Form N-30B-2

June 10, 2009

LAZARD ASSET MANAGEMENT

Lazard Global Total  
Return & Income  
Fund, Inc.

First Quarter Report

**MARCH 31, 2009**

---

*Lazard Global Total Return & Income Fund, Inc.*

## **Investment Overview**

### **Dear Stockholder,**

We are pleased to present this first quarter report for Lazard Global Total Return & Income Fund, Inc. ( LGI or the Fund ), for the period ended March 31, 2009. LGI is a diversified, closed-end management investment company that began trading on the New York Stock Exchange ( NYSE ) on April 28, 2004. Its ticker symbol is LGI.

In the first quarter of 2009, the Fund's Net Asset Value ( NAV ) performance lagged its benchmark, the Morgan Stanley Capital International (MSCI®) World® Index (the Index ), in a period of global market weakness. However, we are pleased with LGI's favorable relative NAV performance since inception. We believe that the Fund has provided investors with an attractive yield and diversification, backed by the extensive experience, commitment, and professional management of Lazard Asset Management LLC (the Investment Manager or Lazard ).

### **Portfolio Update (as of March 31, 2009)**

For the first quarter of 2009, the Fund's NAV decreased 13.5%, underperforming the Index loss of 11.9%. However, the Fund's one-year NAV return (ended March 31, 2009) of -39.4% outperformed the Index decline of 42.6%. The Fund's since inception annualized NAV decline of 1.5% has also outpaced the Index, which declined by 3.7% over the same period. Shares of LGI ended the first quarter of 2009 with a market price of \$9.53, representing a 22.5% discount to the Fund's NAV of \$12.30.

The Fund's net assets were \$118.2 million as of March 31, 2009, with total leveraged assets of \$132.6 million, representing a 10.9% leverage rate. We believe that LGI's investment thesis remains sound, as demonstrated by the Fund's favorable relative performance since inception. Within the global equity portfolio, stock selection in the pharmaceuticals segment of the health care sector and within Switzerland, Japan, and the U.S. helped relative performance during the quarter, while an underweight exposure to the materials sector and stock selection within utilities and within the U.K. detracted from performance. The smaller, short-duration<sup>1</sup> emerging market currency and debt portion of the Fund has produced only a moderate negative performance during the quarter (down approximately 1.7%) despite a challenging global market environment. This portfolio has been a positive contributor to performance for the Fund since inception.

As of March 31, 2009, 88.6% of the Fund's total leveraged assets consisted of global equities and 10.3% consisted of emerging market currency and debt instruments, while the remaining 1.1% consisted of cash and other net assets.

### **Declaration of Dividends**

Pursuant to LGI's level distribution policy, the Fund's Board of Directors, in March, authorized the declaration of a monthly dividend distribution of \$0.07594 per share on the Fund's outstanding common stock. The new distribution rate is a reduction from the Fund's prior monthly dividend distribution of \$0.1042 per share. The prior annualized dividend distribution amount, which had not changed since it was originally established in June 2004, equaled 6.25% of the Fund's initial offering price of \$20.00 per share. The new annualized dividend distribution amount equals 6.25% of the Fund's net asset value per share as of December 31, 2008, which was \$14.58. The reduction is the result of extraordinary market conditions and volatility that produced lower asset values, which in turn resulted in lower net assets of the Fund, reduced net investment income and a reduction in the amount of leverage used by the Fund. The current distribution yield is 9.6%, based on the annualized current distribution and the share price of \$9.53 at the close of NYSE trading on March 31, 2009.

The Fund has filed an application for an exemptive order with the Securities and Exchange Commission seeking an order that would allow the Fund to implement a managed distribution policy, pursuant to which it could make multiple long-term capital gain distributions. If the Fund receives the requested relief, the Fund, subject to the determination of the Board of Directors, may implement a managed distribution policy.

**Investment Overview** (continued)

**Additional Information**

Please note that available on [www.LazardNet.com](http://www.LazardNet.com) are frequent updates on the Fund's performance, press releases, distribution information, and a monthly fact sheet that provides information about the Fund's major holdings, sector weightings, regional exposures, and other characteristics. You may also reach Lazard by phone at 1-800-823-6300.

On behalf of Lazard, we thank you for your investment in Lazard Global Total Return & Income Fund, Inc. and look forward to continuing to serve your investment needs in the future.

**Message from the Portfolio Managers**

**Global Equity Portfolio**  
**(88.6% of total leveraged assets)**

The Fund's global equity portfolio is invested primarily in equity securities of large, well-known global companies with strong financial productivity at attractive valuations. Examples include GlaxoSmithKline, a global research-based pharmaceutical company based in the United Kingdom; Bank of New York Mellon, a U.S. based company that provides financial products and services for institutions and individuals worldwide; Nokia Corp., a Finland-based manufacturer of mobile telephones; and Total SA, a French energy supplier that explores for, produces, refines, transports, and markets oil and natural gas.

Companies held in the global equity portfolio are all based in developed-market regions around the world. As of March 31, 2009, 45.3% of these stocks were based in North America, 26.3% were based in Continental Europe (not including the United Kingdom), 18.4% were from the United Kingdom, 6.9% were from Japan, and 3.1% were from the rest of Asia (not including Japan). The global equity portfolio is similarly well diversified across a number of industry sectors. The top two sectors, by weight, at March 31, 2009, were health care (19.5%), a sector that encompasses industries involved in providing health care equipment, services, and technology, and information technology (18.3%), which includes software, technology hardware, semiconductors, and services companies. Other sectors in the portfolio include consumer discretionary, consumer staples, energy, financials, industrials, materials, telecommunication services, and utilities. The average dividend yield on the securities held in the global equity portfolio was approximately 3.7% as of March 31, 2009.

**Global Equity Markets Review**

Global equity markets fell sharply in January and February before staging a big recovery in March. The rally was based on the hope that government intervention, through quantitative easing and various asset protection plans, would stave off the threat of deflation and provide a market for the illiquid assets sitting on bank balance sheets. Despite this broad-based and unprecedented action, macroeconomic conditions continued to deteriorate, leading to huge volatility as equity values fluctuated with perceived risk premiums. Sector leadership was interesting during the quarter, as the economically sensitive materials and information technology sectors were among the best performers. The materials sector benefited from a rebound in commodity prices due to the hope of reflation, despite continued data indicating weak demand. The information technology sector benefited from early indications of improved order numbers in the electronics supply chain, and overall higher-quality balance sheets of companies in the sector. In contrast, financials was the weakest sector, although it bounced back strongly in March. Historically defensive sectors, such as utilities and telecom services, underperformed in the first quarter, indicating that there has been a degree of sector rotation this year. The quarter also witnessed a rebound in emerging markets stocks, which had been hard hit in the second half of 2008.

**What Helped and What Hurt LGI**

Overweight positioning in information technology companies contributed positively to relative performance in the first quarter. Furthermore, stock selection in the pharmaceuticals segment of the health care sector helped relative performance during the quarter, with Bristol-Myers Squibb and Roche adding value. Stock selection within Switzerland, Japan, and the United States also helped relative returns.

2

---

*Lazard Global Total Return & Income Fund, Inc.*

**Investment Overview** (continued)

Conversely, our underweight position in the materials sector proved to be a drag on the Fund, given the sector's strong performance. We have not changed our positioning here, as we do not believe the fundamentals for commodities are reflected in the share prices of the companies within the sector—inventories are high, demand is weak, and companies are not pricing in a return to marginal costs. Our stock selection in the utilities sector also detracted from performance, driven by the exposure to GDF Suez, which underperformed due to falling European power prices and the market's aversion to even modest gearing levels. Stock selection within the United Kingdom detracted from returns as well.

**Emerging Market Currency and Debt Portfolio**  
**(10.3% of total leveraged assets)**

The Fund also seeks enhanced income through investing in primarily high-yielding, short-duration emerging market forward currency contracts and local currency debt instruments. As of March 31, 2009, this portfolio consisted of emerging market currency forwards, local currency government bonds, and currency/interest rate-linked notes. The average duration of the emerging market currency and debt portfolio rose from approximately 2.5 years to approximately 3.7 years during the quarter, with an average yield on these instruments of 12.4%<sup>2</sup> as of quarter end.

Emerging Market Currency and Debt Market Review

During the first quarter it became clear that the financial crisis that paralyzed credit and interbank markets during the fourth quarter of 2008, and sparked extraordinary U.S. dollar demand due to global de-leveraging, had clearly evolved into a severe global recession. Monetary policy globally tilted towards the unorthodox, as we saw everything from quantitative easing in developed market central banks to Swiss intervention against foreign currency exchange (FX) strength. By engaging in quantitative easing, the U.S. Federal Reserve Bank (the Fed) has committed to buy or lend against everything from corporate debt to mortgages, consumer loans and government debt, after a zero Fed Funds rate failed to end the credit crunch.

In emerging markets, the worst of the financial crisis that accompanied and, in many ways, overwhelmed the impact of the global recession, seemed to be winding down in the first quarter. Emerging market countries possessing credible policy tools to manage through this crisis, or closed economies with low reliance on exports, have seen their local currency and debt markets rebound strongly during the first quarter of 2009. Furthermore, steps such as the Fed's establishment of U.S. dollar swap lines with select emerging market central banks (South Korea, Singapore, Mexico and Brazil) seemed to alleviate earlier extreme dollar scarcity which had resulted in heavy local currency selling pressures. The People's Bank of China has complemented these measures by setting up similar swap lines for its currency, the renminbi, with several of its trading partners. Several factors that led to massive flight into the U.S. dollar have diminished, as the worst of the de-leveraging by hedge funds seems to be over and a lot of the hot money positioned in risk appetite markets has left. It appears that country-specific fundamentals, domestic fiscal and/or monetary policy response, and rapid evolution of valuation metrics, such as current account adjustments, domestic money market risk premia/yields, as well as the nature of each country's stress, seems to have finally begun to play a role in differentiating local market performance. This is good news, as we have begun to see increasing evidence of differentiation amongst our 56 emerging country universe, which indicates that fundamentally-driven asset allocation may begin to perform once again in the coming months, despite the worsening G-3 downturn and continued stress in private credit markets.

What Helped and What Hurt LGI

Reduced net exposure and hedged currency exposure in several markets dampened overall volatility of the currency and debt portfolio, while allowing it to participate in the upside. Security selection moved away from inter-bank forwards in favor of local currency government bond holdings. We also extended duration exposure following many central banks' abrupt change in monetary policy from combating inflation to stimulating growth.

*Lazard Global Total Return & Income Fund, Inc.*

**Investment Overview** (continued)

This led to gains from yield curve rallies and proved particularly beneficial during the first quarter in Brazil, Poland, Israel, Turkey, Colombia, Mexico, and Peru, yet detracted in Hungary. The Fund was also able to tactically take advantage of market dislocations and volatility utilizing country, currency and security selection.

Latin American positions were the portfolio's top performers during the first quarter, in particular within Brazil. The Brazilian real recovered from its 50% decline versus the U.S. dollar last year, following the anticipated economic growth support provided by the central bank in January and was further enabled by resurgent commodity prices and rebounding global market risk sentiment. Mexican currency and government debt positions also contributed to relative performance and positions in Chile benefited when policymakers enacted countercyclical measures to support economic growth.

In the Middle East, Israeli and Turkish positions contributed to relative performance during the quarter. These markets benefited from duration exposure, mostly FX hedged, in both nominal and inflation-linked securities. Exposure to Africa was reduced significantly during the quarter, which detracted from performance on foreign capital exodus, donor reliance, and commodity price sensitivity. Despite the portfolio's light exposure in only two European markets, the Polish zloty's rapid January-through-February depreciation and the Hungarian government bond weakness (mostly FX-hedged) detracted from performance. Polish exposure was predicated on the economy's domestic demand growth engine and limited reliance on exports relative to its neighbors. This exposure was hurt by off-balance-sheet derivative losses of several Polish corporations, which fueled aggressive euro demand (i.e., zloty selling), as well as the speculative use of zloty as a liquid and cheap proxy hedge for the European region's woes. The downside was exacerbated due to choppy, illiquid trading conditions. By March, the zloty stabilized and began to rebound. Elsewhere in the region, we avoided losses in the Czech Republic and Romania.

**Notes to Investment Overview:**

- <sup>1</sup> A measure of the average cash weighted term-to-maturity of the investment holdings. Duration is a measure of the price sensitivity of a bond to interest rate movements. Duration for a forward currency contract is equal to its term-to-maturity.
- <sup>2</sup> The quoted yield does not account for the implicit cost of borrowing on the forward currency contracts, which would reduce the yield shown. All returns reflect reinvestment of all dividends and distributions. Past performance is not indicative, nor a guarantee, of future results.

The performance data of the Index and other market data have been prepared from sources and data that the Investment Manager believes to be reliable, but no representation is made as to their accuracy. The Index represents market value-weighted average returns of selected securities listed on the stock exchanges of Europe, Australasia and the Far East, New Zealand, Canada, and the United States. The Index is unmanaged, has no fees or costs and is not available for investment.

The views of the Fund's management and the portfolio holdings described in this report are as of March 31, 2009; these views and portfolio holdings may have changed subsequent to this date. Nothing herein should be construed as a recommendation to buy, sell, or hold a particular investment. There is no assurance that the portfolio holdings discussed herein will remain in the Fund at the time you receive this report, or that portfolio holdings sold will not have been repurchased. The specific portfolio holdings discussed may in aggregate represent only a small percentage of the Fund's holdings. It should not be assumed that investments identified and discussed were, or will be, profitable, or that the investment decisions we make in the future will be profitable, or equal the performance of the investments discussed herein.

The views and opinions expressed are provided for general information only, and do not constitute specific tax, legal, or investment advice to, or recommendations for, any person. There can be no guarantee as to the accuracy of the outlooks for markets, sectors and securities as discussed herein.

**Notes to Portfolio of Investments** (continued)

March 31, 2009 (unaudited)

**Valuation of Investments:**

Market values for securities are generally based on the last reported sales price on the principal exchange or market on which the security is traded, generally as of the close of regular trading on the NYSE (normally 4:00 p.m. Eastern time) on each valuation date. Any securities not listed, for which current over-the-counter market quotations or bids are readily available, are valued at the last quoted bid price or, if available, the mean of two such prices. Forward currency contracts are valued at the current cost of offsetting the contracts. Securities listed on foreign exchanges are valued at the last reported sales price except as described below; securities listed on foreign exchanges that are not traded on the valuation date are valued at the last quoted bid price.

Bonds and other fixed-income securities that are not exchange-traded are valued on the basis of prices provided by pricing services which are based primarily on institutional trading in similar groups of securities, or by using brokers' quotations.

If a significant event materially affecting the value of securities occurs between the close of the exchange or market on which the security is principally traded and the time when the Fund's net asset value is calculated, or when current market quotations otherwise are determined not to be readily available or reliable, such securities will be valued at their fair values as determined by, or in accordance with procedures approved by, the Board of Directors. The Valuation Committee of the Investment Manager may evaluate a variety of factors to determine the fair value of securities for which current market quotations are determined not to be readily available or reliable. These factors include, but are not limited to, the type of security, the value of comparable securities, observations from financial institutions and relevant news events. Input from the Investment Manager's analysts will also be considered. Fair valuing of foreign securities may be determined with the assistance of a pricing service, using correlations between the movement of prices of such securities and indices of domestic securities and other appropriate indicators, such as closing market prices of relevant ADRs or futures contracts. The effect of using fair value pricing is that the net asset value of the Fund will reflect the affected securities' values as determined in the judgment of the Board of Directors, or its designee, instead of being determined by the market. Using a fair value pricing methodology to price securities may result in a value that is different from the most recent closing price of a security and from the prices used by other investment companies to calculate their portfolios' net asset values.

**Fair Value Measurements:**

The Fund adopted Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 157, *Fair Value Measurements* (SFAS 157), effective January 1, 2008. In accordance with SFAS 157, fair value is defined as the price that the Fund would receive to sell an asset, or would pay to transfer a liability, in an orderly transaction between market participants at the date of measurement. SFAS 157 also establishes a framework for measuring fair value, and a three-level hierarchy for fair value measurement that is based upon the transparency of inputs to the valuation of an asset or liability. Inputs may be observable or unobservable and refer, broadly, to the assumptions that market participants would use in pricing the asset or liability. Observable inputs reflect the assumptions that market participants would use in pricing the asset or liability based on market data obtained from sources independent of the Fund. Unobservable inputs reflect the Fund's own assumptions about the assumptions that market participants would use in pricing the asset or liability, developed based on the best information available in the circumstances. Each investment is assigned a level based upon the observability of the inputs which are significant to the overall valuation. The three-level hierarchy of inputs is summarized below.

Lazard Global Total Return & Income Fund, Inc.

**Notes to Portfolio of Investments** (concluded)

March 31, 2009 (unaudited)

Level 1 unadjusted quoted prices in active markets for identical investments

Level 2 other significant observable inputs (including unadjusted quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Level 3 significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments) The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in these securities.

The following table summarizes the valuation of the Fund's investments by the above fair value hierarchy levels as of March 31, 2009:

Level	Investments in Securities	Other Financial Instruments*
Level 1	\$ 117,449,493	\$
Level 2	18,153,837	(1,073,587)
Level 3	6,139,523	
Total	\$ 141,742,853	\$ (1,073,587)

\* Other financial instruments are derivative instruments such as forward contracts which are valued at the unrealized appreciation/depreciation on the instrument.

Following is a reconciliation of investments in which significant unobservable inputs (Level 3) were used in determining fair value:

	Investments in Securities
Balance as of 12/31/08	\$ 9,362,727
Accrued discounts/premiums	13,283
Realized gain (loss)	(505,713)
Change in unrealized appreciation/ depreciation	160,292
Net purchases (sales)	(2,891,066)
Net transfers in and/or out of Level 3	
Balance as of 3/31/09	\$ 6,139,523
Net change in unrealized appreciation/depreciation from investments still held as of 3/31/09	\$ 160,292

*Lazard Global Total Return & Income Fund, Inc.*

**Dividend Reinvestment Plan**  
(unaudited)

Unless you elect to receive distributions in cash (i.e., opt-out), all dividends, including any capital gain distributions, on your Common Stock will be automatically reinvested by Computershare, Inc., as dividend disbursing agent (the Plan Agent), in additional Common Stock under the Fund's Dividend Reinvestment Plan (the Plan). You may elect not to participate in the Plan by contacting the Plan Agent. If you do not participate, you will receive all distributions in cash, paid by check mailed directly to you by the Plan Agent.

Under the Plan, the number of shares of Common Stock you will receive will be determined on the dividend or distribution payment date, as follows:

- (1) If the Common Stock is trading at or above net asset value at the time of valuation, the Fund will issue new shares at a price equal to the greater of (i) net asset value per Common Share on that date or (ii) 95% of the Common Stock's market price on that date.
- (2) If the Common Stock is trading below net asset value at the time of valuation, the Plan Agent will receive the dividend or distribution in cash and will purchase Common Stock in the open market, on the NYSE or elsewhere, for the participants' accounts. It is possible that the market price for the Common Stock may increase before the Plan Agent has completed its purchases. Therefore, the average purchase price per share paid by the Plan Agent may exceed the market price at the time of valuation, resulting in the purchase of fewer shares than if the dividend or distribution had been paid in Common Stock issued by the Fund. The Plan Agent will use all dividends and distributions received in cash to purchase Common Stock in the open market within 30 days of the valuation date. Interest will not be paid on any uninvested cash payments.

You may withdraw from the Plan at any time by giving written notice to the Plan Agent. If you withdraw or the Plan is terminated, you will receive whole shares in your account under the Plan and you will receive a cash payment for any fraction of a share in your account. If you wish, the Plan Agent will sell your shares and send you the proceeds, minus an initial \$15 service fee plus \$0.12 per share being liquidated (for processing and brokerage expenses).

The Plan Agent maintains all stockholders' accounts in the Plan and gives written confirmation of all transactions in the accounts, including information you may need for tax records. Shares of Common Stock in your account will be held by the Plan Agent in non-certificated form. Any proxy you receive will include all Common Stock you have received under the Plan.

There is no brokerage charge for reinvestment of your dividends or distributions in newly-issued shares of Common Stock. However, all participants will pay a pro rata share of brokerage commissions incurred by the Plan Agent when it makes open market purchases.

Automatically reinvesting dividends and distributions does not mean that you do not have to pay income taxes due upon receiving dividends and distributions.

If you hold your Common Stock with a brokerage firm that does not participate in the Plan, you will not be able to participate in the Plan and any dividend reinvestment may be effected on different terms than those described above. Consult your financial advisor for more information.

The Fund reserves the right to amend or terminate the Plan if, in the judgment of the Board of Directors, the change is warranted. There is no direct service charge to participants in the Plan (other than the service charge when you direct the Plan Agent to sell your Common Stock held in a dividend reinvestment account); however, the Fund reserves the right to amend the Plan to include a service charge payable by the participants. Additional information about the Plan may be obtained from the Plan Agent at P.O. Box 43010, Providence, Rhode Island 02940-3010.
