presented without consideration of subordinate liens on the property.
(f) Refreshed FICO scores represent each borrower's most recent credit score, which is obtained by the Firm at least on (f) a quarterly basis.
(g) At September 30, 2012, and December 31, 2011, included mortgage loans insured by U.S. government agencies of $\mathrm{g}) ~ \$ 15.5$ billion and $\$ 15.6$ billion, respectively.
Includes $\$ 1.3$ billion of performing junior liens at September 30, 2012, that are subordinate to senior liens that are

## (h)

 90 days or more past due; such junior liens are now being reported as nonaccrual loans based upon regulatory guidance issued in the first quarter of 2012. Of the total, $\$ 1.2$ billion were current at September 30, 2012. Prior periods have not been restated.At September 30, 2012, and December 31, 2011, excluded mortgage loans insured by U.S. government agencies of (i) $\$ 12.1$ billion and $\$ 12.6$ billion, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

The following table represents the Firm's delinquency statistics for junior lien home equity loans and lines as of September 30, 2012, and December 31, 2011.

## Delinquencies

| September 30, 2012 (in millions, except ratios) | 30-89 days <br> past due | 90-149 days past due | $150+\text { days }$ <br> past due | Total loans | Total 30+ day delinquency rate |
| :---: | :---: | :---: | :---: | :---: | :---: |
| HELOCs: ${ }^{(a)}$ |  |  |  |  |  |
| Within the revolving period ${ }^{(b)}$ | \$485 | \$200 | \$177 | \$42,227 | 2.04 \% |
| Within the required amortization period | 46 | 14 | 23 | 2,015 | 4.12 |
| HELOANs | 139 | 68 | 24 | 5,454 | 4.24 |
| Total | \$670 | \$282 | \$224 | \$49,696 | 2.37 \% |
| Delinquencies |  |  |  |  |  |
| December 31, 2011 (in millions, except ratios) | 30-89 days past due | 90-149 days past due | $\begin{aligned} & 150+\text { days } \\ & \text { past due } \end{aligned}$ | Total loans | Total 30+ day delinquency rate |
| HELOCs: ${ }^{(a)}$ |  |  |  |  |  |
| Within the revolving period ${ }^{(b)}$ | \$606 | \$314 | \$173 | \$47,760 | 2.29 \% |
| Within the required amortization period | 45 | 19 | 15 | 1,636 | 4.83 |
| HELOANs | 188 | 100 | 42 | 6,639 | 4.97 |
| Total | \$839 | \$433 | \$230 | \$56,035 | 2.68 \% |

(a) In general, HELOCs are revolving loans for a 10-year period, after which time the HELOC converts to a loan with a 20-year amortization period.
(b) The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial difficulty or when the collateral does not support the loan amount.
Home equity lines of credit ("HELOCs") within the required amortization period and home equity loans ("HELOANs") have higher delinquency rates than do HELOCs within the revolving period. That is primarily because the fully-amortizing payment required for those products is higher than the minimum payment options available for HELOCs within the revolving period. The higher delinquency rates
associated with amortizing HELOCs and HELOANs are factored into the loss estimates produced by the Firm's delinquency roll-rate methodology, which estimates defaults based on the current delinquency status of a portfolio.

Impaired loans
At September 30, 2012, the Firm reported, in accordance with regulatory guidance, $\$ 1.7$ billion of residential real estate loans that have been discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual TDRs, regardless of their delinquency status. Prior periods were not restated for this policy change. Prior to September 30, 2012, the Firm's policy was to charge down to net realizable value, and also to place on nonaccrual status, loans to borrowers who had filed for bankruptcy when such loans became 60 days past due; however, the Firm did not previously report Chapter 7 loans as collateral-dependent TDRs unless otherwise modified under one of the Firm's loss mitigation programs.
The table below sets forth information about the Firm's residential real estate impaired loans, excluding PCI loans. These loans are considered to be impaired as they have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 14 on page 176 of this Form 10-Q.

Impaired loans

Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

| With an allowance | \$518 | \$319 | \$663 | \$622 | \$5,754 | \$4,332 | \$3,109 | \$3,047 | \$ 10,044 | \$8,320 |

(a) Represents collateral-dependent residential mortgage loans, including Chapter 7 loans, that are charged off to the ${ }^{\text {a) }}$ fair value of the underlying collateral less cost to sell.
At September 30, 2012, and December 31, 2011, $\$ 7.1$ billion and $\$ 4.3$ billion, respectively, of loans modified subsequent to repurchase from Government National Mortgage Association ("Ginnie Mae") in accordance with the
(b) standards of the appropriate government agency (i.e., Federal Housing Administration ("FHA"), U.S. Department of Veterans Affairs ("VA"), Rural Housing Services ("RHS")) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure.
At September 30, 2012, included $\$ 1.7$ billion of Chapter 7 loans, consisting of $\$ 507$ million of senior lien home (c) equity loans, $\$ 398$ million of junior lien home equity loans, $\$ 493$ million of prime including option ARMs, and
(c) $\$ 254$ million of subprime mortgages. Certain of these individual loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).
Represents the contractual amount of principal owed at September 30, 2012, and December 31, 2011. The unpaid
(d) principal balance differs from the impaired loan balances due to various factors, including charge-offs, net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.
At September 30, 2012, included $\$ 2.9$ billion of Chapter 7 loans, consisting of $\$ 696$ million of senior lien home
(e)equity loans, $\$ 1.1$ billion of junior lien home equity loans, $\$ 764$ million of prime, including option ARMs, and $\$ 401$ million of subprime mortgages.
The following table presents average impaired loans and the related interest income reported by the Firm.

Generally, interest income on loans modified in TDRs is recognized on a cash basis until such time as the borrower
(a) has made a minimum of six payments under the new terms. As of September 30, 2012 and 2011, $\$ 2.7$ billion and
a) $\$ 997$ million, respectively, were loans on which the borrowers had not yet made six payments under their modified terms and other TDRs placed on nonaccrual status under regulatory guidance.

## Loan modifications

In accordance with the terms of the global settlement, which became effective on April 5, 2012, the Firm expects to provide approximately $\$ 500$ million of refinancing relief to certain "underwater" borrowers under the Refi Program and
approximately $\$ 3.7$ billion of additional relief to certain borrowers under the Consumer Relief Program, including reductions of principal on first and second liens.
The purpose of the Refi Program is to allow eligible borrowers who are current on their mortgage loans to refinance their existing loans; such borrowers are otherwise unable to do so because they have no equity or, in many cases, negative equity in their homes. Under the Refi Program, the interest rate on each loan that is refinanced may be reduced either for the remaining life of the loan or for five years. The Firm has determined that it will reduce the interest rates on loans that it refinances under the Refi Program for the remaining lives of those loans. The refinancings generally do not result in term extensions and accordingly, in that regard, are more similar to loan modifications than to traditional refinancings. Substantially
all of the refinancings originally expected to be performed under the Refi Program have been finalized as of September 30, 2012.
The Firm continues to modify first and second lien loans under the Consumer Relief Program. These loan modifications are primarily expected to be executed under the terms of either the U.S. Treasury's Making Home Affordable ("MHA") programs (e.g., HAMP, 2MP) or one of the Firm's proprietary modification programs. For further information on the global settlement, see Global settlement on servicing and origination of mortgages in Note 2 on pages 117-118 and Mortgage Foreclosure Investigations and Litigation in Note 23 on pages 203-204 of this Form 10-Q. Modifications of residential real estate loans, excluding PCI loans, are generally accounted for and reported as TDRs. There were no additional commitments to lend to borrowers whose residential real estate loans, excluding PCI loans, have been modified in TDRs. For further information, see Note 14 on pages 233-234 and 243-245 of JPMorgan Chase's 2011 Annual Report.

TDR activity rollforward
The following tables reconcile the beginning and ending balances of residential real estate loans, excluding PCI loans, modified in TDRs for the periods presented.

(a) Any permanent modification of a loan previously reported as a new TDR as the result of a trial modification is not also reported as a new TDR. For the three and nine months ended September 30, 2012, included $\$ 1.7$ billion of Chapter 7 loans consisting of (b) $\$ 507$ million of senior lien home equity loans, $\$ 398$ million of junior lien home equity loans, $\$ 493$ million of b) prime, including option ARMs, and $\$ 254$ million of subprime mortgages. Certain of these individual loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).
(c)Includes charge-offs on unsuccessful trial modifications.

166

Nature and extent of modifications
MHA, as well as the Firm's proprietary modification programs, generally provide various concessions to financially troubled borrowers including, but not limited to,
interest rate reductions, term or payment extensions and deferral of principal and/or interest payments that would otherwise have been required under the terms of the original agreement.

The following tables provide information about how residential real estate loans, excluding PCI loans, were modified under the Firm's loss mitigation programs during the periods presented. These tables exclude Chapter 7 loans where the sole concession granted is the discharge of debt. At September 30, 2012, these Chapter 7 loans totaled 40,701, consisting of 10,153 senior lien home equity loans, 22,625 junior lien home equity loans, 3,942 prime mortgage, including option ARMs, and 3,981 subprime mortgages.

Financial effects of modifications and redefaults
The following tables provide information about the financial effects of the various concessions granted in modifications of residential real estate loans, excluding PCI, under the Firm's loss mitigation programs and also about redefaults of certain loans modified in TDRs for the periods presented. These tables exclude Chapter 7 loans where the sole concession granted is the discharge of debt.

Represents loans permanently modified in TDRs that experienced a payment default in the period presented, and for which the payment default occurred within one year of the modification. The dollar amounts presented represent the balance of such loans at the end of the reporting period in which they defaulted. For residential real (a)estate loans modified in TDRs, payment default is deemed to occur when the loan becomes two contractual payments past due. In the event that a modified loan redefaults, it is probable that the loan will ultimately be liquidated through foreclosure or another similar type of liquidation transaction. Redefaults of loans modified within the last 12 months may not be representative of ultimate redefault levels.

168

Approximately $85 \%$ of the trial modifications approved on or after July 1, 2010 (the approximate date on which substantial revisions were made to the HAMP program), that are seasoned more than six months have been successfully converted to permanent modifications.
The primary performance indicator for TDRs is the rate at which permanently modified loans redefault. At September 30, 2012, the cumulative redefault rates of residential real estate loans that have been modified under the Firm's loss mitigation programs, excluding PCI loans, based upon permanent modifications that were completed after October 1, 2009, and that are seasoned more than six months are $22 \%$ for senior lien home equity, $17 \%$ for junior lien home equity, $15 \%$ for prime mortgages including option ARMs, and $27 \%$ for subprime mortgages.

Default rates of mortgage and home equity Chapter 7 loans vary significantly based on the delinquency status of the loan and overall economic conditions at the time of discharge. Default rates for Chapter 7 loans that were less than 60 days past due at the time of discharge have ranged between approximately $10 \%$ and $40 \%$ in recent years based on the economic conditions at the time of discharge.
At September 30, 2012, the weighted-average estimated remaining lives of residential real estate loans, excluding PCI loans, permanently modified in TDRs were 6.2 years for senior lien home equity, 6.8 years for junior lien home equity, 9.4 years for prime mortgage, including option ARMs and 7.3 years for subprime mortgage. The estimated remaining lives of these loans reflect estimated prepayments, both voluntary and involuntary (i.e., foreclosures and other forced liquidations).

Other consumer loans

(a) Loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP") are ${ }^{(a)}$ included in the delinquency classifications presented based on their payment status.
(b) These amounts represent student loans, which are insured by U.S. government agencies under the FFELP. These amounts were accruing as reimbursement of insured amounts is proceeding normally.
(c) For risk-rated business banking and auto loans, the primary credit quality indicator is the risk rating of the loan, including whether the loans are considered to be criticized and/or nonaccrual.
(d) At September 30, 2012, included $\$ 65$ million of Chapter 7 auto loans. September 30, 2012, and December 31, 2011, excluded loans 30 days or more past due and still accruing, which
(e) are insured by U.S. government agencies under the FFELP, of $\$ 910$ million and $\$ 989$ million, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

Other consumer impaired loans and loan modifications
The tables below set forth information about the Firm's other consumer impaired loans, including risk-rated business banking and auto loans that have been placed on nonaccrual status, and loans that have been modified in TDRs.
(in millions)

| Auto |  | Business banking |  | Total other consum |  |

Impaired loans
With an allowance
Without an allowance ${ }^{(a)}$
Total impaired loans ${ }^{(b)}$
Allowance for loan losses related to impaired loans
Unpaid principal balance of impaired loans ${ }^{(c)(d)}$
Impaired loans on nonaccrual status ${ }^{(b)}$

When discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the
(a)loan, then the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged off and/or there have been interest payments received and applied to the loan balance.
(b) At September 30, 2012, included $\$ 81$ million of Chapter 7 auto loans. Certain of these individual loans were previously reported as nonaccrual loans (e.g. based upon the delinquency status of the loan).
(c) At September 30, 2012, included $\$ 159$ million of Chapter 7 auto
loans.
Represents the contractual amount of principal owed at September 30, 2012, and December 31, 2011. The
(d) unpaid principal balance differs from the impaired loan balances due to various factors, including
charge-offs; interest payments received and applied to the principal balance; net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.
(e) There were no impaired student and other loans at September 30, 2012, and December 31, 2011.

The following table presents average impaired loans for the periods presented.

## Average impaired loans ${ }^{(b)}$

| Ending balance of TDRs | \$164 | \$86 |  | \$352 | \$430 |  | \$516 | \$516 |  |

(a) At September 30, 2012, included $\$ 81$ million of Chapter 7 auto loans. Certain of these individual loans were ${ }^{(a)}$ previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).

Financial effects of modifications and redefaults
For auto loans, TDRs typically occur in connection with the bankruptcy of the borrower. In these cases, the loan is modified with a revised repayment plan that typically incorporates interest rate reductions and, to a lesser extent, principal forgiveness. Beginning September 30, 2012, Chapter 7 auto loans are also considered TDRs.
For business banking loans, concessions are dependent on individual borrower circumstances and can be of a short-term nature for borrowers who need temporary relief or longer term for borrowers experiencing more fundamental financial difficulties. Concessions are predominantly term or payment extensions, but also may include interest rate reductions.
The balance of business banking loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $\$ 6$ million and $\$ 19$ million, during the
three months ended September 30, 2012 and 2011, respectively, and $\$ 31$ million and $\$ 64$ million, during the nine months ended September 30, 2012 and 2011, respectively. The balance of auto loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $\$ 13$ million and $\$ 27$ million during the three and nine months ended September 30, 2012, respectively. The corresponding amounts for the three and nine months ended September 30, 2011, were insignificant. A payment default is deemed to occur as follows: (1) for scored auto and business banking loans, when the loan is two payments past due; and (2) for risk-rated business banking loans and auto loans, when the borrower has not made a loan payment by its scheduled due date after giving effect to the contractual grace period, if any.

The following table provides information about the financial effects of the various concessions granted in modifications of other consumer loans for the periods presented.

balance
(a) Carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the
${ }^{(a)}$ date of acquisition.
Management concluded as part of the Firm's regular assessment of the PCI loan pools that it was probable that
(b)higher expected credit losses would result in a decrease in expected cash flows. As a result, an allowance for loan losses for impairment of these pools has been recognized.
(c) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates. Current estimated combined LTV for junior lien home equity loans considers all available lien positions related to the property.
(d) Refreshed FICO scores, which the Firm obtains at least quarterly, represent each borrower's most recent credit score.

172

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Approximately $21 \%$ of the PCI home equity portfolio are senior lien loans; the remaining balance are junior lien HELOANs or HELOCs. The following tables represent delinquency statistics for PCI junior lien home equity loans and lines of credit based on unpaid principal balance as of September 30, 2012, and December 31, 2011.

Delinquencies
September 30, 2012
(in millions, except ratios)
HELOCs: ${ }^{(a)}$

| September 30, 2012 (in millions, except ratios) | 30-89 days past due | 90-149 days past due | $150+\text { days }$ <br> past due | Total loans | Total 30+ day delinquency rate |
| :---: | :---: | :---: | :---: | :---: | :---: |
| HELOCs: ${ }^{(a)}$ |  |  |  |  |  |
| Within the revolving period ${ }^{(b)}$ | \$365 | \$179 | \$592 | \$ 16,434 | 6.91 \% |

| Total | \$569 | \$336 | \$592 | \$ 19,973 | 7.50 \% |

(a) In general, HELOCs are revolving loans for a 10-year period, after which time the HELOC converts to a loan with (a) a 20-year amortization period.
(b) Substantially all undrawn HELOCs within the revolving period have been closed.
(c)Predominantly all of these loans have been modified to provide a more affordable payment to the borrower.

The table below sets forth the accretable yield activity for the Firm's PCI consumer loans for the three and nine months ended September 30, 2012 and 2011, and represents the Firm's estimate of gross interest income expected to be earned over the remaining life of the PCI loan portfolios. This table excludes the cost to fund the PCI portfolios, and therefore does not represent net interest income expected to be earned on these portfolios.

| (in millions, except ratios) | Total PCI |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Three months ended September 30 , |  |  | Nine months ended September 30 , |  |  |  |
|  | 2012 | 2011 |  | 2012 |  | 2011 |  |

(in millions, except ratios)

Beginning balance \$19,567
Accretion into interest income
Changes in interest rates on variable-rate loans
Other changes in expected cash flows ${ }^{(a)}$
Balance at September 30
Accretable yield percentage

For the three and nine months ended September 30, 2012, other changes in expected cash flows were principally driven by the impact of modifications, but also related to changes in prepayment assumptions. For the three months
(a)ended September 30, 2011, other changes in expected cash flows were predominately driven by the impact of modifications. For the nine months ended September 30, 2011, other changes in expected cash flows were largely driven by the impact of modifications, but also related to changes in prepayment assumptions.
The factors that most significantly affect estimates of gross cash flows expected to be collected, and accordingly the accretable yield balance, include: (i) changes in the benchmark interest rate indices for variable-rate products such as option ARM and home equity loans; and (ii) changes in prepayment assumptions.

Since the date of acquisition, the decrease in the accretable yield percentage has been primarily related to a decrease in interest rates on variable-rate loans and, to a lesser extent, extended loan liquidation periods. Certain events, such as
extended loan liquidation periods, affect the timing of expected cash flows but not the amount of cash expected to be received (i.e., the accretable yield balance). Extended loan liquidation periods reduce the accretable yield percentage because the same accretable yield balance is recognized against a higher-than-expected loan balance over a longer-than-expected period of time.

173

Credit card loan portfolio
The Credit card portfolio segment includes credit card loans originated and purchased by the Firm, including those acquired in the Washington Mutual transaction. Prior to January 1, 2012, the Credit card portfolio segment was reported as two classes: Chase, excluding Washington Mutual, and Washington Mutual. The Washington Mutual class is a run-off portfolio that has been declining since the Firm acquired the portfolio in 2008. Effective January 1, 2012, management determined that the Washington Mutual portfolio class is no longer significant, and therefore, the Credit card portfolio segment is now being reported as one class of loans. Delinquency rates are the primary credit quality indicator for credit card loans. The geographic distribution of the loans provides insight as to the credit quality of the portfolio based on the regional economy. While the borrower's credit score is another general indicator of credit quality, because the borrower's credit score tends to be a lagging indicator, the Firm does not use credit scores as a primary indicator of credit quality. For more information on credit quality indicators, see Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report. The Firm generally originates new card accounts to prime consumer borrowers. However, certain cardholders' FICO scores may change over time, depending on the performance of the cardholder and changes in credit score technology.

The table below sets forth information about the Firm's credit card loans.

## (a) Refreshed FICO scores are estimated based on a statistically significant random sample of credit card accounts in ${ }^{(a)}$ the credit card portfolio for the periods shown. The Firm obtains refreshed FICO scores at least quarterly.

Credit card impaired loans and loan modifications

For a detailed discussion of impaired credit card loans, including credit card loan modifications, see Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report.

The table below sets forth information about the Firm's impaired credit card loans. All of these loans are considered to be impaired as they have been modified in TDRs.

| (in millions) | Sep 30, <br> 2012 | Dec 31, <br> 2011 |
| :--- | :--- | :--- |
| Impaired credit card loans with an <br> allowance(a)(b) | $\$ 4,651$ | $\$ 6,075$ |
| Credit card loans with modified payment terms ${ }^{(\mathrm{c})}$ | Modified credit card loans that have reverted to pre-modification payment | 623 |

(a) The carrying value and the unpaid principal balance are the same for credit card impaired loans.
(b) There were no impaired loans without an allowance.
(c) Represents credit card loans outstanding to borrowers enrolled in a credit card modification program as of the date ${ }^{(c)}$ presented.

Represents credit card loans that were modified in TDRs but that have subsequently reverted back to the loans' pre-modification payment terms. At September 30, 2012, and December 31, 2011, $\$ 371$ million and $\$ 762$ million, respectively, of loans have reverted back to the pre-modification payment terms of the loans due to noncompliance
(d) with the terms of the modified loans. Based on the Firm's historical experience a substantial portion of these loans
is expected to be charged-off in accordance with the Firm's standard charge-off policy. The remaining $\$ 252$ million and $\$ 377$ million at September 30, 2012, and December 31, 2011, respectively, of these loans are to borrowers who have successfully completed a short-term modification program. The Firm continues to report these loans as TDRs since the borrowers' credit lines remain closed.
The following table presents average balances of impaired credit card loans and interest income recognized on those loans.
(in millions)
Average impaired credit card loans
Interest income on impaired credit card loans
Loan modifications
JPMorgan Chase may offer one of a number of loan modification programs to credit card borrowers who are experiencing financial difficulty. The Firm has short-term programs for borrowers who may be in need of temporary relief, and long-term programs for borrowers who are experiencing more fundamental financial difficulties. Most of the credit card loans have been modified under long-term programs. Modifications under long-term programs involve placing the customer on a fixed payment plan, generally for 60 months. Modifications under all short- and long-term programs typically include reducing the interest rate on the credit card. Certain borrowers enrolled in a short-term modification program may be given the option to re-enroll in a long-term program. Substantially all modifications are considered to be TDRs.
If the cardholder does not comply with the modified payment terms, then the credit card loan agreement reverts
back to its pre-modification payment terms. Assuming that the cardholder does not begin to perform in accordance with those payment terms, the loan continues to age and will ultimately be charged-off in accordance with the Firm's standard charge-off policy. In addition, if a borrower successfully completes a short-term modification program, then the loan reverts back to its pre-modification payment terms. However, in most cases, the Firm does not reinstate the borrower's line of credit.

The following table provides information regarding the nature and extent of modifications of credit card loans for the periods presented.
$\left.\begin{array}{lllll} & \begin{array}{l}\text { New enrollments } \\ \text { Three months } \\ \text { ended }\end{array} & & & \\ & \text { September 30, } & & \text { Nine months } & \\ & \text { ended }\end{array}\right)$

Financial effects of modifications and redefaults
The following table provides information about the financial effects of the concessions granted on credit card loans modified in TDRs and redefaults for the period presented. Three months

| $\$ 154$ | $\$ 247$ | $\$ 558$ |  |

Represents loans modified in TDRs that experienced a payment default in the period presented, and for which the (a)payment default occurred within one year of the modification. The amounts presented represent the balance of such loans as of the end of the quarter in which they defaulted.
For credit card loans modified in TDRs, payment default is deemed to have occurred when the loans become two payments past due. At the time of default, a loan is removed from the modification program and reverts back to its pre-modification terms. Based on historical experience, a substantial portion of these loans is expected to be charged-off in accordance with the Firm's standard charge-off policy. In the second quarter of 2012, the Firm revised its policy for recognizing charge-offs on restructured loans that do not comply with their modified payment terms. These loans will now charge-off when they are 120 days past due rather than 180 days past due. Based on historical experience, the estimated weighted-average ultimate default rate for modified credit card loans was $38.27 \%$ at September 30, 2012, and $35.47 \%$ at December 31, 2011.

Note 14 - Allowance for credit losses
For detailed discussion of the allowance for credit losses and the related accounting policies, see Note 15 on pages 252-255 JPMorgan Chase's 2011 Annual Report.
Allowance for credit losses and loans and lending-related commitments by impairment methodology
The table below summarizes information about the allowance for loan losses, loans by impairment methodology, the allowance for lending-related commitments and lending-related commitments by impairment methodology.

(a)Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR. Consumer, excluding credit card, charge-offs for the nine months ended September 30, 2012 included $\$ 825$ million
(b) of incremental charge-offs for Chapter 7 residential real estate loans and $\$ 55$ million of incremental charge-offs for Chapter 7 auto loans.
The asset-specific credit card allowance for loan losses is related to loans that have been modified in a TDR; such
(c) allowance is calculated based on the loans' original contractual interest rates and does not consider any incremental penalty rates.

176

Note 15 - Variable interest entities
For a further description of JPMorgan Chase's accounting policies regarding consolidation of variable interest entities ("VIEs"), see Note 1 on pages 182-183 of JPMorgan Chase's 2011 Annual Report.
The following table summarizes the most significant types of Firm-sponsored VIEs by business segment.

| Line- | Transaction Type | Activity | Form 10-Q page reference |
| :---: | :---: | :---: | :---: |
| Card | Credit card securitization trusts | Securitization of both originated and purchased credit card receivables | 177 |
|  | Other securitization trusts | Securitization of originated automobile and student loans | 177-179 |
| RFS | Mortgage securitization trusts | Securitization of originated and purchased residential mortgages | 177-179 |
| IB | Mortgage and other securitization trusts | Securitization of both originated and purchased residential and commercial mortgages, automobile and student loans | 177-179 |
|  | Multi-seller conduits Investor intermediation activities: | Assist clients in accessing the financial markets in a cost-efficient manner and structures transactions to meet investor needs | 179 |
|  | Municipal bond vehicles |  | 179-180 |
|  | Credit-related note and asset swap vehicles |  | 180 |

The Firm also invests in and provides financing and other services to VIEs sponsored by third parties, as described on page 180 of this Note and Note 16 on page 263 of JPMorgan Chase's 2011 Annual Report.
Significant Firm-sponsored variable interest entities
Credit card securitizations
For a more detailed discussion of JPMorgan Chase's involvement with credit card securitizations, see Note 16 on page 257 of JPMorgan Chase's 2011 Annual Report.
As a result of the Firm's continuing involvement, the Firm is considered to be the primary beneficiary of its Firm-sponsored credit card securitization trusts. This includes the Firm's primary card securitization trust, Chase Issuance Trust. See the table on page 181 of this Note for further information on consolidated VIE assets and liabilities.

Firm-sponsored mortgage and other securitization trusts
The Firm securitizes (or has securitized) originated and purchased residential mortgages, commercial mortgages and other consumer loans (including automobile and student loans) primarily in its IB and Card businesses. Depending on the particular transaction, as well as the respective business involved, the Firm may act as the servicer of the loans and/or retain certain beneficial interest in the securitization trusts.
For a detailed discussion of the Firm's involvement with Firm-sponsored mortgage and other securitization trusts, as well as the accounting treatment relating to such trusts, see Note 16 on pages 257-259 of JPMorgan Chase's 2011 Annual Report.

The following table presents the total unpaid principal amount of assets held in Firm-sponsored securitization entities, including those in which the Firm has continuing involvement and those that are consolidated by the Firm. Continuing involvement includes servicing the loans; holding senior interests or subordinated interests; recourse or guarantee arrangements; and derivative transactions. In certain instances, the Firm's only continuing involvement is servicing the loans. See Securitization activity on pages 181-182 of this Note for further information regarding the Firm's cash flows with and interests retained in nonconsolidated VIEs.

${ }^{(a)}$ sales to U.S. government agencies.
(b) Includes Alt-A loans.

Consists of securities backed by commercial loans (predominantly real estate) and non-mortgage-related consumer
(c)receivables purchased from third parties. The Firm generally does not retain a residual interest in its sponsored commercial mortgage securitization transactions.
(d)Prior period amounts have been revised to conform with the current presentation methodology.
(e) The table excludes the following: retained servicing (see Note 16 on pages 184-187 of this Form 10-Q for a discussion of MSRs); securities retained from loans sales to U.S. government agencies; interest rate and foreign exchange derivatives primarily used to manage interest rate and foreign exchange risks of securitization entities (See Note 5 on pages 136-144 of this Form 10-Q for further information on derivatives); senior and subordinated
securities of $\$ 303$ million and $\$ 168$ million, respectively, at September 30, 2012, and $\$ 110$ million and $\$ 8$ million, respectively, at December 31, 2011, which the Firm purchased in connection with IB's secondary market-making activities.
(f) Includes interests held in re-securitization transactions.

As of September 30, 2012, and December 31, 2011, 69\% and 68\%, respectively, of the Firm's retained securitization interests, which are carried at fair value, were risk-rated "A" or better, on an S\&P-equivalent basis. The retained interests in prime residential mortgages consisted of $\$ 165$ million and $\$ 136$ million of investment-grade
(g) and $\$ 388$ million and $\$ 427$ million of noninvestment-grade retained interests at September 30, 2012, and December 31, 2011, respectively. The retained interests in commercial and other securitizations trusts consisted of $\$ 4.0$ billion and $\$ 3.4$ billion of investment-grade and $\$ 195$ million and $\$ 283$ million of noninvestment-grade retained interests at September 30, 2012, and December 31, 2011, respectively.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## Residential mortgages

For a more detailed description of the Firm's involvement with residential mortgage securitizations, see Note 16 on page 259 of JPMorgan Chase's 2011 Annual Report.
At September 30, 2012, and December 31, 2011, the Firm did not consolidate the assets of certain Firm-sponsored residential mortgage securitization VIEs, in which the Firm had continuing involvement, primarily due to the fact that the Firm did not hold an interest in these trusts that could potentially be significant to the trusts. See the table on page 181 of this Note for more information on the consolidated residential mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated residential mortgage securitizations.
Commercial mortgages and other consumer securitizations
IB originates and securitizes commercial mortgage loans, and engages in underwriting and trading activities involving the securities issued by securitization trusts. For a more detailed description of the Firm's involvement with commercial mortgage and other consumer securitizations, see Note 16 on page 259 of JPMorgan Chase's 2011 Annual Report. See the table on the previous page of this Note for more information on the consolidated commercial mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.
Re-securitizations
For a more detailed description of JPMorgan Chase's
participation in re-securitization transactions, see Note 16 on pages 259-260 of JPMorgan Chase's 2011 Annual Report. During the three and nine months ended September 30, 2012, the Firm transferred $\$ 2.0$ billion and $\$ 8.0$ billion, respectively, of securities to agency VIEs, and $\$ 45$ million and $\$ 286$ million, respectively, of securities to private-label VIEs. During the three and nine months ended September 30, 2011, the Firm transferred $\$ 2.8$ billion and $\$ 20.1$ billion, respectively, of securities to agency VIEs, and $\$ 189$ million and $\$ 381$ million, respectively, of securities to private-label VIEs.
As of September 30, 2012, and December 31, 2011, the Firm did not consolidate any agency re-securitizations. As of September 30, 2012, and December 31, 2011, the Firm consolidated $\$ 140$ million and $\$ 348$ million, respectively, of assets, and $\$ 4$ million and $\$ 139$ million, respectively, of liabilities of private-label re-securitizations. See the table on page 181 of this Note for more information on the consolidated re-securitization transactions.

As of September 30, 2012, and December 31, 2011, total assets of nonconsolidated Firm-sponsored private-label re-securitization entities were $\$ 1.3$ billion and $\$ 3.3$ billion, respectively. At September 30, 2012, and December 31, 2011, the Firm held approximately $\$ 1.9$ billion and $\$ 3.6$ billion, respectively, of interests in nonconsolidated agency re-securitization entities, and $\$ 4$ million and $\$ 14$ million, respectively, of senior and subordinated interests in nonconsolidated private-label re-securitization entities. See the table on page 178 of this Note for further information on interests held in nonconsolidated securitizations.
Multi-seller conduits
For a more detailed description of JPMorgan Chase's principal involvement with Firm-administered multi-seller conduits, see Note 16 on page 260 of JPMorgan Chase's 2011 Annual Report.
In the normal course of business, JPMorgan Chase trades and invests in commercial paper, including commercial paper issued by the Firm-administered multi-seller conduits. The Firm held $\$ 14.0$ billion and $\$ 11.3$ billion of the commercial paper issued by the Firm-administered multi-seller conduits at September 30, 2012, and December 31, 2011, which was eliminated in consolidation. The Firm's investments were not driven by market illiquidity and the Firm is not obligated under any agreement to purchase the commercial paper issued by the Firm-administered multi-seller conduits.
Deal-specific liquidity facilities, program-wide liquidity and credit enhancement provided by the Firm have been eliminated in consolidation. The Firm provides lending-related commitments to certain clients of the Firm-administered multi-seller conduits. The unfunded portion of these commitments was $\$ 12.1$ billion and $\$ 10.8$ billion at September 30, 2012, and December 31, 2011, respectively, which are reported as off-balance sheet lending-related commitments. For more information on off-balance sheet lending-related commitments, see Note 21 on pages 192-196 of this Form 10-Q.

VIEs associated with investor intermediation activities
Municipal bond vehicles
For a more detailed description of JPMorgan Chase's principal involvement with municipal bond vehicles, see Note 16 on pages 260-261 of JPMorgan Chase's 2011 Annual Report.

179

The Firm's exposure to nonconsolidated municipal bond VIEs at September 30, 2012, and December 31, 2011, including the ratings profile of the VIEs' assets, was as follows.
(in billions)
Nonconsolidated municipal bond vehicles

Credit-related note and asset swap vehicles
For a more detailed description of JPMorgan Chase's principal involvement with credit-related note and asset swap vehicles, see Note 16 on pages 261-263 of JPMorgan Chase's 2011 Annual Report.
Exposure to nonconsolidated credit-related note and asset swap VIEs at September 30, 2012, and December 31, 2011, was as follows.

| September 30, 2012 <br> (in billions) | Net derivative <br> receivables | Total <br> exposure $^{(a)}$ | Par value of collateral <br> held by VIEs ${ }^{(b)}$ |
| :--- | :--- | :--- | :--- |
| Credit-related notes | $\$ 0.8$ | $\$ 0.8$ | $\$ 6.4$ |
| Static structure <br> Managed structure | 1.8 | 1.8 | 5.3 |
| Total credit-related notes | 2.6 | 2.6 | 11.7 |
| Asset swaps | 0.7 | 0.7 | 7.7 |
| Total | $\$ 3.3$ | $\$ 3.3$ | $\$ 19.4$ |
| December 31, 2011 | Net derivative | Total | Par value of collateral |
| (in billions) | receivables | exposure $^{(\text {a })}$ | held by VIEs ${ }^{(b)}$ |
| Credit-related notes | $\$ 1.0$ | $\$ 9.1$ |  |
| Static structure | $\$ 1.0$ | $\$ 1.0$ | 7.7 |
| Managed structure | 2.7 | 2.7 | 16.8 |
| Total credit-related notes | 3.7 | 3.7 | 8.6 |
| Asset swaps | 0.6 | $\$ .6$ | $\$ 25.4$ |

(a)On-balance sheet exposure that includes net derivative receivables and trading assets - debt and equity instruments. The Firm's maximum exposure arises through the derivatives executed with the VIEs; the exposure varies over time
(b) with changes in the fair value of the derivatives. The Firm relies on the collateral held by the VIEs to pay any (b) amounts due under the derivatives; the vehicles are structured at inception so that the par value of the collateral is expected to be sufficient to pay amounts due under the derivative contracts.

The Firm consolidated credit-related note vehicles with collateral fair values of $\$ 516$ million and $\$ 231$ million, at September 30, 2012, and December 31, 2011, respectively. These consolidated VIEs included some that
were structured by the Firm, where the Firm provides the credit derivative, and some that have been structured by third parties where the Firm is not the credit derivative provider. The Firm consolidated these vehicles, because it held positions in these entities that provided the Firm with control of certain vehicles. The Firm did not consolidate any asset swap vehicles at September 30, 2012, and December 31, 2011.
VIEs sponsored by third parties
The Firm also invests in and provides financing and other services to VIEs sponsored by third parties, as described on page 263 of JPMorgan Chase's 2011 Annual Report.
VIE used in FRBNY transaction
In conjunction with the Bear Stearns merger, in June 2008, the Federal Reserve Bank of New York ("FRBNY") took control, through an LLC formed for this purpose, of a portfolio of $\$ 30.0$ billion in assets, based on the value of the portfolio as of March 14, 2008. The assets of the LLC were funded by a $\$ 28.85$ billion term loan from the FRBNY and a $\$ 1.15$ billion subordinated loan from JPMorgan Chase. The JPMorgan Chase loan is subordinated to the FRBNY loan and will bear the first $\$ 1.15$ billion of any losses of the portfolio. Any remaining assets in the portfolio after repayment of the FRBNY loan, repayment of the JPMorgan Chase loan and the expense of the LLC will be for the account of the FRBNY. The extent to which the FRBNY and JPMorgan Chase loans will be repaid will depend on the value of the assets in the portfolio and the liquidation strategy directed by the FRBNY. The Firm does not consolidate the LLC, as it does not have the power to direct the activities of the VIE that most significantly impact the VIE's economic performance. In June 2012, the FRBNY loan was repaid in full and the Firm has subsequently received substantial repayments of its loan. During the three and nine months ended September 30, 2012, JPMorgan Chase recognized a pretax gain of $\$ 98$ million and $\$ 663$ million, respectively, reflecting the expected recovery on the $\$ 1.15$ billion subordinated loan plus contractual interest.

180

Consolidated VIE assets and liabilities
The following table presents information on assets and liabilities related to VIEs consolidated by the Firm as of September 30, 2012, and December 31, 2011.

|  | Assets |  |  |  | Liabilities |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Total | \$12.1 | \$86.8 | \$2.6 | \$ 101.5 | \$66.0 | \$1.5 | \$67.5 |

(a) Excludes intercompany transactions which were eliminated in consolidation.
(b) Includes residential and commercial mortgage securitizations as well as re-securitizations.
(c) Primarily comprises student loan securitization entities. The Firm consolidated $\$ 3.8$ billion and $\$ 4.1$ billion of
(c) student loan securitization entities as of September 30, 2012, and December 31, 2011, respectively.
(d) Includes assets classified as cash, derivative receivables, AFS securities, and other assets within the Consolidated Balance Sheets.
The assets of the consolidated VIEs included in the program types above are used to settle the liabilities of those (e)entities. The difference between total assets and total liabilities recognized for consolidated VIEs represents the Firm's interest in the consolidated VIEs for each program type.
(f)The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item on the Consolidated Balance Sheets titled, "Beneficial interests issued by consolidated variable interest entities." The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. Included in beneficial interests in VIE assets are long-term beneficial interests of $\$ 34.4$ billion and $\$ 39.7$ billion at September 30, 2012, and December 31, 2011, respectively. The maturities of the long-term beneficial interests as of September

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

30 , 2012, were as follows: $\$ 13.0$ billion under one year, $\$ 15.0$ billion between one and five years, and $\$ 6.4$ billion over five years.
(g)Includes liabilities classified as accounts payable and other liabilities on the Consolidated Balance Sheets. Supplemental information on loan securitizations
The Firm securitizes and sells a variety of loans, including residential mortgage, credit card, automobile, student and commercial (primarily related to real estate) loans, as well as debt securities. The primary purposes of these securitization transactions are to satisfy investor demand and to generate liquidity for the Firm.

Securitization activity
The following tables provide information related to the Firm's securitization activities for the three and nine months ended September 30, 2012 and 2011, related to assets held in JPMorgan Chase-sponsored securitization entities that were not consolidated by the Firm, and sale accounting was achieved based on the accounting rules in effect at the time of the securitization.

by the Firm
Proceeds from commercial mortgage securitizations were received in the form of securities. For the three and nine months ended September 30, 2012, $\$ 1.0$ billion and $\$ 3.9$ billion, respectively, of commercial mortgage
(a) securitizations were classified in level 2 of the fair value hierarchy. For the three and nine months ended September $30,2011, \$ 1.2$ billion and $\$ 681$ million, respectively, and $\$ 3.8$ billion and $\$ 1.2$ billion, respectively, of commercial mortgage securitizations were classified in levels 2 and 3 of the fair value hierarchy.
(b) Includes cash paid by the Firm to reacquire assets from off-balance sheet, nonconsolidated entities - for example, loan repurchases due to representation and warranties and servicer clean-up calls.
(c) Includes prime, Alt-A, subprime, and option ARMs. Excludes sales for which the Firm did not securitize the loan ${ }^{(c)}$ (including loans sold to Ginnie Mae, Fannie Mae and Freddie Mac).
(d) There were no residential mortgage securitizations during the three and nine months ended September 30, 2012 (d) and 2011.
(e) Includes commercial and student loan securitizations.
(f) Includes $\$ 851$ million of principal and $\$ 859$ million of proceeds from commercial securitizations co-sponsored by third parties for the nine months ended September 30, 2012.

Loans sold to agencies and other third-party-sponsored securitization entities
In addition to the amounts reported in the securitization activity tables above, the Firm, in the normal course of business, sells originated and purchased mortgage loans on a nonrecourse basis, predominantly to Ginnie Mae, Fannie Mae and Freddie Mac (the "Agencies"). These loans are sold primarily for the purpose of securitization by the Agencies, which also provide credit enhancement of the loans through certain guarantee provisions. The Firm does not consolidate these securitization vehicles as it is not the primary beneficiary. For a limited number of loan sales, the Firm is obligated to share a portion of the credit risk associated with the sold loans with the purchaser. See Note 21 on pages 192-196 of this Form 10-Q for additional information about the Firm's loans sales- and securitization-related indemnifications.

The following table summarizes the activities related to loans sold to U.S. government-sponsored agencies and third-party-sponsored securitization entities.

|  | Three months ended September 30, | Nine months ended September 30, |  |  |
| :--- | :--- | :--- | :--- | :--- |
| (in millions) | 2012 | 2011 | 2012 | 2011 |
| Carrying value of loans sold |  |  |  |  |

Options to repurchase delinquent loans
In addition to the Firm's obligation to repurchase certain loans due to material breaches of representations and warranties as discussed in Note 21 on pages 192-196 of this Form 10-Q, the Firm also has the option to repurchase delinquent loans that it services for Ginnie Mae loan pools, as well as for other U.S. government agencies in certain arrangements. The Firm typically elects to repurchase delinquent loans from Ginnie Mae loan pools as it continues to service them and/or manage the foreclosure process in accordance with the applicable requirements, and such loans continue to be insured or guaranteed. When the Firm's repurchase option becomes exercisable, such loans must be reported on the Consolidated Balance Sheets as a loan with a corresponding liability. As of September 30, 2012, and December 31, 2011, the Firm had recorded on its Consolidated Balance Sheets $\$ 15.5$ billion and $\$ 15.7$ billion, respectively, of loans that either had been repurchased or for which the Firm had an option to repurchase. Predominately all of the amounts presented above relate to loans that have been repurchased from Ginnie Mae loan pools. Additionally, real estate owned resulting from voluntary repurchases of loans was $\$ 1.5$ billion and $\$ 1.0$ billion as of September 30, 2012, and December 31, 2011, respectively. Substantially all of these loans and real estate owned are insured or guaranteed by U.S. government agencies, and where applicable, reimbursement is proceeding normally. For additional information, refer to Note 13 on pages 154-175 of this Form 10-Q and Note 14 on pages 231-252 of JPMorgan Chase's 2011 Annual Report.

JPMorgan Chase's interest in securitized assets held at fair value
The following table outlines the key economic assumptions used to determine the fair value, as of September 30, 2012, and December 31, 2011, of certain of the Firm's retained interests in nonconsolidated VIEs (other than MSRs), that are valued using modeling techniques. The table also outlines the sensitivities of those fair values to immediate $10 \%$ and $20 \%$ adverse changes in assumptions used to determine fair value. For a discussion of MSRs, see Note 16 on pages 184-187 of this Form 10-Q.
(in millions, except rates and where otherwise noted)
JPMorgan Chase interests in securitized assets ${ }^{(\mathrm{a})(\mathrm{b})}$
Weighted-average life (in years)
Weighted-average discount rate ${ }^{(c)}$
Impact of $10 \%$ adverse change
Impact of $20 \%$ adverse change
Commercial and other

| September 30, |  | December 31, <br> 2012 | $2011^{(\mathrm{d})}$ |
| :--- | :--- | :--- | :--- |

The Firm's interests in prime mortgage securitizations were $\$ 553$ million and $\$ 555$ million, as of September 30, 2012, and December 31, 2011, respectively. These include retained interests in Alt-A loans and re-securitization (a)transactions. The Firm's interests in subprime mortgage securitizations were $\$ 52$ million and $\$ 31$ million, as of September 30, 2012, and December 31, 2011, respectively. Additionally, the Firm had interests in option ARM mortgage securitizations of zero and $\$ 23$ million at September 30, 2012, and December 31, 2011, respectively.
(b)Includes certain investments acquired in the secondary market but predominantly held for investment purposes.
(c) Incorporates the Firm's weighted-average loss assumption.
(d) The prior period has been reclassified to conform with the current presentation.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based on a $10 \%$ or $20 \%$ variation in assumptions generally cannot be extrapolated easily, because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in the table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might counteract or magnify the sensitivities. The above sensitivities also do not reflect risk management practices the Firm may undertake to mitigate such risks.

Loan delinquencies and liquidation losses
The table below includes information about components of nonconsolidated securitized financial assets, in which the Firm has continuing involvement, and delinquencies as of September 30, 2012, and December 31, 2011, respectively; and liquidation losses for the three and nine months ended September 30, 2012 and 2011, respectively.

Liquidation losses Three months Nine months

(a)Reflects gross goodwill balances as the Firm has not recognized any impairment losses to date.
(b)Includes foreign currency translation adjustments and other tax-related adjustments.

184

Goodwill was not impaired at September 30, 2012, or December 31, 2011, nor was any goodwill written off due to impairment during the nine months ended September 30, 2012 and 2011.
The goodwill impairment test is based upon a comparison between the carrying value and fair value of a reporting unit. The Firm uses the reporting units' allocated equity plus goodwill capital as a proxy for the carrying amounts of equity for the reporting units in the goodwill impairment testing. Reporting unit equity is determined on a similar basis as the allocation of equity to the Firm's lines of business, which primarily considers stand-alone peer comparisons and regulatory capital requirements (under Basel III), although economic risk capital is also considered. Proposed line of business equity levels are incorporated into the Firm's annual budget process, which is reviewed by the Firm's Board of Directors. Allocated equity is further reviewed on a periodic basis and updated as needed. For a discussion of the primary method used to estimate the fair values of the reporting units, see Impairment testing on page 268 of JPMorgan Chase's 2011 Annual Report.
While no impairment of goodwill was recognized, the Firm's consumer lending businesses in RFS and Card remain at an elevated risk for goodwill impairment due to their exposure to U.S. consumer credit risk and the effects of economic,
regulatory and legislative changes. In addition, the earnings or estimated cost of equity of the Firm's capital markets businesses could also be affected by regulatory or legislative changes. Declines in business performance, increases in allocated equity capital, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.
Mortgage servicing rights
Mortgage servicing rights represent the fair value of expected future cash flows for performing servicing activities for others. The fair value considers estimated future servicing fees and ancillary revenue, offset by estimated costs to service the loans, and generally declines over time as net servicing cash flows are received, effectively amortizing the MSR asset against contractual servicing and ancillary fee income. MSRs are either purchased from third parties or recognized upon sale or securitization of mortgage loans if servicing is retained. For a further description of the MSR asset, interest rate risk management, and the valuation of MSRs, see Note 17 on pages 267-271 of JPMorgan Chase's 2011 Annual Report and Note 3 on pages 119-133 of this Form 10-Q.

The following table summarizes MSR activity for the three and nine months ended September 30, 2012 and 2011.
(in millions, except where otherwise noted)

Servicer advances at September 30, (in billions) ${ }^{(\mathrm{d})} \quad \$ 10.0 \quad \$ 11.0 \quad \$ 10.0 \quad \$ 11.0$ Represents the aggregate impact of changes in model inputs and assumptions such as costs to service, home prices, (a)mortgage spreads, ancillary income, and assumptions used to derive prepayment speeds, as well as changes to the valuation models themselves.
Includes changes related to commercial real estate of \$(3) million and \$(3) million for the three months ended
(b) September 30, 2012 and 2011, and $\$(8)$ million and $\$(7)$ million for the nine months ended September 30, 2012 and 2011, respectively.
(c) Includes $\$ 23$ million and $\$ 33$ million related to commercial real estate at September 30, 2012 and 2011, ${ }^{(c)}$ respectively.

Represents amounts the Firm pays as the servicer (e.g., scheduled principal and interest to a trust, taxes and insurance), which will generally be reimbursed within a short period of time after the advance from future cash
(d) flows from the trust or the underlying loans. The Firm's credit risk associated with these advances is minimal because reimbursement of the advances is senior to all cash payments to investors. In addition, the Firm maintains the right to stop payment for certain types of advances with certain investors if the collateral is insufficient to cover the advance.

185

In the first half of 2011, the Firm determined that the fair value of the MSR asset had declined, reflecting higher estimated future servicing costs related to enhanced servicing processes, particularly loan modification and foreclosure procedures, including costs to comply with Consent Orders entered into with the banking regulators. The increase in the cost to service assumption
contemplated significant and prolonged increases in staffing levels in the core and default servicing function, and specifically considered the higher cost to service certain high-risk vintages. These higher estimated future costs resulted in a $\$ 1.1$ billion decrease in the fair value of the MSR asset during the nine months ended September 30, 2011.

The following table presents the components of mortgage fees and related income (including the impact of MSR risk management activities) for the three and nine months ended September 30, 2012 and 2011.

| Three months ended | Nine months ended |
| :--- | :--- |
| September 30, | September 30, |
| 2012 | 2011 |

RFS mortgage fees and related income
Net production revenue:
Production revenue $\quad \$ 1,582 \quad \$ 1,090 \quad \$ 4,376 \quad \$ 2,536$
Repurchase losses
Net production revenue
$\left.\begin{array}{llll}(13 & ) & (314 & ) \\ 1,569 & 776 & 4,051 & ) \\ \hline 1,579\end{array}\right)$

Net mortgage servicing revenue
Operating revenue:
$\left.\begin{array}{llllll}\text { Loan servicing revenue } & 946 & 1,039 & 2,989 & 3,102 \\ \text { Changes in MSR asset fair value due to modeled amortization }(290 & ) & (457 & ) & (968 & )(1,498\end{array}\right)$

Represents the aggregate impact of changes in model inputs and assumptions such as costs to service, home prices, (a) mortgage spreads, ancillary income, and assumptions used to derive prepayment speeds, as well as changes to the valuation models themselves.
The table below outlines the key economic assumptions used to determine the fair value of the Firm's MSRs at September 30, 2012, and December 31, 2011; and it outlines the sensitivities of those fair values to immediate adverse changes in those assumptions, as defined below.
$\left.\begin{array}{llll}\text { (in millions, except rates) } & \text { Sep 30, 2012 } & \text { Dec 31, } & 2011, \\ \text { Weighted-average prepayment speed assumption ("CPR") } & 15.60 & \% & 18.07 \\ \text { Impact on fair value of } 10 \% \text { adverse change } & \$(543 & ) & \$(585 \\ \text { Impact on fair value of 20\% adverse change } & (1,040 & ) & (1,118 \\ \text { Weighted-average option adjusted spread } & 7.82 & \% & 7.83 \\ \text { Impact on fair value of 100 basis points adverse change } & \$(270 & ) & \$(269 \\ \text { Impact on fair value of 200 basis points adverse change } & (521 & ) & (518\end{array}\right)$

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. Changes in fair value based on variation in assumptions generally cannot be easily extrapolated, because the relationship of the change in the assumptions to the change in fair value are often highly interrelated and may not be linear. In this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which would either magnify or counteract the impact of the initial change.
Other intangible assets
The $\$ 566$ million decrease in other intangible assets during the nine months ended September 30, 2012, was due to $\$ 566$ million in amortization.

186

The components of credit card relationships, core deposits and other intangible assets were as follows.
September 30, 2012 December 31, 2011

| (in millions) | Gross |  | Accumulated |  | Net carrying | Gross |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | AccumulatedNet carrying

a) The decrease in the gross amount and accumulated amortization from December 31, 2011, was due to the removal (a) of fully amortized assets.
(b) Includes intangible assets of approximately $\$ 600$ million consisting primarily of asset management advisory contracts, which were determined to have an indefinite life and are not amortized.
Amortization expense
The following table presents amortization expense related to credit card relationships, core deposits and other intangible assets.

| (in millions) | 2012 | 2011 | 2012 | 2011 |
| :--- | :--- | :--- | :--- | :--- |
| Purchased credit card relationships | $\$ 59$ | $\$ 69$ | $\$ 195$ | $\$ 226$ |
| Other credit card-related intangibles | 27 | 27 | 81 | 80 |
| Core deposit intangibles | 60 | 72 | 182 | 216 |
| Other intangibles | 36 | 44 | 108 | 119 |
| Total amortization expense | $\$ 182$ | $\$ 212$ | $\$ 566$ | $\$ 641$ |

Future amortization expense
The following table presents estimated future amortization expense related to credit card relationships, core deposits and other intangible assets.

| For the year (in millions) | Purchased credit <br> card relationships | Other credit <br> card-related | Core deposit <br> intangibles | Other <br> intangibles | Total |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $2012^{(\text {a })}$ | $\$ 253$ | $\$ 107$ | $\$ 240$ | $\$ 143$ | $\$ 743$ |
| 2013 | 213 | 105 | 196 | 136 | 650 |
| 2014 | 109 | 104 | 102 | 120 | 435 |
| 2015 | 24 | 96 | 26 | 100 | 246 |
| 2016 | 4 | 34 | 14 | 93 | 145 |

Includes $\$ 195$ million, $\$ 81$ million, $\$ 182$ million, and $\$ 108$ million of amortization expense related to purchased
(a)credit card relationships, other credit card-related intangibles, core deposit intangibles and other intangibles, respectively, recognized during the nine months ended September 30, 2012.

Note 17 - Deposits
For further discussion on deposits, see Note 19 on page 272 of JPMorgan Chase's 2011 Annual Report.
At September 30, 2012, and December 31, 2011, noninterest-bearing and interest-bearing deposits were as follows.
(in millions)
U.S. offices

Noninterest-bearin
Interest-bearing:
Demand ${ }^{(\mathrm{a})}$
Savings ${ }^{(b)}$
Time (included \$4,686 and \$3,861 at fair value) ${ }^{(\mathrm{c})}$
Total interest-bearing deposits
Total deposits in U.S. offices
September 30, 2012
$\$ 363,388 \quad \$ 346,670$

Non-U.S. offices
Noninterest-bearing
Interest-bearing:
Demand
Savings
Time (included \$764 and \$1,072 at fair value) ${ }^{(\mathrm{c})}$
Total interest-bearing deposits
Total deposits in non-U.S. offices
Total deposits
(a) Includes Negotiable Order of Withdrawal ("NOW") accounts, and certain trust accounts
(b)Includes Money Market Deposit Accounts ("MMDAs").
(c) Includes structured notes classified as deposits for which the fair value option has been elected. For further
${ }^{(c)}$ discussion, see Note 4 on pages 198-200 of JPMorgan Chase's 2011 Annual Report.

Note 18 - Earnings per share
For a discussion of the computation of basic and diluted earnings per share ("EPS"), see Note 24 on page 277 of JPMorgan Chase's 2011 Annual Report. The following table presents the calculation of basic and diluted EPS for the three and nine months ended September 30, 2012 and 2011.

Three months ended Nine months ended
(in millions, except per share amounts) September 30,

$$
2012 \quad 2011
$$

September 30, 2012

2011
Basic earnings per share
Net income

Net income applicable to common equity
Less: Dividends and undistributed earnings allocated to participating securities
Net income applicable to common
stockholders
Total weighted-average basic shares outstanding
Net income per share
Diluted earnings
per share
Net income applicable to common stockholders
Total weighted-average basic shares outstanding
Add: Employee stock options, SARs and warrants ${ }^{(a)}$
Total weighted-average diluted shares outstanding ${ }^{(b)}$
Net income per share

| $\$ 5,346$ | $\$ 3,936$ | $\$ 14,556$ | $\$ 14,141$ |
| :--- | :--- | :--- | :--- |
| $3,803.3$ | $3,859.6$ | $3,810.4$ | $3,933.2$ |
| 10.6 | 12.6 | 12.2 | 23.3 |
| $3,813.9$ | $3,872.2$ | $3,822.6$ | $3,956.5$ |
| $\$ 1.40$ | $\$ 1.02$ | $\$ 3.81$ | $\$ 3.57$ |

Excluded from the computation of diluted EPS (due to the antidilutive effect) were options issued under employee benefit plans and the warrants originally issued in 2008 under the U.S. Treasury's Capital Purchase Program to
(a) purchase shares of the Firm's common stock. The aggregate number of shares issuable upon the exercise of such options and warrants was 147 million and 197 million for the three months ended September 30, 2012 and 2011, respectively, and 158 million and 112 million for the nine months ended September 30, 2012 and 2011, respectively.
(b) Participating securities were included in the calculation of diluted EPS using the two-class method, as this computation was more dilutive than the calculation using the treasury stock method.

Note 19 - Accumulated other comprehensive income/(loss)
AOCI includes the after-tax change in unrealized gains and losses on AFS securities, foreign currency translation adjustments (including the impact of related derivatives hedges), cash flow hedging activities, and net loss and prior service costs/(credit) related to the Firm's defined benefit pension and OPEB plans.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## Note 20 - Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards for the consolidated financial holding company. The OCC establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A., and Chase Bank USA, N.A.
There are two categories of risk-based capital: Tier 1 capital and Tier 2 capital. Tier 1 capital consists of common stockholders' equity, perpetual preferred stock, noncontrolling interests in subsidiaries and trust preferred capital debt securities, less goodwill and certain other adjustments. Tier 2 capital consists of preferred stock not qualifying as Tier 1 capital, subordinated long-term debt and other instruments qualifying as Tier 2 capital, and the
aggregate allowance for credit losses up to a certain percentage of risk-weighted assets ("RWA"). Total capital is Tier 1 capital plus Tier 2 capital. Under the risk-based capital guidelines of the Federal Reserve, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and Total capital to RWA, as well as minimum leverage ratios (which are defined as Tier 1 capital divided by adjusted quarterly average assets). Failure to meet these minimum requirements could cause the Federal Reserve to take action. Banking subsidiaries also are subject to these capital requirements by their respective primary regulators. As of September 30, 2012, and December 31, 2011, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

The following table presents the regulatory capital, assets and risk-based capital ratios for JPMorgan Chase and its significant banking subsidiaries at September 30, 2012, and December 31, 2011. These amounts are determined in accordance with regulations issued by the Federal Reserve and/or OCC. The following table reflects an adjustment to the Firm's and JPMorgan Chase Bank, N.A.'s RWA as of September 30, 2012. This adjustment reflects regulatory guidance regarding a limited number of market risk models used for certain positions held by the Firm and JPMorgan Chase Bank, N.A. during the first half of 2012, including the CIO synthetic credit portfolio.

Capital ratios

| Tier 1 $^{(\text {a }}$ | 11.9 | $\%$ | 12.3 | $\%$ | 9.7 | $\%$ | 9.4 | $\%$ | 9.7 | $\%$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Total | 14.7 | 15.4 | 12.9 | 13.0 | 13.1 | 14.4 | 10 | $6.0 \%$ | $4.0 \%$ |  |
| Tier 1 leverage | 7.1 | 6.8 | 6.1 | 5.5 | 9.5 | 11.2 | 5.0 | (g) 3.0 | (h) |  |

JPMorgan Chase redeemed $\$ 9.0$ billion of trust preferred capital debt securities effective July 12, 2012. At September 30, 2012, trust preferred capital debt securities included in Tier 1 capital were $\$ 10.2$ billion and
(a) $\$ 600$ million, for JPMorgan Chase and JPMorgan Chase Bank, N.A., respectively. If these securities were excluded from the calculation at September 30, 2012, Tier 1 capital would be $\$ 144.5$ billion and $\$ 106.8$ billion, respectively, and the Tier 1 capital ratio would be $11.1 \%$ and $9.6 \%$, respectively. At September 30, 2012, Chase Bank USA, N.A. had no trust preferred capital debt securities.
(b) RWA consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the perceived credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets such as lending-related commitments, guarantees, derivatives and other
applicable off-balance sheet positions are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit-equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. RWA also incorporate a measure for the market risk related to applicable trading assets-debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total RWA. Includes off-balance sheet RWA at September 30, 2012, of $\$ 307.8$ billion, $\$ 297.6$ billion and $\$ 15$ million, and at
(c) December 31, 2011, of $\$ 301.1$ billion, $\$ 291.0$ billion and $\$ 38$ million, for JPMorgan Chase, JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A., respectively. Adjusted average assets, for purposes of calculating the leverage ratio, include total quarterly average assets adjusted for unrealized gains/(losses) on securities, less deductions for disallowed goodwill and other intangible
(d) assets, investments in certain subsidiaries, and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.
(e) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions; whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.
(f) As defined by the regulations issued by the Federal Reserve, OCC and FDIC.

Represents requirements for banking subsidiaries pursuant to regulations issued under the FDIC Improvement Act.
${ }^{(\mathrm{g})}$ There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.
(h) The minimum Tier 1 leverage ratio for bank holding companies and banks is $3 \%$ or $4 \%$, depending on factors h) specified in regulations issued by the Federal Reserve and OCC.

Rating agencies allow measures of capital to be adjusted upward for deferred tax liabilities, which have resulted from both nontaxable business combinations and from tax-deductible goodwill. The Firm had
Note: deferred tax liabilities resulting from nontaxable business combinations totaling $\$ 319$ million and $\$ 414$ million at September 30, 2012, and December 31, 2011, respectively; and deferred tax liabilities resulting from tax-deductible goodwill of $\$ 2.5$ billion and $\$ 2.3$ billion at September 30, 2012, and December 31, 2011, respectively.

A reconciliation of the Firm's Total stockholders' equity to Tier 1 capital and Total qualifying capital is presented in the table below.

| (in millions) | September 30, 2012 |  | December 31, 2011 |
| :---: | :---: | :---: | :---: |
| Tier 1 capital |  |  |  |
| Total stockholders' equity | \$ 199,693 |  | \$ 183,573 |

| Total Tier 2 capital | 35,805 |  | 37,704 |
| Total qualifying capital | \$190,491 |  | \$188,088 |

(a) Primarily includes trust preferred capital debt securities of certain business trusts.
(b) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

Note 21 - Off-balance sheet lending-related financial instruments, guarantees, and other commitments JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. For a discussion of off-balance sheet lending-related financial instruments and guarantees, and the Firm's related accounting policies, see Note 29 on pages 283-289 of JPMorgan Chase's 2011 Annual Report.
To provide for the risk of loss inherent in wholesale and consumer (excluding credit card) contracts, an allowance for credit losses on lending-related commitments is maintained. See Note 14 on page 176 of this Form 10-Q for further discussion regarding the allowance for credit losses on lending-related commitments.
The following table summarizes the contractual amounts and carrying values of off-balance sheet lending-related financial instruments, guarantees and other commitments at September 30, 2012, and December 31, 2011. The amounts in the table below for credit card and home equity lending-related commitments represent the total available credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit for these products will be utilized at the same time. The Firm can reduce or cancel credit card lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law. The Firm may reduce or close home equity lines of credit when there are significant decreases in the value of the underlying property, or when there has been a demonstrable decline in the creditworthiness of the borrower. Also, the Firm typically closes credit card lines when the borrower is 60 days or more past due.

At September 30, 2012, and December 31, 2011, reflects the contractual amount net of risk participations totaling $\$ 589$ million and $\$ 1.1$ billion, respectively, for other unfunded commitments to extend credit; $\$ 18.2$ billion and
(a) $\$ 19.8$ billion, respectively, for standby letters of credit and other financial guarantees; and $\$ 913$ million and $\$ 974$ million, respectively, for other letters of credit. In regulatory filings with the Federal Reserve these commitments are shown gross of risk participations.
At September 30, 2012, and December 31, 2011, included credit enhancements and bond and commercial paper
(b) liquidity commitments to U.S. states and municipalities, hospitals and other not-for-profit entities of $\$ 45.7$ billion and $\$ 48.6$ billion, respectively. These commitments also include liquidity facilities to nonconsolidated municipal bond VIEs; for further information, see Note 15 on pages 177-184 of this Form 10-Q.
(c) At September 30, 2012, and December 31, 2011, included unissued standby letters of credit commitments of (c) $\$ 44.4$ billion and $\$ 44.1$ billion, respectively.

At September 30, 2012, and December 31, 2011, JPMorgan Chase held collateral relating to $\$ 43.3$ billion and
(d) $\$ 41.5$ billion, respectively, of standby letters of credit; and $\$ 795$ million and $\$ 1.3$ billion, respectively, of other letters of credit.
At September 30, 2012, and December 31, 2011, collateral held by the Firm in support of securities lending

## (e)

 indemnification agreements was $\$ 184.5$ billion and $\$ 186.3$ billion, respectively. Securities lending collateral comprises primarily cash and securities issued by governments that are members of the Organisation for Economic Co-operation and Development ("OECD") and U.S. government agencies.At September 30, 2012, and December 31, 2011, the amount of commitments related to forward-starting reverse repurchase agreements and securities borrowing agreements were $\$ 8.8$ billion and $\$ 14.4$ billion, respectively.
(f)Commitments related to unsettled reverse repurchase agreements and securities borrowing agreements with regular-way settlement periods were $\$ 32.7$ billion and $\$ 25.5$ billion, at September 30, 2012, and December 31, 2011, respectively.
The Firm's mortgage repurchase liability is intended to cover losses associated with all loans previously sold in $(\mathrm{g})$ connection with loan sale and securitization transactions with the GSEs, regardless of when those losses occur or
(g) how they are ultimately resolved (e.g., repurchase, make-whole payment). For additional information, see Loan sale and securitization-related indemnifications on pages 195-196 of this Note.
At September 30, 2012, and December 31, 2011, included unfunded commitments of $\$ 398$ million and $\$ 789$ million, respectively, to third-party private equity funds; and $\$ 1.6$ billion and $\$ 1.5$ billion, respectively, to
(h) other equity investments. These commitments included $\$ 359$ million and $\$ 820$ million, respectively, related to ${ }^{(h)}$ investments that are generally fair valued at net asset value as discussed in Note 3 on pages 119-133 of this Form 10-Q. In addition, at September 30, 2012, and December 31, 2011, included letters of credit hedged by derivative transactions and managed on a market risk basis of $\$ 4.5$ billion and $\$ 3.9$ billion, respectively.
(i) For lending-related products, the carrying value represents the allowance for lending-related commitments and the guarantee liability; for derivative-related products, the carrying value represents the fair value.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Other unfunded commitments to extend credit
Other unfunded commitments to extend credit generally comprise commitments for working capital and general corporate purposes, extensions of credit to support commercial paper facilities and bond financings in the event that those obligations cannot be remarketed to new investors as well as committed liquidity facilities to a clearing organization.
Also included in other unfunded commitments to extend credit are commitments to noninvestment-grade
counterparties in connection with leveraged and acquisition finance activities, which were $\$ 6.8$ billion and $\$ 6.1$ billion at September 30, 2012, and December 31, 2011, respectively. For further information, see Note 3 and Note 4 on pages 119-133 and 133-135 respectively, of this Form 10-Q.
In addition, the Firm acts as a clearing and custody bank in the U.S. tri-party repurchase transaction market. In its role as clearing and custody bank, the Firm is exposed to intra-day credit risk of the cash borrowers, usually broker-dealers; however, this exposure is secured by collateral and typically extinguished through the settlement process by the end of the day. For the three months ended September 30, 2012, the tri-party repurchase daily balances averaged $\$ 372$ billion.
Guarantees
The Firm considers the following off-balance sheet lending-related arrangements to be guarantees under U.S. GAAP:
standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts. For a further discussion of the off-balance sheet lending-related arrangements the Firm considers to be guarantees, and the related accounting policies, see Note 29 on pages 283-289 of JPMorgan Chase's 2011 Annual Report. The recorded amounts of the liabilities related to guarantees and indemnifications at September 30, 2012, and December 31, 2011, excluding the allowance for credit losses on lending-related commitments, are discussed below.
Standby letters of credit and other financial guarantees
Standby letters of credit ("SBLC") and other financial guarantees are conditional lending commitments issued by the Firm to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings, trade and similar transactions. The carrying values of standby and other letters of credit were $\$ 680$ million and $\$ 698$ million at September 30, 2012, and December 31, 2011, respectively, which were classified in accounts payable and other liabilities on the Consolidated Balance Sheets; these carrying values included $\$ 307$ million and $\$ 319$ million, respectively, for the allowance for lending-related commitments, and $\$ 373$ million and $\$ 379$ million, respectively, for the guarantee liability and corresponding asset.

The following table summarizes the types of facilities under which standby letters of credit and other letters of credit arrangements are outstanding by the ratings profiles of the Firm's customers, as of September 30, 2012, and December 31, 2011.
Standby letters of credit, other financial guarantees and other letters of credit

Commitments with collateral
(a) The ratings scale is based on the Firm's internal ratings which generally correspond to ratings as defined by S\&P a) and Moody's.
(b) At September 30, 2012, and December 31, 2011, reflects the contractual amount net of risk participations totaling $\$ 18.2$ billion and $\$ 19.8$ billion, respectively, for standby letters of credit and other financial guarantees; and $\$ 913$
million and $\$ 974$ million, respectively, for other letters of credit. In regulatory filings with the Federal Reserve these commitments are shown gross of risk participations.
At September 30, 2012, and December 31, 2011, included unissued standby letters of credit commitments of $\$ 44.4$
(c) billion and $\$ 44.1$ billion, respectively.

Derivatives qualifying as guarantees
In addition to the contracts described above, the Firm transacts certain derivative contracts that have the characteristics of a guarantee under U.S. GAAP. For further information on these derivatives, see Note 29 on pages 283-289 of JPMorgan Chase's 2011 Annual Report. The total notional value of the derivatives that the Firm deems to be guarantees was $\$ 66.5$ billion and $\$ 75.6$ billion at

September 30, 2012, and December 31, 2011, respectively. The notional amount generally represents the Firm's maximum exposure to derivatives qualifying as guarantees. However, exposure to certain stable value contracts is contractually limited to a substantially lower percentage of the notional amount; the notional amount on these stable value contracts was $\$ 26.3$ billion and $\$ 26.1$ billion and the maximum exposure to loss was
$\$ 2.8$ billion and $\$ 2.8$ billion, at September 30, 2012, and December 31, 2011, respectively. The fair values of the contracts reflect the probability of whether the Firm will be required to perform under the contract. The fair value related to derivatives that the Firm deems to be guarantees were derivative payables of $\$ 323$ million and $\$ 555$ million and derivative receivables of $\$ 93$ million and $\$ 98$ million at September 30, 2012, and December 31, 2011, respectively. The Firm reduces exposures to these contracts by entering into offsetting transactions, or by entering into contracts that hedge the market risk related to the derivative guarantees.
In addition to derivative contracts that meet the characteristics of a guarantee, the Firm is both a purchaser and seller of credit protection in the credit derivatives market. For a further discussion of credit derivatives, see Note 5 on pages $143-144$ of this Form 10-Q.
Loan sales- and securitization-related indemnifications
Mortgage repurchase liability
In connection with the Firm's loan sale and securitization activities with the GSEs and other loan sale and private-label securitization transactions, as described in Note 15 on pages 177-184 of this Form 10-Q, and Note 16 on pages 256-267 of JPMorgan Chase's 2011 Annual Report, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm may be, and has been, required to repurchase loans and/or indemnify the GSEs and other investors for losses due to material breaches of these representations and warranties. Generally, the maximum amount of future payments the Firm would be required to make for breaches of these representations and warranties would be equal to the unpaid principal balance of such loans that are deemed to have defects that were sold to purchasers (including securitization-related SPEs) plus, in certain circumstances, accrued interest on such loans and certain expense.
The Firm has recognized a mortgage repurchase liability of $\$ 3.1$ billion and $\$ 3.6$ billion, as September 30, 2012, and December 31, 2011, respectively, which is reported in accounts payable and other liabilities net of probable recoveries from third-party originators of $\$ 450$ million and $\$ 577$ million at September 30, 2012, and December 31, 2011, respectively. The Firm's mortgage repurchase liability is intended to cover losses associated with all loans previously sold in connection with loan sale and securitization transactions with the GSEs, regardless of when those losses occur or how they are ultimately resolved (e.g., repurchase, make-whole payment). The liability related to all repurchase demands associated with private-label securitizations is separately evaluated by the Firm in establishing its litigation reserves.
Substantially all of the estimates and assumptions underlying the Firm's established methodology for computing its recorded mortgage repurchase liability - including factors such as the amount of probable future demands from the GSEs (which is largely based on historical experience), the ability of the Firm to cure identified
defects, the severity of loss upon repurchase or foreclosure, and recoveries from third parties - require application of a significant level of management judgment.
While the Firm uses the best information available to it in estimating its mortgage repurchase liability, the estimation process is inherently uncertain and imprecise and, accordingly, losses in excess of the amounts accrued as of September 30, 2012, are reasonably possible. The Firm believes the estimate of the range of reasonably possible losses, in excess of its established repurchase liability, is from $\$ 0$ to approximately $\$ 1.6$ billion at September 30, 2012. This estimated range of reasonably possible loss considers the Firm's GSE-related exposure based on an assumed peak to trough decline in home prices of $42 \%$, which is an additional 8 percentage point decline in home prices beyond the Firm's current assumptions which were derived from a nationally recognized home price index. Although the Firm does not consider a further decline in home prices of this magnitude likely to occur, such a decline could increase the levels of loan delinquencies, which may, in turn, increase the level of repurchase demands from the GSEs and potentially result in additional repurchases of loans at greater loss severities; each of these factors could affect the Firm's mortgage repurchase liability. Claims related to private-label securitizations have, thus far, generally manifested themselves through threatened or pending litigation, which the Firm has considered with other litigation matters as discussed in Note 23 on pages 196-206 of this Form 10-Q. Actual repurchase losses could vary significantly from the Firm's recorded mortgage repurchase liability or this estimate of reasonably possible additional losses, depending on the outcome of various factors, including those considered above.
The following table summarizes the change in the mortgage repurchase liability for each of the periods presented.

Summary of changes in mortgage repurchase liability ${ }^{(a)}$

Three months ended September 30, (in millions) 20122011
Repurchase liability at beginning of period

(a) All mortgage repurchase demands associated with private-label securitizations are separately evaluated by the Firm in establishing its litigation reserves.
Includes principal losses and accrued interest on repurchased loans, "make-whole" settlements, settlements with
(b) claimants, and certain related expense. Make-whole settlements were $\$ 94$ million and $\$ 162$ million for the three months ended September 30, 2012 and 2011, respectively and $\$ 387$ million and $\$ 403$ million, for the nine months ended September 30, 2012 and 2011, respectively.
Includes $\$ 30$ million and $\$ 12$ million of provision related to new loan sales for the three months ended September (c) 30, 2012 and 2011, respectively, and $\$ 85$ million and $\$ 35$ million for the nine months ended September 30, 2012 and 2011, respectively.
(d) Includes $\$ 3$ million at September 30, 2012, related to future repurchase demands on loans sold by Washington ${ }^{(d)}$ Mutual to the GSEs.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Loans sold with recourse
The Firm provides servicing for mortgages and certain commercial lending products on both a recourse and nonrecourse basis. In nonrecourse servicing, the principal credit risk to the Firm is the cost of temporary servicing advances of funds (i.e., normal servicing advances). In recourse servicing, the servicer agrees to share credit risk with the owner of the mortgage loans, such as Fannie Mae or Freddie Mac or a private investor, insurer or guarantor. Losses on recourse servicing predominantly occur when foreclosure sales proceeds of the property underlying a defaulted loan are less than the sum of the outstanding principal balance, plus accrued interest on the loan and the cost of holding and disposing of the underlying property. The Firm's securitizations are predominantly nonrecourse, thereby effectively transferring the risk of future credit losses to the purchaser of the mortgage-backed securities issued by the trust. At September 30, 2012, and December 31, 2011, the unpaid principal balance of loans sold with recourse totaled $\$ 9.7$ billion and $\$ 10.4$ billion, respectively. The carrying value of the related liability that the Firm has recorded, which is representative of the Firm's view of the likelihood it will have to perform under its recourse obligations, was $\$ 142$ million and $\$ 148$ million at September 30, 2012, and December 31, 2011, respectively.

Note 22 - Pledged assets and collateral
For a discussion of the Firm's pledged assets and collateral, see Note 30 on page 289 of JPMorgan Chase's 2011 Annual Report.

## Pledged assets

At September 30, 2012, assets were pledged to collateralize repurchase agreements, other securities financing agreements, derivative transactions and for other purposes, including to secure borrowings and public deposits. Certain of these pledged assets may be sold or repledged by the secured parties and are identified as financial instruments owned (pledged to various parties) on the Consolidated Balance Sheets. In addition, at September 30, 2012, and December 31, 2011, the Firm had pledged $\$ 282.3$ billion and $\$ 270.3$ billion, respectively, of financial instruments it owns that may not be sold or repledged by the secured parties. Total assets pledged do not include assets of consolidated VIEs; these assets are used to settle the liabilities of those entities. See Note 15 on pages 177-184 of this Form 10-Q, and Note 16 on pages 256-267 of JPMorgan Chase's 2011 Annual Report, for additional information on assets and liabilities of consolidated VIEs.
Collateral
At September 30, 2012, and December 31, 2011, the Firm had accepted assets as collateral that it could sell or repledge, deliver or otherwise use with a fair value of approximately $\$ 815.6$ billion and $\$ 742.1$ billion, respectively. This collateral was generally obtained under resale agreements, securities borrowing agreements, customer margin loans and derivative agreements. Of the
collateral received, approximately $\$ 543.0$ billion and $\$ 515.8$ billion, respectively, were sold or repledged, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales and to collateralize deposits and derivative agreements.
Note 23 - Litigation
Contingencies
As of September 30, 2012, the Firm and its subsidiaries are defendants or putative defendants in numerous legal proceedings, including private, civil litigations and regulatory/government investigations. The litigations range from individual actions involving a single plaintiff to class action lawsuits with potentially millions of class members. Investigations involve both formal and informal proceedings, by both governmental agencies and self-regulatory organizations. These legal proceedings are at varying stages of adjudication, arbitration or investigation, and involve each of the Firm's lines of business and geographies and a wide variety of claims (including common law tort and contract claims and statutory antitrust, securities and consumer protection claims), some of which present novel legal theories.
The Firm believes the estimate of the aggregate range of reasonably possible losses, in excess of reserves established, for its legal proceedings is from $\$ 0$ to approximately $\$ 6.0$ billion at September 30, 2012. This estimated aggregate range of reasonably possible losses is based upon currently available information for those proceedings in which the Firm is involved, taking into account the Firm's best estimate of such losses for those cases for which such estimate
can be made. For certain cases, the Firm does not believe that an estimate can currently be made. The Firm's estimate involves significant judgment, given the varying stages of the proceedings (including the fact that many are currently in preliminary stages), the existence in many such proceedings of multiple defendants (including the Firm) whose share of liability has yet to be determined, the numerous yet-unresolved issues in many of the proceedings (including issues regarding class certification and the scope of many of the claims) and the attendant uncertainty of the various potential outcomes of such proceedings. Accordingly, the Firm's estimate will change from time to time, and actual losses may be more or less than the current estimate.
Set forth below are descriptions of the Firm's material legal proceedings.
Auction-Rate Securities Investigations and Litigation. Beginning in March 2008, several regulatory authorities initiated investigations of a number of industry participants, including the Firm, concerning possible state and federal securities law violations in connection with the sale of auction-rate securities ("ARS"). The market for many such securities had frozen and a significant number of auctions for those securities began to fail in February 2008. The Firm, on behalf of itself and affiliates, agreed to a

196
settlement in principle with the New York Attorney General's Office which provided, among other things, that the Firm would offer to purchase at par certain ARS purchased from J.P. Morgan Securities LLC, Chase Investment Services Corp. and Bear, Stearns \& Co. Inc. by individual investors, charities and small- to medium-sized businesses. The Firm also agreed to a substantively similar settlement in principle with the Office of Financial Regulation for the State of Florida and the North American Securities Administrators Association ("NASAA") Task Force, which agreed to recommend approval of the settlement to all remaining states, Puerto Rico and the U.S. Virgin Islands. The Firm has finalized the settlement agreements with the New York Attorney General's Office and the Office of Financial Regulation for the State of Florida. The settlement agreements provide for the payment of penalties totaling $\$ 25$ million to all states. The Firm is currently in the process of finalizing consent agreements with NASAA's member states; more than 45 of these consent agreements have been finalized to date.
The Firm also faces a number of civil actions before courts and arbitration panels relating to the Firm's sale and underwriting of ARS. The actions generally allege that the Firm and other firms manipulated the market for ARS by placing bids at auctions that affected these securities' clearing rates or otherwise supported the auctions without properly disclosing these activities. The Firm's motion to dismiss a putative class action that had been filed in the United States District Court for the Southern District of New York on behalf of purchasers of ARS was granted in March 2012. Plaintiffs did not file an appeal of the decision.
Additionally, the Firm was named in two putative antitrust class actions. The actions allege that the Firm, along with numerous other financial institution defendants, colluded to maintain and stabilize the ARS market and then to withdraw their support for the ARS market. In January 2010, the District Court dismissed both actions. An appeal is pending in the United States Court of Appeals for the Second Circuit.
Bear Stearns Hedge Fund Matters. The Bear Stearns Companies LLC (formerly The Bear Stearns Companies Inc.) ("Bear Stearns"), certain current or former subsidiaries of Bear Stearns, including Bear Stearns Asset Management, Inc. ("BSAM") and Bear, Stearns \& Co. Inc., and certain individuals formerly employed by Bear Stearns are named defendants (collectively the "Bear Stearns defendants") in multiple civil actions and arbitrations relating to alleged losses resulting from the failure of the Bear Stearns High Grade Structured Credit Strategies Master Fund, Ltd. (the "High Grade Fund") and the Bear Stearns High Grade Structured Credit Strategies Enhanced Leverage Master Fund, Ltd. (the "Enhanced Leverage Fund") (collectively the "Funds"). BSAM served as investment manager for both of the Funds, which were organized such that there were U.S. and Cayman Islands "feeder funds" that invested substantially all their assets, directly or indirectly, in the Funds. The Funds are in liquidation.
There are currently three civil actions pending in the United
States District Court for the Southern District of New York relating to the Funds. One of these actions involves a derivative lawsuit brought on behalf of purchasers of partnership interests in the U.S. feeder fund to the Enhanced Leverage Fund, alleging that the Bear Stearns defendants mismanaged the Funds. This action seeks, among other things, unspecified compensatory damages based on alleged investor losses. The parties have reached an agreement to settle this derivative action, pursuant to which BSAM would pay a maximum of approximately $\$ 18$ million. In April 2012, the District Court granted final approval of this settlement. In May 2012, objectors representing certain interests in the U.S. feeder fund filed a notice of appeal to the United States Court of Appeals for the Second Circuit from the District Court's final approval of the settlement. That appeal is currently pending. (A separate derivative action, also alleging that the Bear Stearns defendants mismanaged the Funds, was brought on behalf of purchasers of partnership interests in the U.S. feeder fund to the High Grade Fund, and was dismissed following a Court-approved settlement with similar terms, pursuant to which BSAM paid approximately $\$ 19$ million.)
The second pending action, brought by the Joint Voluntary Liquidators of the Cayman Islands feeder funds, makes allegations similar to those asserted in the derivative lawsuits related to the U.S. feeder funds, alleges net losses of approximately $\$ 700$ million and seeks compensatory and punitive damages. The parties presently are engaged in expert discovery.
The third action was brought by Bank of America and Banc of America Securities LLC (together "BofA") alleging breach of contract and fraud in connection with a $\$ 4$ billion securitization in May 2007 known as a "CDO-squared," for which BSAM served as collateral manager. This securitization was composed of certain collateralized debt obligation holdings that were purchased by BofA from the Funds. BofA currently seeks damages up to approximately $\$ 540$
million. The Court recently granted BofA's motion to amend its complaint to reinstate a previously dismissed claim for breach of fiduciary duty. Briefing of motions for summary judgment is scheduled to occur in late 2012 and into early 2013.

Bear Stearns Shareholder Litigation and Related Matters. Various shareholders of Bear Stearns have commenced purported class actions against Bear Stearns and certain of its former officers and/or directors on behalf of all persons who purchased or otherwise acquired common stock of Bear Stearns between December 14, 2006, and March 14, 2008 (the "Class Period"). During the Class Period, Bear Stearns had between 115 million and 120 million common shares outstanding, and the price per share of those securities declined from a high of $\$ 172.61$ to a low of $\$ 30$ at the end of the period. The actions, originally commenced in several federal courts and thereafter consolidated before the United States District Court for the Southern District of New York, allege that the defendants issued materially false and misleading statements regarding Bear Stearns' business and financial results and that, as a result of those

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

false statements, Bear Stearns' common stock traded at artificially inflated prices during the Class Period. An agreement has been reached to settle the claims asserted in the consolidated class action complaint for $\$ 275$ million. The settlement was preliminarily approved by the District Court in June 2012. A hearing was held in September 2012 to consider the final approval of the settlement, and the settlement remains subject to final approval by the District Court. In addition, several individual shareholders of Bear Stearns have also commenced or threatened to commence their own lawsuits or arbitration proceedings against Bear Stearns asserting claims similar to those in the consolidated class action complaint. Certain of these matters have been dismissed or settled.
Separately, an agreement has been reached to resolve a class action brought under the Employee Retirement Income Security Act ("ERISA") against Bear Stearns and certain of its former officers and/or directors on behalf of participants in the Bear Stearns Employee Stock Ownership Plan for alleged breaches of fiduciary duties in connection with the management of that Plan. Under the settlement, the class will receive $\$ 10$ million. In September 2012, the United States District Court for the Southern District of New York Court granted final approval of this settlement.
Bear Stearns, former members of Bear Stearns' Board of Directors and certain of Bear Stearns' former executive officers have also been named as defendants in a shareholder derivative and class action suit which is pending in the United States District Court for the Southern District of New York. Plaintiffs assert claims for breach of fiduciary duty, violations of federal securities laws, waste of corporate assets and gross mismanagement, unjust enrichment, abuse of control, and indemnification and contribution in connection with the losses sustained by Bear Stearns as a result of its purchases of subprime loans and certain repurchases of its own common stock. Certain individual defendants are also alleged to have sold their holdings of Bear Stearns common stock while in possession of material nonpublic information. Plaintiffs seek compensatory damages in an unspecified amount. The District Court dismissed the action in January 2011, and plaintiffs have appealed.
CIO Investigations and Litigations. The Firm is responding to a series of class actions, shareholder derivative actions, shareholder demands and government investigations relating to trading losses in the synthetic credit portfolio managed by the Firm's Chief Investment Office ("CIO"). The Firm has received requests for documents and information in connection with governmental inquiries and investigations by Congress, the OCC, Federal Reserve, DOJ, U.S. Securities \& Exchange Commission ("SEC"), Commodity Futures Trading Commission ("CFTC"), UK Financial Services Authority, the State of Massachusetts and other government agencies. The Firm is cooperating with these investigations.
In addition, the Firm and certain of its affiliates and current and former directors and officers have been named as
defendants in a number of lawsuits arising out of CIO's trading losses.
Four putative class actions alleging violations of Sections 10(b) and 20(a) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder were filed on behalf of alleged classes of purchasers of the Firm's common stock during varying periods ranging from less than one month to more than two years. These actions generally allege that the Firm and certain current and former officers made false or misleading statements concerning CIO's trading practices and financial performance. These cases have been consolidated, and lead plaintiffs were appointed pursuant to the Private Securities Litigation Reform Act. A consolidated amended complaint is scheduled to be filed in November 2012. Separately, two putative class actions have been filed on behalf of participants who held the Firm's common stock in the Firm's retirement and other plans during periods ranging from one to six months. These actions assert claims under ERISA for alleged breaches of fiduciary duties by the Firm, certain affiliates and certain current and former directors and officers in connection with the management of those plans. The complaints generally allege that defendants breached the duty of prudence by allowing investment in the Firm's common stock when they knew or should have known that such stock was unsuitable for the plans and that the Firm and certain current and former officers made false or misleading statements concerning the soundness of the Firm's stock and the prudence of investing in that stock. These actions have been consolidated, and plaintiffs are scheduled to file a consolidated amended complaint in November 2012.
Four shareholder derivative actions have also been filed purportedly on behalf of the Firm against certain of the Firm's current and former directors and officers for alleged breaches of their fiduciary duties. These actions generally allege that defendants failed to exercise adequate oversight over CIO and to manage the risk of CIO's trading activities, which allegedly led to CIO's losses.

The consolidated securities action, consolidated ERISA action and two of the four shareholder derivative actions are pending in the United States District Court for the Southern District of New York, and the two other derivative actions are pending in New York State Supreme Court. On October 19, 2012, defendants moved to dismiss one of the shareholder derivative actions pending in New York State Supreme Court on the ground that plaintiff failed to make a demand on the Firm's Board of Directors or adequately allege demand futility, as required by applicable Delaware law. Defendants have not yet responded to the complaints in any of the other actions.
City of Milan Litigation and Criminal Investigation. In January 2009, the City of Milan, Italy (the "City") issued civil proceedings against (among others) JPMorgan Chase Bank, N.A. and J.P. Morgan Securities plc (formerly J.P. Morgan Securities Ltd.) (together, "JPMorgan Chase") in the District Court of Milan. The proceedings relate to (a) a bond issue

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

by the City in June 2005 (the "Bond"), and (b) an associated swap transaction, which was subsequently restructured on a number of occasions between 2005 and 2007 (the "Swap"). The City seeks damages and/or other remedies against JPMorgan Chase (among others) on the grounds of alleged "fraudulent and deceitful acts" and alleged breach of advisory obligations in connection with the Swap and the Bond, together with related swap transactions with other counterparties. The Firm has entered into a settlement agreement with the City to resolve the City's civil proceedings. In March 2010, a criminal judge directed four current and former JPMorgan Chase personnel and JPMorgan Chase Bank, N.A. (as well as other individuals and three other banks) to go forward to a full trial that started in May 2010. Although the Firm is not charged with any crime and does not face criminal liability, if one or more of its employees were found guilty, the Firm could be subject to administrative sanctions, including restrictions on its ability to conduct business in Italy and monetary penalties. Hearings have continued on a weekly basis since May 2010.
The Prosecutor has made recommendations to the judge about proposed sanctions. These include that each of the four banks involved be fined $€ 1.5$ million and banned from contracting with the Italian public administration for one year, the banks together repay the alleged profit made (calculated at $€ 18$ million per bank), as well as recommended dispositions as to each individual defendants. If the judge accepts any of these recommendations or imposes any other sanctions, they would not take effect until all appeals were exhausted. A decision is expected mid-December 2012. Enron Litigation. JPMorgan Chase and certain of its officers and directors are involved in several lawsuits seeking damages arising out of the Firm's banking relationships with Enron Corp. and its subsidiaries ("Enron"). A number of actions and other proceedings against the Firm previously were resolved, including a class action lawsuit captioned Newby v. Enron Corp. and adversary proceedings brought by Enron's bankruptcy estate. A purported class action filed on behalf of JPMorgan Chase employees who participated in the Firm's 401(k) plan asserting claims under ERISA for alleged breaches of fiduciary duties by JPMorgan Chase, its directors and named officers was dismissed, and the dismissal was affirmed by the United States Court of Appeals for the Second Circuit. A petition for a writ of certiorari to the U.S. Supreme Court has been filed, which the Firm has opposed. Motions to dismiss are pending in an individual action by an Enron investor and an action by an Enron counterparty.
FERC Matters. JPMorgan Chase's commodities business owns or has the right to output from several electricity generating facilities. The Firm is responding to requests for information in connection with an investigation by the Federal Energy Regulatory Commission (the "FERC") regarding bidding practices by this business in certain organized power markets. Additionally, in September 2012,
the FERC issued an Order to Show Cause as to whether a JPMorgan Chase energy subsidiary's statements concerning discovery obligations made in submissions related to the FERC investigation violated FERC rules regarding misleading information and whether the subsidiary's market-based rates authority should be suspended. The matter is pending before the FERC.
Interchange Litigation. A group of merchants and retail associations filed a series of putative class action complaints relating to interchange in several federal courts. The complaints allege, among other claims, that Visa and MasterCard, as well as certain other banks, conspired to set the price of credit and debit card interchange fees, enacted respective rules in violation of antitrust laws, and engaged in tying/bundling and exclusive dealing. All cases were consolidated in the United States District Court for the Eastern District of New York for pretrial proceedings. In July 2012, Visa, Inc., its wholly-owned subsidiaries Visa U.S.A. Inc. and Visa International Service Association, MasterCard Incorporated, MasterCard International Incorporated and various United States financial institution defendants, including JPMorgan Chase \& Co., JPMorgan Chase Bank, N.A., Chase Bank USA, N.A., Chase Paymentech Solutions, LLC and certain predecessor institutions, signed a memorandum of understanding (the "MOU") to enter into a settlement agreement (the "Settlement Agreement") to resolve the claims of the U.S. merchant and retail association plaintiffs (the "Class Plaintiffs") in the multi-district litigation ("MDL 1720"). The MOU outlines certain conditions precedent to a settlement including: (i) requisite corporate approvals, (ii) reaching agreement on certain appendices to the Settlement Agreement, and (iii) reaching negotiated settlements with the individual plaintiffs whose claims were consolidated with MDL 1720.
The Settlement Agreement provides, among other things, that a cash payment of $\$ 6.05$ billion will be made to the Class Plaintiffs, of which the Firm's share is approximately 20\%. The Class Plaintiffs will also receive an amount equal to ten basis points of interchange for a period of eight months as provided in the Settlement Agreement. The
eight month period will begin after the Court preliminarily approves the Settlement Agreement. The Settlement Agreement also provides for modifications to the credit card networks' rules, including those that prohibit surcharging credit transactions. The Settlement Agreement is subject to final documentation and approval by the Court. Investment Management Litigation. Four cases have been filed claiming that investment portfolios managed by J.P. Morgan Investment Management Inc. ("JPMorgan Investment Management") were inappropriately invested in securities backed by subprime residential real estate collateral. Plaintiffs claim that JPMorgan Investment Management and related defendants are liable for losses of more than $\$ 1$ billion in market value of these securities. The first case, filed by NM Homes One, Inc. in the United States District Court for the Southern District of New York, has been settled. In the second and third cases, filed by

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Assured Guaranty (U.K.) and Ambac Assurance UK Limited in New York state court, discovery is proceeding on plaintiff's claims for breach of contract, breach of fiduciary duty and gross negligence. The fourth case, filed by CMMF LLP in New York state court, asserts claims under New York law for breach of fiduciary duty, gross negligence, breach of contract and negligent misrepresentation. Trial is scheduled to begin in January 2013. Lehman Brothers Bankruptcy Proceedings. In May 2010, Lehman Brothers Holdings Inc. ("LBHI") and its Official Committee of Unsecured Creditors (the "Committee") filed a complaint (and later an amended complaint) against JPMorgan Chase Bank, N.A. in the United States Bankruptcy Court for the Southern District of New York that asserts both federal bankruptcy law and state common law claims, and seeks, among other relief, to recover $\$ 8.6$ billion in collateral that was transferred to JPMorgan Chase Bank, N.A. in the weeks preceding LBHI's bankruptcy. The amended complaint also seeks unspecified damages on the grounds that JPMorgan Chase Bank, N.A.'s collateral requests hastened LBHI's demise. In February 2012, JPMorgan Asset Management and Highbridge Capital Management reached a settlement with LBHI and the Committee, which resulted in the return to LBHI of $\$ 700$ million of the $\$ 8.6$ billion of collateral sought by the amended complaint. The Firm moved to dismiss plaintiffs' amended complaint in its entirety, and also moved to transfer the litigation from the Bankruptcy Court to the United States District Court for the Southern District of New York. The District Court directed the Bankruptcy Court to decide the motion to dismiss while the District Court is considering the transfer motion. In April 2012, the Bankruptcy Court issued a decision granting in part and denying in part the Firm's motion to dismiss. The Court dismissed the counts of the amended complaint seeking avoidance of the allegedly constructively fraudulent and preferential transfers made to the Firm during the months of August and September 2008. The Court denied the Firm's motion to dismiss as to the other claims, including claims that allege intentional misconduct. In September 2012, the District Court denied the transfer motion without prejudice to its renewal in the future, but stated that any trial would likely have to be conducted before the District Court.
The Firm also filed counterclaims against LBHI alleging that LBHI fraudulently induced the Firm to make large clearing advances to Lehman against inappropriate collateral, which left the Firm with more than $\$ 25$ billion in claims (the "Clearing Claims") against the estate of Lehman Brothers Inc. ("LBI"), LBHI's broker-dealer subsidiary. These claims have been paid in full, subject to the outcome of the litigation. Discovery is underway, with any trial unlikely to begin before 2013. In August 2011, LBHI and the Committee filed an objection to the deficiency claims asserted by JPMorgan Chase Bank, N.A. against LBHI with respect to the Clearing Claims, principally on the grounds that the Firm had not conducted the sale of the securities collateral held for such claims in a commercially reasonable
manner. In September 2012, LBHI and several of its subsidiaries that had been Chapter 11 debtors filed an objection to derivatives claims asserted by the Firm alleging that the amount of the derivatives claims had been overstated and challenging certain set-offs taken by the JPMorgan entities to recover on the claims.
LIBOR Investigations and Litigation. JPMorgan Chase has received subpoenas and requests for documents and, in some cases, interviews, from federal and state agencies and entities, including the DOJ, CFTC, SEC, and various state attorneys general, as well as the European Commission, UK Financial Services Authority, Canadian Competition Bureau, Swiss Competition Commission and other regulatory authorities and banking associations around the world. The documents and information sought relate primarily to the process by which interest rates were submitted to the British Bankers Association ("BBA") in connection with the setting of the BBA's London Interbank Offered Rate ("LIBOR") for various currencies, principally in 2007 and 2008. Some of the inquiries also relate to similar processes by which information on rates is submitted to European Banking Federation ("EBF") in connection with the setting of the EBF's Euro Interbank Offered Rates ("EURIBOR") and to the Japanese Bankers' Association for the setting of Tokyo Interbank Offered Rates ("TIBOR") as well as to other processes for the setting of other reference rates in various parts of the world during similar time periods. The Firm is cooperating with these inquiries.
In addition, the Firm has been named as a defendant along with other banks in a series of individual and class actions filed in various United States District Courts in which plaintiffs make varying allegations that in various periods, starting in 2000 or later, defendants either individually or collectively suppressed or otherwise manipulated the U.S. dollar LIBOR and Euroyen TIBOR rates by submitting rates that were artificially low or high. Plaintiffs allege that they transacted in loans, derivatives or other financial instruments whose values are impacted by changes in U.S. dollar LIBOR, Yen LIBOR, or Euroyen TIBOR and assert a variety of claims including antitrust claims seeking treble
damages.
The U.S. dollar LIBOR actions have been consolidated for pre-trial purposes in the United States District Court for the Southern District of New York. In November 2011, the Court entered an Order appointing interim lead counsel for two proposed classes: (i) plaintiffs who allegedly purchased U.S. dollar LIBOR-based financial instruments directly from the defendants in the over-the-counter market, and (ii) plaintiffs who allegedly purchased U.S. dollar LIBOR-based financial instruments on an exchange. In March 2012, the Court also accepted the transfer of a related action which seeks to bring claims on behalf of a third proposed class of purchasers of debt securities that pay an interest rate linked to U.S. dollar LIBOR. In June 2012, the defendants moved to dismiss all claims in these three U.S. dollar LIBOR purported class actions and the three related individual actions pending before the Court. In September 2012, the parties completed briefing on the

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

defendants' motions to dismiss. The Court has not yet ruled on the defendants' motions to dismiss.
The Court also has pending before it six additional U.S. dollar LIBOR putative class actions. Two of these actions seek to bring claims on behalf of purchasers of over-the-counter transactions in U.S. dollar-based derivatives from certain non-party commercial banking and insurance institutions in the United States. The other four actions seek to bring claims on behalf of: (i) U.S. community banks that issued loans with interest rates tied to U.S. dollar LIBOR; (ii) all lending institutions which are either headquartered or have a majority of their operations in the State of New York and which originated or purchased loans paying interest rates tied to U.S. dollar LIBOR; (iii) all persons and entities who owned a preferred equity security on which dividends are payable at a rate tied to U.S. dollar LIBOR; and (iv) all persons or entities within the U.S. who entered into an adjustable mortgage rate loan agreement that had an interest rate indexed to U.S. dollar LIBOR and that was securitized into a security that was issued by or owned by the defendants. The Court has stayed these purported class actions until it rules on the defendants' pending motions to dismiss.
The Firm also has been named as a defendant in a purported class action filed in the United States District Court for the Southern District of New York which seeks to bring claims on behalf of plaintiffs who allegedly purchased or sold exchange-traded Euroyen futures and options contracts. In October 2012, the Court ordered plaintiff to file any amended complaint by November 30, 2012, after which the defendants will have 60 days to file responsive pleadings or motions to dismiss.
In addition, the Firm was previously named as a defendant in a purported class action filed in the United States District Court for the Southern District of New York which sought to bring claims on behalf of plaintiffs in the United States who allegedly purchased or sold EURIBOR-related financial instruments, either on an exchange or in over-the-counter transactions. In August 2012, the plaintiff voluntarily dismissed this action without prejudice. Madoff Litigation. JPMorgan Chase \& Co., JPMorgan Chase Bank, N.A., J.P. Morgan Securities LLC, and J.P. Morgan Securities plc have been named as defendants in a lawsuit brought by the trustee (the "Trustee") for the liquidation of Bernard L. Madoff Investment Securities LLC ("Madoff"). The Trustee has served an amended complaint in which he has asserted 28 causes of action against JPMorgan Chase, 20 of which seek to avoid certain transfers (direct or indirect) made to JPMorgan Chase that are alleged to have been preferential or fraudulent under the federal Bankruptcy Code and the New York Debtor and Creditor Law. The remaining causes of action involve claims for, among other things, aiding and abetting fraud, aiding and abetting breach of fiduciary duty, conversion, contribution and unjust enrichment. The complaint generally alleges that JPMorgan Chase, as Madoff's long-time bank, facilitated the maintenance of Madoff's Ponzi scheme and overlooked
signs of wrongdoing in order to obtain profits and fees. The complaint asserts common law claims that purport to seek approximately $\$ 19$ billion in damages, together with bankruptcy law claims to recover approximately $\$ 425$ million in transfers that JPMorgan Chase allegedly received directly or indirectly from Bernard Madoff's brokerage firm. In October 2011, the United States District Court for the Southern District of New York granted JPMorgan Chase's motion to dismiss the common law claims asserted by the Trustee, and returned the remaining claims to the Bankruptcy Court for further proceedings. The Trustee has appealed this decision.
Separately, J.P. Morgan Trust Company (Cayman) Limited, JPMorgan (Suisse) SA, J.P. Morgan Securities plc, Bear Stearns Alternative Assets International Ltd., J.P. Morgan Clearing Corp., J.P. Morgan Bank Luxembourg SA, and J.P. Morgan Markets Limited (formerly Bear Stearns International Limited) have been named as defendants in lawsuits presently pending in Bankruptcy Court in New York arising out of the liquidation proceedings of Fairfield Sentry Limited and Fairfield Sigma Limited (together, "Fairfield"), so-called Madoff feeder funds. These actions are based on theories of mistake and restitution, among other theories, and seek to recover payments made to defendants by the funds totaling approximately $\$ 155$ million. Pursuant to an agreement with the Trustee, the liquidators of Fairfield have voluntarily dismissed their action against J.P. Morgan Securities plc without prejudice to refiling. The other actions remain outstanding. In addition, a purported class action was brought by investors in certain feeder funds against JPMorgan Chase in the United States District Court for the Southern District of New York, as was a motion by separate potential class plaintiffs to add claims against JPMorgan Chase \& Co., JPMorgan Chase Bank, N.A., J.P. Morgan Securities LLC and J.P. Morgan Securities plc to an already-pending purported class action in the same court. The allegations in these complaints largely track those raised by the Trustee. The Court dismissed these complaints
and plaintiffs have appealed.
The Firm is a defendant in five other Madoff-related actions pending in New York state court and one purported class action in federal District Court in New York. The allegations in all of these actions are essentially identical, and involve claims against the Firm for, among other things, aiding and abetting breach of fiduciary duty, conversion and unjust enrichment. The Firm has moved to dismiss both the state and federal actions.
The Firm is also responding to various governmental inquiries concerning the Madoff matter.
MF Global. As previously disclosed, JPMorgan Chase \& Co. was named as one of several defendants in a number of putative class action lawsuits brought by former customers of MF Global in federal District Courts in New York, Illinois and Montana. The lawsuits have been consolidated before the United States District Court for the Southern District of New York. The actions alleged, among other things, that the Firm aided and abetted MF Global's alleged misuse of

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

customer money and breaches of fiduciary duty and was unjustly enriched by the transfer of certain customer segregated funds by MF Global. The Firm has entered into a tolling agreement with counsel for the class plaintiffs and an individual plaintiff, pursuant to which the plaintiffs have agreed not to pursue any such claims against the Firm in these actions for so long as the tolling agreement remains in effect.
J.P. Morgan Securities LLC has been named as one of several defendants in a number of purported class actions filed by purchasers of MF Global's publicly traded securities, including the securities issued pursuant to MF Global's June 2010 secondary offering of common stock and February 2011 and August 2011 convertible note offerings. The actions have been consolidated before the United States District Court for the Southern District of New York. In August 2012, the lead plaintiffs filed an amended complaint which asserts violations of the Securities Act of 1933 against the underwriter defendants and alleges that the offering documents contained materially false and misleading statements and omissions regarding MF Global's financial position, internal controls and risk management, as such topics relate to the company's exposure to European sovereign debt.
In June 2012, the Securities Investor Protection Act ("SIPA") Trustee issued a Report of the Trustee's Investigation and Recommendations, and stated that he is considering potential claims against the Firm with respect to certain transfers identified in the Report. Discussions with the SIPA Trustee regarding possible resolution of potential claims against the Firm are ongoing.
The Firm has responded to and continues to respond to inquiries from the CFTC, SEC, SIPA Trustee and Bankruptcy Trustee concerning MF Global.
Mortgage-Backed Securities and Repurchase Litigation and Regulatory Investigations. JPMorgan Chase and affiliates, Bear Stearns and affiliates and Washington Mutual affiliates have been named as defendants in a number of cases in their various roles as issuer, originator or underwriter in MBS offerings. These cases include purported class action suits, actions by individual purchasers of securities or by trustees for the benefit of purchasers of securities, an action by the New York State Attorney General and actions by monoline insurance companies that guaranteed payments of principal and interest for particular tranches of securities offerings. Although the allegations vary by lawsuit, these cases generally allege that the offering documents for securities issued by dozens of securitization trusts contained material misrepresentations and omissions, including with regard to the underwriting standards pursuant to which the underlying mortgage loans were issued, or assert that various representations or warranties relating to the loans were breached at the time of origination. There are currently pending and tolled investor claims involving approximately $\$ 140$ billion of such securities. In addition, and as described below, there are pending and threatened claims by monoline insurers
and by and on behalf of trustees that involve some of these and other securitizations.
In the actions against the Firm as an MBS issuer (and, in some cases, also as an underwriter of its own MBS offerings), three purported class actions are pending against JPMorgan Chase and Bear Stearns, and/or certain of their affiliates and current and former employees, in the United States District Courts for the Eastern and Southern Districts of New York. Motions to dismiss have been largely denied in these cases, although in certain cases defendants have sought to appeal aspects of the decision, and they are in various stages of litigation. A settlement of a fourth purported class action that is pending in the United States District Court for the Western District of Washington against Washington Mutual affiliates, WaMu Asset Acceptance Corp. and WaMu Capital Corp. and certain former officers or directors of WaMu Asset Acceptance Corp., has been preliminarily approved by the court.
In addition to class actions, the Firm is also a defendant in individual actions brought against certain affiliates of JPMorgan Chase, Bear Stearns and Washington Mutual as issuers (and, in some cases, as underwriters) of MBS. These actions involve claims by or to benefit various institutional investors and governmental agencies. These actions are pending in federal and state courts across the United States and are in various stages of litigation.
In actions against the Firm solely as an underwriter of other issuers' MBS offerings, the Firm has contractual rights to indemnification from the issuers. However, those indemnity rights may prove effectively unenforceable where the issuers are now defunct, such as in pending cases where the Firm has been named involving affiliates of IndyMac Bancorp and Thornburg Mortgage. The Firm may also be contractually obligated to indemnify underwriters in certain deals it issued.

EMC Mortgage LLC (formerly EMC Mortgage Corporation) ("EMC"), an indirect subsidiary of JPMorgan Chase \& Co., and certain other JPMorgan Chase entities currently are defendants in nine pending actions commenced by bond insurers that guaranteed payments of principal and interest on certain classes of 19 different MBS offerings. These actions are pending in federal and state courts in New York and are in various stages of litigation. Certain JPMorgan Chase entities, in their capacities as alleged successors in interest to Bear Stearns and EMC, have been named as defendants in a civil suit filed by the New York Attorney General in New York state court in connection with Bear Stearns' due diligence and quality control practices relating to MBS.
The Firm or its affiliates are defendants in actions brought by trustees of various MBS trusts and others on behalf of the purchasers of securities issued by those trusts. The first action was commenced by Deutsche Bank National Trust Company, acting as trustee for various MBS trusts, against the Firm and the FDIC based on MBS issued by Washington Mutual Bank and its affiliates; that case is described in the Washington Mutual Litigations section below. The other

202
actions are at various initial stages of litigation in the New York and Delaware state courts, including actions brought by MBS trustees, each specific to a single MBS transaction, against EMC and/or JPMorgan Chase. These cases generally allege breaches of various representations and warranties regarding securitized loans and seek repurchase of those loans, as well as indemnification of attorneys' fees and costs and other remedies.
There is no assurance that the Firm will not be named as a defendant in additional MBS-related litigation, and the Firm has entered into agreements with a number of entities that purchased such securities that toll applicable limitations periods with respect to their claims. In addition, the Firm has received several demands by securitization trustees that threaten litigation, as well as demands by investors directing or threatening to direct trustees to investigate claims or bring litigation, based on purported obligations to repurchase loans out of securitization trusts and alleged servicing deficiencies. These include but are not limited to a demand from a law firm, as counsel to a group of purchasers of MBS that purport to have $25 \%$ or more of the voting rights in as many as 191 different trusts sponsored by the Firm or its affiliates with an original principal balance of more than $\$ 174$ billion (excluding 52 trusts sponsored by Washington Mutual, with an original principal balance of more than $\$ 58$ billion), made to various trustees to investigate potential repurchase and servicing claims. Further, there have been repurchase and servicing claims made in litigation against trustees not affiliated with the Firm, but involving trusts the Firm sponsored. In April 2012, the Court granted the Firm's motion to dismiss a shareholder complaint filed in New York Supreme Court against the Firm and two affiliates, members of the boards of directors thereof and certain employees, asserting claims based on alleged wrongful actions and inactions relating to residential mortgage originations and securitizations. The plaintiff has appealed the order. A second shareholder complaint has been filed in New York Supreme Court against current and former members of the Firm's Board of Directors and the Firm, as nominal defendant, alleging that the Board allowed the Firm to engage in wrongful conduct regarding the sale of residential MBS and failed to implement adequate internal controls to prevent such wrongdoing.
In addition to the above-described litigation, the Firm has also received, and responded to, a number of subpoenas and informal requests for information from federal and state authorities concerning mortgage-related matters, including inquiries concerning a number of transactions involving the Firm and its affiliates' origination and purchase of whole loans, underwriting and issuance of MBS, treatment of early payment defaults and potential breaches of securitization representations and warranties, reserves and due diligence in connection with securitizations. In January 2012, the Firm was advised by SEC staff that they are considering recommending to the Commission that civil or administrative actions be pursued arising out of two separate investigations they have been conducting. The first
now involves potential claims against J.P. Morgan Securities LLC and J.P. Morgan Acceptance Corporation I relating to delinquency disclosures in connection with a single mortgage-backed securitization. The second involves potential claims against Bear Stearns entities and J.P. Morgan Securities LLC relating to disclosures concerning settlements of claims against originators involving loans included in a number of Bear Stearns securitizations. The Firm has reached an agreement in principle with the staff of the SEC to resolve these matters. The agreement in principle is subject to approval by the SEC, as well as court approval. There can be no assurance that the agreement in principle will be approved.
Mortgage Foreclosure Investigations and Litigation. JPMorgan Chase and four other firms agreed to a settlement (the "global settlement") with a number of federal and state government agencies, including the DOJ, the Department of Housing and Urban Development, the Consumer Financial Protection Bureau and the State Attorneys General, relating to the servicing and origination of mortgages. The global settlement was approved by the federal District Court for the District of Columbia effective April 5, 2012. Pursuant to the global settlement, the Firm is required to make certain payments, provide various forms of relief to certain borrowers and adhere to certain enhanced mortgage servicing standards. The global settlement releases the Firm from various state and federal claims, but these releases do not include claims arising out of securitization activities, including representations made to investors concerning MBS, criminal claims and repurchase demands from the GSEs, among other items. The New York Department of Financial Services was not a party to the settlement and did not release any claims.
The Attorneys General of Massachusetts and New York have separately filed lawsuits against the Firm, other servicers and a mortgage recording company asserting claims for various alleged wrongdoings relating to mortgage assignments and use of the industry's electronic mortgage registry. The Firm has moved to dismiss these actions.

Six purported class action lawsuits were filed against the Firm relating to its mortgage foreclosure procedures. Two of the class actions have been dismissed with prejudice and one settled on an individual basis. Of the remaining active actions, one is in the discovery phase and the other two have motions to dismiss pending. Additionally, the purported class action brought against Bank of America involving an EMC loan has been dismissed.
Two shareholder derivative actions have been filed in New York Supreme Court against the Firm's Board of Directors alleging that the Board failed to exercise adequate oversight as to wrongful conduct by the Firm regarding mortgage servicing. These actions seek declaratory relief and damages. In July 2012, the Court granted defendants' motion to dismiss the complaint in the first-filed action and gave plaintiff 45 days in which to file an amended complaint. In October 2012, the Court entered a stipulated order consolidating the actions and staying all proceedings

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

pending the plaintiffs' decision whether to file a consolidated complaint after the Firm completes its response to a demand submitted by one of the plaintiffs under Section 220 of the Delaware General Corporation Law. The Firm has received subpoenas from the United States Attorney's Office for the Southern District of New York in connection with the participation by JPMorgan Chase and Washington Mutual in the Federal Housing Administration's Direct Endorsement Program. The Firm continues to provide documents and information pursuant to the subpoenas. Municipal Derivatives Investigations and Litigation. Purported class action lawsuits and individual actions have been filed against JPMorgan Chase and Bear Stearns, as well as numerous other providers and brokers, alleging antitrust violations in the market for financial instruments related to municipal bond offerings referred to collectively as "municipal derivatives." In July 2011, the Firm settled with federal and state governmental agencies to resolve their investigations into similar alleged conduct. The municipal derivatives actions have been consolidated and/or coordinated in the United States District Court for the Southern District of New York. In April 2012, JPMorgan and Bear Stearns reached an agreement to settle the municipal derivatives actions for $\$ 45$ million. The settlement is subject to court approval.
In addition, civil actions have been commenced against the Firm relating to certain Jefferson County, Alabama (the "County") warrant underwritings and swap transactions. In November 2009, J.P. Morgan Securities LLC settled with the SEC to resolve its investigation into those transactions. Following that settlement, the County filed an action against the Firm and several other defendants in Alabama state court. An action on behalf of a purported class of sewer rate payers has also been filed in Alabama state court. The suits allege that the Firm made payments to certain third parties in exchange for being chosen to underwrite more than $\$ 3$ billion in warrants issued by the County and to act as the counterparty for certain swaps executed by the County. The complaints also allege that the Firm concealed these third-party payments and that, but for this concealment, the County would not have entered into the transactions. The Court denied the Firm's motions to dismiss the complaints in both proceedings. The Firm filed mandamus petitions with the Alabama Supreme Court, seeking immediate appellate review of these decisions. The mandamus petition in the County's lawsuit was denied in April 2011. In November and December, 2011, the County filed notices of bankruptcy with the trial court in each of the cases and with the Alabama Supreme Court stating that it was a Chapter 9 Debtor in the U.S. Bankruptcy Court for the Northern District of Alabama. Subsequently, the portion of the sewer rate payer action involving claims against the Firm was removed by certain defendants to the United States District Court for the Northern District of Alabama. In its order finding that removal of this action was proper, the District Court referred the action to the District's

Bankruptcy Court, where the action remains pending. Discovery in the County's action is ongoing.
In September 2012, a group of purported creditors of the County initiated an adversary proceeding and filed a purported class action complaint alleging that certain warrants were issued unlawfully and were thus null and void and seeking $\$ 1.6$ billion in damages from the Firm and other defendants involved in the Jefferson County financing transactions. The Firm's response to that complaint is currently due in November 2012.
Two insurance companies that guaranteed the payment of principal and interest on warrants issued by the Countr have filed separate actions against the Firm in New York state court. Their complaints assert that the Firm fraudulently misled them into issuing insurance based upon substantially the same alleged conduct described above and other alleged non-disclosures. One insurer claims that it insured an aggregate principal amount of nearly $\$ 1.2$ billion and seeks unspecified damages in excess of $\$ 400$ million as well as unspecified punitive damages. The other insurer claims that it insured an aggregate principal amount of more than $\$ 378$ million and seeks recovery of $\$ 4$ million allegedly paid under the policies to date as well as any future payments and unspecified punitive damages. In December 2010, the court denied the Firm's motions to dismiss each of the complaints. The Firm has filed a cross-claim and a third party claim against the County for indemnity and contribution. The County moved to dismiss, which the court denied in August 2011. In consequence of its November 2011 bankruptcy filing, the County has asserted that these actions are stayed. In February 2012, one of the insurers filed a motion for a declaration that its action is not stayed as against the Firm or, in the alternative, for an order lifting the stay as against the Firm. The Firm and the County opposed the motion, which remains pending.
Option Adjustable Rate Mortgage Litigation. The Firm is defending four purported and three certified class actions all pending in federal courts in California asserting that several JPMorgan Chase entities violated the federal Truth in

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Lending Act and state unfair business practice statutes in failing to provide adequate disclosures in Option Adjustable Rate Mortgage ("ARM") loans regarding the resetting of introductory interest rates and that negative amortization was certain to occur if a borrower made the minimum monthly payment. With respect to the former Washington Mutual and Bear Stearns defendants who purchased Option ARM loans from third-party originators, plaintiffs allege that those entities aided and abetted the original lenders' alleged violations. Classes have been certified in three of the actions. In one of the certified class actions, the Firm has moved for decertification of the class and for summary judgment. The Firm has sought permission to immediately appeal the remaining class certification decisions. Overdraft Fee/Debit Posting Order Litigation. JPMorgan Chase Bank, N.A. has been named as a defendant in several purported class actions relating to its practices in posting
debit card transactions to customers' deposit accounts. Plaintiffs allege that the Firm improperly re-ordered debit card transactions from the highest amount to the lowest amount before processing these transactions in order to generate unwarranted overdraft fees. Plaintiffs contend that the Firm should have processed such transactions in the chronological order they were authorized. Plaintiffs seek the disgorgement of all overdraft fees paid to the Firm by plaintiffs since approximately 2003 as a result of the re-ordering of debit card transactions. The claims against the Firm have been consolidated with numerous complaints against other national banks in multi-District litigation pending in the United States District Court for the Southern District of Florida. The Firm has reached an agreement to settle this matter in exchange for the Firm paying $\$ 110$ million and agreeing to change certain overdraft fee practices. On May 24, 2012, the Court granted preliminary approval of the settlement and scheduled a final approval hearing in December 2012.
Petters Bankruptcy and Related Matters. JPMorgan Chase and certain of its affiliates, including One Equity Partners ("OEP"), have been named as defendants in several actions filed in connection with the receivership and bankruptcy proceedings pertaining to Thomas J. Petters and certain affiliated entities (collectively, "Petters") and the Polaroid Corporation. The principal actions against JPMorgan Chase and its affiliates have been brought by a court-appointed receiver for Petters and the trustees in bankruptcy proceedings for three Petters entities. These actions generally seek to avoid, on fraudulent transfer and preference grounds, certain purported transfers in connection with (i) the 2005 acquisition by Petters of Polaroid, which at the time was majority-owned by OEP; (ii) two credit facilities that JPMorgan Chase and other financial institutions entered into with Polaroid; and (iii) a credit line and investment accounts held by Petters. The actions collectively seek recovery of approximately $\$ 450$ million. Defendants have moved to dismiss the complaints in the actions filed by the Petters bankruptcy trustees and the parties have agreed to stay the action brought by the Receiver until after the Bankruptcy Court rules on the pending motions.
Securities Lending Litigation. JPMorgan Chase Bank, N.A. has been named as a defendant in four putative class actions asserting ERISA and other claims pending in the United States District Court for the Southern District of New York brought by participants in the Firm's securities lending business. A fifth lawsuit was filed in New York state court by an individual participant in the program. Three of the purported class actions, which have been consolidated, relate to investments of approximately $\$ 500$ million in medium-term notes of Sigma Finance Inc. ("Sigma"). In August 2010, the Court certified a plaintiff class consisting of all securities lending participants that held Sigma medium-term notes on September 30, 2008, including those that held the notes by virtue of participation in the investment of cash collateral through a collective fund, as well as those that held the notes by virtue of the investment
of cash collateral through individual accounts. The Court granted JPMorgan Chase's motion for partial summary judgment as to plaintiffs' duty of loyalty claim, finding that the Firm did not have a conflict of interest when it provided repurchase financing to Sigma while also holding Sigma medium-term notes in securities lending accounts. The parties reached an agreement to settle this action for $\$ 150$ million. The Court granted final approval to the settlement in June 2012.
The fourth putative class action concerns investments of approximately $\$ 500$ million in Lehman Brothers medium-term notes. The Court granted the Firm's motion to dismiss all claims in April 2012. The plaintiff filed a third amended complaint, and the Firm's motion to dismiss this complaint is pending. The New York state court action, which is not a class action, concerns the plaintiff's alleged loss of money in both Sigma and Lehman Brothers medium-term notes. The Firm has answered the complaint. Discovery is complete and motions for summary judgment are due in November 2012.
Washington Mutual Litigations. Proceedings related to Washington Mutual's failure are pending before the United States District Court for the District of Columbia and include a lawsuit brought by Deutsche Bank National Trust Company, initially against the FDIC, asserting an estimated $\$ 6$ billion to $\$ 10$ billion in damages based upon alleged breach of various mortgage securitization agreements and alleged violation of certain representations and warranties given by certain Washington Mutual, Inc. ("WMI") subsidiaries in connection with those securitization agreements. The case includes assertions that JPMorgan Chase may have assumed liabilities for alleged breaches of representations and warranties in the mortgage securitization agreements. The District Court denied as premature motions by the Firm and the FDIC that sought a ruling on whether the FDIC retained liability for Deutsche Bank's claims. Discovery is underway.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

In addition, JPMorgan Chase was sued in an action originally filed in state court in Texas (the "Texas Action") by certain holders of WMI common stock and debt of WMI and Washington Mutual Bank who seek unspecified damages alleging that JPMorgan Chase acquired substantially all of the assets of Washington Mutual Bank from the FDIC at a price that was allegedly too low. The Texas Action was transferred to the United States District Court for the District of Columbia, which ultimately granted JPMorgan Chase's and the FDIC's motions to dismiss the complaint, but the United States Court of Appeals for the District of Columbia Circuit reversed the District Court's dismissal and remanded the case for further proceedings. Plaintiffs, who sue now only as holders of Washington Mutual Bank debt following their voluntary dismissal of claims brought as holders of WMI common stock and debt, have filed an amended complaint alleging that JPMorgan Chase caused the closure of Washington Mutual Bank and damaged them by causing their bonds issued by Washington Mutual Bank, which had a total face value of $\$ 38$ million, to lose substantially all of their value. JPMorgan Chase and the

FDIC moved to dismiss this action and the District Court dismissed the case except as to the plaintiffs' claim that the Firm tortiously interfered with the plaintiffs' bond contracts with Washington Mutual Bank prior to its closure. ***
In addition to the various legal proceedings discussed above, JPMorgan Chase and its subsidiaries are named as defendants or are otherwise involved in a substantial number of other legal proceedings. The Firm believes it has meritorious defenses to the claims asserted against it in its currently outstanding legal proceedings and it intends to defend itself vigorously in all such matters. Additional legal proceedings may be initiated from time to time in the future.
The Firm has established reserves for several hundred of its currently outstanding legal proceedings. The Firm accrues for potential liability arising from such proceedings when it is probable that such liability has been incurred and the amount of the loss can be reasonably estimated. The Firm evaluates its outstanding legal proceedings each quarter to assess its litigation reserves, and makes adjustments in such reserves, upwards or downwards, as appropriate, based on management's best judgment after consultation with counsel. The Firm incurred litigation expense of $\$ 790$ million and $\$ 1.3$ billion, respectively, during the three months ended September 30, 2012 and 2011, and $\$ 3.8$ billion and $\$ 4.3$ billion, respectively, during the nine months ended September 30, 2012 and 2011. There is no assurance that the Firm's litigation reserves will not need to be adjusted in the future.

In view of the inherent difficulty of predicting the outcome of legal proceedings, particularly where the claimants seek very large or indeterminate damages, or where the matters present novel legal theories, involve a large number of parties or are in early stages of discovery, the Firm cannot state with confidence what will be the eventual outcomes of the currently pending matters, the timing of their ultimate resolution or the eventual losses, fines, penalties or impact related to those matters. JPMorgan Chase believes, based upon its current knowledge, after consultation with counsel and after taking into account its current litigation reserves, that the legal proceedings currently pending against it should not have a material adverse effect on the Firm's consolidated financial condition. The Firm notes, however, that in light of the uncertainties involved in such proceedings, there is no assurance the ultimate resolution of these matters will not significantly exceed the reserves it has currently accrued; as a result, the outcome of a particular matter may be material to JPMorgan Chase's operating results for a particular period, depending on, among other factors, the size of the loss or liability imposed and the level of JPMorgan Chase's income for that period.

Note 24 - Business segments
The Firm is managed on a line-of-business basis. There are six major reportable business segments - Investment Bank, Retail Financial Services, Card Services \& Auto, Commercial Banking, Treasury \& Securities Services and Asset Management. In addition, there is a Corporate/Private Equity segment. The business segments are determined based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see the footnotes to the table below. For a further discussion concerning JPMorgan Chase's business segments, see Business Segment Results on pages $17-18$ of this Form 10-Q, and pages 76-78 and Note 33 on pages 300-303 of JPMorgan Chase's 2011 Annual Report.

## Business segment changes

On July 27, 2012, the Firm announced that it will be reorganizing its business segments to reflect the manner in which the segments will be managed. The reorganization of the business segments is expected to be effective beginning in the fourth quarter of 2012. As a result, Retail Financial Services ("RFS") and Card Services \& Auto ("Card") businesses will be combined to form the Consumer \& Community Banking segment. The Investment Bank ("IB") and Treasury \& Securities Services ("TSS") businesses will be combined to form the Corporate \& Investment Bank segment. Asset Management ("AM") and Commercial Banking ("CB") will remain unchanged. In addition, Corporate/Private Equity will not be significantly affected.

Segment results
The following tables provide a summary of the Firm's segment results for the three and nine months ended September 30, 2012 and 2011, on a managed basis. Total net revenue (noninterest revenue and net interest income) for each of the segments is presented on a fully taxable-equivalent ("FTE") basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense/(benefit).
Effective January 1, 2012, the Firm revised the capital allocated to certain businesses, reflecting additional refinement of each segment's estimated Basel III Tier 1 common capital requirements and balance sheet trends.

Segment results and reconciliation ${ }^{(a)}$

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's lines of business (a) results on a "managed basis," which is a non-GAAP financial measure. The Firm's definition of managed basis starts a) with the reported U.S. GAAP results and includes certain reclassifications as discussed below that do not have any impact on net income as reported by the lines of business or by the Firm as a whole.
IB manages traditional credit exposures related to the Global Corporate Bank ("GCB") on behalf of IB and TSS, and (b)IB and TSS share the economics related to the Firm's GCB clients. Included within this allocation are net revenue, provision for credit losses and expenses. IB recognizes this credit allocation as a component of all other income. Segment managed results reflect revenue on a FTE basis with the corresponding income tax impact recorded within (c) $\begin{aligned} & \text { income tax expense/(benefit). These adjustments are eliminated in reconciling items to arrive at the Firm's reported }\end{aligned}$ ${ }^{(c)}$ U.S. GAAP results. FTE adjustments for the three and nine months ended September 30, 2012 and 2011, were as follows.

|  | Three months ended |  | Nine months ended September |  |

Report of Independent Registered Public Accounting Firm
To the Board of Directors and Stockholders of
JPMorgan Chase \& Co.:
We have reviewed the consolidated balance sheet of JPMorgan Chase \& Co. and its subsidiaries (the "Firm") as of September 30, 2012, and the related consolidated statements of income and of comprehensive income for the three-month and nine-month periods ended September 30, 2012 and September 30, 2011, and the consolidated statements of cash flows and of changes in stockholders' equity for the nine-month periods ended September 30, 2012 and September 30, 2011, included in the Firm's Quarterly Report on Form 10-Q for the period ended September 30, 2012. These interim financial statements are the responsibility of the Firm's management.

We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States), the objective of which is the expression of an opinion regarding the financial statements taken as a whole.
Accordingly, we do not express such an opinion.
Based on our review, we are not aware of any material modifications that should be made to the consolidated interim financial statements for them to be in conformity with accounting principles generally accepted in the United States of America.
We previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet as of December 31, 2011, and the related consolidated statements of income, changes in stockholders' equity and comprehensive income, and cash flows for the year then ended (not presented herein), and in our report dated February 29, 2012, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying consolidated balance sheet as of December 31, 2011, is fairly stated in all material respects in relation to the consolidated balance sheet from which it has been derived.

Net interest income and net yield on interest-earning assets
2.32 \%
\$11,176 2.43 \% \$11,950 2.66 \%

Negative yield for the three months ended September 30, 2012, is a result of increased client-driven demand for
(a) certain securities combined with the impact of low interest rates; the offset of this matched book activity is
${ }^{\text {a }}$ reflected as lower net interest expense reported within Trading liabilities - debt, short-term borrowings and other liabilities.
(b) Includes margin loans.
(c) Includes brokerage customer payables.
(d) Interest includes the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable.
(e) For the three months ended September 30, 2012 and 2011, the annualized rates for AFS securities, based on amortized cost, were $2.17 \%$ and $2.71 \%$, respectively.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## GLOSSARY OF TERMS

Allowance for loan losses to total loans: Represents period-end allowance for loan losses divided by retained loans. Beneficial interests issued by consolidated VIEs: Represents the interest of third-party holders of debt/equity securities, or other obligations, issued by VIEs that JPMorgan Chase consolidates. The underlying obligations of the VIEs consist of short-term borrowings, commercial paper and long-term debt. The related assets consist of trading assets, available-for-sale securities, loans and other assets.
Benefit obligation: Refers to the projected benefit obligation for pension plans and the accumulated postretirement benefit obligation for OPEB plans.
Corporate/Private Equity: Includes Private Equity, Treasury and Chief Investment Office, and Corporate Other, which includes other centrally managed expense and discontinued operations.
Credit derivatives: Financial instruments whose value is derived from the credit risk associated with the debt of a third party issuer (the reference entity) which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Upon the occurrence of a credit event, which may include, among other events, the bankruptcy or failure to pay by, or certain restructurings of the debt of, the reference entity, neither party has recourse to the reference entity. The protection purchaser has recourse to the protection seller for the difference between the face value of the CDS contract and the fair value of the reference obligation at the time of settling the credit derivative contract. The determination as to whether a credit event has occurred is generally made by the relevant ISDA Determination Committee, comprised of 10 sell-side and five buy-side ISDA member firms.
Credit cycle: A period of time over which credit quality improves, deteriorates and then improves again. The duration of a credit cycle can vary from a couple of years to several years.

CUSIP number: A CUSIP (i.e., Committee on Uniform Securities Identification Procedures) number identifies most securities, including: stocks of all registered U.S. and Canadian companies, and U.S. government and municipal bonds. The CUSIP system - owned by the American Bankers Association and operated by Standard \& Poor's - facilitates the clearing and settlement process of securities. The number consists of nine characters (including letters and numbers) that uniquely identify a company or issuer and the type of security. A similar system is used to identify non-U.S. securities (CUSIP International Numbering System).
Deposit margin: Represents net interest income expressed as a percentage of average deposits.
FICO score: A measure of consumer credit risk provided by credit bureaus, typically produced from statistical models by Fair Isaac Corporation utilizing data collected by the credit bureaus.
Forward points: Represents the interest rate differential between two currencies, which is either added to or subtracted from the current exchange rate (i.e., "spot rate") to determine the forward exchange rate.
G7 government bonds: Bonds issued by the government of one of countries in the "Group of Seven" ("G7") nations. Countries in the G7 are Canada, France, Germany, Italy, Japan, the United Kingdom and the United States. Global Corporate Bank: TSS and IB formed a joint venture to create the Firm's Global Corporate Bank. With a team of bankers, the Global Corporate Bank serves multinational clients by providing them access to TSS products and services and certain IB products, including derivatives, foreign exchange and debt. The cost of this effort and the credit that the Firm extends to these clients is shared between TSS and IB.
Headcount-related expense: Includes salary and benefits (excluding performance-based incentives), and other noncompensation costs related to employees.
Home equity - senior lien: Represents loans where JP Morgan Chase holds the first security interest on the property. Home equity - junior lien: Represents loans where JP Morgan Chase holds a security interest that is subordinate in rank to other liens.
Interchange income: A fee paid to a credit card issuer in the clearing and settlement of a sales or cash advance transaction.

Investment-grade: An indication of credit quality based on JPMorgan Chase's internal risk assessment system. "Investment grade" generally represents a risk profile similar to a rating of a "BBB-"/"Baa3" or better, as defined by independent rating agencies.
LLC: Limited Liability Company.
Loan-to-value ("LTV") ratio: For residential real estate loans, the relationship, expressed as a percentage, between the principal amount of a loan and the appraised value of the collateral (i.e., residential real estate) securing the loan. Origination date LTV ratio
The LTV ratio at the origination date of the loan. Origination date LTV ratios are calculated based on the actual appraised values of collateral (i.e., loan-level data) at the origination date.
Current estimated LTV ratio
An estimate of the LTV as of a certain date. The current estimated LTV ratios are calculated using estimated collateral values derived from a nationally recognized home price index measured at the metropolitan statistical area ("MSA") level. These MSA-level home price indices comprise actual data to the extent available and forecasted data where actual data is not available. As a result, the estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting LTV ratios are necessarily imprecise and should therefore be viewed as estimates.
Combined LTV ratio
The LTV ratio considering all lien positions related to the property. Combined LTV ratios are used for junior lien home equity products.
Managed basis: A non-GAAP presentation of financial results that includes reclassifications to present revenue on a fully taxable-equivalent basis. Management uses this non-GAAP financial measure at the segment level, because it believes this provides information to enable investors to understand the underlying operational performance and trends of the particular business segment and facilitates a comparison of the business segment with the performance of competitors.
Master netting agreement: An agreement between two counterparties who have multiple derivative contracts with each other that provides for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default on or termination of any one contract.

Mortgage product types:
Alt-A
Alt-A loans are generally higher in credit quality than subprime loans but have characteristics that would disqualify the borrower from a traditional prime loan. Alt-A lending characteristics may include one or more of the following: (i) limited documentation; (ii) a high combined-loan-to-value ("CLTV") ratio; (iii) loans secured by non-owner occupied properties; or (iv) a debt-to-income ratio above normal limits. Perhaps the most important characteristic is limited documentation. A substantial proportion of traditional Alt-A loans are those where a borrower does not provide complete documentation of his or her assets or the amount or source of his or her income.

## Option ARMs

The option ARM real estate loan product is an adjustable-rate mortgage loan that provides the borrower with the option each month to make a fully amortizing, interest-only or minimum payment. The minimum payment on an option ARM loan is based on the interest rate charged during the introductory period. This introductory rate is usually significantly below the fully indexed rate. The fully indexed rate is calculated using an index rate plus a margin. Once the introductory period ends, the contractual interest rate charged on the loan increases to the fully indexed rate and adjusts monthly to reflect movements in the index. The minimum payment is typically insufficient to cover interest accrued in the prior month, and any unpaid interest is deferred and added to the principal balance of the loan. Option ARM loans are subject to payment recast, which converts the loan to a variable-rate fully amortizing loan upon meeting specified loan balance and anniversary date triggers.
Prime
Prime mortgage loans generally have low default risk and are made to borrowers with good credit records and a monthly income at least three to four times greater than their monthly housing expense (mortgage payments plus taxes and other debt payments). These borrowers provide full documentation and generally have reliable payment histories.

Subprime
Subprime loans are designed for customers with one or more high risk characteristics, including but not limited to: (i) unreliable or poor payment histories; (ii) a high LTV ratio of greater than $80 \%$ (without borrower-paid mortgage insurance); (iii) a high debt-to-income ratio; (iv) an occupancy type for the loan is other than the borrower's primary residence; or (v) a history of delinquencies or late payments on the loan.

214

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

MSR risk management revenue: Includes changes in the fair value of the MSR asset due to market-based inputs, such as interest rates and volatility, as well as updates to assumptions used in the MSR valuation model; and derivative valuation adjustments and other, which represents changes in the fair value of derivative instruments used to offset the impact of changes in the market-based inputs to the MSR valuation model.
NA: Data is not applicable or available for the period presented.
Net charge-off rate: Represents net charge-offs (annualized) divided by average retained loans for the reporting period.
Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.
NM: Not meaningful.
Overhead ratio: Noninterest expense as a percentage of total net revenue.
Participating securities: Represents unvested stock-based compensation awards containing nonforfeitable rights to dividends or dividend equivalents (collectively, "dividends"), which are included in the earnings per share calculation using the two-class method. JPMorgan Chase grants restricted stock and RSUs to certain employees under its stock-based compensation programs, which entitle the recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock. These unvested awards meet the definition of participating securities. Under the two-class method, all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities, based on their respective rights to receive dividends.
Portfolio activity: Describes changes to the risk profile of existing lending-related exposures and their impact on the allowance for credit losses from changes in customer profiles and inputs used to estimate the allowances.
Pre-provision profit: Represents total net revenue less noninterest expense. The Firm believes that this financial measure is useful in assessing the ability of a lending institution to generate income in excess of its provision for credit losses.
Pretax margin: Represents income before income tax expense divided by total net revenue, which is, in management's view, a comprehensive measure of pretax performance derived by measuring earnings after all costs are taken into consideration. It is, therefore, another basis that management uses to evaluate the performance of TSS and AM against the performance of their respective competitors.
Principal transactions revenue: Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, private equity investments, and physical commodities used in
market making and client-driven activities. In addition, Principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specified risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk, and (c) other derivatives, including the synthetic credit portfolio.
Purchased credit-impaired ("PCI") loans: Represents loans that were acquired in the Washington Mutual transaction and deemed to be credit-impaired on the acquisition date in accordance with FASB guidance. The guidance allows purchasers to aggregate credit-impaired loans acquired in the same fiscal quarter into one or more pools, provided that the loans have common risk characteristics (e.g., product type, LTV ratios, FICO scores, past due status, geographic location). A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.
Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows, the past-due status of the pools, or that of the individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.
Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses that were recorded as purchase accounting adjustments at the time of acquisition. PCI loans as well as the related charge-offs and allowance for loan losses are excluded in the calculation of certain net charge-off rates and allowance coverage ratios. To date, no charge-offs have been recorded for these loans.

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

Real estate investment trust ("REIT"): A special purpose investment vehicle that provides investors with the ability to participate directly in the ownership or financing of real-estate related assets by pooling their capital to purchase and manage income property (i.e., equity REIT) and/or mortgage loans (i.e., mortgage REIT). REITs can be publicly- or privately-held and they also qualify for certain favorable tax considerations.
Receivables from customers: Primarily represents margin loans to prime and retail brokerage customers which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets for the wholesale lines of business.
Reported basis: Financial statements prepared under U.S. GAAP, which excludes the impact of taxable-equivalent adjustments.
Retained loans: Loans that are held-for-investment excluding loans held-for-sale and loans at fair value.
Risk-weighted assets ("RWA"): Risk-weighted assets consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors
representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the perceived credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets such as lending-related commitments, guarantees, derivatives and other applicable off-balance sheet positions are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. Risk-weighted assets also incorporate a measure for market risk related to applicable trading assets-debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total risk-weighted assets.
Seed capital: Initial JPMorgan capital invested in products, such as mutual funds, with the intention of ensuring the fund is of sufficient size to represent a viable offering to clients, enabling pricing of its shares, and allowing the manager to develop a commercially attractive track record. After these goals are achieved, the intent is to remove the Firm's capital from the investment.
Stress testing: A scenario that measures market risk under unlikely but plausible events in abnormal markets. Taxable-equivalent basis: For managed results, total net revenue for each of the business segments and the Firm is presented on a tax-equivalent basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense.

Troubled debt restructuring ("TDR"): Occurs when the Firm modifies the original terms of a loan agreement by granting a concession to a borrower that is experiencing financial difficulty.
Unaudited: Financial statements and information that have not been subjected to auditing procedures sufficient to permit an independent certified public accountant to express an opinion.
U.S. GAAP: Accounting principles generally accepted in the United States of America.
U.S. government-sponsored enterprise obligations: Obligations of agencies originally established or chartered by the U.S. government to serve public purposes as specified by the U.S. Congress; these obligations are not explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government. U.S. Treasury: U.S. Department of the Treasury.

Value-at-risk ("VaR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.
Washington Mutual transaction: On September 25, 2008, JPMorgan Chase acquired the banking operations of Washington Mutual Bank ("Washington Mutual Bank") from the FDIC. For additional information, see Glossary of Terms on page 311 of JPMorgan Chase's 2011 Annual Report.

# Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q 

## LINE OF BUSINESS METRICS

## Investment Banking

IB's revenue comprises the following:
Investment banking fees include advisory, equity underwriting, bond underwriting and loan syndication fees. Fixed income markets primarily include revenue related to market-making across global fixed income markets, including foreign exchange, interest rate, credit and commodities markets.
Equities markets primarily include revenue related to market-making across global equity products, including cash instruments, derivatives, convertibles and Prime Services.
Credit portfolio revenue includes net interest income, fees and loan sale activity, as well as gains or losses on securities received as part of a loan restructuring, for IB's credit portfolio. Credit portfolio revenue also includes the results of risk management related to the Firm's lending and derivative activities.
Retail Financial Services
Description of selected business metrics within Consumer \& Business Banking:
Client investment managed accounts - Assets actively managed by Chase Wealth Management on behalf of clients. The percentage of managed accounts is calculated by dividing managed account assets by total client investment assets.
Active mobile customers - Retail banking users of all mobile platforms, which include: SMS text, Mobile Browser, iPhone, iPad and Android, who have been active in the past 90 days.
Client advisors - Investment product specialists, including Private Client Advisors, Financial Advisors, Financial Advisor Associates, Senior Financial Advisors, Independent Financial Advisors and Financial Advisor Associate trainees, who advise clients on investment options, including annuities, mutual funds, stock trading services, etc., sold by the Firm or by third party vendors through retail branches, Chase Private Client branches and other channels. Personal bankers - Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services. Sales specialists - Retail branch office and field personnel, including Business Bankers, Relationship Managers and Loan Officers, who specialize in marketing and sales of various business banking products (i.e., business loans, letters of credit, deposit accounts, Chase Paymentech, etc.) and mortgage products to existing and new clients.
Deposit margin/deposit spread: Represents net interest income expressed as a percentage of average deposits.
Mortgage Production and Servicing revenue comprises the following:
Net production revenue includes net gains or losses on originations and sales of prime and subprime mortgage loans, other production-related fees and losses related to the repurchase of previously-sold loans.
Net mortgage servicing revenue includes the following components.
(a) Operating revenue comprises:

- All gross income earned from servicing third-party mortgage loans including stated service fees, excess service fees and other ancillary fees; and
- Modeled MSR asset amortization (or time decay).
(b)Risk management comprises:
- Changes in MSR asset fair value due to market-based inputs such as interest rates, as well as updates to assumptions used in the MSR valuation model; and
- Derivative valuation adjustments and other, which represents changes in the fair value of derivative instruments used to offset the impact of changes in interest rates to the MSR valuation model.
Mortgage origination channels comprise the following:
Retail - Borrowers who buy or refinance a home through direct contact with a mortgage banker employed by the Firm using a branch office, the Internet or by phone. Borrowers are frequently referred to a mortgage banker by a banker in a Chase branch, real estate brokers, home builders or other third parties.
Wholesale - Third-party mortgage brokers refer loan application packages to the Firm. The Firm then underwrites and funds the loan. Brokers are independent loan originators that specialize in counseling applicants on available home financing options, but do not provide funding for loans. Chase materially eliminated broker-originated loans in 2008, with the exception of a small number of loans guaranteed by the U.S. Department of Agriculture under its Section 502

Guaranteed Loan program that serves low-and-moderate income families in small rural communities.
Correspondent - Banks, thrifts, other mortgage banks and other financial institutions that sell closed loans to the Firm. Correspondent negotiated transactions ("CNTs") - Mid- to large-sized mortgage lenders, banks and bank-owned mortgage companies sell servicing to the Firm on an as-originated basis (excluding sales of bulk servicing transactions). These transactions supplement traditional production channels and provide growth opportunities in the servicing portfolio in periods of stable and rising interest rates.

217

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

## Card Services \& Auto

Description of selected business metrics within Card:
Sales volume - Dollar amount of cardmember purchases, net of returns.
Open accounts - Cardmember accounts with charging privileges.
Merchant Services business - A business that processes bank card transactions for merchants.
Bank card volume - Dollar amount of transactions processed for merchants.
Total transactions - Number of transactions and authorizations processed for merchants.
Auto origination volume - Dollar amount of loans and leases originated.
Commercial card provides a wide range of payment services to corporate and public sector clients worldwide through
the commercial card products. Services include procurement, corporate travel and entertainment, expense
management services, and business-to-business payment solutions.
Commercial Banking
CB Client Segments:
Middle Market Banking covers corporate, municipal, financial institution and not-for-profit clients, with annual revenue generally ranging between $\$ 10$ million and $\$ 500$ million.
Corporate Client Banking covers clients with annual revenue generally ranging between $\$ 500$ million and $\$ 2$ billion and focuses on clients that have broader investment banking needs.
Commercial Term Lending primarily provides term financing to real estate investors/owners for multifamily properties as well as financing office, retail and industrial properties.
Real Estate Banking provides full-service banking to investors and developers of institutional-grade real estate properties.
Other primarily includes lending and investment activity within the Community Development Banking and Chase Capital businesses.

## CB revenue:

Lending includes a variety of financing alternatives, which are primarily provided on a basis secured by receivables, inventory, equipment, real estate or other assets. Products include term loans, revolving lines of credit, bridge financing, asset-based structures, leases, commercial card products and standby letters of credit.
Treasury services includes revenue from a broad range of products and services (as defined by Transaction Services and Trade Finance descriptions within TSS line of business metrics) that enable CB clients to manage payments and receipts as well as invest and manage funds.

Investment banking includes revenue from a range of products providing CB clients with sophisticated capital-raising alternatives, as well as balance sheet and risk management tools through advisory, equity underwriting, and loan syndications. Revenue from Fixed income and Equity markets products (as defined by Investment Banking Line of Business Metrics) available to CB clients is also included.
Other product revenue primarily includes tax-equivalent adjustments generated from Community Development Banking activity and certain income derived from principal transactions.
Description of selected business metrics within CB:
Liability balances include deposits, as well as deposits that are swept to on-balance sheet liabilities (e.g., commercial paper, federal funds purchased and securities loaned or sold under repurchase agreements) as part of customer cash management programs.
IB revenue, gross represents total revenue related to investment banking products sold to CB clients.
Treasury \& Securities Services
Treasury \& Securities Services firmwide metrics include certain TSS product revenue and liability balances reported in other lines of business related to customers who are also customers of those other lines of business. In order to capture the firmwide impact of Treasury Services and TSS products and revenue, management reviews firmwide metrics such as liability balances, revenue and overhead ratios in assessing financial performance for TSS. Firmwide metrics are necessary, in management's view, in order to understand the aggregate TSS business.
Description of a business metric within TSS:

Liability balances include deposits, as well as deposits that are swept to on-balance sheet liabilities (e.g., commercial paper, federal funds purchased, and securities loaned or sold under repurchase agreements) as part of customer cash management programs.
Assets under custody represents activities associated with the safekeeping and servicing of assets on which WSS earns fees.
Description of selected products and services within TSS:
Investor Services includes primarily custody, fund accounting and administration, and securities lending products sold principally to asset managers, insurance companies and public and private investment funds.
Clearance, Collateral Management \& Depositary Receipts primarily includes broker-dealer clearing and custody services, including tri-party repo transactions, collateral management products, and depositary bank services for American and global depositary receipt programs.
Transaction Services includes a broad range of products and services that enable clients to manage payments and receipts, as well as invest and manage funds. Products include U.S. dollar and multi-currency clearing, ACH,

218
lockbox, disbursement and reconciliation services, check deposits, and currency-related services.
Trade Finance enables the management of cross-border trade for bank and corporate clients. Products include loans directly tied to goods crossing borders, export/import loans, commercial letters of credit, standby letters of credit, and supply chain finance.
Pre-provision profit ratio represents total net revenue less total noninterest expense divided by total net revenue. This reflects the operating performance before the impact of credit, and is another measure of performance for TSS against the performance of competitors.
Asset Management
Assets under management - Represent assets actively managed by AM on behalf of Private Banking, Institutional, and Retail clients. Includes "committed capital not called," on which AM earns fees.
Assets under supervision - Represents assets under management as well as custody, brokerage, administration and deposit accounts.
Multi-asset - Any fund or account that allocates assets under management to more than one asset class (e.g., long-term fixed income, equity, cash, real assets, private equity or hedge funds).
Alternative assets - The following types of assets constitute alternative investments - hedge funds, currency, real estate and private equity.

AM's client segments comprise the following:
Institutional includes comprehensive global investment services - including asset management, pension analytics, asset/liability management and active risk budgeting strategies - to corporate and public institutions, endowments, foundations, not-for-profit organizations and governments worldwide.
Retail includes worldwide investment management services and retirement planning and administration through third-parties and direct distribution of a full range of investment vehicles.
Private Banking includes investment advice and wealth management services to high- and ultra-high-net-worth individuals, families, money managers, business owners and small corporations worldwide, including investment management, capital markets and risk management, tax and estate planning, banking, capital raising and specialty-wealth advisory services.

Item 3 Quantitative and Qualitative Disclosures about Market Risk
For a discussion of the quantitative and qualitative disclosures about market risk, see the Market Risk Management section of Management's discussion and analysis on pages 96-102 of this Form 10-Q.
Item 4 Controls and Procedures
As described in CIO synthetic credit portfolio update on page 10 of this Form 10-Q, the Firm determined that a material weakness existed in the Firm's internal control over financial reporting (as defined in Rule 13a-15(f) under the Securities Exchange Act of 1934) at March 31, 2012. A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected on a timely basis. During the first quarter of 2012, the size and characteristics of the synthetic credit portfolio managed by the Firm's Chief Investment Office ("CIO") changed significantly. These changes had a negative impact on the effectiveness of CIO's internal controls over valuation of the synthetic credit portfolio. The identified deficiency in the CIO valuation control process was the result of issues in certain interrelated and interdependent control elements comprising that process, including insufficient engagement of CIO senior finance management in the valuation control process in light of the increased size and heightened risk profile of the synthetic credit portfolio during the first quarter of 2012, and in the effectiveness of certain procedures employed during the first quarter of 2012 by the CIO Valuation Control Group in performing the price verifications.
Management has taken steps to remediate the material weakness, including enhancing CIO senior finance management supervision of the valuation control process, implementing more formal reviews of price testing calculations, and instituting more formal procedures around the establishment and monitoring of price testing thresholds. These remedial steps were substantially implemented by June 30, 2012. In accordance with the Firm's internal control compliance program, however, the material weakness designation could not be closed until the remediation processes were operational for a period of time and successfully tested. The testing was successfully completed during the third quarter of 2012, and the control deficiency was closed at September 30, 2012.
Based on the foregoing, the Chairman and Chief Executive Officer and the Chief Financial Officer have evaluated the effectiveness of the design and operation of the Firm's disclosure controls and procedures as of September 30, 2012, and they have concluded that such controls and procedures were effective at such date. The term "disclosure controls and procedures" is defined in Rule 13a-15(e) under the Securities Exchange Act of 1934.
Other than the foregoing, there was no change in the Firm's
internal control over financial reporting that occurred during the three months ended September 30, 2012, that has materially affected, or is reasonably likely to materially affect, the Firm's internal control over financial reporting. Reference is made to Exhibits 31.1 and 31.2 for the Certification statements issued by the Firm's Chairman and Chief Executive Officer, and Chief Financial Officer, regarding the Firm's disclosure controls and procedures, and internal control over financial reporting, as of September 30, 2012.

## Part II Other Information

Item 1 Legal Proceedings
For information that updates the disclosures set forth under Part 1, Item 3: Legal Proceedings, in the Firm’s 2011 Annual Report on Form 10-K, see the discussion of the Firm's material litigation in Note 23 on pages 196-206 of this Form 10-Q.
Item 1A Risk Factors
The following discussion supplements the discussion of risk factors affecting the Firm as set forth in Part I, Item 1A: Risk Factors on pages 7-17 of JPMorgan Chase's Annual Report on Form 10-K for the year ended December 31, 2011; Part II, Item 1A: Risk Factors on pages 175-175A of JPMorgan Chase's Quarterly Report on Form 10-Q/A for the quarter ended March 31, 2012; and Part II, Item 1A: Risk Factors on pages 219-222 of JPMorgan Chase's Quarterly Report on Form 10-Q for the quarter ended June 30, 2012. The discussion of risk factors, as so supplemented, sets forth the material risk factors that could affect JPMorgan Chase's financial condition and operations. Readers should not consider any descriptions of such factors to be a complete set of all potential risks that could affect the Firm.

Changes are being considered in the method for determining LIBOR and it is not apparent how any such changes could affect the value of debt securities and other financial obligations held or issued by JPMorgan Chase that are linked to LIBOR, or how such changes could affect the Firm's financial condition or results of operations. Beginning in 2008, concerns have been raised about the accuracy of the calculation of the daily London Inter-Bank Offered Rate ("LIBOR"), which is currently overseen by the British Bankers' Association (the "BBA"). The BBA has taken steps to change the process for determining LIBOR by increasing the number of banks surveyed to set LIBOR and to strengthen the oversight of the process. In addition, the final report of the Wheatley Review of LIBOR, published in September 2012, set forth recommendations relating to the setting and administration of LIBOR, and the UK government has announced that it intends to incorporate these recommendations in new legislation.
At the present time it is uncertain what changes, if any, may be required or made by the UK government or other
governmental or regulatory authorities in the method for determining LIBOR. Accordingly, at the present time it is not apparent whether or to what extent any such changes would have an adverse impact on the value of any LIBOR-linked debt securities issued by the Firm or any loans, derivatives and other financial obligations or extensions of credit for which the Firm is an obligor, or whether or to what extent any such changes would have an adverse effect on the value of any LIBOR-linked securities, loans, derivatives and other financial obligations or extensions of credit held by or due to the Firm or on the Firm's financial condition or results of operations.
The ongoing Eurozone debt crisis could have significant adverse effects on JPMorgan Chase's business, results of operations, financial condition and liquidity, particularly if it leads to any sovereign debt defaults, significant bank failures or defaults and/or the exit of one or more countries from the European Monetary Union.
The ongoing Eurozone debt crisis could have significant adverse effects on JPMorgan Chase's business, results of operations, financial condition and liquidity, particularly if it leads to additional sovereign debt defaults, significant bank failures or defaults and/or the exit of one or more countries from the European Monetary Union.
The ongoing Eurozone debt crisis has caused, and is likely to continue to cause, disruption in global financial markets.
These conditions could materially worsen if, for example, consecutive Eurozone countries were to default on their sovereign debt, significant bank failures or defaults in these countries were to occur, and/or one or more of the members of the Eurozone were to exit the European Monetary Union ("EMU"). Yields on government bonds of certain Eurozone countries, including Greece, Ireland, Italy, Portugal and Spain, have remained volatile, despite various stabilization packages and facilities that have been implemented to assist various distressed Eurozone countries. Concerns have been and continue to be raised as to the financial effectiveness of the assistance measures taken to date and such concerns could intensify. The Firm believes that its exposure to sovereign and non-sovereign clients and counterparties in the five countries referenced above is modest relative to the Firm's aggregate exposures. However, continued economic turmoil in the Eurozone could lead to a further deterioration of global economic conditions and thereby adversely affect the Firm's business and results of operations in Europe and elsewhere. There can be no assurance that the various steps that JPMorgan Chase has taken to protect its businesses, results of operations and financial condition against the results of the Eurozone crisis will be sufficient. See "Management's Discussion and Analysis - Country Risk Management" on pages 103-105 of this Form 10-Q for a discussion of the Firm's European exposures.
The effects of the Eurozone debt crisis could be even more significant if they lead to a partial or complete break-up of the EMU. The partial or full break-up of the EMU would be unprecedented and its impact highly uncertain. The exit of
one or more countries from the EMU or the dissolution of the EMU could lead to redenomination of certain obligations of obligors in exiting countries. Any such exit and redenomination would cause significant uncertainty with respect to outstanding obligations of counterparties and debtors in any exiting country, whether sovereign or otherwise, and lead to complex and lengthy disputes and litigation. The resulting uncertainty and market stress could also cause, among other things, severe disruption to equity markets, significant increases in bond yields generally, potential failure or default of financial institutions, including those of systemic importance, a significant decrease in global liquidity, a freeze-up of global credit markets and a potential worldwide recession. Any combination of such events could negatively impact JPMorgan Chase's businesses, financial condition and results of operations. In addition, one or more EMU exits and currency redenominations could be accompanied by imposition of capital, exchange and similar controls, which could further negatively impact JPMorgan Chase's cross-border risk and other aspects of its businesses and its earnings.
A breach in the security of JPMorgan Chase's systems could disrupt its businesses, result in the disclosure of confidential information, damage its reputation and create significant financial and legal exposure for the Firm. Although JPMorgan Chase devotes significant resources to maintain and regularly upgrade its systems and processes that are designed to protect the security of the Firm's computer systems, software, networks and other technology assets and the confidentiality, integrity and availability of information belonging to the Firm and its customers, there is no assurance that all of the Firm's security measures will provide absolute security. JPMorgan Chase and other financial services institutions and companies engaged in data processing have reported breaches in the security of their websites or other systems, some of which have involved sophisticated and targeted attacks intended to obtain
unauthorized access to confidential information, destroy data, disable or degrade service, or sabotage systems, often through the introduction of computer viruses or malware, cyberattacks and other means. The Firm and several other U.S. financial institutions have recently experienced significant distributed denial-of-service attacks from technically sophisticated and well-resourced third parties which were intended to disrupt consumer online banking services.
Despite the Firm's efforts to ensure the integrity of its systems, it is possible that the Firm may not be able to anticipate or to implement effective preventive measures against all security breaches of these types, especially because the techniques used change frequently or are not recognized until launched, and because security attacks can originate from a wide variety of sources, including third parties outside the Firm such as persons who are involved with organized crime or associated with external service providers or who may be linked to terrorist organizations or
hostile foreign governments. Those parties may also attempt to fraudulently induce employees, customers or other users of the Firm's systems to disclose sensitive information in order to gain access to the Firm's data or that of its customers or clients. These risks may increase in the future as the Firm continues to increase its mobile payments and other internet-based product offerings and expands its internal usage of web-based products and applications. A successful penetration or circumvention of the security of the Firm's systems could cause serious negative consequences for the Firm, including significant disruption of the Firm's operations, misappropriation of confidential information of the Firm or that of its customers, or damage to computers or systems of the Firm and those of its customers and counterparties, and could result in violations of applicable privacy and other laws, financial loss to the Firm or to its customers, loss of confidence in the Firm's security measures, customer dissatisfaction, significant litigation exposure, and harm to the Firm's reputation, all of which could have a material adverse effect on the Firm. Item 2 Unregistered Sales of Equity Securities and Use of Proceeds During the three months ended September 30, 2012, there were no shares of common stock of JPMorgan Chase \& Co. issued in transactions exempt from registration under the Securities Act of 1933, pursuant to Section 4(2) thereof.

Repurchases under the common equity repurchase program
On March 13, 2012, the Board of Directors authorized a $\$ 15.0$ billion common equity (i.e., common stock and warrants) repurchase program, of which up to $\$ 12.0$ billion is approved for repurchase in 2012 and up to an additional $\$ 3.0$ billion is approved through the end of the first quarter of 2013. During the three months ended September 30, 2012, there were no repurchases of common stock or warrants; the Firm did not make any repurchases after May 17, 2012. During the nine months ended September 30, 2012, the Firm repurchased (on a trade-date basis) an aggregate of 49 million shares of common stock and warrants for $\$ 1.6$ billion. As of September 30, 2012, $\$ 13.4$ billion of authorized repurchase capacity remained under the new program. For additional information regarding repurchases of the Firm's equity securities, see 2012 Business outlook, on page 9 of this Form 10-Q.
The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the repurchase program. A Rule 10b5-1 repurchase plan allows
the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity - for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information.
The authorization to repurchase common equity will be utilized at management's discretion, and the timing of purchases and the exact amount of common equity that may be repurchased is subject to various factors, including market conditions; legal and regulatory considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative investment opportunities. The repurchase program does not include specific price targets or timetables; may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs; and may be suspended at any time. For a discussion of restrictions on equity repurchases, see Note 22 on page 276 of JPMorgan Chase's 2011 Annual Report.

Shares repurchased pursuant to the common equity repurchase program during the nine months ended September 30, 2012, were as follows.

|  | Common stock |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: | Warrants

(a)Includes $\$ 86$ million of repurchases in December 2011, which settled in early January 2012.
(b)Excludes $\$ 60$ million of repurchases in March 2012, which settled in early April 2012.
(c)Includes $\$ 60$ million of repurchases in March 2012, which settled in early April 2012.
(d) Excludes commissions cost.
(e) The amount authorized by the Board of Directors excludes commissions cost.
(f)

## Edgar Filing: JPMORGAN CHASE \& CO - Form 10-Q

The unused portion of the prior $\$ 15.0$ billion program was canceled when the new $\$ 15.0$ billion program was authorized.
(g)Dollar value remaining under the new $\$ 15.0$ billion program.

Repurchases under the stock-based incentive plans
Participants in the Firm's stock-based incentive plans may have shares of common stock withheld to cover income taxes. Shares withheld to pay income taxes are repurchased pursuant to the terms of the applicable plan and not under the Firm's repurchase program. Shares repurchased pursuant to these plans during the nine months ended September 30, 2012, were as follows.

| Nine months ended | Total shares of common stock <br> repurchased | Average price <br> paid per share of common <br> septock |
| :--- | :--- | :--- |
| September 30, 2012 | 406 | $\$ 45.81$ |
| First quarter | 32 | 39.72 |
| Second quarter | 28 | 35.98 |
| July | - | - |
| August | - | - |
| September | 28 | 35.98 |
| Third quarter | 466 | $\$ 44.80$ |
