Independent auditors' report to the members of HBOS plc

The Board of Directors
HBOS plc

We have audited the accompanying consolidated balance sheets of HBOS plc and its subsidiary companies (the Group) as of December 31, 2008 and 2007, and the related consolidated income statements, statements recognised income and expense and cash flows for each of the years in the three-year period ended December 31, 2008. These consolidated financial statements are the responsibility of the Group's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (U.S.). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting policies used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Group as of December 31, 2008 and 2007, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 2008 in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board.

As discussed in the Accounting Policies section of the consolidated financial statements, the Group has changed its method of accounting for certain financial assets in the year ended 31 December 2008 following the adoption of 'Reclassification of Financial Assets (Amendments to IAS 39 Financial Instruments: Recognition and Measurement and IFRS 7 Financial Instruments: Disclosures).

Notes to the Financial Statements

Accounting Policies Financial Statements

The financial statements of HBOS plc comprise the Consolidated Income Statement and the Consolidated Balance Sheets, Cash Flow Statements and Statements of Recognised Income and Expense together with the related Notes to the Financial Statements. These disclosures are required under IAS 1 'Presentation of Financial Statements' relating to the management of capital and IFRS 7 'Financial Instruments: Disclosures' relating to the nature of risks and their management. These disclosures form an integral part of the financial statements and are prefaced as such on the respective pages.

Statement of Compliance

The financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the IASB, and interpretations issued by the International Financial Reporting Interpretations Committee (IFRIC).

Basis of Preparation

a) Principles Underlying Going Concern Assumption

During 2008, global financial markets experienced difficult conditions which have been characterised by a marked reduction in liquidity. As a consequence of this, governments and central banks carried out a series of actions to address the lack of liquidity within their respective banking systems. In the UK these actions have included the introduction by the Bank of England of liquidity support, through schemes (collectively "Bank of England facilities") such as the extended Long-Term Repo open market operations and the Special Liquidity Scheme (SLS) whereby banks and building societies can exchange eligible securities for UK treasury bills; and the creation of a credit guarantee scheme by HM Treasury, providing a government guarantee for certain short and medium term senior debt securities issued by eligible banks. During 2008 the Group has made use of these measures in order to maintain and improve a stable funding position. The Group's management of liquidity and funding risks is described in Note 57 Risk Management.

In the context of this continued turbulence and uncertainty in the financial markets, combined with a deteriorating global economic outlook, the Group has also taken steps to strengthen its capital position in order to provide a buffer against further shocks arising from the financial systems and to ensure that it remains competitive. On 15 January 2009, in conjunction with the takeover of the Group by Lloyds TSB Group plc (Note 58), the Group raised £11,345m (net after costs) in preference and ordinary share capital (Note 39).

On 16 January 2009, following completion of the acquisition of the Group by Lloyds Banking Group plc, the Group became a wholly owned subsidiary and became dependent upon the ultimate parent and its banking subsidiaries for its capital, liquidity and funding needs.

There is a risk despite the substantial measures taken so far by governments, that further deterioration in the markets could occur. In addition the economic conditions in the UK are deteriorating more quickly than previously anticipated placing further strain on the Lloyds Banking Group's capital resources. The key dependencies on successfully funding the Lloyds Banking Group's balance sheet include the continued functioning of the money and capital markets at their current levels; the continued access of the Lloyds Banking Group to central bank and Government sponsored liquidity facilities including access to HM Treasury's credit guarantee scheme and access to the Bank of England's various facilities; limited further deterioration in the Lloyds Banking Group's credit ratings; and no significant or sudden withdrawal of deposits resulting in increased reliance on money markets or Government support schemes.

Based upon projections prepared by Lloyds Banking Group plc management which take into account the completion of the acquisition on 16 January 2009 of the Group (Note 59) and together with the Lloyds Banking Group's current ability to fund in the market and assumption that announced Government sponsored schemes will continue to be available, the Directors are satisfied that the Group has adequate resources to continue in business for the foreseeable future. The Group has received confirmation that it is the current intention of Lloyds Banking Group plc to ensure that the Group's subsidiaries should have at all times for the foreseeable future access to adequate resources to continue to trade and meet their liabilities as they fall due. Accordingly, the financial statements of the Group have been prepared on a going concern basis.

b) Basis of Measurement

The financial statements have been prepared under the historical cost basis, except that the following assets and liabilities are stated at their fair values: derivatives, financial instruments held for trading, financial instruments designated at fair value through the income statement, financial instruments classified as available for sale and investment properties. In addition insurance contracts, investment contracts with discretionary participation features and value of in-force long term assurance business included in the insurance and investment business are prepared on the basis set out in the applicable accounting policy.

IFRS Applied in 2008

The following IFRS amendments have been applied in 2008:

Amendments to IAS 39 'Financial Instruments: Recognition and Measurement' and IFRS 7 'Financial Instruments: Disclosures'

In view of the ongoing market dislocation and the deterioration of the world's financial markets, the Group transferred certain asset backed securities (ABS) and floating rate notes (FRNs) from the 'held for trading' classification to the 'available for sale' classification with effect from 1 July 2008 at their fair values at that date. Subsequently, in light of increasing illiquidity in the markets for ABS, the Group changed the classification of ABS from 'available for sale' to 'loans and receivables' with effect from 1 November 2008. There have been no other reclassifications in the year. Thereafter the recognition and measurement principles of IAS 39 are followed. Disclosure of these reclassifications is given in Note 45.

The following IFRIC interpretations have been applied in 2008:

IFRIC 11 IFRS2 'Group and Treasury Share Transactions'

IFRIC 11 provides guidance on accounting in the separate financial statements of subsidiaries for transactions where a parent grants rights to its equity instruments directly to the employees of subsidiaries and where the subsidiary grants to its employees rights to the equity instruments of the parent. The application of this interpretation has not affected the consolidated financial statements as costs are recharged to the subsidiaries on the basis prescribed in the interpretation.

IFRIC 14 'The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction'

This interpretation has been applied in full within these financial statements. However, due to the financial rules of the Group's defined benefit schemes, its application has not impacted upon the Group's recognition or measurement of pension assets and liabilities under IAS 19 'Employee Benefits', nor is it expected to at future reporting dates.

Notes to the Financial Statements
continued

The accounting policies below have been consistently applied to all periods presented in these financial statements. Certain comparative amounts have been reclassified to conform to the current year's presentation.

Basis of Consolidation

The consolidated financial statements include the results of the Company and its subsidiary undertakings, (and, where appropriate, special purpose vehicles), together with the Group's interests in associates and jointly controlled entities.

The financial statements of entities controlled by the Group are consolidated in the Group financial statements commencing on the date control is obtained until the date control ceases. Control is defined as being where the Group has power, directly or indirectly, to govern the financial and operating policies of such entities so as to obtain benefits from its activities. In assessing control, potential voting rights that presently are exercisable or convertible are taken into account. When assessing whether or not a special purpose entity (SPE) that has been sponsored by the Group should be consolidated or not, the Group considers the indicators of control that are included in the Standing Interpretations Committee (SIC) Interpretation 12 'Consolidation – Special Purpose Entities' and if these are met the SPE is included in the consolidation.

Open Ended Investment Companies (OEICs) where the Group, through the Group's life funds, has a controlling interest are consolidated. The unit holders' interest is reported in investment contract liabilities.

All intra-group balances, transactions, income and expenses are eliminated on consolidation.

Recognition and Derecognition of Financial Assets and Liabilities

The Group recognises loans and advances to customers and banks, deposits by banks, customer accounts, debt securities in issue, other borrowed funds and other financial assets and liabilities upon origination.

The Group derecognises a financial asset when the contractual rights to the cash flows from the asset expire or it transfers the right to receive the contractual cash flows on the financial asset in a transaction in which substantially all the risks and rewards of ownership of the financial asset are transferred. Any interest in the transferred financial asset that is created or retained by the Group is recognised as a separate asset.

The Group derecognises a financial liability when its contractual obligations are discharged or cancelled or expired.

Derivatives

Derivatives are measured at fair value and initially recognised on the date the contract is entered into. Where the fair value of a derivative is positive, it is carried as a derivative asset and where negative, as a derivative liability. The gain or loss from changes in fair value is taken to net trading income, except for interest from derivatives used for economic hedging purposes that do not qualify for hedge accounting treatment which is taken to net interest income, insurance and investment related derivatives which are taken to net investment income related to insurance and investment business or when cash flow hedge accounting is employed.

Hedge accounting allows one financial instrument, generally a derivative such as a swap, to be designated as a hedge of another financial instrument such as a loan or deposit or a portfolio of the same. At inception of the hedge relationship formal documentation is drawn up specifying the hedging strategy, the component transactions and the

methodology that will be used to measure effectiveness.

Monitoring of hedge effectiveness is undertaken continually. A hedge is regarded as effective if the change in fair value or cash flows of the hedge instrument and the hedged item are negatively correlated within a range of 80% to 125%, either for the period since effectiveness was last tested or cumulatively since inception.

The Group uses three hedge accounting methods:

Firstly, fair value hedge accounting offsets the change in the fair value of the hedging instrument against the change in the fair value of the hedged item in respect of the risk being hedged. The hedged item is adjusted for the fair value of the risk being hedged irrespective of its financial instrument classification. These changes in fair value are recognised in the income statement through net trading income. Adjustments made to the carrying amount of the hedged item for fair value hedges will be amortised on an effective interest rate basis over the remaining expected life in line with the presentation of the underlying hedged item. If the hedge is highly effective the net impact on the income statement is minimised.

Secondly, cash flow hedge accounting matches the cash flows of hedged items against the corresponding cash flow of the hedging derivative. The effective part of any gain or loss on a hedging instrument is recognised directly in equity in the cash flow hedge reserve and the hedged item is accounted for in accordance with the policy for that financial instrument. Any ineffective portion of the hedging instrument's fair value is recognised immediately in the income statement through net trading income. The amount deferred in reserves remains until the designated transaction occurs at which time it is released and accounted for in the income statement in line with the treatment of the hedged item. Where the hedge relationship subsequently proves ineffective, or where the hedged item is settled early or is terminated, the associated gains and losses that were recognised directly in reserves are reclassified to the income statement through net trading income. Where the hedging instrument expires or is terminated before the forecast transaction occurs, the associated gains and losses recognised in reserves remain deferred until the forecast transaction occurs.

Thirdly, hedging of net investments in foreign operations is discussed within the foreign currencies accounting policy.

A derivative may be embedded in another financial instrument, known as the host contract. Where the economic characteristics and risks of an embedded derivative are not closely related to those of the host contract, the embedded derivative is separated from the host and held separately on the balance sheet at fair value, except for those instruments that have been designated at fair value through the income statement, where the derivative is not separated from the host instrument. Changes in fair value are taken to the income statement through net trading income, and the host contract is accounted for in accordance with the policy for that class of financial instrument.

If quoted or market values are not available then derivative fair values are determined using valuation techniques that are consistent with techniques commonly used by market participants to price these instruments. These techniques include discounted cash flow analysis and other pricing models. The fair values calculated from these models are regularly compared with prices obtained in actual market transactions to ensure reliability. In all material instances

Notes to the Financial Statements
continued

these techniques use only observable market data.

Loans and Advances

Loans and advances held for trading principally consist of reverse repurchase agreements, are carried at fair value and are classified as financial assets held for trading. Gains, losses and related income are taken to net trading income as they arise.

All other loans and advances are classified as loans and receivables. They are initially recognised at the draw down date at the fair value on the commitment date plus directly attributable incremental transaction costs. They are subsequently carried at amortised cost using the effective interest method less provision for impairment.

The fair value of loans and advances to customers is measured at the commitment date and calculated by discounting anticipated cash flows, including interest, at a current market rate of interest. The fair value of floating rate loans and advances and overnight deposits is considered by the Group to be equal to the carrying value as these loans and advances are accounted for at current interest rates and credit risk is assessed in the impairment review. The fair value of fixed interest bearing accounts is based on cash flows discounted using current money market interest rates for debts with similar maturity and credit risk characteristics.

Loans and advances that are performing in accordance with the underlying contract are classified as neither past due nor impaired. If a customer fails to make a payment that is contractually due, or if the loan is in excess of facility limit, the loan is classified as past due.

If subsequently all contractually due payments are made or if the loan continues to operate within limit, the loan reverts to its neither past due nor impaired status.

The Group assesses whether objective evidence of impairment exists individually for financial assets that are individually significant and individually or collectively for assets that are not significant. The estimation involved in these impairment assessments is considered a critical accounting estimate.

Objective evidence that a financial asset is impaired includes significant difficulty of the customer, breach of contract such as interest or principal payments being missed, the loan being in excess of facility limit for a sustained period or the likelihood that the borrower will enter bankruptcy. Objective evidence may also arise from wider economic and financial market indicators including factors that pertain to a particular industry sector or local economy.

The amount of any impairment is calculated by comparing the net present value of estimated future cash flows, discounted at the loan's original effective interest rate, with the carrying value of the loan. If impaired, the carrying value is adjusted via the provision and the additional provision is charged to the income statement.

The written down value of the impaired loan is compounded back to the net realisable balance over time using the original effective interest rate. This is reported through interest income in the income statement and represents the unwinding of the discount.

A write-off is made when it is not possible or economically viable to collect all or part of a claim. Write-offs are offset against the release of a previously established impairment provision or directly through the income statement.

Loans with no identified evidence of individual impairment are subject to collective impairment assessment. This is to quantify impairment losses which exist at the balance sheet date, but which have not yet been individually identified. Collective assessment is carried out for groups of assets that share similar risk characteristics. Collective impairment is assessed using a methodology based on existing risk conditions or events that have a strong correlation with a tendency to default.

Terms and conditions for past due or impaired loans and advances may be renegotiated. When the renegotiated contract becomes effective, the loan is subsequently classified as past due, impaired or neither past due nor impaired according to its performance under the renegotiated terms.

Loans and advances to customers include advances that are subject to non-returnable finance arrangements following securitisation of portfolios of mortgages and other advances. The principal benefits of these advances are acquired by special purpose securitisation entities that fund their purchase primarily through the issue of debt securities in issue.

Syndications

Syndication activity is undertaken as part of the Group's risk management strategy specifically with the intention of transferring credit risk and obtaining financing as distinct from trading.

The Group considers that loan commitments and subsequent draw down form one contract and the loan is therefore recognised at the date of the draw down at the fair value as measured at the commitment date plus directly attributable and incremental transaction costs. Loans pending syndication are classified as loans and receivables and derecognised upon sell down when the risks and rewards are transferred to a third party.

Finance Leases and Operating Leases

Assets leased to customers that transfer substantially all the risks and rewards incidental to ownership to the customer are classified as finance leases. They are recorded at an amount equal to the net investment in the lease, less any provisions for impairment, within loans and advances to customers.

The difference between the gross receivable and the present value of the receivable is recognised as unearned finance income. Lease income is recognised over the term of the lease using the pre-tax net investment method, which reflects a constant periodic rate of return on the net investment.

All other assets leased to customers that do not transfer substantially all the risks and rewards of ownership are classified as operating leases. These assets, less any provision for impairment, are separately disclosed in the balance sheet and are recorded at cost less accumulated depreciation, which is calculated on a straight-line basis over their estimated useful lives. Operating lease rentals are recognised in operating income on a straight-line basis over the lease term. Finance and operating lease assets are regularly reviewed for impairment.

Leases entered into by the Group as lessee are primarily operating leases. Operating lease rentals payable are recognised as an expense in the income statement on a straight-line basis over the term unless a more systematic basis is more appropriate.

Investment Securities

Investment securities held for trading are classified as financial assets held for trading and are carried at fair value. Gains, losses and related income are taken to net trading income as they arise. Investment securities designated at fair value through

F-9

Notes to the Financial Statements
continued

the income statement are carried at fair value. Gains, losses and related income are taken to other operating income as they arise, except for those related to insurance and investment business which are taken to net investment income related to insurance and investment business.

Debt securities other than those held for trading or designated at fair value and for which there is no active market at inception are classified as loans and receivables. They are initially recognised at fair value plus directly related incremental transaction costs and are subsequently carried on the balance sheet at amortised cost using the effective interest rate method less provision for impairment.

All other investment securities are classified as available for sale. They are initially recognised at fair value plus directly related incremental transaction costs and are subsequently carried on the balance sheet at fair value. Unrealised gains or losses arise from changes in the fair values and are recognised directly in equity in the available for sale reserve, except for impairment losses or foreign exchange gains or losses related to debt securities, which are recognised immediately in the income statement in impairment on investment securities or other operating income respectively. Income on debt securities is recognised on an effective interest rate basis and taken to interest income through the income statement. Income from equity shares is credited to other operating income, with income on listed equity shares being credited on the ex-dividend date and income on unlisted equity shares being credited on an equivalent basis. On sale or maturity, previously unrealised gains and losses are recognised in other operating income.

Investment securities classified as available for sale are continually reviewed at the specific investment level for impairment. Impairment is recognised when there is objective evidence that a specific financial asset is impaired. Objective evidence of impairment might include a significant or prolonged decline in market value below the original cost of a financial asset and, in the case of debt securities, including those reclassified as loans and receivables, non-receipt of due interest or principal repayment, a breach of covenant within the security's terms and conditions or a measurable decrease in the estimated future cash flows since their initial recognition.

Impairment losses on available for sale equity instruments are not reversed through the income statement. Any increase in the fair value of an available for sale equity instrument after an impairment loss has been recognised is treated as a revaluation and recognised directly in equity. An impairment loss on an available for sale debt instrument is reversed through the income statement, if there is evidence that the increase in fair value is due to an event that occurred after the impairment loss was recognised.

The fair values of investment securities trading in active markets are based on market prices or broker/dealer valuations. Where quoted prices on instruments are not readily and regularly available from a recognised broker, dealer or pricing service, or available prices do not represent regular transactions in the market, the fair values are estimated using quoted market prices for securities with similar credit, maturity and yield characteristics or similar valuation models. Investment securities, principally asset backed securities (ABS) not traded in an active market are valued using valuation models that include non-market observable inputs. These models use observed issuance prices in related asset classes, market correlations, prepayment assumptions and external credit ratings. Additional assessments are then made on possible deterioration in credit risk for each individual security and on additional liquidity considerations for particular asset classes.

The Group uses trade date accounting when recording the purchase and sale of investment securities.

Jointly Controlled Entities and Associates

Jointly controlled entities are entities over which the Group has joint control under a contractual arrangement with other parties.

Associates are entities over which the Group has significant influence, but not control over the financial and operating policies. Significant influence is the power to participate in the financial and operating policy decisions of the entity but is not control over those policies.

The venture capital exemption is taken for investments where significant or joint control is present and the investing area operates as a venture capital business. These investments are designated at fair value through the income statement. Otherwise, the Group's share of results of associates and jointly controlled entities, generally based on audited accounts, are included in the consolidated financial statements using the equity method of accounting. The share of any losses is restricted to a level that reflects an obligation to fund such losses.

Goodwill

The excess of the cost of a business combination over the interest in the net fair value of the identifiable assets, liabilities and contingent liabilities at the date of acquisition of a business is capitalised as goodwill. The goodwill is allocated to the cash-generating units or groups of cash-generating units that are expected to benefit from the acquisitions concerned.

In most cases, the cash-generating units represent the business acquired.

After initial recognition, goodwill is measured at cost less any accumulated impairment losses. Cash-generating units to which goodwill is allocated are subject to a semi-annual impairment review at 31 March and 30 September and whenever there is an indication that the unit may be impaired. This compares the recoverable amount, being the higher of a cash generating units' fair value less costs to sell and its value in use, with the carrying value. When this indicates that the carrying value of goodwill is not recoverable, it is irrevocably written down through the income statement by the amount of any impaired loss identified. Further details of the calculation are given in the critical accounting estimates and in Note 23.

IFRS 3 'Business Combinations' has not been applied retrospectively to business combinations that occurred before 1 January 2004.

Software

Costs associated with the development of software for internal use, subject to de minimis limits, are capitalised if the software is technically feasible and the Group has both the intent and sufficient resources to complete the development. Costs are only capitalised if the asset can be reliably measured and will generate future economic benefits to the Group either through sale or use.

Only costs that are directly attributable to bringing the asset into working condition for its intended use are capitalised. These costs include all directly attributable costs necessary to create, produce and prepare the asset to be capable of operating in a manner intended by management. Other development expenditure is recognised in the income statement as an

Notes to the Financial Statements
continued

expense as incurred.

Capitalised development expenditure and purchased software is stated at cost less accumulated amortisation and impairment losses. Once the software is ready for use, the capitalised costs are amortised over their expected lives, generally four years. Capitalised software is assessed for impairment where there is an indication of impairment. Where impairment exists, the carrying amount of the asset is reduced to its recoverable amount and the impairment loss recognised in the income statement. The amortisation charge for the asset is then adjusted to reflect the asset's revised carrying amount.

Subsequent expenditure is only capitalised when it increases the future economic benefits embodied in the specific asset to which it relates.

Purchased Value of In-Force Investment Contracts

The Group's contractual rights to benefits from providing investment management services in relation to investment contracts acquired in business combinations and portfolio transfers are measured at fair value at the time of acquisition. The resulting asset is referred to as purchased value of in-force investment contracts (PVIF) and is amortised over the estimated lives of the contracts on a systematic basis. At each reporting date an assessment is made to determine if there is any indication of impairment. Where impairment exists, the carrying amount of the asset is reduced to its recoverable amount and the impairment loss recognised in the income statement. The amortisation charge is then adjusted to reflect the revised carrying amount.

Property, Plant and Equipment

Property, plant and equipment is stated at cost less accumulated depreciation and impairment losses.

Freehold land is not depreciated. Freehold and leasehold property, other than freehold investment properties, is stated at cost and depreciated over fifty years or the length of the lease term if shorter. Improvements to leasehold properties are stated at cost and are depreciated in equal instalments over the lesser of the remaining life of the lease or eight years. Premiums are amortised over the period of the lease.

The cost of equipment, which includes fixtures and fittings, vehicles and computer hardware, less estimated residual value, is written off in equal instalments over the expected lives of the assets, generally between three and eight years.

Subsequent costs are included in the asset's carrying amount, only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably.

Property and equipment is assessed for impairment where there is an indication of impairment. Where impairment exists, the carrying amount of the asset is reduced to its recoverable amount and the impairment loss recognised in the income statement. The depreciation charge for the asset is then adjusted to reflect the asset's revised carrying amount.

Investment Properties

Investment properties comprise freehold and leasehold property that are held, either to earn rental income or for capital appreciation or both. They are initially recognised at cost and are fair valued annually. Rental income from investment properties is recognised on a straight-line basis over the term of the lease and any gains or losses arising

from a change in the fair value are recognised in the income statement in the period that they occur through other operating income, except for those relating to insurance and investment business, which are taken through net investment income related to insurance and investment business.

Disposal Group

Assets and liabilities of a disposal group are classified as held for sale where the carrying amount will be recovered principally through a sale transaction as opposed to continuing use. This applies where the assets and liabilities are available for sale in their present condition, subject only to the terms that are usual and customary for the sale of such assets and liabilities, and when a sale is highly probable and expected to complete within one year of being classified as a disposal group. Disposal groups are measured at the lower of carrying amount and fair value less costs to sell.

Deposits by Banks and Customer Accounts

Deposits by banks and customer accounts held for trading are classified as financial liabilities held for trading and are carried at fair value. Gains, losses and related income are taken to net trading income as they arise. All other customer accounts and deposits by banks are held at amortised cost using the effective interest method.

The fair value of customer deposits with no stated maturity date is the amount repayable on demand. The estimated fair value of fixed interest bearing deposits and other borrowings with no quoted market price is calculated using a cash flow model discounted using interest rates for debts with similar maturities.

Repurchase Agreements

Securities sold subject to repurchase agreements are retained within the balance sheet where the Group retains substantially all of the risks and rewards of ownership. Funds received under these arrangements are included within deposits by banks, customer accounts or financial liabilities held for trading. Conversely, securities acquired under commitments to resell are not recognised in the balance sheet as debt securities where substantially all the risks and rewards do not pass to the Group. In this case, the purchase price is included within loans and advances to banks, loans and advances to customers, or financial assets held for trading. The difference between sale and repurchase prices for such transactions is reflected in the income statement over the lives of the transactions, within interest payable or interest receivable as appropriate.

General Insurance Business

The Group underwrites general insurance products. For each general insurance policy underwritten, premiums (net of refunds) are credited to net earned premiums on insurance contracts over the period of risk coverage of the insurance policy.

The cost of claims notified but not settled and claims incurred but not reported at the balance sheet date are estimated and provided for. Claims incurred comprise the settlement and handling costs of paid and outstanding claims arising from events occurring during the financial year together with adjustments to prior year claims provisions. Estimates are based upon an assessment of the likely costs taking account of all known facts. Where the outcome of outstanding cases is unclear, statistical techniques are used which take into account the cost of recent similar claim settlements.

Costs related to the acquisition of new insurance contracts (including commissions paid to intermediaries and other related administration costs) are capitalised as deferred acquisition costs (DAC) and amortised on the same basis that premiums are recognised.

Notes to the Financial Statements
continued

Where the expected value of claims and expenses attributable to unexpired risk periods exceed the value of unearned premiums less DAC, at the balance sheet date, additional provisions are made for the anticipated losses.

The accounting policies set out above in respect of the measurement of the insurance contract liabilities include liability adequacy testing that meets the requirements of IFRS 4 'Insurance Contracts'.

Insurance and Investment Product Classification

The Group has classified its long term insurance and investment business in accordance with IFRS 4 'Insurance Contracts' as follows:

Insurance contracts are contracts containing significant insurance risk. Such contracts remain insurance contracts until all rights and obligations are extinguished or expired;

Investment contracts with a discretionary participation feature (DPF) are contracts that do not contain significant insurance risk but that contain discretionary participation features, which for the Group are its with-profit contracts; and

Investment contracts are contracts that have neither significant insurance risk nor a DPF.

General insurance business only issues insurance contracts.

Value of In-force Long Term Assurance Business (VIF)

The Group places a value on the long term insurance contracts and investment contracts with DPF, which represents the present value of future cash flows attributable to the Group with respect to these contracts. The change in VIF is accounted for as revenue.

In-force business is defined as all policies where the first premium has been paid. For traditional with-profit business, the surplus attributable to the Group equates to one ninth of the cost of the bonuses declared in any year. The level of assumed future bonuses is calculated by projecting the portfolio of with-profit business forward and applying reversionary and terminal bonus rates so as to exhaust the projected surplus of assets attributable to with-profit policyholders.

Insurance Contracts and Investment Contracts with DPF

As permitted by IFRS 4 'Insurance Contracts', the Group applies accounting policies that are usual and customary in the insurance industry. In particular the Group applies the UK guidance set out in FRS 27 'Life Assurance'.

Insurance contracts and investment contracts with DPF liabilities written within the with-profit fund, including both traditional and unitised with-profit contracts, are calculated with reference to the expected payout using realistic and, where applicable, market consistent assumptions. Insurance contract liabilities within the non-profit funds are calculated in accordance with the Prudential Sourcebook for insurers (INSPRU) issued by the UK Financial Services Authority. For insurance contracts, premiums are recognised as revenue when due from the policyholder and claims payable are recorded when notified or due. For unitised with-profit contracts, where the policyholder has the choice to invest in a unit-linked investment fund, deposits and withdrawals are accounted for directly on the balance sheet. Similarly, for investment contracts with DPF, deposits and withdrawals are accounted for directly in the balance sheet.

At each reporting date an assessment is made of whether liabilities are adequate using current estimates of future cash flows and taking into account the value of any related VIF asset.

Any deficiency is immediately charged to the income statement by establishing a provision on the balance sheet.

Costs related to the acquisition of new long-term insurance and investment with DPF contracts are expensed as incurred.

Investment Contracts

The Group's investment contracts, which include collective investment schemes, are primarily unit-linked. These contracts are managed and evaluated on a fair value basis in accordance with the terms of the contracts as benefits are linked to the fair value of the assets supporting the contracts. Accordingly, the investment contract liabilities have been designated at fair value through the income statement with fair value changes recognised through change in investment contract liabilities. The fair value of the liabilities is estimated using a valuation technique. In accordance with this technique the liability is established as the bid value of the assets held to match the liability, less an allowance in relation to deductions made to the liability for capital gains tax on the gains relating to the matching assets. Deposits and withdrawals are accounted for directly in the balance sheet as adjustments to the liability with other changes recognised in the income statement.

Revenue in relation to investment management services is recognised as the services are provided. Incremental costs directly attributable to securing the Group's contractual right to benefit from providing investment management services in relation to investment contracts, other than through a business combination or portfolio transfer (refer to the accounting policy for intangible assets), are recognised as an asset if it is probable that they will be recovered. Incremental costs include commissions paid to intermediaries and other similar costs. This asset, referred to as deferred origination costs, is amortised as the related investment management revenue is recognised, and its recoverability assessed at each balance sheet date on a portfolio basis.

Unallocated Surplus

The unallocated surplus is accounted for as a liability as permitted by IFRS 4. The carrying value of the unallocated surplus is determined as the residual assets of the with-profit fund after providing for the with-profit liabilities in accordance with the policies described above.

Reinsurance

Contracts entered into with reinsurers under which the Group is compensated for losses on insurance contracts issued by the Group, and that meet the classification requirements for insurance contracts, are classified as reinsurance contracts held. The benefits to which the Group is entitled under these contracts are recognised as reinsurance assets. These assets consist of short term balances due from reinsurers as well as longer term receivables that are dependent on the expected claims and benefits arising under the related insurance contracts. Amounts recoverable from or due to reinsurers are measured consistently with the amounts associated with the reinsured insurance contracts, in accordance with the terms of each reinsurance contract, and are regularly reviewed for impairment.

Post Retirement Schemes

The Group's net obligation in respect of defined benefit pension plans is calculated separately for each plan. The net obligation represents the present value of the future benefits owed to employees in return for their service in the current and prior periods, after the deduction of the fair value of any plan assets.

The discount rate used is the market yield on high quality

Notes to the Financial Statements
continued

corporate bonds at the balance sheet date that have maturity dates approximating to the terms of the Group's obligation. The calculation is performed by a qualified actuary using the projected unit credit method. Actuarial gains and losses arising from experience adjustments and changes in actuarial assumptions are recognised immediately through the statement of recognised income and expense. The charge to the income statement for defined benefit schemes includes current service cost, past service cost, the interest cost of the scheme liabilities and the expected return on scheme assets.

The cost of contributions to defined contribution pension schemes are recognised as an expense in the income statement as incurred.

Taxation

Income tax on the profit or loss for the year comprises current and deferred tax. Income tax is recognised in the income statement except to the extent that it relates to items recognised directly in equity, in which case it is recognised in equity.

The tax charge is analysed between tax that is payable in respect of policyholder returns and tax that is payable on shareholders' equity returns. This allocation is based on an assessment of the effective rate of tax that is applicable to shareholders' equity for the year.

Deferred tax is provided in full using the balance sheet liability method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The following differences are not provided: goodwill not deductible for tax purposes, the initial recognition of assets and liabilities that affects neither accounting nor taxable profit, and overseas earnings where both remittance is controlled by the Group and it is probable that the difference will not reverse in the foreseeable future. The amount of deferred tax provided is based on the expected manner of realisation or settlement of the carrying amount of assets and liabilities, based on tax rates that are enacted or substantially enacted at the balance sheet date.

Deferred tax assets are recognised where it is probable that future taxable profit will be available against which the temporary differences can be utilised.

The tax effects of losses available for carry forward are recognised as an asset when it is probable that future taxable profits will be available against which these losses can be utilised.

Deferred and current tax assets and liabilities are offset when they arise in the same tax reporting group and where there is both a legal right of offset and the intention to settle on a net basis or to realise the asset and settle the liability simultaneously.

Provisions

The Group recognises a provision if there is a present obligation as a consequence of either a legal or a constructive obligation resulting from a past event. To recognise this it should be probable that an outflow of economic resources, that can be reliably measured, will be required to settle the obligation. Provisions are measured as the discounted expected future cash flows taking account of the risks and uncertainties associated with the specific liability where appropriate.

A constructive obligation is only deemed to exist in respect of restructuring provisions once a detailed restructuring plan has been formally approved and the plan has been announced publicly or work on the restructure has commenced.

Provision is made for undrawn loan commitments which have become onerous.

As explained under critical accounting judgements, if the Group assesses that a constructive obligation for a regulatory provision exists then a provision is established. Where the provisioning criteria are met, the Group makes provision for the estimated cost of making redress payments to customers in respect of past product sales where the sales processes have been deficient. To calculate the provision the Group estimates the number of cases requiring redress and the average cost per case. These are dependent upon, inter alia, the volume of claims, the actions of regulators and, as appropriate, the performance of investments. As progress is made in settling claims, if necessary, the Group revises its judgements and estimates based on the emerging trends.

Debt Securities in Issue

Debt securities in issue held for trading are classified as financial liabilities held for trading and are carried at fair value. Gains, losses and related expense are taken to net trading income as they arise. Debt securities in issue designated at fair value through the income statement are carried at fair value. Gains, losses and related expense are taken to other operating income as they arise, except for those related to insurance and investment business which are taken to net investment income related to insurance and investment business. All other debt securities in issue are held at amortised cost. They are initially recognised at fair value plus directly related incremental transaction costs and are subsequently carried on the balance sheet at amortised cost using the effective interest method.

Fair values are calculated based on quoted market prices. Where quoted market prices are not available, a cash flow model is used, discounted using an appropriate current yield curve for the remaining term to maturity.

Other Borrowed Funds

Other borrowed funds comprises preference shares that are classified as debt, preferred securities and subordinated liabilities, all of which are held at amortised cost, using the effective interest method.

Preference shares are classified as debt where they are redeemable on a specific date, or at the option of the shareholders, or if dividend payments are not discretionary. Dividends on preference shares classified as debt are recognised in the income statement through interest expense.

Preferred securities are issued at or close to market values. These are classified as debt where they are redeemable on a specific date, or at the option of the holders, or if interest payments are not discretionary. The interest payable on such securities is recognised in the income statement through interest expense.

Subordinated liabilities consist of dated and undated loan capital. The interest payable is recognised in the income statement through interest expense.

Share Capital

Incremental costs directly attributable to the issue of new shares are shown in equity as a deduction from the proceeds.

Netting

Financial assets and liabilities are offset and the net amount reported in the balance sheet when there is a legally enforceable right of offset and there is an intention and ability to settle on a net or simultaneous basis.

Where master netting agreements allow for offset only on

Notes to the Financial Statements
continued

default by one of the parties, the Group presents the disclosures on a gross basis.

Foreign Currencies

The consolidated financial statements are presented in sterling which is the Group's functional and presentation currency.

Foreign currency transactions are translated into sterling at the exchange rate prevailing at the date of the transaction.

Monetary assets and liabilities denominated in foreign currencies are translated at balance sheet date exchange rates. Exchange differences arising, including those from changes in the amortised cost of foreign currency monetary available for sale assets, are recognised in the income statement except for differences arising from hedges of net investments in foreign operations and derivatives related to cash flow hedges which are recognised directly in equity.

Non-monetary assets and liabilities carried at historical cost are translated using the historical exchange rate.

Non-monetary assets and liabilities carried at fair value are translated at exchange rates on the date the fair value is determined. Exchange differences arising are recognised in the income statement except those relating to available for sale financial assets (equity investments), which are recognised directly in reserves.

The results and financial position of all Group entities that have a functional currency different from sterling are translated into sterling as follows:

assets and liabilities for each balance sheet presented are translated at the closing rate at the date of the balance sheet;

goodwill and fair value adjustments arising on the acquisition of a foreign operation are treated as assets and liabilities of the foreign entity and translated at the closing rate; and

income and expenses are translated at the average exchange rates for the period (unless this is not a reasonable approximation of the cumulative effect of the rates prevailing on the transaction dates, in which case income and expenses are translated at the dates of the transactions).

All resulting exchange differences are recognised as a separate component of other reserves within equity.

On consolidation, exchange differences arising from the translation of the net investment in foreign operations, and of borrowings and other currency instruments designated as hedges of such investments, are taken to equity where the hedge is deemed to be effective. When a foreign operation is sold, such exchange differences are recognised in the income statement as part of the gain or loss on sale. The ineffective portion of any net investment hedge is recognised in the income statement immediately.

Cumulative translation differences for all foreign operations are deemed to be zero at 1 January 2004. Any gain or loss on the subsequent disposal of a foreign operation will exclude translation differences that arose before 1 January 2004, but include later translation differences.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and balances at central banks that are freely available, and loans and advances to banks with an original maturity of three months or less excluding financial assets that are held for trading purposes.

Share-based Payments

The Group predominantly operates equity-settled share-based compensation schemes in exchange for employee services received. The fair values of options or shares granted are determined at the date of grant and expensed over the vesting period. The fair values of the options or shares granted are measured using various models, taking into account the terms and conditions upon which the options and shares were granted. Market conditions are taken into account to set the fair value at grant and are not updated. Non-market vesting conditions, including non-market performance conditions, are not reflected in the grant date fair value but are reflected within estimates of the number of options or shares expected to vest. Any adjustments required as a result of updating these estimates are taken to the income statement over the remaining vesting period. Modifications are assessed at the date of modification and any incremental charges required are charged to the income statement over any remaining vesting period. For share-based compensation schemes settled by the Group a recharge equal to the cost during the period is made to subsidiary companies.

Effective Interest Rate

Revenue on financial instruments classified as loans and receivables, available for sale and expense on financial liabilities at amortised cost, are recognised on an effective interest rate basis. This calculation takes into account interest received or paid and fees and commissions paid or received that are integral to the yield as well as incremental transaction costs and all other premiums and discounts. The effective interest rate is the rate that discounts the expected future cash flows over the expected life of the financial instrument or, where appropriate, a shorter period, to the net carrying amount of the financial instrument at initial recognition. These calculations are undertaken on a portfolio basis other than in respect of significant balances, relating principally to larger corporate customers, which are assessed individually. In applying the portfolio basis, the Group makes use of various statistical modelling techniques which are specific to different portfolios to estimate redemption profiles and derive the expected cash flows. A number of relevant considerations are taken into account to estimate the cash flows of individually significant corporate balances, including previous experience of customer behaviour, credit scoring of the customer and anticipated future market conditions at the date of acquisition. The impact of the assumption related to the expected life of the instruments is considered under critical accounting estimates.

Fees and Commission

Fees and commission income and expense is recognised in the income statement as the related service is provided except those that are integral to the effective interest rate calculations or to investment contract deferred origination costs.

Fees and commission recognised in the income statement include service fees, agency and management fees, transaction fees, guarantee fees, letter of credit fees, asset management fees and non-utilisation fees.

Syndication and underwriting fees are spread over the expected term of the sell down. In the event of the loan not being sold down then no fees are recognised.

Fees and commission included in the effective interest calculation are those that are incremental and directly attributable to the origination of the product and which are integral to the yield of the product. These include arrangement fees, incentives such as cash backs, intermediary fees and commissions, high loan to value fees and procurement fees.

Notes to the Financial Statements
continued

Guarantees

Financial guarantees are contracts that require the Group to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the terms of a debt instrument.

Financial guarantees are initially recognised at fair value on the date the guarantee was given. Subsequent to initial recognition, the Group's liabilities under such guarantees are measured at the higher of the amount determined under the Group's accounting policy on provisions and the amount initially recognised less cumulative amortisation recognised to record any fee income earned in the period.

Critical Accounting Judgements and Estimates

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of assets, liabilities, income and expenses. Due to the inherent uncertainty in making estimates, actual results reported in future periods may be based on amounts which differ from those estimates. Judgements, estimates and assumptions are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Revisions to accounting estimates are recognised in the period in which the estimate is revised and in any future periods affected.

a) Critical Accounting Judgements

The preparation of the financial statements necessarily requires the exercise of judgement in the application of accounting policies which are set out above. These judgements are continually reviewed and evaluated based on historical experience and other factors. The principal critical accounting judgements made by the Group that have a material financial impact on the financial statements are as follows:

Designation of Financial Instruments

The Group has classified its financial instruments in accordance with IAS 39 'Financial Instruments: Recognition and Measurement'. In some instances the classification is prescribed whilst in others the Group is able to exercise judgement in determining the classification as follows:

Non-derivative financial assets, other than those held for trading, where there is no active market and which have fixed or determinable payments are classified as 'loans and receivables';

The Group's 'trading' portfolio is classified as 'held for trading'. The Group exercises judgement in determining which financial instruments form part of its trading book. This is determined at acquisition by the purpose for which the instrument is acquired;

The Group exercised judgement when determining that the ongoing market dislocation and deterioration of the world's financial markets that occurred during the third quarter of 2008 was a sufficiently rare circumstance to warrant a reclassification of certain financial assets from 'held for trading' to 'available for sale' for which the Group has the intention and ability to hold these assets for the foreseeable future. The Group also subsequently reclassified certain financial assets from 'available for sale' to 'loans and receivables'. In both cases, the Group had the intention and ability to hold the financial assets for the foreseeable future and the financial assets transferred met the classification criteria of loans and receivables;

Derivative instruments are automatically classified as 'at fair value through the income statement' unless they form part of an effective hedging relationship. The Group's accounting policy for hedge accounting is described under the policy for derivatives;

Instruments that are deemed by the Group on initial recognition to eliminate a measurement mismatch or where they contain an embedded derivative which is not separated from the host contract are designated on initial recognition as 'at fair value through the income statement'. In addition portfolios of assets, liabilities or both that are managed and the performance evaluated on a fair value basis in accordance with a documented risk or investment management strategy are designated on initial recognition 'at fair value through the income statement';

In addition the venture capital exemption is taken for investments where significant influence or joint control is present and the investing area operates as a venture capital business. These investments are designated 'at fair value through the income statement'. This policy is applied consistently across the Group's portfolios. Judgement is applied when determining whether or not a business area operates as a venture capital business. The judgement is based on consideration of whether, in particular, the primary business activity is investing for current income, capital appreciation or both; whether the investment activities are clearly and objectively distinct from any other activities of the Group; and whether the investee operates as a separate business autonomous from the Group;

Assets in support of the general insurance and long term assurance businesses are designated by the Group, as 'at fair value through the income statement';

Investment contracts within the long term assurance business are designated by the Group as 'at fair value through the income statement';

The Group has chosen not to designate any financial assets as 'held to maturity';

All other financial assets are classified as 'available for sale'; and

All other financial liabilities are classified as 'at amortised cost'.

The accounting treatment of these financial instruments is set out in the relevant accounting policy.

Active markets

Asset backed securities not traded in an active market are valued using models. An active market is one where prices are readily and regularly available from an exchange, broker, pricing service, industry group or regulator and these prices represent actual and regularly occurring transactions on an arm's length basis. Where there are no regular transactions occurring (significant liquid markets) the market is not described as active. A significant increase in the spread between the amount sellers are 'asking' and buyers are 'bidding' or the presence of a relatively small number of 'bidding' parties, are indicators that a market may be inactive. The determination of whether a market is inactive requires judgement.

More details of the models used to value the securities not traded in an active market is given in the section in 'fair values' in critical accounting estimates below.

Notes to the Financial Statements
continued

Impairment of Investment Securities

As explained in the accounting policy, investment securities are reviewed at the specific investment level for impairment. Impairment is recognised when there is objective evidence that a specific financial asset is impaired. Objective evidence of impairment might include a significant or prolonged decline in market value below the original cost of a financial asset and, in the case of debt securities, including those reclassified as loans and receivables, non-receipt of due interest or principal repayment, a breach of covenant within the security's terms and conditions or a measurable decrease in the estimated future cash flows since their initial recognition.

The disappearance of active markets, declines in market value and ratings downgrades do not in themselves constitute objective evidence of impairment and, unless a default has occurred on a debt security, the determination of whether or not objective evidence of impairment is present at the balance sheet date requires the exercise of management judgement.

Unarranged Overdraft Charges

The Group's accounting policy in respect of regulatory provisions is given in the section on provisions. In the absence of a legal obligation, judgement is necessary in determining the existence of a constructive obligation. In respect of the claims made for refunds of unarranged overdraft charges, the judgement of the Group is that there is no constructive obligation pending the outcome of the legal case.

Syndications

As explained in the accounting policy on syndications, the Group has elected to treat loans and advances pending syndication as loans and receivables rather than account for them as trading assets. Accordingly these are initially recognised at the draw down date at the fair value as at the commitment date plus directly attributable incremental transaction costs.

Deferred Tax

Deferred tax assets and liabilities require management judgement in determining the amounts to be recognised. In particular, when assessing the extent to which deferred tax assets should be recognised with consideration given to the timing, nature and level of future taxable income. The recognition of deferred tax assets relating to tax losses carried forward relies on profit projections and taxable profit forecasts prepared by management, where a number of assumptions are required based on the levels of growth in profits and the reversal of deferred tax balances.

b) Critical Accounting Estimates

The preparation of the financial statements requires the Group to make estimations where uncertainty exists. The principal critical accounting estimates made by the Group are considered below. Disclosures about estimates and the related assumptions are also included in the appropriate Note to the Financial Statements.

Fair Values

The designation of financial instruments for measurement purposes is set out under the critical accounting judgements above and the valuation methodologies for financial instruments remain as disclosed in this accounting policy section.

Derivatives and other financial instruments classified as at fair value through the income statement or available for sale are recognised at fair value.

Debt securities measured at fair value and not traded in an active market, principally comprising asset backed securities (ABS) in the Treasury division, are valued using valuation models that include non-market observable inputs. These models use observed issuance prices in related asset classes, market correlations, prepayment assumptions and external credit ratings. For each asset class within the ABS portfolio, the implied spread arrived at by using this methodology is applied to the securities within that asset class. Additional assessments are then made on possible deterioration in credit risk for each individual security and on additional liquidity considerations for particular asset classes.

Of the total debt securities carried at fair value on the balance sheet, the fair values of those calculated using models with inputs that are not observable in the market is £3,054m (2007 £17,790m).

For debt securities valuations using non-market observable inputs, the effect of a one hundred basis point move in credit spreads (which based upon experience is the only key sensitivity) would result in a pre-tax movement of £163m (2007 £185m) for assets classified at fair value through the income statement and a post-tax movement of £nil (2007 £351m), recognised in equity reserves, on assets classified as available for sale.

On ABS that were valued using models with non-observable market inputs, a £1,056m (2007 £78m) pre-tax negative fair value adjustment was recognised in the income statement within net trading income and a post-tax negative fair value adjustment of £3,572m (2007 £158m) on ABS classified as available for sale was recognised in equity reserves.

Retirement Benefit Obligations

The expected cash flows used in the calculation of the defined benefit schemes' liabilities include a number of assumptions around mortality, inflation rates applicable to defined benefits and the average expected service lives of the employees. The selection of these assumptions and the selection of the discount rate have a material impact on the estimation of the pension liabilities. The discount rate used by the Group to calculate the defined benefit scheme liabilities is based upon a blended market yield at the balance sheet date of high quality bonds with a similar duration to that of the schemes' liabilities and is derived on a basis consistent with prior years. The sensitivity of the scheme liabilities to changes in the principal assumptions used are set out in Note 33.

Long Term Assurance Business

The estimation of the Group's insurance and investment contracts with discretionary participating features (DPF) liabilities and related value of in-force (VIF) assets relies on a number of assumptions in forecasting future experience. The selection of appropriate assumptions requires the application of material judgement and is made with reference to historic trends, taking into account the analysis of actual versus expected experience as well as industry data.

The accounting policy for insurance contracts and investment contracts with DPF and the description of long term assurance business in Note 30 describe the assumptions that are made when calculating the value of these contracts, which also impact on the value of the VIF and the unallocated surplus. The Group applies significant judgement when selecting the rates of persistency to be used in these calculations. The considerations given to lapse and surrender rate assumptions are detailed in Note 30. The sensitivity of the Group's results to changes in certain key variables on long term insurance and investment

Notes to the Financial Statements
continued

contracts with DPF are disclosed in Note 28.

Effective Interest Rate

As described in the accounting policy for effective interest rate, the Group uses statistical and mathematical models to calculate the effective yield for loans and advances. The Group applies judgement when determining the expected life of these loans. The underlying products usually allow the customer to make early repayment before the contractual maturity date. In estimating the expected life of the loan, the Group takes into account a number of relevant considerations when the asset is initially recognised to estimate the cash flows from early redemptions including the type of product, previous experience of customer behaviour, credit scoring of the customer and anticipated future market conditions. The cash flows are adjusted in the light of actual experience, however the effective interest rate is not reassessed. As a consequence of the reduced levels of principal repaid in 2008 and the resulting adjustments to estimated future cash flows a £200m credit (2007 £nil) has been taken to the income statement. If the estimated life of the Retail portfolio were to increase or decrease by one month then the carrying value of the Retail portfolio would increase or decrease by £6m (2007 £18m) respectively.

Impairment Losses on Loans and Advances

The Group regularly reviews its loan portfolios carried at amortised cost to assess for impairment. This review is conducted across all asset types and impairment provisions are established to recognise incurred impairment losses within the loan portfolios. As explained in the Group's accounting policy on loans and advances, impairment loss calculations involve the estimation of future cash flows of loans and advances based on observable data at the balance sheet date, historical loss experience for assets with similar credit risk characteristics and other factors including, inter alia, future prospects of the customers, value of collateral held and reliability of information. These calculations may be undertaken on either a portfolio basis or individually for individually significant exposures. In applying the portfolio basis the Group makes use of various statistical modelling techniques which are specific to different portfolio types.

The actual amount of the future cash flows and their timing may differ significantly from the assumptions made for the purposes of determining the impairment provisions given the range of asset types, number of customers and current economic conditions. This uncertainty is exacerbated in the current economic climate, where the timing of and value realisable from the collateral held in the form of property is particularly uncertain. Consequently these allowances can be subject to variation.

Goodwill

Goodwill arises on the acquisition of a business. As explained in the accounting policy for goodwill it is subject to a six monthly impairment review. This compares the recoverable amount, being the higher of a cash-generating units' fair value less costs to sell and its value in use, with the carrying value. When this indicates that the carrying value is not recoverable it is written down through the income statement as goodwill impairment.

The recoverable amount of goodwill carried at 31 December 2008 has been based upon value in use. This calculation uses cash flow projections based upon the five year business plan where the main assumptions used for planning purposes relate to the current economic outlook and opinions in respect of economic growth, unemployment, property markets, interest rates and credit quality. Cash flows thereafter are extrapolated using a growth rate of 2.2% p.a., reflecting management's view of the expected future long term trend in growth rate of the respective economies concerned, predominantly being in the UK, and the long term performance of the businesses concerned. The pre-tax

discount rate used in discounting the projected cash flows has, in view of current credit conditions, been increased to within a range of 14.4% - 15.3% p.a. (2007: 10.0% - 12.2% p.a.) reflecting, inter alia, the perceived risks within those businesses.

As at 31 December 2008 the carrying value of goodwill held on the balance sheet is £1,556m (2007 £1,940m) as shown in Note 23. Goodwill has been impaired by £158m during the year. The unprecedented levels of market turmoil and current economic conditions have adversely impacted the short-term profitability of the cash generating units. The Group has considered the impact upon the assumptions used and has conducted sensitivity analysis on the impairment tests. For example, an increase in the discount rate to 17% would result in an additional impairment to goodwill of £31m; alternatively if projected cash flows reduced by 20% an additional impairment of £118m would arise.

Notes to the Financial Statements
continued

IFRS and IFRIC Not Yet Applied

The following standards and interpretations are not effective for the year ended 31 December 2008 and have not been applied in preparing the financial statements:

IFRS 8 'Operating Segments' which is effective for periods commencing on or after 1 January 2009. This standard replaces IAS 14 'Segmental Reporting' and aligns the disclosure of operating segments in the financial statements with the internal reporting of segments to senior management. Following the acquisition of the Group by Lloyds TSB plc the Group will adopt the segmental structure and measurement basis for segments of the Lloyds Banking Group. These are currently being determined by the new organisation.

Amendments to IAS 1 'Presentation of Financial Statements: A Revised Presentation' which is effective for periods commencing on or after 1 January 2009. The revised standard will affect the presentation of owner changes in equity and of comprehensive income. Adoption will not change the recognition, measurement or disclosure of specific transactions or events as required by other standards.

Amendment to IAS 23 'Borrowing Costs' which is applicable to borrowing costs related to qualifying assets for which the commencement date for capitalisation is on or after 1 January 2009. The application of this revised standard in 2008 would not have had a material impact on the financial statements.

Amendment to IFRS 2 'Share-based Payment: Vesting Conditions and Cancellations' which is effective for periods commencing on or after 1 January 2009. This defines 'non-vesting' conditions and clarifies the accounting. The application of this amendment would not have an impact upon the financial statements as the Group accounting policy accords with the treatment prescribed by the amendment.

Amendments to IAS 32 and IAS 1 'Puttable Financial Instruments and Obligations Arising on Liquidation' which is effective for periods commencing on or after 1 January 2009. This amendment addresses the balance sheet classification of puttable financial instruments and obligations arising only on liquidation. Where these instruments represent a residual interest in the net assets of an entity and meet certain other conditions they should be classified as equity rather than liabilities. The Group has no items currently classified as liabilities that would need to be presented as equity as a result of this amendment because these instruments fail to meet the criteria for such a reclassification.

IFRIC 13 'Customer Loyalty Programmes' which is effective for periods commencing on or after 1 July 2008. The application of this interpretation in 2008 would not have had a material impact on the financial statements.

The following interpretations have not yet been adopted by the European Union but is effective for the year ended 31 December 2008. The Group has implemented the principles of these interpretations in preparing the financial statements:

IFRIC 12 'Service Concession Arrangements' which is effective for periods commencing on or after 1 January 2008. The application of this interpretation would not have affected the financial statements as the Group accounting policy accords with the requirements.

IFRS 1 'First-time adoption of IFRS' which is effective for periods commencing on or after 1 January 2009. As the Group reports under IFRS, the application of this amendment in 2008 would not have any effect upon the financial statements.

Amendments to IAS 27 'Consolidated and Separate Financial Statements' which is effective for periods commencing on or after 1 January 2009. This amendment removes the definition of the cost method which requires dividends from pre-acquisition profits to be set off against the cost of an investment in a subsidiary. Application in 2008 would not have had an effect upon the financial statements.

IFRIC 15 'Agreements for the Construction of Real Estate' which is effective for periods commencing on or after 1 January 2009. The application of this interpretation would not have affected the financial statements as the Group accounting policy accords with the requirements.

IFRIC 16 'Hedges of a Net Investment in a Foreign Operation' which is effective for periods commencing on or after 1 October 2008. The application of this interpretation in 2008 would not have affected the financial statements as the Group accounting policy accords with the requirements.

IFRIC 17 'Distributions of Non Cash Assets to Owners' which is effective for periods commencing on or after 1 July 2009. The application of this interpretation would not have affected the financial statements as the Group accounting policy accords with the requirements.

IFRIC 18 'Transfers of Assets from Customers' which applies to transfers of assets from customers received on or after 1 July 2009. The application of this interpretation in 2008 would not have had a material impact on the financial statements.

Improvements to IFRS 2008 The majority of these improvements are effective for periods commencing on or after 1 January 2009 and their application would not have had a material effect upon the financial statements.

Amendments to IAS 39 'Financial Instruments: Recognition and Measurement: Eligible Hedged Items' which is effective for periods commencing on or after 1 July 2009. This amendment clarifies what can be designated as a hedged item in a hedge accounting relationship and application in 2008 would not have had a material impact upon the financial statements.

Amendments to IAS 39 'Reclassification of Financial Assets': Effective Date and Transition which is effective on or after 1 July 2008. This amendment clarifies the effective date and transition requirements for the change to the standard issued in October 2008 permitting entities to reclassify non derivative financial assets out of the fair value through the income statement category in particular circumstances. The application of this amendment would not have affected the financial statements as the Group accounting policy accords with the requirements.

Revised IFRS 3 'Business Combinations' and amended IAS 27 'Consolidated and Separate Financial Statements' These changes are effective for periods beginning on or after 1 July 2009 with the main effects being that the cost of investment will comprise the consideration paid to the vendors for equity with acquisition costs being expensed immediately; goodwill will be accounted for only upon the acquisition of a subsidiary as subsequent changes in interest will be recognised in equity and only upon the loss of control will any profit or loss be recognised in income. Further, any pre-existing stake held will, where control is subsequently gained, be revalued with any profit or loss arising being booked to income. These changes will affect the manner in which acquisitions and disposals made by the Group are accounted for after the implementation of the revised Business Combinations standard and related revisions to IAS 27.

4 (Loss)/Profit on Sale of Businesses

Non-operating income consists of the following:

	2008	2007	2006
	£m	£m	£m
Loss on the sale of Bank of Western Australia Ltd and St. Andrews Australia Pty Ltd	(845)		
Profit on the sale and leaseback of certain branch premises	20	28	22
Profit on the part disposal of Rightmove plc (Note 21)	56	59	17
Distribution from Visa Inc shares listing	26		
Profit on the sale of Insight Investment Management (C.I.) Limited		4	
Profit on the dilution of shareholding in Invista Real Estate Investment Management Holdings plc			22
Profit on the sale of Retail Financial Services Limited			9
Profit on the sale of Drive Financial Services LP			180
	(743)	91	250

On 8 October 2008, the HBOS Group agreed the sale of part of its Australian operations, principally Bank of Western Australia Ltd and St. Andrews Australia Pty Ltd, to Commonwealth Bank of Australia Limited. The sale completed on 19 December 2008 and results in a pre-tax loss on disposal of £845m (including goodwill written-off of £240m) which is included as non-operating income within the (loss)/profit on sale of businesses for the year.

Under the share sale agreement HBOS plc has provided certain warranties to Commonwealth Bank of Australia, that all relevant, material circumstances and facts in relation to the sale have been disclosed and described in agreement. The share sale agreement provided for adjustments to the initial purchase price based on the risk weighted assets of Bank of Western Australia Limited and the net assets of St. Andrews Australia Pty Limited. As a result, the loss on sale of these businesses may be subject to adjustment for the contingent element of the commitment receivable.

Following the sale, HBOS retains a presence in Australia through Bank of Scotland International (Australia) Limited and Capital Finance Australia Limited which are engaged in corporate banking and asset finance activities respectively, together with the Bank of Scotland plc Sydney branch and therefore this sale does not constitute a discontinued activity. As such, the performance of the businesses sold and the loss on disposal remains within the profit arising from continuing operations of the Group. These businesses are reported in International division for segmental reporting purposes.

Annual cash incentive for 2006 (1)			3,259	3,259
Total			9,577	8,921

(1) The annual cash incentive 2006 includes Peter Cummings £825,000, Jo Dawson £211,000, Andy Hornby £606,000, Colin Matthew £400,000, Former Directors £1,217,000.

Emoluments

No bonuses were paid to any Directors with respect to 2008 following waiver by the Directors of their respective rights to receive these bonus payments. Remuneration in respect of Non-executive Directors consists solely of fees. No short or long term bonuses or benefits were paid to any of the Non-executive Directors in the year.

The Group did not make any payments to Directors' pensions during the year. The table above includes in "taxable benefits and allowances" the non-pensionable cash allowances payable to Executive Directors in lieu of any further service-related pension accrual. The cash allowance was equivalent to 25% of salary, payable monthly. The allowances paid in 2008 were: Peter Cummings £168,833; Jo Dawson £153,833; Mike Ellis £162,500; Philip Gore-Randall £138,000; Andy Hornby £256,000; Colin Matthew £157,416; Dan Watkins £130,000; Phil Hodgkinson £53,750.

During the year the non-pensionable cash allowance for Andy Hornby was increased by the Remuneration Committee of the Group to 50% of salary with effect from April 2006. Andy Hornby waived his entitlement to receive this incremental backdated increase of £645,000. His allowance of £256,000 is equivalent to 25% of salary in 2008 as paid to all other Executive Directors.

Comparative year end totals of emoluments excluding the non-pensionable cash allowances are also shown in the table above.

Pension contributions paid, or treated as paid in the year, was nil (2007 £5,000, 2006 £34,000) to defined benefit schemes and nil (2007 nil, 2006 nil) to money purchase schemes and were attributed to nil Directors (2007 one, 2006 four). Nil contributions related to the highest paid Director (2007 nil, 2006 £7,000) resulting an accrued pension of £240,000 at the year end (2007 £344,000, 2006 £184,000). Nil (2007 nil, 2006 nil) was paid to past Directors in respect of retirement benefits in excess of their normal entitlements.

The fees paid to Dennis Stevenson comprise a payment made to him personally in respect of his service as Chairman of the Group of £795,000 (2007 £707,500, 2006 £628,000).

From 1 May 2007 the basic Board membership fee payable to Non-executive Directors was at a rate of £66,000 p.a. and from 1 May 2008 this basic Board membership fee was increased to a rate of £70,000 p.a. The basic Board membership fee covers the full range of duties and responsibilities associated with Non-Executive Directorship, including attending Board meetings and the Group's Annual General Meeting.

Notes to the Financial Statements
continued

9 Directors' Remuneration continued

The figures shown in the table above also include, in respect of Non-executive Directors, fees for service on Committees of the Board and, where relevant, fees for services as Directors of Subsidiaries and Joint Ventures and for service on other Committees.

The taxable benefits and allowances payment to Dennis Stevenson comprises a Distant Accommodation Allowance of £20,000 p.a.

Taxable benefits and allowances for the Executive Directors comprise, where relevant, the benefit in kind values of company cars, healthcare, life assurance, concessionary rate mortgages and, a contribution towards the cost of providing distant accommodation away from the Executive Director's primary residential area, as well as the non-pensionable cash allowance mentioned earlier.

Resignations and terminations

Phil Hodgkinson retired as main board Director on 30 April 2008. He received no termination payment, and his pension benefits, based on service to 5 April 2006 (when further service based accrual ceased) and final pensionable salary at retirement, were reduced for early retirement based on the period between his retirement date and his 55th birthday in line with his contractual entitlements having served 5 years as an Executive Director.

Charles Dunstone stood down as Non-executive Director from the Board immediately following the Group's Annual General Meeting on 29 April 2008. Termination payments are not made to Non-executive Directors and no such payment was made to Charles Dunstone.

On 16 January 2009, on the acquisition of the Group by Lloyds TSB Group plc (now Lloyds Banking Group plc (LBG)) becoming effective, the Chairman and all other Directors of the Group (other than Jo Dawson, Philip Gore-Randall and Dan Watkins) were required to resign from the Board of the Group. Jo Dawson, Philip Gore-Randall and Dan Watkins will resign from the Board of the Group during 2009. For departing Executive Directors, the total payments and pension arrangements put in place at the termination of their respective employments do not, or will not, (as the case may be) go beyond their legal entitlements. No severance payments will be made to Jo Dawson or Dan Watkins on their resignation from the Board of the Group, as they continue to be employed by LBG.

On termination of their contracts by the Group, Messrs Hornby and Stevenson waived their respective entitlements to receive their contractual severance payments under their service agreements. Andy Hornby received a statutory redundancy payment of £2,970.

It was agreed that, on termination of their contracts, the following Executive Directors would receive payments in lieu of notice (equivalent to 12 months' salary) in accordance with their contractual entitlements; for entering into certain post-termination restrictive covenants (approximately £10,000); and, in the case of Peter Cummings and Colin Matthew, statutory redundancy. In total, these payments are as follows: Peter Cummings £702,080; Mike Ellis £670,500; Philip Gore-Randall £568,000; Colin Matthew £656,405. No payments were made with respect to further service based pension accrual, or in lieu of pension. On termination of his contract, Peter Cummings waived his right to receive a contractual bonus entitlement of £1,320,000 which had been earned in 2007 but deferred pursuant to its terms.

Pensions

The pension entitlements of the Executive Directors who were active members of the HBOS Final Salary Pension Scheme (the Scheme) as at 31 December 2008 are set out in the table below:

Executive Directors' pension entitlements

Name	Age at 31/12/08	Accrued pension at 31/12/08 £'000 pa	Increase in accrued pension over year (net of inflation) £'000 pa	Increase in accrued pension over year (net of inflation) £'000 pa	Transfer value at 31/12/08 £'000	Increase in transfer value £'000	Transfer value of net increase
							to accrued pension (less Director's contributions at 31/12/08) £'000
P Cummings	53	369	25	7	7,090	1,120	141
J Dawson	46	100	11	6	1,394	210	85
A Hornby	41	240	20	9	2,813	406	103
C Matthew	58	416	18	(1)	9,089	1,290	(32)
D Watkins	46	218	56	47	2,845	873	619

The accrued pension at 31 December 2008 is the pension which the Director would have been entitled to receive based on his/her completed pensionable service, had he/she left on 31 December 2008 payable from normal retirement age (age 60) and subject to revaluation increases between leaving and retirement.

The transfer values are based on the accrued pensions at 31 December 2008. The transfer value basis was reviewed during 2008 to take account of changes in legislation for the calculation of such values and the change in financial markets. The resulting increase in the transfer values is predominantly as a result of applying the new basis to the accrued pensions at 31 December 2008. The transfer values are the notional lump sums which would have been paid to another pension scheme for the benefit of the Director had he or she left service at the respective dates. It is not possible for a transfer value to be paid directly to the Director personally.

Notes to the Financial Statements
continued

9 Directors' Remuneration continued

The Director's contribution is the personal contribution required, if any, under the terms of the Scheme. Members of the Scheme have the option to pay additional voluntary contributions: neither the additional voluntary contributions nor the resulting benefits are included in the table.

For those Directors whose benefits were above the "Lifetime Allowance" at "A-day", there will be no further service accrual of benefits and no further Directors' contributions*. Those Directors receive the non-pensionable cash allowance referred to previously.

Philip Gore-Randall is not included in the Scheme and simply receives the cash allowance referred to previously. Mike Ellis is in receipt of a pension from his earlier employment with the Group which is unaffected by, and independent of, his current employment. In respect of his current employment he receives the cash allowance referred to previously.

Pension is generally based on retirement from service at normal retirement age (age 60) and is based on final salary. Pension and lump sum life assurance is provided from the Scheme and otherwise from separate arrangements with the Group. On death after retirement or after leaving service, a spouse's or dependant's pension may be payable. Children's benefits may also be payable. Executive Directors who have five years' service as an Executive Director have a contractual right to retire at age 55 or above with a non-reduced pension and at age 50 or above (but below age 55) with a reduced pension.

Pension increases after retirement are a mixture of guaranteed and discretionary. Scheme provisions vary by individual; the maximum extent of the Scheme guarantees is to increase pensions in line with the RPI, subject to a maximum of 5% p.a. and a minimum of 3% p.a. (no minimum for pensionable service after 31st March 2004). There is an established policy of reviewing pensions on a discretionary basis taking account of increases in the RPI. Allowance is made in transfer values on leaving in respect of the guaranteed and discretionary increases outlined above.

Peter Cummings and Colin Matthew retired on termination of their respective employments with the Group on 16 January 2009, as referred to in Resignations and Terminations above. Pension benefits for Colin Matthew were provided without reduction for early payment, based on his service to 5 April 2006 (when further service based accrual ceased) and his final pensionable salary at retirement in line with his contractual right as set out above.

Pension benefits for Peter Cummings were provided in accordance with the Group's standard policy for Directors and senior managers retiring at age 50 and above. In such a case where a Director or senior manager retires by way of redundancy the Group does not reduce the pension payment to reflect retirement after the Director's or senior manager's 55th birthday. The notional additional capital cost of providing benefits for Peter Cummings in accordance with this policy was £0.7m. An actuarial reduction of 4.75% for early retirement based on the period between his retirement date and his 55th birthday was applied to his pension benefits based on service to 5 April 2006 (when further service based accrual ceased) and his final pensionable salary at retirement. As a result, and in waiving his entitlement to receive his contractual bonus of £1,320,000 referred to in 'Resignations and Terminations' above, Peter Cummings received in total less than his legal entitlements.

Potential pre-tax gains on share options exercised

During the year, two Directors exercised 2,045 options (2007 four Directors and 146,814 options, 2006 3 Directors and 52,514 options) under share option schemes. The highest paid Director did not exercise any share options (2007 600 share options, 2006 none).

Shares vested under long term incentive schemes

During the year, one Director (Peter Cummings) had a share grant of 43,350 released (2007 eight Directors had share grants of 530,101 released, 2006 five Directors had share grants of 598,416 released) under long term incentive schemes, in accordance with his contractual entitlement under the rules of the schemes. This relates to the 2003-2006 Long Term Incentive Plan which was granted in January 2003. As explained in previous annual reports, all participants could choose to take any shares released after three years based on a three year performance outcome or could continue to participate in the plan for a further two years and take shares at that point based on the better of the three year and five year performance outcomes. Peter Cummings elected to continue to participate in the plan for the further two years to the end of 2007. HBOS's Total Shareholder Return over the five year performance period exceeded the weighted average of the comparator group by 1.57% consequently 183% of the original share grant was released under the terms of the long term incentive scheme on 27 February 2008. No share grant was released (2007 a share grant of 36,223, 2006 a share grant of 148,641) under long term incentive plans in respect of the highest paid Director.

* Dan Watkins has an element of pre April 2006 pension accrual being released over the period to April 2011.

Notes to the Financial Statements
continued

9 Directors' Remuneration continued

Shares vested under short term incentive schemes

During the year, seven Directors had share grants of 428,938 released (2007 seven Directors had share grants of 121,744 released, 2006 five Directors had share grants of 101,045 released) under short term incentive schemes. As explained in previous annual reports, Executive Directors could elect to take their annual and biennial incentives in HBOS shares. If they elected to do so, and held the shares in trust for three years, additional shares were awarded. The release of these 428,938 shares relates to the shares placed in trust using short term incentive plan awards in 2004 together with the additional shares awarded following the three year holding period. In respect of the highest paid Director, a share grant of 49,191 was released (2007 a share grant of 5,710, 2006 a share grant of 32,908) under short term incentive plans. In addition a special award originally granted in 2002 of 212,739 shares was also released. None of these releases related to performance in 2008.

The value of additional shares is shown net of income tax and National Insurance liability although the value of the additional shares was grossed up to take account of the associated income tax and National Insurance payable by the participant.

Value of shares vested under free shares plan

During the year, 2,674 (2007 nil, 2006 nil) free shares relating to six Directors (2007 no Directors, 2006 no Directors) vested. In the year, seven (2007 six, 2006 none) directors were awarded shares under the free shares plan (see Note 40 for further detail). In respect of the highest paid Director, 333 (2007 nil, 2006 nil) free shares vested in the year.

The net value of assets other than money, shares and options received by the all the Directors was nil.

Change of control

All of the HBOS share plans contained a provision relating to change of control. The acquisition of HBOS by LBG resulted in awards and options vesting and becoming exercisable, in accordance with contractual entitlements under plan rules. Certain awards were exchanged for awards over LBG ordinary shares, but otherwise subject to the same terms as the original award. Certain options will also be exchanged to the extent they have not been exercised within the 6 month exercise period following the change of control.

Where the vesting of awards and options were subject to the satisfaction of performance conditions, in accordance with the plan rules and the terms of such conditions, the Remuneration Committee of the Group determined the extent to which such awards and options vested by taking into account the level of performance. In relation to the Directors, the Remuneration Committee exercised this discretion by reducing vesting to exclude any payments in relation to the 2008 financial year.

The total payments made to Directors of the Group on change of control were Peter Cummings, £129,000 and 2,051 share options; Jo Dawson £139,000 and 3,330 share options; Mike Ellis £83,000; Philip Gore-Randall £73,000; Andy Hornby £251,000 and 7,599 share options; Colin Matthew £151,000; and Dan Watkins £88,000 and 3,330 share options.

10 Auditors' Remuneration

Edgar Filing: Lloyds Banking Group plc - Form 6-K

During the year the Group (including its overseas subsidiaries) obtained the following services from the Group's auditor and its associates:

	2008	2007	2006
	£m	£m	£m
Statutory audit of the Group and consolidated accounts	0.3	0.3	0.3
Fees payable for other services:			
Audit of the Group's subsidiaries pursuant to legislation	6.7	7.7	6.5
Other services pursuant to legislation	7.1	1.0	1.4
Total audit fees and audit related services	14.1	9.0	8.2
Tax services	0.5	0.8	0.9
Services relating to information technology		0.1	0.3

11 Segmental Analysis

Principal activities of the HBOS Group are the provision of banking and other financial services in the UK and overseas.

The Group's activities are organised on a divisional basis which reflect the business sector segments below. Group Items principally comprises the expenses of managing the Group, including technology so far as it is not devolved to divisions, accommodation and other shared services such as cheque clearing and mailing.

11 Segmental Analysis continued

Business sector

In July 2008 the Group announced a divisional reorganisation under which the Group's Business Banking became part of Corporate division, moving from Retail division. In addition, there was a transfer of Trading Cash Management from Treasury to Corporate division. Accordingly the 2007 comparatives have been reclassified to reflect this new structure and certain other minor reorganisations. There is no impact on the 2007 Consolidated Balance Sheet and Income Statement as previously published.

13 Taxation

The tax credit for the year of £3,409m (2007 tax charge of £1,365m, 2006 tax charge of £1,772m) includes a £893m tax credit (2007 £18m tax charge, 2006 £220m tax charge) in respect of the tax attributable to the policyholder earnings in the Group's UK life companies. The 2007 tax charge of £1,365m includes a credit of £178m in respect of the change in the rate of UK corporation tax. An overseas tax charge of £233m (2007 £293m) is within the tax credit of £3,409m.

	(2,964)	21	661
Total income tax on (loss)/profit	(3,409)	1,365	1,772

The above tax expense is made up as follows:

Tax on policyholder returns	(893)	18	220
Tax on shareholder returns	(2,516)	1,347	1,552

The main UK corporation tax rate reduced from 30% to 28% in April 2008. The average rate of UK corporation tax for the year to December 2008 is 28.5%.

The effective tax rate for the year is 31.5% (2007 24.9%, 2006 31%) which is higher (2007 lower, 2006 higher) than the average rate of 28.5%. The difference are explained below:

In addition there is £nil (2007 £1m, 2006 £nil) recognised in equity relating to changes in the rates of corporation tax (Note 34).

14 Earnings Per Share

Basic and diluted earnings per ordinary share are based upon Group (loss)/profit attributable to ordinary shareholders of £(7,580)m (2007 profit £3,965m, 2006 profit £3,820m) which is calculated as follows:

	2008	2007	2006
	£m	£m	£m
(Loss)/profit attributable to parent company shareholders	(7,499)	4,045	3,879
Profit attributable to preference shareholders	(81)	(80)	(59)
Profit of disposal group held for sale attributable to ordinary shareholders			(3)
(Loss)/profit attributable to ordinary shareholders for continuing operations	(7,580)	3,965	3,817

Edgar Filing: Lloyds Banking Group plc - Form 6-K

The average number of ordinary shares in issue in the prior years has been adjusted by the adjustment factor of 1.001 arising from the Rights Issue and by a factor of 1.026 arising from the Capitalisation Issue. The impact on previously published comparatives is as follows:

	as published		reclassified	
	2007		2007	
Average number of ordinary shares in issue for basic EPS (millions)	3,735		3,835	
- Earnings (basic)	106.2	p	103.4	p
- Earnings (diluted)	105.5	p	102.8	p
	as published		reclassified	
	2006		2006	
Average number of ordinary shares in issue for basic EPS (millions)	3,796		3,898	
Basic earnings per ordinary share:				
- Continuing operations	100.5	p	97.9	p
- Disposal group	0.1	p	0.1	p
- Total	100.6	p	98.0	p
Diluted earnings per ordinary share:				
- Continuing operations	99.4	p	96.9	p
- Disposal group	0.1	p	0.1	p
- Total	99.5	p	97.0	p

Notes to the Financial Statements
continued

14 Earnings Per Share continued

To calculate basic earnings per ordinary share the weighted average number of 25p ordinary shares is used and for diluted earnings per ordinary share the weighted average number of actual and potential 25p ordinary shares is used. Details of these are given below:

	2008 Number million	2007 Number million (reclassified)	2006 Number million (reclassified)
Actual weighted average number of shares in issue	4,518	3,835	3,898
Effect of dilutive share options and shares potentially to be issued or allotted	17	23	42
Potential weighted average number of shares in issue	4,535	3,858	3,940

The basic and diluted earnings per ordinary share are given below:

	2008 pence	2007 pence (reclassified)	2006 pence (reclassified)
Earnings per ordinary share (continuing operations)			
Basic	(167.8)	103.4	
Diluted(1)	(167.8)	102.8	
Earnings per ordinary share			
Basic - continuing operations			97.9
Basic - disposal group			0.1
Basic - total			98.0
Diluted1- continuing operations			96.9
Diluted1- disposal group			0.1
Diluted1- total			97.0

(1) The effect of dilutive share options and shares potentially to be issued or allotted has not been included in the calculation of diluted earnings per share for 2008 because doing so would have an anti-dilutive effect.

15 (Loss)/Profit Attributable To Equity Shareholders

Of the loss attributable to equity shareholders a loss of £1,902m (2007 profit £1,731m) is dealt with in the financial statements of the Parent Company.

16 Financial Instruments Held for Trading

Financial assets and liabilities held for trading (other than derivatives) are as follows:

	2008 £m	2007 £m
Financial assets held for trading		
Debt securities	13,538	36,723
Loans and advances to banks	3,344	11,601
Loans and advances to customers	5,689	6,357

Financial liabilities held for trading		
Debt securities in issue		469
Deposits by banks	7,631	8,989
Customer accounts	11,220	13,247
Total	18,851	22,705

Financial assets held for trading include £4,369m (2007 £4,711m) subject to repurchase (Note 54).

F-34

Notes to the Financial Statements
continued

16 Financial Instruments Held for Trading continued

Following the International Accounting Standards Board's (IASB) decision in October 2008 to permit the reclassification of Financial Assets, the Group's Treasury division reclassified certain securities from assets held for trading into the available for sale (AFS) portfolio, and subsequently, in light of increasing illiquidity in the markets for asset backed securities (ABS), changed the classification of ABS from AFS to loans and receivables. Further details of these reclassifications are shown in Note 45.

17 Derivatives

The Group's derivative transactions are either customer driven and generally matched, held within policyholder funds as permitted by the investment strategies or are carried out for proprietary purposes within limits approved by the Board. Where a derivative held for economic hedging purposes does not qualify for hedge accounting, it is classified below as held for trading.

The Group uses interest rate swaps, cross currency swaps and other derivative instruments to hedge and reduce the interest rate and currency exposures that are inherent in any banking business. The hedge accounting strategy adopted by the Group is to utilise a combination of the macro cash flow, micro fair value and net investment hedge approaches.

19 Securitisation and Covered Bonds

a) Securitisation

Loans and advances to customers include advances securitised under the Group's securitisation programmes, the majority of which have been sold by subsidiary companies to bankruptcy remote special purpose entities (SPEs). As the SPEs are funded by the issue of debt on terms whereby some of the risks and rewards of the portfolio are retained by the subsidiary, the SPEs are consolidated fully and all of these advances are retained on the Group's balance sheet, with the related notes in issue included within debt securities in issue.

b) Covered bonds

Certain loans and advances to customers have been assigned to bankruptcy remote limited liability partnerships to provide security to issues of covered bonds by the Group. The Group retains substantially all of the risks and rewards associated with these loans and the partnerships are consolidated fully with the loans retained on the Group's balance sheet, with the related covered bonds included within debt securities in issue.

The Group's principal securitisation and covered bonds programmes, together with the balances of the advances subject to notes in issue at 31 December, are listed below. The notes in issue are reported in Note 37.

	Type of loan	2008		2007

	55,231	52,327	37,065	39,834
Total securitisations and covered bonds	169,028	170,995	83,051	86,251
Less loan notes held by the Group	(97,363)	(94,265)	(1,258)	(1,258)
Total	71,665	76,730	81,793	84,993

The balances reported for the Prominent securitisation above include £456m (2007 £459m) advances and £456m (2007 £459m) notes in issue that arise from a funded synthetic securitisation.

Cash deposits of £12,423m (2007 £5,144m) held by the Group are restricted in use to repayment of the debt securities issued by the SPEs and other legal obligations.

In addition to the programmes noted above, the Group entered into synthetic securitisations, referencing an asset pool of £nil (2007 £14,089), using credit default swaps of of £nil (2007 £40m).

In total the Group has securitised £97,363m of mortgage assets under certain securitisation and covered bond programmes and purchased all of the loan notes in issue relating to those issuances for £94,265m. These transactions did not lead to any derecognition of the mortgage assets as the Group has retained all of the risks and rewards associated with the loan notes. See Note 54 for further details about the Group's repurchase transactions.

Notes to the Financial Statements
continued

19 Securitisation and Covered Bonds continued

c) Other Special Purpose Entities

In addition to the SPEs described above, the Group sponsors two conduit programmes, Grampian and Landale, which invest in asset-backed securities funded by commercial paper or through banking facilities. Details of the assets secured under these conduit programmes are given in Note 20.

The SPEs within these conduit programmes are consolidated fully, except for two of the five SPE's within Landale. One is the central funding company for the conduit that obtains external funding and lends it to the purchasing companies. The second is a purchasing company that has acquired floating rate notes issued under the Group's mortgage securitisation programmes and which is supported by liquidity lines that are provided by third party banks. These entities are not consolidated as there are insufficient indicators of control, in particular as the credit risk relating to the assets held by the entities and the liquidity risks are not borne by the Group. If these two entities were consolidated by the Group the financial impact would be minimal with the principal effects increasing deposits by banks by £1,126m (2007 £1,756m) and customer accounts by £51m (2007 £100m) and increasing debt securities in issue by £50m (2007 decrease by £1,856m). Group profit before tax would be increased by £2m (2007 £0.5m).

20 Investment Securities continued

Included in investment securities is £37,263m (2007 £8,996m) subject to repurchase (Note 54).

Following the International Accounting Standards Board's (IASB) decision in October 2008 to permit the reclassification of financial assets, Treasury reclassified certain securities from the Trading Book into the available for sale (AFS) portfolio, and subsequently in light of increasing illiquidity in the markets for asset backed securities (ABS), changed the classification of ABS from AFS to loans and receivables. Further details of these reclassifications are shown in Note 45.

The fair value movement during the year on investment securities held at fair value through the income statement is a loss of £13,415m (2007 gain of £1,014m, 2006 a gain of £3,679m) and the fair value movement during the year on investment securities classified as available for sale is a loss of £8,173m (2007 a loss of £429m, 2006 a gain of £135m).

Loans and receivables debt securities include ABS of £17,703m (end 2007 available for sale debt securities £18,563m, 2006 £19,017m) which are held in the Group's Grampian conduit. This is a series of bankruptcy remote special purpose entities (SPEs) that are funded by the issue of commercial paper and banking facilities. The commercial paper is included within debt securities in issue. As some of the rewards and risks of the portfolio are retained by the Group, including the provision of liquidity facilities by Bank of Scotland plc to the conduit, the assets and liabilities of the conduit are consolidated as part of the Group. The Group also has a smaller conduit, Landale, of which three of the five SPEs are consolidated. These hold available for sale debt securities of £681m (2007 £604m). Details of the Landale SPEs that are not consolidated by the Group are given in Note 19.

21 Interests in Jointly Controlled Entities and Associates continued

The Group's main jointly controlled entities at 31 December 2008 are as follows:

	Nature of business		Issued share capital	Group's interest	Statutory accounts made up to	Principal area of operations
Jointly controlled entities						
AA Personal Finance Limited	Finance	ordinary	£3,000,002	50%	December 2008	UK
esure Holdings Ltd	Insurance	ordinary	£3,330,000	70%	December 2008	UK
		preference	£175,170,000	100%		
Green Property Investment						
Fund 1 plc	Investment	ordinary	€41,198,100	50%	June 2008	Ireland
Sainsbury's Bank plc	Banking	ordinary	£170,000,000	50%	December 2008	UK

During the year, the Group reviewed the classification of its investments in jointly controlled entities and associates together with its long term investment loans to joint ventures (collectively the Group's longer term interests in jointly controlled entities and associates), in light of the deteriorating economic environment. As a result of this review, certain longer term investment securities that in substance form part of the Group's overall net investment in jointly controlled entities and associates have been transferred from investment securities - debt securities classified as loans and receivables to interests in jointly controlled entities and associates. These longer term interests include loans for which settlement is neither planned nor likely to occur in the foreseeable future. Accordingly, the Group's interests in jointly controlled entities and associates have been reclassified on the 2007 consolidated balance sheet as shown below. There is no overall impact on the net assets at 31 December 2007 as a result of this restatement. Certain 2007 disclosures have been amended accordingly.

The Group's main jointly controlled entities and associates in operation at 31 December 2007 were as follows:

	Nature of business		Issued share capital	Group's interest	Statutory accounts made up to	Principal area of operations
Jointly controlled entities						
AA Personal Finance Limited	Finance	ordinary	£3,000,002	50%	December 2007	UK
esure Holdings Ltd	Insurance	ordinary	£3,330,000	70%	December 2007	UK
		preference	£175,170,000	100%		
Green Property Investment						
Fund 1 plc	Investment	ordinary	€48,768,400	50%	June 2007	Ireland
Sainsbury's Bank plc	Banking	ordinary	£170,000,000	50%	December 2007	UK
Associates						
Rightmove plc	Property website	ordinary	£129,399,978	13%	December 2007	UK

Except for the Green Property Investment Fund 1 plc which is incorporated in Ireland, all of the interests in jointly controlled entities above are incorporated in the UK. All interests in jointly controlled entities are held by subsidiaries. Where entities have accounts that are drawn up to a date other than 31 December management accounts are used when accounting for them by the Group. The Group's remaining holding of 13% in Rightmove plc was disposed during the

year (Note 4).

Invista Real Estate Investment Management Holdings plc	55% management	UK
St Andrews Life Assurance plc	100% Pensions	UK
St. James's Place plc	60% Financial services	UK

(a) HBOS Covered Bonds LLP does not have ordinary share capital. The Group consolidates a 100% interest in this entity.

The above information is provided in relation to the principal related undertakings and, in accordance with Section 231(5) of the Companies Act 1985, a full list of related undertakings, as at 31 December 2008, will be annexed to the Company's next Annual Return to be delivered to the Registrar of Companies for Scotland.

On 17 September 2007 in accordance with the provisions of the HBOS Group Reorganisation Act 2006 (the Act), the Governor and Company of the Bank of Scotland registered as a public limited company under the Companies Act and changed its name to Bank of Scotland plc. On the same day, under the Act, the business activities, assets (including investments in subsidiaries) and liabilities of CAPITAL BANK plc, Halifax plc and HBOS Treasury Services plc transferred to Bank of Scotland plc.

All regulated banking and insurance subsidiaries are required to maintain capital at levels agreed with the relevant regulators; this may impact those subsidiaries' ability to make distributions.

Additions	(256)	(15)
Disposals	(158)	(5)
Impairment losses charged to the income statement	1,556	1,940
At 31 December		

Goodwill is analysed on a divisional basis as follows:

	2008	2007
	£m	£m
Retail	376	455
Corporate	268	277
Insurance & Investment	850	832
International	23	337
Treasury & Asset Management	39	39
Total	1,556	1,940

The primary component of goodwill disposed of comprises £240m in respect of the sale of Bank of Western Australia Ltd and St Andrews Australia Pty Ltd to Commonwealth Bank of Australia (Note 4).

The Group carries out semi-annual and, if necessary, other impairment reviews of cash-generating units to which goodwill is allocated as described in the accounting policy on goodwill. The critical accounting estimate in respect of goodwill explains the assumptions used and sensitivity of the impairment testing.

The goodwill impairment of £158m principally comprises £72m being the full write-down of goodwill held in respect of the acquisition of the ICC business banking division in Ireland and £50m being the write-down of goodwill relating to a specialist area of the UK credit card business to a recoverable amount, based on a value in use, of £20m. The write-downs have been triggered principally by deteriorating economic conditions.

In 2007, the impairment loss of £5m related to a partial write-down of the goodwill held in respect of fund management business in Insurance & Investment division.

Cumulative impairment losses charged to the income statement total £218m (2007 £60m, 2006 £55m and 2005 £nil).

The impairment loss of £55m in 2006 principally relates to the full write down of the goodwill held in the respect of a Corporate specialist leasing company following an impairment review.

Included within Group property and equipment are assets that are in the course of construction amounting to £89m (2007 £306m, 2006 £353m) which are not depreciated until the assets are brought into use. These are primarily properties that will be classified as investment properties upon completion.

Transfer from/(to) property and equipment (Note 24)	84	19	(23)
At 31 December	3,045	4,731	5,010

The Directors determine fair value of investment properties after consultation with external valuation experts, who have recent experience in the location and category of the property being valued. Fair values were determined having regard to recent market transactions for similar properties and in accordance with guidance published by the Royal Institution of Chartered Surveyors. Valuations are performed at least annually.

Rental income and expenses in respect of the above properties amounted to £241m and £15m respectively (2007 £221m and £11m respectively, 2006 £249m and £25m respectively). At 31 December 2008 investment properties of £3,001m (2007 £4,697m, 2006 £4,917m) are held in the Insurance & Investment business.

26 Operating Lease Assets

Assets leased to customers include the following amounts in respect of operating lease assets:

	2008			2007			2006		
	Cost	Depreciation	Carrying value	Cost	Depreciation	Carrying value	Cost	Depreciation	Carrying value
	£m	£m	£m	£m	£m	£m	£m	£m	£m
At 1 January	6,483	(1,840)	4,643	6,164	(1,483)	4,681	4,370	(1,255)	3,115

Transfer from investment contracts to long term insurance contracts

During the year to 31 December 2008 changes have been made to certain investment bonds with additional life cover being added. In accordance with IFRS 4 'Insurance Contracts' this results in these products transferring from being accounted for as investment contracts to insurance contracts. This has resulted in a £281m increase in the value of in-force long term assurance business. This is partly offset by a net £96m, principally arising from a reduction in deferred origination costs, which are charged to fees and commission expense. The overall impact of this change is an increase in profit before tax of £185m.

Also included within transfers is £117m that relates to a transfer from value of in-force long term assurance business to deferred costs.

Assumptions

The key assumptions used in the measurement of the value of in-force long term assurance business relating to insurance contracts and investment contracts with a discretionary participating feature (DPF) are determined by the Board of Directors.

The economic assumptions that have the greatest effect on the calculation of the value in-force long term assurance business are set out below.

The experience assumptions set out in Note 30 also have a significant effect on the cash flow projections. The selection of these assumptions also requires the application of material judgement and is made with reference to historic trends, taking into account the analysis of actual versus expected experience as well as industry data.

Additional information on the long term assurance business risk is set out in the Risk Management Note 57.

Discount rate

The discount rate is used to calculate the present value of the future projected cash flows.

In 2008 each cash flow is valued using the discount rate consistent with that applied to such a cash flow in the capital markets. In practice, to achieve the same result, where the cash flows are either independent of or move linearly with market movements, a method has been applied known as the 'certainty equivalent' approach whereby it is assumed that all assets earn the risk free rate and all cash flows are discounted at the risk free rate. The risk free rate assumed in valuing in-force business is equal to the 15 year gilt yield. This applies to all business with the exception of immediate annuity business.

Notes to the Financial Statements
continued

28 Value of In-Force Long Term Assurance Business continued

The discount rate for annuity business is assumed to be higher than the risk free rate. Assets backing immediate annuity business are invested in a mix of government stocks and corporate bonds, which are generally held to maturity. The yield on corporate bonds typically exceeds the risk free rate, partly reflecting the risk of default, but also reflecting a premium required by investors as compensation for lower liquidity when compared with government stocks. The discount rate for annuity business is based on the risk free rate with an allowance for this 'liquidity premium'. It is assumed that the premium over the risk free rate is equal to 75% of the spread between the yield on HBOS's portfolio of corporate bonds and the yield on government stocks.

In 2007 the risk discount rate was increased to reflect the uncertainty associated with the projected cash flows. This increase can be broken down into two principal components, being the market risk component and the non-market risk component.

The market risk component represented an allowance for uncertainty as to the level of future margins that would actually be achieved by the Group's investments. The level of the market risk component was chosen so as to avoid capitalising any investment risk premiums over the long term view of the risk free rate of return. Following the move to the certainty equivalent approach in 2008, this adjustment is no longer required as it is assumed that all assets earn the risk free rate.

The non-market risk component represented an additional allowance in the risk discount rate to reflect the potential volatility of, and uncertainty around, the future level of non-market risk inherent in the contracts. In 2008 this has been replaced by an explicit allowance for non-market risk, as described below.

The breakdown of the discount rate is shown in the table below:

	2008	2007	2006
	%	%	%
Long term view of risk free rate of return	3.74	5.0	5.0
Market risk component	n/a	1.0	1.0
Non-market risk component	n/a	2.0	2.0
Total	3.74	8.0	8.0

Investment return

In 2008 it is assumed that all assets earn the risk free rate, in line with the certainty equivalent approach described above, with the exception of immediate annuity business. For annuity business the assumed return is equal to the risk free rate plus the allowance for the liquidity premium, calculated as described for the discount rate above.

In 2007 assumptions were set for each individual asset class based on the long term view of expected returns, and weighted to produce an investment return assumption for each particular class of business. The weighting was based on the long term asset allocation strategy for each class of business. In 2007 the long term view of expected returns was 5.0-5.5% for fixed interest securities and 7.5% for equities.

Expenses

Operating expense assumptions reflect the projected costs of maintaining and servicing in-force insurance contracts and investment contracts with DPF and associated overhead expenses. The current level of expenses is taken as an appropriate expense base. The current expenses are analysed having regard to the volume and type of business in force to derive per contract expense assumptions. These per policy expense assumptions are assumed to increase over the course of the projections in line with expected expenses over the plan period reverting to an assumed expense inflation rate of 3% (2007 3%, 2006 3%) thereafter.

Non-market risk

An allowance for non-market risk is made through the choice of best estimate assumptions based upon experience, which generally will give the mean expected financial outcome for shareholders and hence no further allowance for non-market risk is required. However, in the case of operational risk and the with-profits fund there are asymmetries in the range of potential outcomes for which an explicit allowance is made.

Changes in assumptions

During the year, the certainty equivalent approach described above was adopted, whereby it is assumed that all assets earn the risk free rate and all cash flows are discounted at the risk free rate. This applies to all business with the exception of immediate annuity business, for which the discount rate is based on the risk free rate plus an allowance for the liquidity premium. The certainty equivalent approach has the effect of increasing the value of in-force business assets by £143m in 2008, but has no effect on the valuation of the related insurance contract liabilities.

In addition to this, there were a number of changes to the underlying experience assumptions used to estimate the cashflows from the long term assurance business. The selection of these assumptions also requires the application of material judgement and is made with reference to historic trends, taking into account the analysis of actual versus expected experience as well as industry data.

Sensitivities

The tables below indicate the stand alone impact of changes to certain key variables on long term assurance business, this includes the impact on long term insurance contracts, investment contracts with DPF, value of in-force long term assurance business and related financial assets in support of the long term business but excluding those relating to investment contract liabilities.

Notes to the Financial Statements

Long term insurance contract liabilities

The Group principally writes the following long term contracts which contain insurance risk. The contracts also contain financial risk. The principal risks associated with each type of contract are described below.

Life assurance – The policyholder is insured against death or permanent disability usually for predetermined amounts (principally mortality and disability risk).

Annuity products – The policyholder is entitled to payments for the duration of their life and is therefore insured for living longer than expected (principally longevity and market risk).

Edgar Filing: Lloyds Banking Group plc - Form 6-K

With-profit business – The primary purpose of these products is to provide a long term smoothed investment vehicle to the policyholder, protecting them against short term market fluctuations. The policyholder is also usually insured against death and the policy may carry an annuity option at maturity (principally market risk).

Unit-linked business – The primary purpose of these products is to provide an investment vehicle but where the policyholder is also insured against death (principally market risk).

Additional information on the risk associated with the long term assurance business is set out in note 57.

The table below sets out the extent of the above exposures based on the carrying value of the liabilities:

			2008			2007
	Insurance	Reinsurers'	Net	Insurance	Reinsurers'	Net
	contract	share of	insurance	contract	share of	insurance

30 Insurance Contract Liabilities continued

Guarantees and options

The products with the most significant guarantees and options are certain with-profit bonds which allow surrenders at specified dates without market value adjustments being applied and withdrawals to be taken without penalty; certain contracts which provide guaranteed minimum levels of return on policyholder contributions made to the contract; and certain pension contracts containing an option that allows the policyholder to take an annuity benefit at any time between their 60th and 75th birthday on annuity rates that were guaranteed at the outset of the contract. There are no other material guarantees and options within the long term assurance business other than those discussed above.

For contracts where there are guarantees and options the most significant factor in determining the cost of the guarantees and options (other than economic conditions in which the option or guarantee has value) is the actual take up rate of options. The most significant factor in determining take up rates is customer behaviour which is influenced by a number of factors including the value of the contract, and the financial circumstances of the individuals. The financial impact is dependent on the value of corresponding investments, interest rates and longevity at the time of the claim.

In order to measure the risk of these guarantees, the Group makes use of statistical modelling techniques where appropriate to determine the possible and most likely range of outcomes. To help mitigate the risks, the Group makes use of matching techniques in order to hedge part of the expected cash flows arising under the guarantees in these contracts with financial instruments.

Experience and valuation rates of interest assumptions

The assumptions used in the measurement of insurance liabilities are determined by the board of directors. Material judgement is required in the choice of assumptions relating to insurance contracts.

The assumptions that have the greatest effect on the measurement of the insurance contract liabilities are set out by type of business below.

Mortality and longevity rates

The process used to determine the Group's mortality and longevity assumptions starts with an internal investigation of the Group's actual mortality experience over the last five years. This investigation is updated regularly.

The results of this investigation are considered in the context of a number of factors including the credibility of the results (which will be affected by the volume of data available), any exceptional events that have occurred during the period being considered, any known or expected trends in underlying data and relevant published market data.

The rates derived from the Group's experience are adjusted in the light of the factors mentioned above to derive a set of 'best estimate' rates. No deliberate margins for prudence are introduced as part of this process. These 'best estimate' assumptions will be used in the projection of 'best estimate' cash flows, such as the measurement of the value of in-force long term assurance business.

For insurance contracts within the non-profit funds, the liabilities are assessed on a prudent basis and hence the rates used need to include a margin for adverse deviation that will increase liabilities and provide some protection from the risk that actual experience is worse than the 'best estimate' assumptions.

Edgar Filing: Lloyds Banking Group plc - Form 6-K

For insurance contracts within the with-profit fund, the liabilities are required to be determined using the realistic or 'best estimate' assumptions.

The mortality tables used to determine insurance contract liabilities are as follows:

	2008	2007
Non-profit policies		
Pension annuities		
Males	90% PMA92 mc (1.5% minimum improvement)	98% PMA92 mc (1.5% minimum improvement)
Females	87% PMA92 mc (1% minimum improvement)	80% PFA92 75%mc (1% minimum improvement)
Term assurances		
Males	33% - 138% TM92	24% - 79% TM92
Females	33% - 94% TF92	26% - 95% TF92
Unit-linked policies		
Life assurance and pensions	49.5% - 88% AM92/AF92	58% - 143% AM92/AF92
With-profit policies		
Life assurance and pensions	60.5% - 88% AM92/AF92	49% - 132% AM92/AF92

For life assurance policies, increased mortality rates would lead to a larger number of claims and claims occurring sooner than anticipated, increasing the expenditure and reducing profits. For annuity contracts, the opposite is true.

Notes to the Financial Statements
continued

30 Insurance Contract Liabilities continued

Lapse and surrender rates (persistency)

A lapse occurs when the termination of a contract results from the non-payment of premiums due under that contract. A surrender occurs when a policyholder decides to voluntarily terminate their contract. Paid-up and partial surrender are additional forms of lapse and surrender.

The process used to determine contract lapse and surrender rates is similar to that used to determine mortality and longevity rates. The previous experience of the Group from 2005 to 2007 is analysed using statistical techniques. As the experience can vary considerably between different product types and for contracts which have been in force for different periods, the internal analysis breaks the data down into broadly homogeneous groups for the purposes of this analysis. This analysis is updated regularly.

The most recent experience is considered along with the results of previous analyses in order to determine a 'best estimate' view of what persistency experience will be in the future. In determining this 'best estimate' view, a number of factors are considered including the credibility of the results (which will be affected by the volume of data available), any exceptional events that have occurred during the period being considered, any known or expected trends in underlying data and relevant published market data.

These 'best estimate' assumptions will be used in the projection of 'best estimate' cash flows, such as the measurement of the value of in-force long term assurance business. For insurance contracts within the non-profit funds, the liabilities are calculated assuming a prudent scenario. For insurance contracts within the with-profit fund, the liabilities are required to be determined using the realistic or 'best estimate' assumptions.

Lapse and surrender rates vary according to both contract type and the length of time a contract has been in force. No lapse and surrender rates have been presented because it is impractical to summarise the information in a meaningful manner.

The impact of an increase in lapse and surrender rates on contracts without guarantees and options would most likely result in a decrease in profits, as the contracts would no longer be in force to generate cash flows in the future. However, for certain policies with valuable guarantees and options (principally within the with-profit fund), increased lapse and surrender rates may be beneficial to the Group as the policyholder loses the ability to exercise the potentially valuable guarantee or option when their policy terminates.

Valuation rate of interest

The valuation rate of interest is the rate used to discount the projected cash flows on the contracts in order to determine the value of the liabilities as at the reporting date.

For insurance contracts within the non-profit funds, the liabilities are calculated using an estimate of the prudent valuation rate of interest determined according to specific rules set out by the Financial Services Authority.

For insurance contracts within the with-profit fund, the liabilities are calculated using a realistic or market consistent valuation rate of interest based on the prevailing economic conditions at the time of the liability assessment without further adjustment.

The valuation rates of interest used are as follows:

	2008	2007
Non-profit policies		
Pension annuities	2.2% - 4.9%	4.1% - 5.3%
Term assurances	2.5% - 3.7%	3.5% - 4.4%
Unit-linked policies		
Life assurance	3.1% - 3.4%	3.3% - 4.0%
Pensions	2.4% - 3.4%	4.1% - 4.9%

In isolation, an increase in the valuation rate of interest decreases liabilities leading to an increase in profits or vice versa.

Discretionary participating bonus rates

The distributions to policyholders with insurance and investment contracts with DPF are determined by the board of directors of subsidiaries based on local regulations and in line with arrangements in individual policy contracts. For insurance and investment contracts with DPF in the with-profit fund, the distributions to policyholders are governed by the fund's Principles and Practices of Financial Management. No material changes were made to the distribution policies for insurance and investment contracts with DPF during the year under review.

Changes in experience and valuation rate of interest assumptions

The only significant changes to the assumptions used to calculate the value of policyholder liabilities at the year ended 31 December 2008 from those used at the year end 31 December 2007 were due to the change in valuation rates of interest which were updated to reflect prevailing economic conditions at the balance sheet date. The valuation rate of interest assumptions were broadly matched by changes in the valuation of investment securities.

Notes to the Financial Statements

30 Insurance Contract Liabilities continued

General insurance contract liabilities

The insurance business's general insurance claim provisions including IBNR by policy type are set out in the table below:

	2008			2007		
	Gross claims provisions	Reinsurers' share of claims provisions	Net claims provisions	Gross claims provisions	Reinsurers' share of claims provisions	Net claims provisions
	£m	£m	£m	£m	£m	£m
Repayment insurance	113	(4)	109	94		94
Household insurance	104		104	192		192
Other insurance	3		3	12		12
Total	220	(4)	216	298		298

Assumptions

For general insurance contracts, claims provisions (comprising provisions for claims reported by policyholder and IBNR claims) are established to cover the ultimate costs of settling the liabilities in respect of claims that have occurred and are estimated based on known facts and anticipated experience at the balance sheet date. The provisions are refined as part of a regular ongoing process as claims experience develops, certain claims are settled and further claims are reported. Outstanding claims provisions are not discounted for the time value of money.

The measurement process primarily includes projection of future claims costs through a combination of actuarial and statistical projection techniques. In certain cases, where there is a lack of reliable historical data on which to estimate claims development, relevant benchmarks of similar business are used in developing claims estimates.

The principal assumption underlying the estimates is the general insurance business's past claims development experience. This includes assumptions in respect of average claims costs, claims handling costs, claims inflation factors, and claim numbers for each accident year. Judgement is used to assess the extent to which external factors such as judicial decisions and government legislation affect the estimates.

Additional information on the Group's general insurance risk is given on pages 28 to 30 of the Risk Management report.

General insurance claims development table

The development of general insurance liabilities provides a measure of the Group's ability to estimate the ultimate value of claims. The top half of the table below illustrates how the Group's estimate of total claims outstanding for each accident year has changed at successive year ends. The bottom half of the table reconciles the cumulative claims to the net liability appearing in the balance sheet. The accident year basis is considered the most appropriate for the business written by the Group.

Edgar Filing: Lloyds Banking Group plc - Form 6-K

32 Unallocated Surplus

	2008	2007	2006
	£m	£m	£m
At 1 January	1,493	1,543	974
Change in the year	(942)	(50)	569
At 31 December	551	1,493	1,543

The nature of certain insurance and investment contracts with DPF within the with-profit fund is such that the allocation of the surplus assets between the policyholder and the Group has not been determined at the end of the accounting period. The unallocated surplus comprises these surplus assets and is deemed to be a liability until allocation to the appropriate party has been determined. In accordance with the requirements of FRS 27 'Life Assurance', as permitted by IFRS4, the 'best estimate' of the Group's share of future bonuses has been recognised as part of the unallocated surplus.

Sensitivities

The table below indicates the stand alone impact of changes to certain key variables that have the greatest impact on the Group's with-profit fund. These are shown with reference to the unallocated surplus and the underlying with-profit liabilities:

	Change in variable	Increase/ (decrease) in liabilities £m	2008 Impact on unallocated surplus £m
Interest rates increase into perpetuity	25bps	(117)	
Equity/property market values fall and thereafter increase based on the long term view of the risk free rate	-10%	(312)	(96)
Lapse and surrender rates decrease across all policy types and cohorts (excluding paid-up policies)	-10%	36	(36)
	Change in variable	Increase/ (decrease) in liabilities £m	2007 Impact on unallocated surplus £m
Interest rates increase into perpetuity	25bps	(94)	29
Equity/property market values fall and thereafter increase based on the long term view of the risk free rate	-10%	(652)	(257)

Edgar Filing: Lloyds Banking Group plc - Form 6-K

	Change in variable	Increase/ (decrease) in liabilities £m	2006 Impact on unallocated surplus £m
Lapse and surrender rates decrease across all policy types and cohorts (excluding paid-up policies)	-10%	16	(16)
Interest rates increase into perpetuity	25bps	(142)	26
Equity/property market values fall and thereafter increase based on the long term view of the risk free rate	-10%	(757)	(201)
Lapse and surrender rates decrease across all policy types and cohorts (excluding paid-up policies)	-10%	16	(16)

Although the tables above demonstrate the impact of individual variable changes, in practice due to the correlation between certain variables a change in one variable would normally be expected to have an impact on other assumptions. It should also be noted that in some instances these sensitivities are non-linear.

33 Retirement Benefit Obligations

The Group operates defined benefit and defined contribution pension schemes, as well as defined benefit post retirement medical and concessionary mortgage plans. The charge for the year in respect of the pension schemes is £272m (2007 £206m, 2006 £208m) comprising £167m (2007 £141m, 2006 £161m) for defined benefit schemes, £101m (2007 £60m, 2006 £44m) for defined contribution schemes and £4m (2007 £5m, 2006 £3m) for other post retirement benefits. The Group's IAS pension surplus across all defined benefit post employment plans as at 31 December 2008 comprises an asset of £629m and a deficit of £152m (gross of deferred tax) giving a net surplus of £477m. As at 31 December 2007, the IAS 19 position was a deficit of £347m (gross of deferred tax).

Defined contribution post employment benefit plans

The principal Group defined contribution plan is the HBOS Group Money Purchase Scheme. It is funded by contributions from colleagues and the Group. New colleagues are automatically enrolled in the scheme unless they opt out.

The level of Group contributions for the majority of members who contribute at the core rate of 4% is 6%. In addition, if members wish to pay more, then the Group will also make further contributions in respect of the members first 4% of additional contributions. For the majority of members, stepping their contribution rate to 8% will result in the Group stepping up its rate to 12%. Higher levels of Group contributions are available to more senior colleagues. Alternatively, members may elect to pay a lower contribution of 2% and receive Group contributions at 3%. These were the levels of contributions for colleagues and Group for the majority of the existing members at April 2006 and other colleagues who were automatically enrolled into the plan. The respective default rates for colleague and Group contributions have been increased to 3% and 4.5% in 2007 and were increased to 4% and 6% in 2008. The expense of all the Group defined contribution plans for the year ended 31 December 2008 was £101m (2007 £60m, 2006 £44m).

Defined benefit post employment benefit plans

The Group provides several defined benefit plans. The main scheme is the HBOS Final Salary Pension Scheme (HBOS FSPS) which is a closed funded scheme. It was formed in July 2006 through the merger of the Group's four main UK defined benefit schemes. Accordingly disclosures prior to the date of the merger have been re-analysed to show pro forma comparatives for the HBOS FSPS based on the comparative disclosures of the four legacy schemes.

Separate disclosures for all other defined benefit pension plans within the Group are made under the heading 'Other Schemes'. These contain a mixture of funded and unfunded schemes and arrangements.

Separate disclosures are also made on a combined basis for the unfunded post retirement medical plans and concessionary mortgage plans under the heading 'Other Post Retirement Benefits'.

The Group sponsors the HBOS FSPS Equitable Life Assurance Scheme (closed funded scheme), the unfunded scheme as included within the Other Schemes and the post retirement medical and mortgage schemes as included within Other Post Retirement Benefits. The net assets of these schemes are £576m, £53m, £(49)m and £(55)m respectively totalling £525m (2007 £(263)m, £(44)m and £(53)m respectively totalling £(360)m, 2006 £778m, £44m and £55m respectively totalling £877m). Accordingly the disclosures relating to the HBOS FSPS and Other Post Retirement Benefits are also those of the Group.

The unfunded scheme in the Group had a liability of £44m at the start of the year (2007 £44m, 2006 £42m) and £49m at the year end (2007 £44m, 2006 £44m). The pension expense relating to the unfunded scheme in the Group is £3m (2007 £2m, 2006 £3m) and is comprised of an interest cost and current service cost of £3m and £nil respectively (2007 £2m and £nil, 2006 £2m and £1m). In addition benefits paid by the Group in respect of the unfunded scheme during the year amounted to £2m (2007 £2m, 2006 £1m). The unfunded pension liabilities have been secured by assets held by the Group. These assets, comprising listed investment securities held at a value of £51m at 31 December 2008 (2007 £56m, 2006 £36m), are included in the Group's investment securities and would only be available to members in the event of certain contingencies, such as the failure to pay benefits.

The assets of the Group's funded schemes are held in separate trustee-administered funds, which are independent of the Group's own assets, to meet the long term pension liabilities of past and present employees. The trustees of the schemes are required to act with regard to the best interests of the schemes' beneficiaries and a number of trustees are nominated or elected by the members of the schemes. The trustees, in consultation with the Group, set the schemes' investment strategies and, with the agreement of the Group, set the level of contributions to be made to the schemes.

The liabilities of the defined benefit schemes are measured by discounting the estimated future cash flows to be paid out by the schemes using the projected unit method. This method is an accrued benefit valuation technique that makes allowances for projected earnings. The Group estimates the average duration of the liabilities of the defined benefit scheme to be 23 years.

Following its formation in 2006, the first funding valuation and the most recent published valuation of the HBOS FSPS was carried out as at 31 December 2006 by an independent actuary. The financial assumptions adopted within this valuation were based upon the economic conditions prevailing at the date of valuation. This resulted in the Group adjusting the rate of regular contributions to around 23% of pensionable salaries with effect from July 2007. From 1 June 2008 a salary sacrifice was introduced. Under this arrangement all member contributions are instead paid by the Group, with a corresponding adjustment made to members' net salaries. (This similarly applies to the defined contribution schemes noted above). In the light of the deficit of £95m under the assumptions agreed for the valuation, the Group also agreed to make annual deficit contributions of £50m per annum for each of the years 2007 to 2010 inclusive. The Group has paid £100m in respect of the first two years contribution during 2007. As such no deficit contributions were paid in 2008. The level of contributions payable to the scheme is expected to be reviewed again following completion of the next scheduled funding valuation, due as at 31 December 2009.

The Group operates a post retirement medical plan for certain former employees and provides post retirement mortgage benefits to both current and retired employees.

Notes to the Financial Statements
continued

33 Retirement Benefit Obligations continued

On 1 January 2008, the Clerical Medical International Pension Scheme, which is a funded defined benefit plan, included within Other Schemes was merged with the HBOS FSPS. In anticipation of this, the Group paid a deficit reduction contribution of £5m during 2007 as part of the merger agreement.

The Group's net post retirement benefit liabilities in respect of its defined benefit plans are analysed as follows:

	2008				2007

Loss from change in assumptions				(40)	(39)	(6)		(85)
Total actuarial gains/(losses)				245	(7)	(5)		233

The Group's policy for recognising actuarial gains and losses is to take them directly to reserves in the period in which they arise.

A gain of £568m (2007 gain of £312m, 2006 gain of £163m) (net of tax) was recognised in the consolidated statement of recognised income and expense in the year. Cumulative actuarial gains and losses recognised in the consolidated statement of recognised income and expense at 31 December 2008 amounts to a gain of £744m (2007 a gain of £176m, 2006 loss of £136m) (net of tax).

The mortality assumptions used in 2008 are unchanged from those adopted following the 31 December 2006 valuation of the FSPS. For current and deferred pensioners table PNA00 projected to 2006 using the base level of improvements from the '92' series, with subsequent future improvements in line with the '92' series 'medium cohort' projections have been used with a 10% loading to the female table reducing life expectancy. This is to align it with actual experience for the schemes' pensioners. For active members table A92ULT multiplied by 70% has been used.

Summary of assumptions and membership data

The following assumptions and data have been used in respect of the defined benefit pension schemes:

	HBOS FSPS				Other Schemes			
	2009	2008	2007	2006	2009	2008	2007	2006
Actuarial assumptions at beginning of the year								
Discount rate (%)	6.25	5.70	5.15	4.85	5.7	5.70	5.15	4.85
RPI inflation rate	3.0	3.4	3.0	2.8	3.4	3.4	3.0	2.8
Expected return on plan assets (a) (%)	5.53	6.78	7.18	7.15	6.66	6.66	6.86	6.29
Salary increases (b) (%)	3.5	3.9	3.5	3.3	3.9	3.9	3.5	3.3
Pension increases (c) (%)	3.0	3.3	3.0	2.8	3.3	3.3	3.0	2.8
Life expectancy at age 60 (years)								
Retired members								
Males	26	26	26	23	26	26	26	23
Females	27	27	27	26	27	27	27	26
Non-retired members								
Males	27	27	27	24	27	27	27	24
Females	29	29	29	27	29	29	29	27

- (a) The expected return on plan assets shown above is a weighted average based on the current investment strategy. Return seeking assets (eg equities) are assumed to return 7.55% pa, low risk matching assets (predominantly gilts) are assumed to return 3.85% pa, corporate bonds are assumed to return 6.25% pa, with profits funds are assumed to return 6.25% pa, and property is assumed to return 6.5% pa.
- (b) In addition to the general assumed rate of salary increases, there is a separate assumed salary scale of increases due to promotions and increasing seniority worth about 0.5% in overall terms.
- (c) The pension increase is on the excess over the Guaranteed Minimum Pension. Pensions which are guaranteed to increase at a rate of at least 3% per annum have been assumed to increase at 3.25% per annum for the end of year calculations (3.60% per annum for 2007 and 3.40% per annum for 2006).

The expected Group contributions for the year commencing 1 January 2009 total £274.5m (2008 £215.9m)

A summary of the membership data at the end of each year is as follows:

Edgar Filing: Lloyds Banking Group plc - Form 6-K

	2008	2007	2006	HBOS	2008	2007	2006	Other

Average age	65	64	63	64	64	63	64	65

The membership data above reflects the transfer of Clerical Medical International Scheme into the HBOS FSPS.

The principal assumptions used in the calculation of the other post retirement benefits are the discount rate, which is the same as that used for the pension schemes and the medical cost trend rate which has been assumed to be the same as the discount rate.

Sensitivity analysis for each of the principal assumptions used to measure the scheme liabilities, showing the increase in defined benefit obligations at 31 December 2008, is set out below:

Factor	change in assumption	HBOS FSPS			Other Schemes		
		Increase 2008	Increase 2007	Increase 2006	Increase 2008	Increase 2007	Increase 2006
Discount rate	decrease 0.1%	2.3%	2.3%	2.3%	2.2%	2.2%	2.2%
Rate of inflation	increase 0.1%	2.3%	2.3%	2.2%	2.2%	2.2%	2.2%
Rate of salary growth	increase 0.1%	0.4%	0.5%	0.4%	0.4%	0.4%	0.5%
Life expectancy at age 60	increase by 1 year	2.7%	2.7%	2.7%	2.5%	2.5%	2.4%

34 Deferred Tax

The statutory position reflects the deferred tax assets and liabilities as disclosed in the consolidated balance sheet and takes account of the inability to offset assets and liabilities where there is no legally enforceable right of offset. The tax disclosure of deferred tax assets and liabilities tie to the amount outlined in the table below which splits the deferred tax assets and liabilities by type.

	2008	2007	2006
	£m	£m	£m
Statutory position			
Deferred tax liabilities	227	2,600	3,349
Deferred tax asset	(2,556)	(70)	(758)
Net deferred tax (asset)/liability	(2,329)	2,530	2,591
	2008	2007	2006
	£m	£m	£m
Tax disclosure			
Deferred tax liabilities	1,608	2,945	3,349
Deferred tax asset	(3,937)	(415)	(758)
Net deferred tax (asset)/liability	(2,329)	2,530	2,591

At 31 December 2008 a deferred tax liability of £255m (2007 £251m, 2006 £214m) relating to investments in subsidiaries has not been recognised because the Group controls whether or not the liability will be incurred and it is satisfied that it will not be incurred in the foreseeable future.

Deferred tax assets are recognised for tax losses carried forward to the extent that the realisation of the related tax benefit through taxable profits is probable. Deferred tax assets of £92m (2007 £nil) have not been recognised in respect of capital losses carried forward as there are no predicted future capital profits. Capital losses can be carried forward indefinitely. In addition, deferred tax assets of £69m (2007 £62m) have not been recognised in respect of Eligible Unrelieved Foreign tax (EUFT) and carried forward as there are no predicted future taxable profits against which the unrelieved foreign tax credits can be utilised. EUFT can be carried forward indefinitely.

As a result of the Finance Act 2007, the main UK corporation tax rate reduced from 30% to 28% in April 2008. UK deferred tax balances that are not expected to have been realised by April 2008 have been restated at the rate of 28%. In addition, the German corporation tax rate reduced from 25% to 15% in January 2008.

The movement in the net position is as follows:

35 Other Liabilities

	2008	Group 2007
	£m	£m
Unclaimed shares	150	151
Other liabilities	4,959	4,921
	5,109	5,072

Unclaimed shares comprise the net sale proceeds of certain Halifax Group Limited (formerly Halifax Group plc) ordinary shares which, following the Halifax Group restructuring which took effect on 1 June 1999, represented Halifax plc ordinary shares. These shares were issued to meet claims for Halifax plc ordinary shares from qualifying members of Halifax Building Society and others following the transfer of business from Halifax Building Society to Halifax plc in 1997. This liability also includes the related unclaimed dividends up to the date of sale and the unclaimed capital payments arising from the Halifax Group restructuring in 1999. These amounts are being held on behalf of the persons who would have been entitled to claim the shares before they were sold. Amounts representing the sale proceeds, together with the unclaimed capital payments, can be claimed during a period of nine years from the date of sale (30 August 2001) after which time they will be forfeited. Amounts representing the related unclaimed dividends can be claimed during the period of twelve years from the date of the resolution for payment of each dividend, after which time they will be forfeited. Following an internal reorganisation on 1 July 2002, responsibility for these balances was assumed by the Group.

The Group is an authorised institution and operates in the UK or overseas within the regulatory framework established in the UK by the Financial Services Authority or overseas by local regulatory bodies. As a result of this, regulatory provisions are established when a legal or constructive obligation exists as a result of a past event where it is probable that an outflow of resources will be required to settle the obligation and a reliable estimate can be made. Regulatory provisions include the following:

- i) the estimated cost of making redress payments to customers in respect of past product sales where sales processes have been deficient or where fees and premiums have been overcharged; and
- ii) the costs estimated by management for the Financial Services Compensation Scheme management expense levy against deposit taking firms to fund the UK compensation scheme for customers of authorised financial services firms that are unable to pay claims made against them. Further details are given below.

In addition, other provisions include property-related costs in respect of surplus leased space that amounted to £39m (2007 £27m, 2006 £27m) at the year end, provisions for long term and annual leave, provisions in respect of legal liabilities and for obligations under reward programmes.

The timing of cash outflows for regulatory and other provisions can be uncertain and depend on a number of variables outwith the control of the Group. It is estimated that £191m (2007 £35m, 2006 £95m) of the outstanding provisions will be settled within the next year.

Notes to the Financial Statements

36 Provisions continued

Financial Services Compensation Scheme (FSCS)

The Financial Services Compensation Scheme (FSCS) is the UK's statutory compensation scheme for customers of authorised financial services firms that are unable to pay claims made against them. HBOS plc, as an authorised firm, is obliged to pay levies to the FSCS as part of its funding arrangements, as explained below.

The FSCS raises levies against firms authorised by the Financial Services Authority (FSA) in respect of its management expenses and compensation costs. Under a new funding system introduced on 1 April 2008, the levies are split into five broad classes, one of which is protected deposits. Each deposit-taking firm contributes an amount in respect of these costs, which is proportionate to their share of the protected deposits for the relevant year. The levies are subject to the maximum thresholds determined by the FSA.

Since October 2008, the FSCS has contributed to the costs of transferring, and/or paid compensation to, the customers of certain failed firms (including Bradford & Bingley plc, Kaupthing Singer & Friedlander Limited, Heritable Bank plc, Landsbanki's Icesave and London Scottish Bank plc). As a result, the FSCS is now a creditor of these firms.

To fund these activities, the FSCS has obtained interest-only finance from HM Treasury of £19.7 billion (as at 16 December 2008), which is due to be refinanced in 2011. The FSCS expects the amounts owed to it by failed firms to be reduced as assets are realised or other payments are made to creditors. In turn, this will enable the FSCS to reduce its borrowings from HM Treasury. In the meantime, the FSCS will need to meet its anticipated obligations in respect of interest payments on its borrowings through management expenses levies on authorised firms.

The FSA, on behalf of the FSCS, has issued guidance regarding the levies to be made by the FSCS in 2009. This guidance indicates that the FSCS is expected to raise the next levy before 31 March 2009 and that the annual limit on the FSCS management expenses levy for 2008/9 has been set at £1 billion. HBOS has accrued a charge of £200m in respect of forecast management expenses levies for the levy years 2008/09 and 2009/10 that are based upon its share of protected deposits as at 31st December 2007 and 2008 respectively.

When the existing borrowing with HM Treasury is refinanced in 2011, a repayment schedule for the outstanding principal will be agreed between HM Treasury and the FSCS, after which the FSCS will raise compensation costs levies against firms in respect of these amounts. These levies could be significant. However, no provision has been made for these costs to date as their amount is unknown and is not expected to be quantifiable until 2011 at the earliest.

Edgar Filing: Lloyds Banking Group plc - Form 6-K

On 21 May 2007 HBOS plc issued 7,500 American Depositary Receipts representing US\$750m 6.657% Fixed to Floating Rate US\$1 preference shares. These are Tier I non-innovative non-equity preference shares that were issued at \$1,000 per share. Dividends are payable semi-annually in arrears until 21 May 2037 at which date the Group has the option to redeem them. Thereafter, dividends are payable at a rate of three month LIBOR plus 1.27% per annum payable quarterly in arrears and can be redeemed by the Group on any dividend payment date.

There have been no new issues during 2008. On 15 January 2009 HBOS plc issued £3,000m HMT preference shares (Note 58).

During the year the following dated subordinated liabilities have been issued:

On 8 April 2008 HBOS plc issued €175m Subordinated Lower Tier 2 Notes at par. The notes pay interest at a rate of 6.5% plus Indexation (HICP excluding tobacco for Eurozone) annually in arrears until maturity on 8 April 2023.

On 21 May 2008 HBOS plc issued US\$2bn Subordinated Lower Tier 2 Notes at an issue price of 99.334% of the principal amount. The notes pay interest at a rate of 6.75% per annum, payable semi-annually in arrears until maturity on 21 May 2018.

During 2007 the following dated subordinated liabilities were issued:

On 20 March 2007 HBOS plc issued €1bn Subordinated Lower Tier 2 Notes at an issue price of 99.954% of the principal amount. The notes pay interest at a rate of three month Euribor plus 0.2% per annum payable quarterly in arrears until 21 March 2012 at which time the interest rate will become three month Euribor plus 0.7% per annum payable quarterly in arrears until maturity in March 2017. The Group has the option to redeem these notes on 21 March 2012 and quarterly thereafter.

On 27 April 2007 HBOS plc issued Aus\$400m Subordinated Callable Floating Rate and Aus\$200m Subordinated Callable Fixed/Floating Rate Australian Domestic Instruments at issue prices of 100% and 99.423% of the principal amount respectively. The fixed rate notes pay interest at a rate of 6.75% and the floating rate notes at three month AUD-BBR-BSW plus 0.26% per annum payable quarterly in arrears until 1 May 2012 at which time both interest rates will become three month AUD-BBR-BSW plus 0.76% per annum payable quarterly in arrears until maturity in May 2017. The Group has the option to redeem these notes on 1 May 2012 and quarterly thereafter.

Notes to the Financial Statements
continued

38 Other Borrowed Funds continued

On 6 June 2007 HBOS plc issued US\$1bn Subordinated Callable Notes at par. The notes pay interest at a rate of three month US\$ LIBOR plus 0.2% per annum payable quarterly in arrears until 6 September 2012 at which time the interest rate will become three month US\$ LIBOR plus 0.7% per annum payable quarterly in arrears until maturity in September 2017. The Group has the option to redeem these notes on 6 September 2012 and quarterly thereafter.

On 20 June 2007 HBOS plc issued Can\$500m Callable Fixed to Floating Rate Notes at par. The notes are subordinated and pay interest at a rate of 5.109% per annum payable quarterly in arrears until 20 June 2012 at which time the interest rate will become three month CAD-BA-CDOR plus 0.65% per annum payable quarterly in arrears until maturity in June 2017. The Group has the option to redeem these notes on 20 June 2012 and quarterly thereafter.

On 15 October 2007 HBOS plc issued €160m Subordinated Fixed Rate Notes at par. The notes pay interest at a rate of 5.374% per annum payable annually and mature on 30 June 2021.

On 17 October 2007 HBOS plc issued £500m Lower Tier 2 Subordinated Notes at an issue price of 99.9% of the principal amount. The notes pay interest at a rate of 6.305% per annum payable semi-annually until 18 October 2012 at which time the interest rate will become three month LIBOR plus 1.2% per annum payable quarterly in arrears until maturity in October 2017. The Group has the option to redeem these notes on 18 October 2012 and quarterly thereafter.

No repayment, for whatever reason, of dated subordinated liabilities prior to its stated maturity and no purchase by the relevant entity of its subordinated debt may be made without the consent of the Financial Services Authority. On a winding up of the Group or subsidiary, the claims of the holders of dated loan capital shall be subordinated in right of payment to the claims of all depositors and creditors of the Group or subsidiary undertaking, other than creditors whose claims are expressed to rank pari passu with, or junior to, the claims of the holders of the dated loan capital.

Notes to the Financial Statements
continued

38 Other Borrowed Funds continued

On 19 March 2008 HBOS plc issued £750m Undated Fixed to Floating Rate Subordinated Notes at an issue price of 99.25% of the principal amount to HBOS Capital Funding No. 4 L.P., a subsidiary undertaking. The notes pay interest at a rate of 9.54% per annum, payable semi-annually in arrears until 19 March 2018 at which time the interest rate will become 3 month LIBOR plus 6.75% per annum payable quarterly in arrears. The Group has the option to redeem these notes on 19 March 2018 and quarterly thereafter. Upon consolidation this is eliminated and minority interest arises, as disclosed in Note 41.

No exercise of any redemption option or purchase by the relevant entity of any of the undated subordinated liabilities may be made without the consent of the Financial Services Authority. On a winding up of the Group or subsidiary, the claims of the holders of undated loan capital shall be subordinated in right of payment to the claims of all depositors and creditors of the Group or subsidiary other than creditors whose claims are expressed to rank pari passu with, or junior to the claims of the holders of the undated loan capital. The undated loan capital is junior in point of subordination to the dated loan capital referred to above.

Authorised share capital

On 29 April 2008 HBOS announced that it would make a rights issue of two new ordinary shares for every five ordinary shares held at a price of 275p per share. On 26 June 2008 a General Meeting increased the authorised share capital of HBOS plc by 2,900m ordinary shares to 7,640m ordinary shares and approved the rights issue. The rights issue was completed in July and raised £3,987m net of expenses of £137m. On 12 December 2008 an Extraordinary General Meeting increased the authorised share capital of HBOS plc by a further 7,500m to 15,140m.

At 31 December 2008 the authorised share capital comprised:

Ordinary shares

15,140 million ordinary shares of 25 pence each (2007 4,740 million).

Preference shares

Edgar Filing: Lloyds Banking Group plc - Form 6-K

198,065,600 6.475% non-cumulative perpetual preference shares of £1 each (2007 198,065,600),
350,002 6.3673% fixed to floating preference shares class of £1 each (2007 350,000),
750,000 6.0884% non-cumulative preference shares of £1 each (2007 750,000),

The terms of the following preference shares when issued are such that these shares are classified as other borrowed funds rather than issued share capital.

2,597 million preference shares of £1 each (2007 2,597 million),
200 million 6 1/8% non-cumulative redeemable preference shares of £1 each (2007 200 million),
375 million 9 1/4% non-cumulative irredeemable preference shares of £1 each (2007 375 million),
125 million 9 3/4% non-cumulative irredeemable preference shares of £1 each (2007 125 million),
250,000 8.117% non-cumulative perpetual preference shares class 'A' of £10 each (2007 250,000),
150,000 7.754% non-cumulative perpetual preference shares class 'B' of £10 each (2007 150,000),
3,000 million preference shares of €1 each (2007 3,000 million),
4,998 million preference shares of US\$1 each (2007 4,998 million),
750,000 6.413% non-cumulative callable fixed to floating rate preference shares series 'A' of US\$1 each (2007 750,000),
750,000 5.92% non-cumulative callable fixed to floating rate preference shares series 'B' of US\$1 each (2007 750,000),
750,000 6.657% non-cumulative callable preference shares of US\$1 each (2007 750,000),
750,000 6.657% non-cumulative callable preference shares of US\$1 each (2007 750,000),
1,000 million preference shares of Aus\$1 each (2007 1,000 million),
1,000 million preference shares of Can\$1 each (2007 1,000 million),
400 million preference shares of JPY250 each (2007 nil),
3,000,000 12% fixed to floating callable non-cumulative preference shares of £1 each (2007 nil).

Note 38 details the preference shares that have been issued and classified as other borrowed funds.

Issued share capital

At 31 December 2008 the Group's issued ordinary share capital, excluding shares held in Treasury, amounted to 5,406,574,275 shares (2007 3,730,415,166). The Group's issued preference share capital amounted to 199,165,602 (2007 199,165,600).

Notes to the Financial Statements
continued

39 Share Capital continued

HBOS plc completed the rights issue in July 2008 issuing 1,500m ordinary shares of 25p each and raising £3,987m net of expenses of £137m.

During the year HBOS plc used 2,589,000 shares previously purchased under the 2007 share buyback programme to satisfy employee share scheme demands. During the year HBOS plc has bought no further ordinary shares (2007 50m) at a total consideration of nil (2007 £500m). At 31 December 2008 no shares (2007 2,589,000) bought back remained in Treasury.

The Group operates a number of share option plans and savings related option plans for colleagues. Details of these, including the impact of the rights issue, is given in Note 40.

On 15 January 2009 HBOS plc issued 7,482m ordinary shares under a placing with HM Treasury (see Note 58).

40 Share-based Payments

As a result of the acquisition of the Group by Lloyds TSB on 16th January 2009, some of the share schemes vested in the period between 12 January 2009, and 16 January 2009. For further details, see Note 58. This note therefore reflects the position of the share schemes as at 31 December 2008. Details of the accelerated vesting, together with the financial effects will be disclosed in the financial statements for 2009.

During the year ended 31 December 2008, the Group operated the following share-based payment arrangements, which were predominantly equity-settled:

Sharesave plan

Colleagues may enter into contracts through the sharesave schemes to save up to £250 per month for a fixed term of 3, 5 or 7 years. At the end of the savings period a tax-free bonus is added to the savings and colleagues have the option to acquire shares in the Group at a price equal to 80% of the share price agreed.

Share option plans

The final award under the HBOS plan was made in 2004. Under this plan options over shares at market value, with a face value equal to 20% of salary, were awarded to all colleagues with the exception of those of level 8 and above. A separate option plan exists for St. James's Place, which awards options in respect of HBOS shares, and which continues to operate.

Free shares

This was introduced in 2005 under the share incentive plan legislation as a replacement for the share option plan (not including the St. James's Place plan). In broad terms, it covers all colleagues, and free shares up to a limit of £3,000 annually are awarded to each colleague.

Sharekicker plan	This provides colleagues with the opportunity to purchase shares with a proportion of their annual net bonus. For every two shares purchased a matching share is awarded after three years.
Performance sharekicker plan	With effect from September 2008, the EPS sharekicker plan was renamed the Performance Sharekicker Plan. The plan is open to colleagues of level 7 and above (in relation to annual net bonuses) and colleagues of level 8 and above (in relation to net bonuses payable under the two-year incentive scheme). This provides colleagues with the opportunity to purchase shares with a proportion of their annual net bonus. For every two shares purchased a matching share is awarded after three years. For the 2006 and 2007 awards, matching shares awarded under this plan depends on EPS performance over the three year vesting period. For the 2008 award, matching shares awarded under this plan depends on EPS performance in excess of the RPI and on operating cost performance over the three year vesting period.
Long term incentive plan	For most senior colleagues, share grants of varying percentages of salaries are made and colleagues may receive up to 200% of the grant depending on the Group's annualised TSR compared to the annualised weighted average TSR of a basket of comparator companies, over a three year period. See below for further detail.
Executive stock option plan	The final award under this plan was in 2000. Under this plan, options were granted at market value to certain colleagues. The options vested upon satisfaction of a performance measure over a three year period. Options are exercisable from the date the measure is satisfied until the tenth anniversary of the date of grant.
St. James's Place plans	Various St. James's Place plc option and share plans are offered to some of its colleagues.
Insight Investment plan	In 2007 Insight Investment Management Ltd converted an existing incentive scheme into a share-based payment arrangement, offering options and/or shares to some of its colleagues.
Invista Real Estate plans	Various share-based plans are offered to certain colleagues in Invista Real Estate Investment Management Holdings plc.

Awards in 2006								
Date of grant		21 September	2 March	8 August	23 March	16 March	30 March	
Number granted		9,669,771	495,585	7,370,115	4,707,159(c)		1,915,822	
Transfer on 16 March 2007(d)					(527,155)	527,155(c)		
Contractual life	3.5, 5.5 and 7.5 years	3.5, 5.5 and 7.5 years	7 years	3 years	3 years	3 years	3 years	5 years
Vesting conditions	3.25, 5.25 and 7.25 years vesting period(a)	3.17, 5.17 and 7.17 years vesting period(a)	3 years service	3 years service	3 years service	3 years service and achievement of target	3 years service and achievement of TSR target	3 years service

- (a) Although the savings periods are three, five and seven years the vesting periods are slightly longer since savings commence after the grant date.
- (b) The awards relate to the St. James's Place plan.
- (c) These are the number of deferred shares purchased.
- (d) Award of options include nil-priced options and options with an exercise price equal to the price of the Group's B ordinary shares based on the most recently approved annual valuation of the Insight business at the date of the grant. If all options and shares outstanding under the Insight Investment Plan at 31 December 2008 vested on that date, 46.6 million HBOS shares would be required to meet this.
- (e) The rights issue in July 2008 assumed a cashless take up of the rights at a nil-paid rights price of 11.274p.

Movements in options

Outstanding and exercisable at 31 December	614,463	6.34	813,927	6.28	1,251,907	6.11

For the sharesave plan, the weighted average share price at the date of exercise for share options exercised during the year was £6.77. The options outstanding at 31 December 2008 had exercise prices in the range of £2.20 to £8.38 and a weighted average remaining contractual life of 4.6 years.

For the share option plans, the weighted average share price at the date of exercise for share options exercised during the year was £6.66. The options outstanding at 31 December 2008 had exercise prices in the range of £6.49 to £10.64 and a weighted average remaining contractual life of 1.5 years.

For the executive stock option plan, the weighted average share price at the date of exercise for share options exercised in the year was £6.42. The options outstanding at 31 December 2008 had exercise prices in the range of £5.35 to £7.07 and a weighted average remaining contractual life of 1.5 years.

Financial assumptions underlying the calculation of fair value

The fair value expense has been based on the fair value of the instruments granted, as calculated using appropriate pricing models.

The table below shows the assumptions and models used to calculate the grant date fair value of awards in 2008, 2007 and 2006:

	Sharesave	Sharesave	Share	Free Sharekicker	Performance	Long
	interim	plan	option	shares	sharekicker	term
			plan(b)		plan	incentive
					plan	plan
Awards in 2008

Pricing model	Black - Scholes	Black - Scholes	Binomial Lattice	(c)	Black - Scholes	Black - Scholes	Monte Carlo Simulation

(a) Expected volatility is based on an analysis of both the Group's historical volatility over the twelve months preceding the date of each award and the volatility implied by the price of traded options as at the date of each award.

(b) The awards relate to the St. James's Place plan.

(c) As no performance conditions attach to these awards and dividends are reinvested, the fair value is the same as the face value of the awards.

(d) The fair value of Sharekicker awards reflects that a share is automatically awarded for every two held after three years.

(e) Dividends payable on the matching shares during the vesting period are not awarded to the recipient.

(f) Dividends payable on the shares during the vesting period are reinvested and so no dividend yield assumption is required.

- (a) Expected volatility is based on an analysis of both the Group's historical volatility over the twelve months preceding the date of each award and the volatility implied by the price of traded options as at the date of each award.
- (b) The awards relate to the St. James's Place plan.
- (c) As no performance conditions attach to these awards and dividends are reinvested, the fair value is the same as the face value of the awards.
- (d) The fair value of Sharekicker awards reflects that a share is automatically awarded for every two held after three years.
- (e) Dividends payable on the matching shares during the vesting period are not awarded to the recipient.
- (f) Dividends payable on the shares during the vesting period are reinvested and so no dividend yield assumption is required.

Early exercise assumptions

The following allowance has been made for the impact of early exercise once options have vested:

Sharesave plan

As the length of the exercise window is only six months all option holders are assumed to exercise halfway through the exercise

window.

St. James's Place plan

It is assumed that half of the option holders will exercise their options each year if the share price is at least 15% above the exercise price.

Allowance for performance conditions

The long term incentive plan includes a market based performance condition based on the Group's total shareholder return relative to an index of comparator companies. The impact of this performance condition has been modelled using Monte Carlo Simulation techniques, which involves running several thousands of simulations of future share price movements for both the Group and the comparator index. For the purpose of these simulations it is assumed that the share price of the Group and the comparator index are 80% correlated (2007 award 60%) and that the comparator index has volatility of 30% p.a. for the 2008 award (2007 award 20% p.a.).

The performance condition is based on the Group's performance relative to the comparator index over a three year period commencing on 1 January each year. The fair value calculations for the awards that were made in 2008 and 2007 therefore include an allowance for the actual performance of the Group's share price relative to the index over the period between 1 January and the award date.

In 2008 the weightings attached to certain comparators were amended with effect from 1 January 2008 and apply, from that date to 2005, 2006 and 2007 awards. To better match the business profile of the Group, the committee decided to amend the comparator companies and Northern Rock has dropped out of the comparator group due to government involvement. Alliance and Leicester and Bradford and Bingley remain within the comparator group at their delisted prices. This amendment also applies to all future awards. The modifications do not alter the fair values of any of the awards, nor make additional changes necessary.

Modifications

Changes to the Performance Sharekicker plan as described above had no material effect on the fair value costs of the plans.

The Rights Issue carried out by HBOS plc in July 2008 created a modification to all share plans. This resulted in an adjustment to the awards made to colleagues but had no material effect on the fair value of the awards.

A new sharesave award was made in October 2008 which commenced on 1 January 2009. The award was offered as a replacement to all other share plans. As such a modification approach was taken on all monthly savings cancelled to existing plans and invested in the new plan. The modification element resulted in a nil cost and charges were taken for new and increased savers.

The period allowable for colleagues to exercise their share options for the 2003 and 2004 share option plans was extended from 3 years to 7 years in October 2008. This resulted in an increase in fair value, chargeable directly to the income statement, of £0.6m.

Included within the charge for the year is £16m (2007 £13m, 2006 £8m) in respect of share-based arrangements within St. James's Place, £15m in respect of the Insight Investment plan (2007 £4m, 2006 £nil) and £3m in respect of Invista Real Estate plans (2007 £3m, 2006 £nil). In relation to the Group's share schemes, National Insurance and income tax costs are accrued by the Group. The credit of £9m (2007 £14m debit) is not included in the above table.

The liability for cash settled share-based payment plans at 31 December 2008 is £2m (2007 £5m, 2006 £5m) and is included in accruals and deferred income.

The Group uses trusts to purchase and hold its own shares as part of the share-based payment arrangements. Details of these trusts and the shares held are given below.

No. 1 and No. 2 Employee Share Ownership Trusts

The No.1 Employee Share Ownership Trust (ESOT 1) administers shares conditionally granted to Executive Directors and other executives under the HBOS Long Term Executive Bonus Plan. The Trust also administers shares which have been conditionally granted to Executive Directors, other executives and employees under the HBOS plc Annual Bonus Plan and overseas operations of the HBOS plc Share Incentive Plan (Free Shares). The No.2 Employee Share Ownership Trust (ESOT 2) administers shares to be awarded to Executive Directors, other executives and employees under the Group's Sharesave and share option plans, where options are not satisfied by the new issue of shares or from shares held by the HBOS QUEST. Interest free loans have been provided by the Group to the Trusts to allow shares to be purchased in the market to satisfy these share grants.

At 31 December 2008 1.3 million HBOS plc ordinary shares (2007 0.5 million, 2006 0.7 million) with a market value of £1m (2007 £4m, 2006 £8m) were held in ESOT 1 and 4.3 million HBOS plc ordinary shares (2007 7.5 million, 2006 3.6 million) with a market value of £3m (2007 £55m, 2006 £41m) were held in ESOT 2. The shares in the Trusts are included in the balance sheet of the Group at a net book value of £nil (2007 £nil). Under the terms of the Trusts, dividends on these shares require to be waived.

HBOS plc Qualifying Employee Share Ownership Trust (the HBOS QUEST)

The HBOS QUEST operates in conjunction with the HBOS Sharesave scheme and the former savings-related share schemes operated by Bank of Scotland and Halifax Group plc.

At 31 December 2008, the HBOS QUEST held no HBOS plc ordinary shares (2007 0.1 million, 2006 1.7 million with a market value of 2007 £1m, 2006 £19m). In the prior year these shares are included in the balance sheet at nil value.

Under the terms of the Trust Deed, dividends on these shares are required to be waived.

Free shares plan

A number of trusts operate in conjunction with the Free Shares Plan which commenced in 2005.

- (a) The Share Incentive Plan trust operates in conjunction with free share awards made to employees throughout the Group, except to the extent noted below. At 31 December 2008 this trust held 58.2 million HBOS plc ordinary shares (2007 19.6 million, 2006 12.7 million), with a market value of £40m (2007 £144m, 2006 £144m). These shares are included in the balance sheet at nil value.
- (b) The Irish Profit Share Trust holds free shares awarded to colleagues employed in Ireland. At 31 December 2008 this trust held 1.2 million HBOS plc ordinary shares (2007 0.5 million, 2006 0.3 million), with a market value of £0.8m (2007 £3m, 2006 £3m). These shares are included in the balance sheet at nil value.
- (c) The HBOS Australia Employee Share Trust holds free shares awarded to colleagues employed in Australia. At 31 December 2008 this trust held 3.8 million shares (2007 1.7 million, 2006 1.0 million) with a market value of £3m (2007 £13m, 2006 £12m). These ordinary shares are included in the balance sheet at nil value.
- (d) ESOT 1 administers free shares awarded to colleagues based overseas.

42 Dividends

A Capitalisation Issue took place on 6 October 2008 in lieu of an interim cash dividend to shareholders. The Capitalisation amount was £320m. Qualifying shareholders received new fully paid ordinary shares based on the capitalisation amount per ordinary share as at 3 October 2008 (6.07p), multiplied by the number of ordinary shares held at close of business on 3 October, divided by the Capitalisation Issue price of 232p, being the value per ordinary share agreed under the terms of the acquisition by Lloyds TSB Group plc (Note 58).

Ordinary dividends are charged direct to reserves only when the Group has a contractual obligation to pay.

The following dividends have been charged to retained earnings during the year:

	2008	2007	2006
	£m	£m	£m
Ordinary share dividends			
2005 final dividend of 24.35p per share			930
2006 interim dividend of 13.5p per share			512
2006 final dividend of 27.9p per share		1,048	
2007 interim dividend of 16.6p per share		619	
2007 final dividend of 32.3p per share	1,205		
	1,205	1,667	1,442
Preference share dividends			
Equity dividends paid	81	80	59
	1,286	1,747	1,501

43 Contingent Liabilities and Commitments

	2008	2007
	£m	£m
Contingent liabilities		
Acceptances and endorsements		43
Guarantees and irrevocable letters of credit	4,898	6,891
	4,898	6,934
Commitments		
Short term trade related transactions	137	115
Undrawn formal standby facilities, credit lines and other commitments to lend with a maturity:		
- Up to and including one year	50,211	68,253
- Over one year	33,109	31,416
	83,457	99,784

Of the amounts shown above in respect of undrawn formal standby facilities, credit lines and other commitments to lend, £56,319m (2007 £71,970m) was irrevocable.

Edgar Filing: Lloyds Banking Group plc - Form 6-K

The contractual amounts above indicate the volume of business outstanding at the year end and do not reflect the underlying credit and other risks, which are significantly lower as some facilities will not be drawn down and some facilities that are drawn will be supported by collateral. It should be noted that the Group's liquidity lines to the Group's Grampian and Landale conduits do not appear in the table above as these are internal to the Group and are eliminated on consolidation.

Where the Group is a lessee the future minimum lease payments under non-cancellable operating leases are due to be paid in the following periods:

	2008	2007
	£m	£m
Not later than one year	177	185
Later than one year and not later than five years	645	674
Later than five years	1,230	1,320
	2,052	2,179

Where the Group is a lessee the future obligations payable under finance leases are as follows:

	2008	2007
	£m	£m
Not later than one year		1
Later than one year and not later than five years		1

F-77

Notes to the Financial Statements
continued

43 Contingent Liabilities and Commitments continued

Commitments in respect of capital expenditure on property and equipment that is authorised but not provided for in the accounts, for contracts which have been entered into amount to £18m (2007 £21m). Commitments for contracts which have been placed in relation to operating lease assets amount to £10m (2007 £11m).

Legal and regulatory matters:

a) Unarranged overdraft charges

On 27 July 2007 it was announced that members of the Group, along with seven other major UK current account providers, had reached agreement with the OFT to commence legal proceedings in the High Court of England and Wales for a declaration (or declarations) to resolve legal uncertainties concerning the fairness and lawfulness of unarranged overdraft charges (the Test Case). It was also announced that HBOS and those other providers will seek a stay of all current and potential future court proceedings which are brought against them in the UK concerning these charges and have obtained the consent of the Financial Ombudsman Service (FOS) not to proceed with consideration of the merits of any complaints concerning these charges that are referred to them prior to the resolution of the Test Case. By virtue of a waiver granted by the FSA of its complaints handling rules, HBOS (and other banks, including the banks party to the Test Case) will not be dealing with or resolving customer complaints about unarranged overdraft charges while the waiver is in force. On 22 January 2009, the FSA confirmed that it is extending its waiver regarding unarranged overdraft charges complaints until 26 July 2009.

The first step in the Test Case was a trial of certain preliminary issues concerning the legal status and enforceability of contractual terms relating to unarranged overdraft charges. This preliminary trial concluded on 8 February 2008 and the judgment was handed down on 24 April 2008. The judgment held that the contractual terms relating to unarranged overdraft charges currently used by the Group (i) are not capable of being penalties, but (ii) are not exempt from assessment for fairness under the Unfair Terms in Consumer Contract Regulations 1999 (UTCCRs).

At a court hearing on 22 and 23 May 2008, the Judge granted HBOS and the other Test Case banks permission to appeal his decision that current unarranged overdraft charges are assessable for fairness under the UTCCRs. This appeal concluded on 5 November 2009. On 26 February 2009 the Court of Appeal dismissed the banks' appeal and held that the charges are assessable for fairness. The banks will now be applying to the House of Lords for permission to appeal this judgement.

A further hearing took place in early July 2008, at which the Court was asked to consider whether terms and conditions previously used by the Test Case banks are capable of being penalties and whether the Judge's decision in April 2008 (that the banks' current contractual terms are capable of being assessed for fairness under the UTCCRs) can be applied to historic terms.

The Court handed down its judgment on 8 October 2008 on this second stage of the Test Case process. The Court ruled that charges applied under Halifax and Bank of Scotland's previously used terms and conditions cannot be penalties. However, the Court also ruled that the historic terms and conditions are not exempt from assessment for fairness under the UTCCRs. The banks intend to appeal this latter decision.

Further Court hearings will be required before the Test Case process is concluded.

A definitive outcome of the Test Case is unlikely to be known for at least twelve months.

Given the early stage of these proceedings and the uncertainty as to their outcome, it is not practicable at this time to estimate any potential financial effect.

b) Payments Protection Insurance (PPI)

The final report from the Competition Commission (CC) into Payment Protection Insurance (PPI) was received on 29th January 2009. The remedies published were broadly similar to those outlined in the CC's Provisional Decision with some changes to the sales process.

Whilst the Group believes many of the remedies could improve customer searching and enable switching, the inability to sell appropriate insurance products at a point when customers take on increased financial commitment, will result in lower levels of protection for UK consumers.

The Group is actively reviewing its customer propositions, in the light of the CC's Final Report, to ensure that the Group continue to offer a valuable protection product to the Group's customers.

The Group took the decision to launch a regular premium protection product. This was launched in early February 2009.

The FOS has been receiving a large number of complaints in relation to PPI sold by a number of providers and has written to the FSA suggesting an industry wide review of PPI sales standards. In response, the industry is working on a Statement of Principles to define a consistent way of handling sales complaints. The FSA is considering FOS's suggestions and a statement from the FSA in relation to its most recent thematic work in relation to PPI is expected in the first quarter of 2009.

d) Other legal and regulatory matters

HBOS is engaged in other litigation in the UK and overseas arising out of its normal business activities. HBOS considers that none of these actions are material and has not disclosed any contingent liability in respect of these actions because it is not practical to do so.

44 Measurement Basis of Financial Assets and Liabilities

The accounting policies describe how different classes of financial instruments are measured, and how income and expenses, including fair value gains and losses, are recognised. The following table analyses the carrying amounts of the financial assets and liabilities by category and by balance sheet heading. Investment contracts with DPF valued under IFRS 4 are excluded from this table.

	At fair value through the income statement					Financial liabilities at amortised cost £m	2008 Total £m
	Derivatives designated as hedging instruments £m	Held for trading £m	Designated upon initial recognition ¹ £m	Available for sale £m	Loans and receivables £m

45 Financial Asset Reclassifications

Following the publication by the International Accounting Standards Board (IASB) and subsequent endorsement by the European Union in October 2008 of the amendments to International Accounting Standard 39 'Financial Instruments: Recognition and Measurement' (IAS 39) and IFRS 7 'Financial Instruments: Disclosures', the Group has reviewed the classification of its trading portfolio.

The Group has noted that the ongoing market dislocation and the deterioration of the world's financial markets that has occurred during the third quarter of 2008 is a sufficiently rare circumstance to warrant a review of the classification of financial assets held for trading.

With effect from 1 July 2008, the Group transferred from the held for trading classification certain asset backed securities (ABS) and floating rate notes (FRNs) with fair values at that time of £9,112m and £3,098m respectively, to the available for sale classification within investment securities. The carrying values as at 31 December 2008 are £10,132m and £3,410m respectively and the fair values as at 31 December 2008 are £10,047m and £3,410m respectively.

Subsequent to the transfers performed on 1 July 2008, the Group determined in light of increasing illiquidity in the markets for ABS to change the classification of certain ABS assets from AFS to loans and receivables. A portfolio of ABS was reclassified to loans and receivables with effect from 1 November 2008 at £35,446m. The carrying values and fair values as at 31 December 2008 are £37,173m and £36,191m respectively.

The financial impact of the reclassifications described above is set out below.

F-80

Notes to the Financial Statements
continued

45 Financial Asset Reclassifications continued

a) Debt securities reclassified from held for trading to AFS, with effect from 1 July 2008

Negative fair value adjustments of £730m were taken through the income statement relating to these assets for the period from 1 January 2008 to 30 June 2008 (full year 2007 £212m). If these assets had not been reclassified during the year additional negative fair value adjustments of £981m, net of accretion of discount of £96m, would have been recognised in the income statement and the AFS reserve movement would have been reduced by £776m (post tax) for the period 1 July 2008 to 31 December 2008.

At 1 July 2008 the effective interest rates on the reclassified debt securities ranged from 3% to 12% with expected recoverable cash flows of £13,359m.

b) ABS reclassified from available for sale to loans and receivables, with effect from 1 November 2008

Negative fair value adjustments of £3,301m (post tax) were taken through AFS reserves for the period from 1 January 2008 to 31 October 2008 (full year 2007 £319m post tax). If these assets had not been reclassified during the year additional negative fair value adjustments of £708m (post tax) would have been recognised in the AFS reserves for the period from 1 November 2008 to 31 December 2008.

Following this change in classification, these securities are no longer subject to measurement at fair value, although they will continue to be subject to regular impairment testing.

At 1 November 2008 the effective interest rates on the ABS reclassified, ranged from 3% 12% with expected recoverable principal flows of £40,968m.

The reclassifications of trading assets and AFS investment securities during the year had the effect of increasing both basic and diluted earnings per share for 2008 by £15.6p.

Notes to the Financial Statements
continued

46 Fair Value of Financial Instruments

The following table summarises the carrying amounts and fair values of financial assets and liabilities not carried on the Group's balance sheet at fair value. This note provides additional information in respect of financial instruments carried as loans and receivables or held at amortised cost (note 44).

	Carrying amount 2008 £m	Carrying amount 2007 £m	Fair value 2008 £m	Fair value 2007 £m

Other financial liabilities	2,419	665	2,424	665

The valuation methodologies for calculating the fair value of financial instruments carried as loans and receivables and at amortised cost are set out below.

Fair value is the amount for which the Group could exchange an asset, or could settle a liability, with other knowledgeable, willing parties in an arm's length transaction. The objective of the valuation techniques applied is to determine what the values would have been at year end in an arm's length transaction motivated by normal business considerations.

Loans and advances to banks, loans and advances to customers, deposits by banks and customer accounts are not regularly traded and so market prices are not available. In this instance, valuation techniques are applied to determine the fair value of these instruments.

For loans and deposits with variable interest rates, the fair value is represented by the carrying value as these products are at an administered rate that can be immediately repriced. The portfolios are stratified into various sub-groups, and also distinguish between performing and non-performing loans. For loans, counterparty credit risk is taken into account in determining the fair value with reference to current spreads at which similar products are currently priced, as appropriate. For non-performing loans, fair value is determined taking into account expected cash flows and discounting them over the period when they are expected to be recovered.

For other loans fair value is estimated by discounting anticipated contractual cash flows at current market interest rates. The portfolios are stratified into various sub-groups, and also distinguish between performing loans and non-performing loans. For performing loans, current market interest rates are derived by reference to the rates at

which similar products are currently priced and after taking into account significant changes in credit spreads. Credit spreads are determined with reference to new originations for similar products, and take into account the type of product, the maturity profile of the portfolio and collateral held. For non-performing loans, fair value is determined taking into account expected cash flows and discounting it over the period when they are expected to be recovered.

For customer deposits, fair value is estimated by discounting anticipated contractual cash flows at current market interest rates.

For investment securities held as loans and receivables and debt securities in issue and other borrowed funds carried at amortised cost, the fair values have been derived using quoted prices where available, broker valuations and where these are not available, cash flow models, adjusted for credit spreads where appropriate. Cash flow models take into account expected cash flows and the expected maturity of the instrument.

The fair values have been calculated on a product basis and as such do not necessarily represent the value that could have been obtained for a portfolio if it were sold at 31 December 2008.

48 Credit Risk

The Group's approach to managing credit risk is set out in the Risk Management Note 57. The table below sets out the Group's exposure to credit risk relating to financial instruments and insurance assets before taking account of collateral and other security. Policyholder assets are excluded from the Group's exposure in the table as the underlying credit risks are for the account of policyholders.

	Total £m	Policyholder funds £m	2008 Group exposure £m	Total £m	Policyholder funds £m	2007 Group exposure £m

Total	9,123	13,848	3,060	26,031	6,503	3,218	641	10,362

(b) For 2008 the ageing of the Corporate lending exposure is based upon the date the loan became overdue. For 2007, it is based upon the date the account entered impaired status.

The balance of Corporate impaired loans include £1,242m (2007 £1,648m) of impaired loans with no loss and £12,606m (2007 £1,570) of impaired loans with loss. Loans categorised as impaired with no loss represent loans that have been individually assessed as having impairment characteristics but where the Group expect, after taking consideration of collateral and other credit enhancements, full recovery of both interest and capital.

Impairment provisions as a % of closing net advances are analysed in the following table:

	£m	2008		2007	
		As % of closing advances	£m	As % of closing advances	£m
Retail	3,038	1.19	2,219	0.88

Collateral and other credit enhancements held

Financial assets that are past due or individually assessed as impaired may be partially or fully collateralised or subject to other forms of credit enhancement.

Assets in these categories subject to collateralisation are mainly corporate and residential mortgage loans.

For corporate loans, security may be in the form of floating charges where the value of the collateral varies with the level of assets such as inventory and receivables held by customer. For these and other reasons collateral given is only accurately valued on origination of the loan or in the course of enforcement actions and as a result it is not practicable to estimate the fair value of the collateral held.

A description and the estimated fair value of collateral held in respect of residential mortgage loans that are past due or individually assessed as impaired was as follows:

	2008	2007
	Fair value	Fair value
	£m	£m
Nature of assets		
- Residential property	13,534	10,660
	13,534	10,660

Collateral included in the above table reflects the Group's interest in the property in the event of default. That held in the form of charges against residential property in the UK is restricted to the outstanding loan balance. In other territories, where the Group is not obliged to return any sale proceeds to the mortgagee, the full estimated fair value has been included.

Repossessed collateral

During 2008 the Group obtained assets as a result of the enforcement of collateral held as security, as follows:

	2008 Carrying amount £m	2007 Carrying amount £m
Nature of assets		
- Residential property	617	292
	617	292

The Group does not use assets obtained in its operations. Assets obtained are normally sold, generally at auction, or realised in an orderly manner to settle indebtedness. Any surplus funds are returned to the borrower or are otherwise dealt with in accordance with appropriate insolvency regulations.

Financial assets held for trading

Financial assets held for trading are almost exclusively investment grade investments with 99% (2007 99%) of inter-bank and structured investment portfolios rated 'A' or above based on internal credit ratings. An analysis of financial instruments held for trading is given in Note 16.

Derivative assets

Derivative assets are primarily traded with investment grade counterparties with 83% (2007 83%) of derivatives rated 'A' or above based on internal credit ratings.

Loans and advances to banks

Loans and advances to banks are primarily invested with investment grade banks of which 89% (2007 79%) have a credit rating of 'A' or above based on internal credit ratings.

Debt securities

Debt securities are primarily held within the Treasury & Asset Management, Corporate and Insurance & Investment divisions and are almost exclusively issued by investment grade counterparties with 93% (2007 96%) of debt securities rated 'A' or above based on internal credit ratings.

Reinsurance assets

Of the reinsurance assets 71% (2007 80%) are due from insurers with a credit rating of 'AA' or above.

Contingent liabilities and commitments

Contingent liabilities and commitments are analysed in Note 43. This amount reflects the outstanding business at the year end and reflects the maximum credit exposure that could be drawn down. Some facilities will not be drawn down or may be only partially utilised.

Treasury debt securities - credit exposure

As part of investment credit activities Treasury holds a portfolio of debt securities which are analysed below. The investment credit business has two functions: firstly it manages part of the Group's prudential liquidity portfolio and secondly it takes investment positions principally through the Grampian conduit.

Following the International Accounting Standards Board's (IASB) decision to permit the reclassification of financial assets, Treasury reclassified certain securities from assets held for trading into available for sale (AFS) portfolio and, subsequently, in light of increasing illiquidity in the markets for asset backed securities (ABS), changed the classification of ABS from AFS, to loans and receivables. Further details about these reclassifications are in Note 45.

Treasury's total debt securities portfolio as at 31 December 2008, net of fair value adjustments and impairments, is summarised in the following table:

			Fair value through Income Statement	2008 Total £m
Asset class	Loans & Receivables £m	Available for Sale £m	£m

	6,210	96	5,278	99
FFELP Student Loans(1)	6,992	94	5,586	98
Other ABS	637	89	672	99
Total Uncovered ABS	37,526	82	38,637	99
Negative Basis	2,701	70	3,267	99
Total ABS(3)(4)	40,227	81	41,904	99

(1)RMBS means Residential Mortgage Backed Securities; CMBS means Commercial Mortgage Backed Securities; CBO means Collateralised Bond Obligations; CLO means Collateralised Loan Obligations; FFELP means Federal Family Education Loan Programme.

(2)Negative basis means bonds held with separate matching credit default swap (CDS) protection.

(3)The total comprises US securities of £24,304m (2007 £16,333m), and Non-US securities of £15,923m (2007 £25,571m).

(4)There has been no increase in net exposure as a result of the purchase of ABS during the year. Any increase in net exposure is the result of exchange rate movements in excess of paydowns, fair value adjustments and impairments.

49 Market Risk

The Group's approach to managing market risk is set out in the Risk Management Note 57. The following table shows, split by currency, the Group's sensitivity as at 31 December 2008 to an immediate interest rate shift of 25 basis points to all interest rates.

	2008		2007	
	+25 bps	-25 bps	+25 bps	-25 bps
Impact of interest rate shift on income statement (expense)/income	£m	£m	£m	£m
Currency				
Sterling	82.4	(119.6)	(21.2)	21.6
US Dollar	(2.9)	2.7	(0.6)	0.5
Euro	(8.0)	8.1	(4.3)	4.3
Australian Dollar	(1.5)	1.5	0.1	(0.1)
Other	(0.3)	0.3	0.1	(0.1)
Total	69.7	(107.0)	(25.9)	26.2

Non-trading currency exposure

Structural currency exposures arise from the Group's investments in overseas subsidiaries, branches and other investments and are noted in the table below.

	2008			2007		
Functional currency of the operation	Net investments in overseas operations	Borrowing taken out to hedge net investments	Remaining structural currency exposure	Net investments in overseas operations	Borrowing taken out to hedge net investments	Remaining structural currency exposure
	£m	£m	£m	£m	£m	£m
Australian Dollar	2,015	2,015		2,023	2,023	
Euro	3,011	3,011		1,888	1,613	275
US Dollar	191	181	10	97	97	
Other	(23)		(23)	4		4
Total	5,194	5,207	(13)	4,012	3,733	279

At 31 December 2008 and 2007 there are no material net currency exposures in the non-trading book relating to transactional (or non-structural) positions that would give rise to net currency gains or losses. Additional information on the Group's foreign exchange risk is set out in the Risk Management Note 57.

51 Related Party Transactions

Banking transactions are entered into by the Group with its subsidiaries in the normal course of business and are at normal commercial terms. These include loans, deposits and foreign currency transactions. Interest income and expense are £2,880m (2007 £1,909m, 2006 £1,469m) and £2,344m (2007 £1,718m, 2006 £966m) respectively. HBOS plc is the principal employer of the Group and staff and other costs in the year of £2,582m (2007 £2,457m, 2006 £2,277m) were recharged to subsidiaries.

In the year ended 31 December 2008, the Group provided both administration and processing services to Sainsbury's Bank plc. The amounts payable to the Group during the year were £26m (2007 £42m, 2006 £36m), of which £10m is outstanding at the year end (2007 £18m, 2006 £15m). At 31 December 2008, Sainsbury's Bank plc also has balances with the Group that are included in loans and advances to banks of £906m (2007 £726m, 2006 £766m) and deposits by banks of £1,274m (2007 £3,430m, 2006 £943m).

At 31 December 2008 there are loans and advances to customers of £14,196m (2007 £11,373m, 2006 £10,115m) outstanding and balances within customer accounts of £342m (2007 £575m, 2006 £304m) relating to jointly controlled entities and associated undertakings. In addition, £175m (2007 £175m, 2006 £175m) preference shares in esure are held by the Group and are reported in investment securities (Note 20).

At 31 December 2008, there are customer accounts of £30m (2007 £20m, 2006 £3m) and investment and insurance contract liabilities of £872m (2007 £425m, 2006 £489m) related to the Group's pension arrangements. Additionally, the Group's pension funds held HBOS plc ordinary shares with a value of £3m (2007 £19m, 2006 £28m) and HBOS plc bonds with a value of £nil (2007 £2m, 2006 £nil).

52 Transactions with Key Management Personnel

Key management personnel comprise the members of the Board of HBOS plc and, as the senior executive committee of the Group, the members of the HBOS Executive Committee.

Remuneration and other compensation

	2008	2007	2006
	£'000	£'000	£'000

Compensation for loss of office		1,475	
Post retirement benefits	82	63	222
Equity compensation benefits	2,083	6,257	7,715

Product transactions

Key management personnel and other colleagues, as well as receiving salary, incentives, shares, pensions and other benefits are entitled to enter into product transactions with HBOS plc and its subsidiaries. These transactions are generally in the form of banking, savings, mortgage, loan, insurance, assurance and investment products. Any product offerings that are received on beneficial terms compared to the terms received by customers and which give rise to

taxable benefits in kind are declared to HM Revenue & Customs and taxed accordingly.

Key management personnel and connected persons have undertaken transactions with HBOS plc and its subsidiaries, jointly controlled entities and associated undertakings in the normal course of business, details of which have been disclosed to the Group are given below:

53 Cash and Cash Equivalents

	2008	2007	2006
		Reclassified	
	£m	£m	£m
Cash and balances at central banks	2,502	2,945	2,295
Less: mandatory reserve deposits	(296)	(373)	(330)
	2,206	2,572	1,965
Loans and advances to banks	17,645	7,683	11,263
Less: amounts with a maturity of three months or more	(7,748)	(4,070)	(3,735)
	9,897	3,613	7,528
Cash and cash equivalents	12,103	6,185	9,493

Mandatory reserve deposits are held with local central banks in accordance with statutory requirements; these deposits are not available to finance the Group's day to day operations.

Included in total cash and cash equivalents at 31 December 2008 is £864m (2007 £658m, 2006 £767m) of cash held at the central bank as collateral against notes in circulation of £957m (2007 £881m, 2006 £857m).

Mandatory reserve deposits of £373m at 31 December 2007 (£330m 2006) have been reclassified from loans and advances to banks to cash and balances at central banks. In addition, total cash and cash equivalents at 31 December 2007 have been reclassified to include certain cash deposits held with the central Bank of Ireland of £853m (1 January 2007 £535m, 1 January 2006 £279m) and cash held at the central bank as collateral against notes in circulation of £881m (1 January 2007 £857m) which are available to finance the Group's day-to-day operations. The cash flow statements have been adjusted accordingly.

54 Securities Borrowing and Lending, Repurchase and Reverse Repurchase Agreements

The Group enters into securities lending transactions and repurchase agreements, whereby cash and securities are temporarily received or transferred as collateral. Where the securities sold subject to repurchase or pledged as collateral are retained on the balance sheet the funds received under these arrangements are recognised as liabilities. These transactions are all in respect of standard securities borrowing and reverse repurchase agreements which are undertaken under standard market terms and conditions, or are in respect of securities exchange transactions under the Bank of England's Special Liquidity Scheme. Assets and liabilities relating to such arrangements at 31 December are as follows:

	2008	Asset	2008	Liability
	£m	2007	£m	2007
		£m		£m
Assets subject to repurchase				
Financial assets held for trading (Note 16)	4,369	4,711	3,425	4,523

Edgar Filing: Lloyds Banking Group plc - Form 6-K

Loans and advances to customers (Note 18)	56,858		39,220	
Investment securities (Note 20)	37,263	8,996	31,682	7,841
	98,490	13,707	74,327	12,364

In addition to the above, financial assets pledged as collateral as part of securities lending transactions amounted to £89,109m (2007 £11,918m).

Securities held as collateral under stock borrowed or under reverse repurchase agreements amounted to £76,018m (2007 £39,975m), of which £64,378m (2007 £28,817m) had been resold or repledged by the Group as collateral for its own transactions. These securities are not recognised as assets, and the cash advanced is recognised within financial assets held for trading, loans and advances to banks and loans and advances to customers.

(a) The with-profit fund unallocated surplus is determined on an adjusted realistic basis.

(b) Excludes investment contract liabilities related to the collective investment schemes.

(c) Provisional available capital

Notes to the Financial Statements
continued

56 Long Term Assurance Business Capital Position Statement continued

The Group has one UK with-profit fund, the Clerical Medical Investment Group Limited (CMIGL) with-profit fund, which is shown separately in the Capital Position Statement. The Group's UK non-profit businesses are aggregated as well as the Group's overseas life businesses for the purpose of this statement.

For the Group's UK with-profit fund, available capital and capital requirements are determined under the 'twin peaks' assessment as prescribed by the regulations of the Financial Services Authority (FSA). Under this assessment the available capital is determined by comparing admissible assets with the mathematical reserves determined on the 'regulatory peak' basis. This is adjusted by the with-profit insurance capital component (WPICC) to arrive at the available capital position for the purpose of this disclosure. The capital requirement, adjusting for the WPICC, consists of the long term insurance capital requirement (LTICR).

The WPICC is determined under the twin peaks test by comparing the regulatory peak with the realistic peak. If the latter is more onerous then this gives rise to a WPICC. At 31 December 2008 and at 31 December 2007, the realistic peak was more onerous. Accordingly, the available capital of the with-profit fund is adjusted by the WPICC and presented on a realistic basis. As more fully described in Note 32, the unallocated surplus is determined on an adjusted realistic basis in accordance with FRS 27 as permitted by IFRS 4.

There are no formal arrangements, other than those relating to the CMIGL with-profit fund described below, for shareholders' funds or the surplus within the individual life funds to be used to support other businesses or life funds within the Group. However, as described below, subject to certain conditions being met, the available capital within the individual funds is potentially transferable to other parts of the Group. However, the capital within each fund is generally subject to restrictions as to its availability to meet requirements that arise elsewhere in the Group, including other long term businesses. In particular, for sections in the Capital Position Statement where aggregate capital amounts have been shown, such as for UK non-profit funds and overseas business, there are no prior arrangements in place to allow the capital to move freely between entities within these sections.

Restrictions to the application of capital

Restrictions apply to the transfer of assets from any long term fund. In particular, at all times, each long term fund must maintain an excess of assets over liabilities. Transfers of assets from a long term fund can only be made once management are satisfied that they have met the relevant requirements of the fund. The principal restrictions are:

(a) CMIGL with-profit fund

The unallocated surplus held in the fund can only be applied to meet the requirements of the fund itself or distributed according to the prescribed rules of the fund. Shareholders are entitled to an amount not exceeding one ninth of the amount distributed to policyholders in the form of bonuses. Such distributions would also be subject to a tax charge. The use of capital within the fund is also subject to the terms of the scheme of demutualisation effected in 1996 and the conditions contained in the Principles and Practices of Financial Management of the fund. Capital within the Clerical Medical non-profit fund is available to meet the with-profit fund's capital requirements. There are no other arrangements that provide capital support to the fund.

(b) UK non-profit funds

Except as above, the capital held in the fund is attributable to the shareholders and, subject to meeting the regulatory requirements of these businesses, this capital is potentially available to meet capital requirements elsewhere in the

Group. Any transfer of the surplus would give rise to a tax charge.

(c) Overseas life business

These include several smaller life companies outside the UK. In all cases the available capital resources are subject to local regulatory requirements including Germany and Ireland. The available capital held in each company is potentially available to meet the capital requirements in other parts of the Group, subject to additional complexity surrounding the transfer of capital from one country to another.

F-98

Notes to the Financial Statements

56 Long Term Assurance Business Capital Position Statement continued

Target capital

For the UK with-profit fund, the Group is required to hold sufficient capital to meet FSA requirements, based on the risk capital margin (RCM) determined in accordance with the FSA's regulatory rules under its realistic capital regime. The determination of the RCM is based on the impact of specified changes in market prices of the fund assets as well as policyholder behaviour, taking into account the actions management would have taken in the event of the particular adverse changes.

For UK non-profit business, the relevant capital requirement is the LTICR and resilience capital requirement determined in accordance with FSA regulations.

Under the FSA's Individual Capital Adequacy Standards framework, each company is required to carry out its own assessment of the capital required to meet its liabilities in all reasonably foreseeable circumstances known as the individual capital assessment (ICA). The ICA takes into account certain business risks not reflected in the FSA's other capital requirements.

Management intends to maintain surplus capital in excess of the various regulatory requirements, including the ICA, in order to absorb changes in both the underlying businesses and the capital requirements over the short term. At 31 December 2008 the provisional available capital, excluding the with-profit fund, was 370% (2007 468%) of the provisional LTICR and resilience capital requirements of £756m (2007 £650m). At 31 December 2008, the total provisional available capital including the with-profit fund on a realistic basis was 263% (2007 399%) of the provisional LTICR and resilience capital requirements of £1,256m (2007 £1,116m).

Changes in capital

The principal factors that resulted in changes to the total provisional available capital are set out in the table below:

	CMIGL UK with-profit fund £m	UK non-profit funds £m	UK life shareholder funds £m	Overseas life business £m	Total life business £m

57 Risk Management

Credit risk

Credit risk is the risk of financial loss from counterparty's failure to settle financial obligations as they fall due.

Credit risk performance

During the second half of 2008 the pressures being experienced in wholesale and liquidity markets spread to become severe economic deterioration in the UK. This pressure accelerated significantly in quarter four 2008 and saw substantial issues arising in Corporate lending and Treasury investments.

The Corporate Division's Credit Risk Management was unable to react quickly enough to contain the deterioration, exacerbated by HBOS historic levels of exposure concentration within property and property related sectors, giving little room for manoeuvre in a deteriorating market and resulting in impairment losses increasing dramatically.

In addition, Treasury has been materially impacted by the reduction in fair value of the ABS portfolio as a result of credit concerns, poor market sentiment and liquidity pressures. This has been exacerbated following a strategic decision of moving away from using Government bonds to provide liquidity, instead relying on AAA rated asset backed securities and investment grade bank FRNs, which whilst effective in liquidity terms, significantly increased the credit risk profile of the Group.

The credit risk profile within HBOS is susceptible to further increases in impairments if the UK economy continues to deteriorate. Additional pressure will also be evident in Treasury's ABS portfolio if US real estate values fall further, resulting in increasing fair value and impairment losses.

Management of credit risk

The Group Credit Risk Committee (GCRC), one of the Executive Risk Committees, is chaired by the Group Risk Director and comprises senior executives from across the business Divisions and Group Risk and Group Finance functions. It meets monthly and reviews the Group's lending portfolio, approves Group credit standards, limits and divisional credit risk policies. The Group Credit Risk Policy Statement is approved by the Board on an annual basis. The GCRC also assists the Board in formulating the Group's credit risk appetite in respect of key products and sectors.

Group Credit, a specialist support function within Group Risk, provides centralised expertise in the area of credit risk measurement and management techniques. In addition to reporting on the performance of each divisional portfolio to the GCRC (and other senior HBOS committees), Group Credit exercises independent oversight over the effectiveness of credit risk management arrangements and adherence to approved policies, standards and limits.

Day to day management of credit risk is undertaken by specialist credit teams working within each Division in compliance with policies approved by divisional committees, under lending authorities delegated by the Board (via GCRC). Typically functions undertaken by these teams include credit sanctioning, portfolio management and management of high risk and defaulted accounts and credit risk model build and governance.

To manage credit risk, a wide range of policies and techniques are used across the Group:

For retail portfolios, extensive use is made of credit scoring in the assessment of new applications for credit. In addition, behavioural scoring is used to provide an assessment of the conduct of a customer's accounts in granting

extensions to, and setting limits for, existing facilities and in identifying customers at risk of default. Affordability is a vitally important measure and is reviewed in combination with either application and/or behavioural scores. HBOS has been involved in data sharing initiatives within the industry and makes extensive use of credit bureau files to inform the assessment of customer risk and affordability and to aid responsible lending. Small business customers are assessed for their credit-worthiness in a similar manner to retail customers.

For corporate portfolios a full credit assessment of the financial strength of each potential transaction and/or customer is undertaken, including a stress test of key financial aspects of the transaction, awarding an internal risk rating which is reviewed regularly. The same approach is also used for larger SME (small to medium enterprise) customers.

within Treasury Division (Treasury), which handles the Group's banking and sovereign related exposures, as well as the Group's structured credit bond (ABS) portfolio held for liquidity and proprietary purposes, focused credit risk policies are established and reviewed by Group Wholesale Credit Committee (GWCC), a sub-committee of the GCRC. Basel II Advanced IRB compliant models are used to rate banking and sovereign counterparties. Structured credit bonds are reviewed individually by an independent credit function prior to purchase and an internal rating is applied to all exposures. Additional thresholds and limits are applied by rating and by asset class in line with the business strategy. As part of an ongoing portfolio review process, monitoring is performed covering each bond holding, supplemented by stress analyses conducted on a periodic basis.

An additional measure within the credit risk framework is the establishment of product, industrial sector and country limits to avoid excessive concentrations of risk. Material portfolios, such as mortgages, have approved sub-sector limits to ensure that they remain within plan and tolerance for risk. All such limits are set and monitored by the GCRC.

Notes to the Financial Statements
continued

57 Risk Management continued

Standards have been established across the Group for the management of credit risk. All Divisions are independently rated against these internal standards by the Group Credit function (on an annual basis) and work together to continuously improve credit risk management capability. There continues to be significant levels of investment in the development of credit risk rating tools, including enhancements to the portfolio risk measurement systems and in governance arrangements to support operations within the terms of the Basel II Accord. These include principles for development, validation and performance monitoring of credit risk models. The approval process for credit models is dependant upon the materiality of the model, with all models impacting the regulatory capital calculation requiring approval by the Group Model Governance Committee (GMGC), which is a sub committee of GCRC, and those deemed material to the Group being approved by the Group Capital Committee (GCC).

Internal reporting has developed in response to the introduction of improved rating tools. Senior Management across the Group are now provided with reports assessing the risk profile in terms of Probability of Default and Expected Loss and will continue to do so under the Basel II environment going forward.

Standard technical definitions

PD – Probability of Default. The probability that an obligor enters default in the next 12 months.

EAD – Exposure At Default. The obligor's credit exposure at the point of default, assuming default occurs within the next 12 months.

LGD – Loss Given Default. The proportion of an obligor's exposure at default that the lender loses as a result of default, assuming that default occurs within the next 12 months. This is a percentage.

EL – Expected Loss – The monetary amount we expect to lose from an obligor, arising from a default in the next 12 months.

Derived by the formula $EL = PD \times EAD \times LGD$.

Scope of HBOS IRB Permission

In the period to 31 December 2007 HBOS operated under what is commonly know as the Basel I regulatory capital regime. Under Basel I the FSA required each bank and banking group to maintain an individually prescribed ratio of total capital to risk-weighted assets, taking into account both balance sheet assets and off-balance sheet transactions. From 1st January 2008 HBOS, in common with UK peers, adopted the Basel II framework through application of the FSA BIPRU rules.

Basel II seeks to augment arrangements and introduces a risk sensitive framework. Basel II is structured to provide a choice of methodologies to determine credit risk regulatory capital requirements, with different levels of complexity. HBOS makes use of the Standardised and Advanced Internal Ratings Based (AIRB) approaches with no portfolios using the Foundation Internal Ratings Based approach.

Standardised approach. This is an extension of Basel I and requires banks to use external credit ratings to determine risk weightings for rated counterparties. Like Basel I, it groups other counterparties into broad categories and applies regulatory determined risk weightings to these categories.

Advanced Internal Ratings Based approach (AIRB). This is the most sophisticated approach. Banks use their own internal assessment of PD, EAD and LGD to determine risk weight asset values.

HBOS is approved by the FSA to use the Advanced Internal Ratings Based approach (AIRB) for regulatory capital purposes. The scope of permission covers all Basel II asset classes, however, HBOS has a model roll-out schedule to complete, predominately in relation to International and Corporate businesses. The roll-out plan and mandatory parallel run will run until the end of 2010.

Beside these, HBOS has a number of small portfolios where, for economic reasons, it is not commercially viable to construct AIRB models. These are typically products which are no longer sold and effectively in run off mode or new products where HBOS has yet to establish the critical mass of data necessary to construct AIRB models. In such cases the Standardised approach is applied. The models that are used in the regulatory capital calculation also underpin the credit risk measurement framework used by HBOS. It is a regulatory requirement that the models deployed in the capital calculations are used to inform credit related decisions.

Internal ratings process

For each IRB asset class the approach has been to build internal models to generate PD's, LGD's and EAD's for products within the asset class. This is summarised below.

Retail Assets – Retail assets include residential mortgages, overdrafts, credit cards and unsecured personal lending exposures. The methodology for retail assets is transaction based with a foundation in the scorecards used for application decision and account management. The regulatory EL is mapped to a Lifetime Expected Loss (LEL) which is used in wider business processes including assessment of risk appetite and pricing.

Notes to the Financial Statements
continued

57 Risk Management continued

Corporate Assets – Corporate assets include exposures to corporate and SME entities. The methodology for non specialised lending corporate assets considers, individually, the obligor PD, the transaction EAD and LGD then combines these to produce the transaction EL. The approach within HBOS to estimating PD has been to undertake a statistical analysis of the obligor’s financial statements with a supplementary qualitative but standardised overlay. This is then calibrated to the historically identified (and where necessary appropriately adjusted) default rate for the portfolio in hand. EAD estimates are based on current exposures plus an additional proportion of the undrawn positions. The LGD component is estimated, taking account of the EAD less any recognisable collateral.

Specialised Lending Assets – This asset class predominantly comprises property investment and property development transactions but also includes major asset financing deals such as shipping and aircraft. This is a transaction based approach. Where full models are in place, our methodology has been to stochastically assess the transaction’s cash flows over its lifetime and use this to calculate the 12 month EL.

Financial Institutions and Sovereign Assets – This comprises exposures to governments together with exposures to bank counterparties. Given the historical limited default data for such portfolios the methodology for these assets has been to predict what rating would be provided by an External Credit Assessment Institution (ECAI) should the obligor have sought one. This rating is then related to a PD value based upon the long run historic information associated with such ECAI ratings. A transaction EAD is estimated based on the product characteristics while LGD is directly associated with the standing of the obligor. These components are then combined to produce the transaction EL.

Within HBOS all models have been developed internally and there is no use of external models (although there may be reliance on external feeds such as bureau data, PD ratings for external third parties such as tenants, and feeds to Treasury Bank rating models). Minimum Standards for the development and monitoring of Credit Risk Models are in force across the Group.

In accordance with the HBOS federal structure, credit risk control units have been established within each Divisional risk function.

Divisional credit teams are independent from business generation teams and are responsible for:

development, validation, implementation and recalibration of credit risk models;

monitoring of the ongoing performance of the credit risk models; and

securing annual approval of all credit risk models from the appropriate body.

The most material internal rating models are approved for use by Group Capital Committee with the remainder at Group Model Governance Committee, which is a sub committee of GCRC. Group Credit Risk undertake independent technical review of Divisional credit risk models in accordance with the Group’s standards. These reviews take place annually or when a model is materially changed and result in a recommendation to the GMGC or Group Capital Committee where the model is approved for use.

Use of internal estimates

The Group has introduced IRB models on a phased basis, ensuring that full confidence in the outputs is built up within the credit areas before moving to full use in decisioning.

IRB parameters are being widely used in the divisions particularly in those that will experience the most material benefit under Basel II and for the most material requirements.

Credit approval

Credit assessment and approval within HBOS is mainly conducted at the divisional level in line with the Group Credit Risk Policy Statement (GCRPS) and divisional credit policy statements. The GCRPS requires adherence to the canons of lending appropriate for a financial institution of HBOS's size and sophistication, and in relation to IRB inputs it specifically requires that each borrower must be assigned a credit rating or score, or directly, a probability of default (PD) which is updated at least annually; and PD and EL should be considered as part of a credit assessment.

The divisional processes can be broken down into two main categories:

Portfolio level credit approval (defined as low value, high volume automated credit processes and used primarily for assessing retail portfolios). Typically, lifetime EL and EL estimates generated from/by IRB models are used to set application scorecard cutoffs. Therefore, the level of business accepted via automated decision making processes is directly influenced by IRB outputs. Decisioning and pricing are linked and LEL outputs are also fed into profitability models that are used to make pricing decisions;

Transaction level credit approval (defined as high value, low volume exposures which are addressed directly by credit analysts - used for corporate, corporate SME, financial institution and sovereign asset classes).

In general, the process operates as follows:

The relationship manager inputs the appropriate information into the models which return PD/EL outputs.

An independent credit risk management unit checks the inputs to the model calculations for accuracy and plausibility (and for outputs); and verifies that the correct model has been used.

Notes to the Financial Statements
continued

57 Risk Management continued

Credit limits

The governance process for limits approval is:

At Group level, limits for products, sectors and countries are set under the authority of GCRC; and

Within the divisions, sanctioning is conducted under a set of agreed delegated lending authorities granted to individuals or credit committees. These delegated authorities have been revised substantially in response to the deteriorating credit conditions.

Divisional risk committees do not make individual credit decisions but are responsible for putting in place appropriate governance arrangements, approving policies and standards and credit risk rating systems and monitoring all aspects of credit risk within their respective divisions.

Pricing

Transaction/portfolio level pricing is set by the divisions who are increasingly basing these decisions on the outputs of the IRB models.

For Retail, pricing and decisioning are intrinsically linked. The lifetime expected losses are fed into the profit model, along with other costs, to allow a price to be set that generates the required return. All pricing decisions have been assessed using the Basel lifetime expected loss to ensure that current pricing passes the required hurdle rates dependent on the risk involved.

For Corporate, the pricing model facilitates the incorporation of appropriate pricing information into the credit approval process.

For Treasury, the major activities are funding, liquidity and hedging in external markets on behalf of the wider HBOS group. Treasury is not normally a market maker in the markets within which it operates and is therefore dependent on prices quoted to it by the market.

Portfolio reporting

Credit risk reporting is conducted at both Group and divisional levels embedding IRB parameters into the management information. This includes analysing PD, LGD, EAD, and EL measures. Model performance and parameter assessment are also presented.

Factors impacting loss experience

The deterioration in the loss experience generally reflects the increasing economic pressures over the year characterised by declining economic activity, rising unemployment, the contraction of the mortgage market, reduced availability of credit and the fall in house and commercial property values.

The increase in mortgage losses was driven predominantly by increased affordability pressures and reduced attrition from higher risk customers as well as the rise in Loan to Value ratios due to reduced housing values.

The Corporate credit environment has suffered significant deterioration, with an increasing number of customers operating under stressed conditions. In particular, our exposure to the construction and real estate sectors, where there have been historically large concentrations of lending, have been impacted more severely than other sectors. In addition HBOS strategy was to support relatively high levels of exposure to a small number of long term customer relationships, these single name concentrations have placed the Group at risk of significant loss, should default occur. The general deterioration of the credit environment and associated market dislocation has limited the options available to Corporate to restructure or dispose of distressed assets. As a result, not only has HBOS been impacted earlier and more significantly than most of its peers, it has been very difficult to materially reduce the balance sheet risk profile in reaction to the environment.

Likewise, the loss experience within our International businesses reflects the deteriorating economies within which it operates.

Losses experienced in Treasury are due to both the fair value impact of the market dislocation on the asset backed securities portfolio, including Alt A bonds and CDOs and the well publicised failure of certain bank counterparties resulted in credit impairments. The fall in value has been driven largely by credit concerns, poor market sentiment and liquidity requirements.

Credit risk mitigation

Collateral is the pledging of assets which in the event of default can be sold in order to realise some or all of the outstanding monies. HBOS has documented policies in respect of the criteria for recognition of collateral taken as credit risk mitigation.

HBOS employs a variety of credit risk mitigation techniques in order to mitigate the credit risk faced. These techniques include netting, collateral, guarantees and credit derivatives.

The Retail mortgage portfolios are formally secured on residential properties. Corporate exposures utilise a broad range of collateral types serving to reduce the loss in event of default. Financial collateral is predominantly cash. Other eligible collateral includes first charges on commercial and residential real estate and other physical assets such as aircraft, shipping, commercial vehicles and car fleets.

Notes to the Financial Statements
continued

57 Risk Management continued

On balance sheet netting is recognised where the agreement is legally effective and enforceable, and there is an intention and ability to settle on a net or simultaneous basis, in all jurisdictions. In recognising the netting agreements HBOS ensures it can determine at any time those assets and liabilities that are subject to the netting agreement.

On balance sheet netting is recognised in respect of mutual claims between the HBOS Group and its counterparty. This is limited to reciprocal cash balances between HBOS Group and the counterparty. For master netting agreements covering repurchase transactions and/or securities or commodities lending or borrowing transactions and/or other capital market driven transactions to be recognised for the purposes of the calculation of regulatory capital, they shall:

Be legally effective and enforceable in all relevant jurisdictions, including in the event of the bankruptcy or insolvency of the counterparty;

Give the non-defaulting party the right to terminate and close-out in a timely manner all transactions under the agreement upon the event of default, including in the event of the bankruptcy or insolvency of the counterparty; and

Provide for the netting of gains and losses on transactions closed out under a master agreement, so that a single net amount is owed by one party to the other.

HBOS policy is to calculate the market value of collateral taken, and periodically reassess it. Notwithstanding revaluation is undertaken whenever HBOS has reason to believe that a significant decrease in market value has occurred. Where the collateral is held by a third party, HBOS takes reasonable steps to ensure that the third party segregates the collateral from its own assets.

Where real estate is pledged as collateral the value of the property is frequently reassessed. More frequent assessment is carried out where the market is subject to significant changes in conditions.

Statistical methods are used to monitor the value of the property and to identify property that requires to be revalued. The property valuation is reviewed by an independent valuer when information indicates that the value of the property may have declined materially relative to general market prices.

The value of other physical forms of collateral is monitored on a frequent basis and at a minimum once every year. More frequent monitoring is required where the market is subject to significant changes in conditions.

HBOS policy is to ensure it has the ability to liquidate the collateral, the ability to establish objectively a price or market value, the frequency with which the value can readily be obtained (including a professional appraisal or valuation), and the volatility or a proxy of the volatility of the value of the collateral. Both initial valuation and revaluation take into account any deterioration or obsolescence of the collateral. Particular attention is paid in valuation and revaluation to the effects of the passage of time on fashion- or date-sensitive collateral. HBOS policy in recognising collateral is that there is the right to physically inspect the collateral ensuring also that the collateral taken as protection is adequately insured against damage.

Guarantees exist when one entity commits to paying the outstanding monies in event of default of another entity, which has entered into a transaction with HBOS. The Group receives a variety of guarantees types however capital calculation recognition is only taken through the use of PD substitution for guarantees provided by appropriate sovereigns and institutions.

Credit derivatives are an investment banking product whereby HBOS pays a premium to a credit protection provider in order to receive the full amount of monies owed should a specific counterparty default on their obligations. In effect, this is a form of insurance policy and is used in Treasury Division to mitigate Credit Risk.

Counterparty credit risk

Internal capital and credit limits

Bank and Sovereign AIRB rating predictor models are used to produce an internal rating for each counterparty within the portfolio. These ratings are mapped across to statistically derived (based upon Moody's history of default data) PD and LGD tables. When combined with EAD, these values determine EL. To determine EAD exposure, values for derivative products are calculated by using the mark-to-market methodology for regulatory purposes and internally developed models for limit management. EL is then used to calculate the minimum capital from which the Risk Weighted Asset (RWA) is derived. Treasury does not use economic capital models, thus RWAs are used to determine regulatory capital.

Securing collateral and establishing credit reserves:

Treasury makes active use of collateral and risk mitigation techniques to reduce credit risks in its portfolio. These include the use of collateral (cash, government securities, and guarantees), break clauses and netting. In addition, a gross notional control for repo and stock borrowing exists.

To recognise the effects of credit risk mitigation, the mitigation agreements must be valid, enforceable, unconditional and irrevocable. In addition, collateral must be transferred to Bank of Scotland through the passing of title and should be netable on a portfolio basis. Once these and other conditions specified by the credit sanctioner are met, the effect of collateral received is reflected in reductions to all applicable credit exposures and in capital adequacy calculations.

Treasury Collateral Operations are required to actively monitor collateral using established best risk management practices.

Notes to the Financial Statements
continued

57 Risk Management continued

Correlation risk

Under the repo framework, the issuer of collateral held and the counterparty the trade is transacted with should be neither the same nor connected. The same rule applies for derivatives under collateral assets standards. Treasury Credit has the discretion to extend the rule to other cases where there is significant correlation.

Financial instruments subject to credit risk

The table below sets out the Group's exposure to credit risk relating to financial instruments before taking account of collateral and other security. Policyholder assets are excluded from the analysis in the table as the underlying credit risks are for the account of the policyholders and have no direct impact on the Group's results, as described further in Note 48. A full reconciliation between the Group's consolidated balance sheet and financial instruments subject to credit risk is set out in Note 48.

	As at 31.12.2008	As at 31.12.2007
	£m	£m
Financial instruments subject to credit risk		
Loans and advances to customers	435,223	430,007
Financial assets held for trading	22,571	54,681
Debt securities	71,395	56,100
Other financial assets	69,392	24,256
	598,581	565,044
Contingent liabilities and commitments	61,217	78,904
Total	659,798	643,948

Loans and advance to customers

Loans and advances to customers are managed on a divisional basis. Information about the credit quality of loans and advances to customers is set out in Note 48.

Financial assets held for trading

As described above, full credit analysis is undertaken and, based upon that, an internal rating is derived which helps to establish a credit appetite for the issuer or asset intended to be acquired.

As Treasury manages the liquidity of the HBOS Group, its mandate is to maintain a high quality credit portfolio and actively use portfolio techniques to manage and monitor the quality of its portfolios. This includes the use of rating based thresholds, established portfolio level thresholds, asset class limits and sub-limits. There are also rules governing the types of assets that can be held within Treasury's Liquidity portfolios, Trading and Banking books and for individual asset backed security (ABS) tranche sizes. There are also limits controlling the maximum weighted average life of assets.

Financial assets held for trading are predominantly investment grade investments with 98.8% (2007 99.6%) of inter-bank and structured investment portfolios rated 'A' or above based on an internal credit ratings scale that is, in general, aligned with the ratings scales of the major credit ratings agencies (Moody's, S&P and Fitch).

During the course of 2008, £12.2bn of ABS and FRN assets were transferred from the Trading Book to the AFS Book. Subsequently, £35.4bn of ABS was transferred from the AFS Book into the Loans & Receivables Book.

	As at 31.12.2008	As at 31.12.2007
	%	%
AAA	67.4	51.5
AA	19.3	34.4
A	12.1	13.7
Below A	1.2	0.4

Debt securities

Debt securities are primarily held within the Treasury or Insurance & Investment Divisions and are predominantly invested in investment grade counterparties with 92.7% (2007 96.5%) of debt securities rated 'A' or above, again based on our internal rating scale.

	As at 31.12.2008	As at 31.12.2007
	%	%
AAA	52.0	57.8
AA	23.8	25.8
A	16.8	12.9
Below A	7.4	3.5

Notes to the Financial Statements
continued

57 Risk Management continued

Other financial assets

Other financial assets include cash and balances at central banks, items in the course of collection, derivative assets, loans and advances to banks and sundry financial assets.

Market risk

Market risk is defined as the potential loss in value or earnings of the organisation arising from:

changes in external market factors such as interest rates (interest rate risk), foreign exchange rates (foreign exchange risk), credit spread, commodities and equities; and

the potential for customers to act in a manner which is inconsistent with business, pricing and hedging assumptions.

The objectives of the Group's market risk framework are to ensure that:

market risk is taken only in accordance with the Board's appetite for such risk;

such risk is within the Group's financial capability, management understanding and staff competence;

the Group complies with all regulatory requirements relating to the taking of market risk; and

the quality of the Group's profits is appropriately managed and its reputation safeguarded.

Risk appetite is set by the Board which allocates responsibility for oversight and management of market risk to the Group Market Risk Committee (GMRC), an Executive Risk Committee chaired by the Group Risk Director.

The Group devotes considerable resources to ensuring that market risk is captured, modelled and reported, and managed. Trading and non-trading portfolios are managed at various organisational levels, from the HBOS Group overall, down to specific business areas. Market risk measurement and management methods are designed to meet or exceed industry standards, and the tools used facilitate internal market risk management and reporting.

Market risk is controlled across the Group by setting limits using a range of measurement methodologies. The principal methodologies are Net Interest Income (NII) sensitivity and Market Value (MV) sensitivity for banking books and Value at Risk (VaR) for trading books. All are supplemented by scenario analysis which is performed in order to estimate the potential economic loss that could arise from extreme, but plausible stress events.

Detailed market risk framework documents and limit structures have been developed for each Division. These are tailored to the specific market risk characteristics and business objectives of each Division. Each divisional policy requires appropriate divisional sanction, and is then forwarded to the GMRC for approval on at least an annual basis.

Market risk within the insurance and investment businesses arises in a number of ways and depending upon the product: some risks are borne directly by the customer and some by the insurance and investment companies. Risk to customers is controlled by adherence to and regular monitoring of investment mandates and, if appropriate, unit

pricing systems and controls. In the case of risk to the companies, individual Boards approve overall risk appetites and policies against which exposure is monitored.

Market risk – principally interest rate, inflation and equity – also arises from the Group’s defined benefit pensions obligations. These sensitivities are regularly measured and are reported to the GMRC every month.

Interest rate risk (non-trading)

A key market risk faced by the Group in its non-trading book is interest rate risk. This arises where the Group’s financial assets and liabilities have interest rates set under different bases or reset at different times.

The principal Board limit for structural interest rate risk is expressed in terms of potential volatility of net interest income in adverse market conditions. Risk exposure is monitored using the following measures:

Net Interest Income sensitivity – This methodology comprises an analysis of the Group’s current interest rate risk position overlaid with behavioural assessment and re-pricing assumptions of planned future activity. The change to forecast NII is calculated with reference to a set of defined parallel interest rate shocks which measure how much current projections would alter over a 12 month period.

Market Value sensitivity – This methodology considers all re-pricing mismatches in the current balance sheet including those beyond the time horizon of the NII measure. It is also calculated with reference to a set of defined parallel interest rate shocks.

The Board has delegated authority to the GMRC to allocate limits to divisions as appropriate within the overall risk appetite approved by the Board each year. In turn, the GMRC has granted limits which constitute the risk tolerance for each Division.

Notes to the Financial Statements
continued

57 Risk Management continued

Banking divisions are required to hedge all significant open interest rate mismatch positions with Treasury and are not permitted to take positions of a speculative nature. A limit structure exists to ensure that risks stemming from residual and temporary positions or from changes in assumptions about customer behaviour remain within the Group's risk appetite.

Market risk in non-trading books consists almost entirely of exposure to changes in interest rates. This is the potential impact on earnings and value that could occur when, if rates fall, liabilities cannot be re-priced as quickly as assets; or when, if rates rise, assets cannot be re-priced as quickly as liabilities.

Net interest income sensitivity

The following table shows, split by major currency, the Group's sensitivities as at 31 December 2008 to an immediate up and down 25 basis points change to all interest rates.

Impact of interest rate shift	As at 31.12.2008	
	+ 25 bps £m	- 25 bps £m
Currency:		
Sterling	82.4	(119.6)
US Dollar	(2.9)	2.7
Euro	(8.0)	8.1
AU Dollar	(1.5)	1.5
Other	(0.3)	0.3
Total	69.7	(107.0)

Impact of interest rate shift	As at 31.12.2007	
	+ 25 bps £m	- 25 bps £m
Currency:		
Sterling	(21.2)	21.6
US Dollar	(0.6)	0.5
Euro	(4.3)	4.3
AU Dollar	0.1	(0.1)
Other	0.1	(0.1)
Total	(25.9)	26.2

Base case projected NII is calculated on the basis of the Group's current balance sheet, forward rate paths implied by current market rates, and contractual re-pricing dates (adjusted according to behavioural assumptions for some products); it also incorporates business planning assumptions about future balance sheet volumes and the level of early redemption fees. The above sensitivities show how this projected NII would change in response to an immediate

parallel shift to all relevant interest rates – market and administered.

The principal driver of the risk is re-pricing mismatch but the methodology also recognises that behavioural re-pricing assumptions –for example, prepayment rates – are themselves a function of the level of interest rates.

The measure, however, is simplified in that it assumes all interest rates, for all currencies and maturities, move at the same time and by the same amount. Also, it does not incorporate the impact of management actions that, in the event of an adverse rate movement, could reduce the impact on NII.

Basis risk

Major structural interest rate exposure will largely be addressed by quantifying re-pricing risk, however, there is potentially a material risk relating to basis, i.e. the exposure relating to the Group's (net) asset position repricing of a different index than the (net) liability position.

The primary source of basis risk exposure within the Group is in the UK, where HBOS has a net asset position referenced to Bank Rate and a net liability position referenced to short term LIBOR rates. Analogous Bank Rate/ LIBOR positions also exist in Ireland.

The following table shows net assets for the Banking Divisions (excluding Treasury) by pricing basis and reflects the major components of the Group's balance sheet as it relates to basis risk:

	2008	2007
Bank rate	97.9	113.0
Variable market rates	(79.5)	(58.6)

Reserve sensitivity

The following table shows the market value sensitivity, for a 25 basis point shift, of those items in respect of which a change in market value must be reflected in the equity of the Group – principally available for sale assets and cash flow hedges.

	As at 31.12.2008		As at 31.12.2007	
	+ 25 bps £m	- 25 bps £m	+ 25 bps £m	- 25 bps £m
Impact of interest rate shift				
Available for sale reserve	(14.5)	14.5	(15.7)	15.7
Cash flow hedge reserve	84.9	(84.9)	116.1	(116.1)
Total	70.4	(70.4)	100.4	(100.4)

Foreign exchange risk (non-trading)

The Group Funding & Liquidity Committee (GFLC) is responsible for the framework within which structural foreign currency risk is managed. The GFLC manages foreign currency exposures based on forecast currency information provided by the Divisions, and mandates Treasury to execute transactions and undertake currency programmes to manage structural currency risk. The actual risk position is monitored monthly by the GMRC.

Transaction exposures arise primarily from profits generated in the overseas operations, which will be remitted back to the UK and then converted into sterling. Translation exposures arise due to earnings that are retained within the overseas operations and reinvested within their own balance sheet. Structural currency exposures arise from the Group's investments in overseas subsidiaries, branches and other investments and are noted in the table below.

Functional currency of the operation	2008			2007		
	Net investments in overseas operations £m	Borrowing taken out to hedge net investments £m	Remaining structural currency exposure £m	Net investments in overseas operations £m	Borrowing taken out to hedge net investments £m	Remaining structural currency exposure £m
AU Dollar	2,015	2,015		2,023	2,023	
Euro	3,011	3,011		1,888	1,613	275
US Dollar	191	181	10	97	97	
Other	(23)		(23)	4		4
Total	5,194	5,207	(13)	4,012	3,733	279

As at 31 December 2008 and 31 December 2007 there are no material net currency exposures in the non-trading book relating to transactional (or non-structural) positions that would give rise to net currency gains or losses.

Trading

The Group's market risk trading activities are principally conducted by Treasury Division. This Group activity is subject to a Trading Book Policy Statement, which is approved by the Board, and limits set by the GMRC.

Treasury trading primarily centres around two activities: proprietary trading and trading on the back of business flows. Both activities incur market risk, the majority being interest rate and foreign exchange rate exposure. In addition, a number of marketable assets held as part of our liquidity risk management framework are also held in trading books. Such activity gives rise to market risk as a result of movements in credit spread.

The Group employs several complementary techniques to measure and control trading activities including: Value at Risk (VaR), sensitivity analysis, stress testing and position limits.

The VaR model used as part of the Group's management of trading activity expresses market risk to 99% confidence using a one day holding period. The number provides an indication of the maximum mark to market loss which, to this level of confidence, might be incurred on a single day given the size of current trading positions. It is computed using an historical simulation approach and a one year history of price data.

The underlying assumption of VaR is that future price volatility and correlation will not differ significantly from that previously observed. It also implicitly assumes that all positions are sufficiently liquid to be realisable within the chosen one day holding period. VaR gives no indication of the size of any loss that could occur from extreme adverse price changes (ie, outside the chosen confidence level). For these reasons, stress testing is employed to simulate the effect of selected adverse market movements. Three different types of stress tests are conducted:

historical scenarios;

defined scenarios tailored to key vulnerabilities, and;

extreme shocks to single risk factors.

Notes to the Financial Statements
continued

57 Risk Management continued

Such measures are particularly relevant when market conditions are abnormal and daily price movements are difficult to source.

The Group's trading market risk exposure for the year ended 31 December 2008 is analysed below.

Owing to the unprecedented level of volatility in the credit markets, VaR has been suspended as a measure for the credit trading portfolio. Positions are now managed using sensitivity measures. The large increase in VaR, relative to 31 December 2007, is due principally to higher price volatility in wholesale markets - the size of underlying trading positions has not changed materially.

The regulatory capital charge for market risk trading exposures represents only 0.85% (2007 1.87%) of the Group's capital base.

	As at 31 Dec 2008	As at 31 Dec 2007	Average 2008	Average 2007	Highest 2008	Highest 2007	Lowest 2008	Lowest 2007
Exposure	£m	£m	£m	£m	£m	£m	£m	£m
Total Value at Risk	8.4	13.2	12.2	7.6	18.3	13.9	5.0	4.0
Interest rates	8.4	4.7	5.5	3.0	9.1	5.9	2.8	1.7
Credit spread	suspended	8.3	suspended	4.3	suspended	8.4	suspended	1.8
Foreign exchange	6.1	1.9	8.3	0.6	16.3	2.0	1.3	0.1
Equity risk factor	0.1	0.2	0.2	0.2	1.1	0.40	0.0	0.0

For all significant exposures VaR is calculated on a daily basis and is used by senior management to manage market risk. On a more detailed desk and trader level, to increase transparency interest rate risk relating to the trading book is principally managed using sensitivity methodology to measure exposure and set limits. This methodology calculates the present value impact of a one basis point movement in interest rates on the outstanding positions. Credit spread risk is managed using position limits based on credit spread sensitivity. Foreign exchange risk is principally managed by the use of position limits. Equity risk is managed through Equity Index VaR and position limits.

The VaR model was granted CAD2 recognition by the FSA in December 2007 for general market risk in London for the following risk factors:

Interest Rate

Foreign Exchange

Equity

It is validated by daily backtesting against observed P&L both at the total (diversified) level and at sub-portfolio levels.

Derivatives

In the normal course of business, the Group uses a limited range of derivative instruments for both trading and non-trading purposes. The principal derivative instruments used are interest rate swaps, interest rate options, cross currency swaps, forward rate agreements, credit derivatives, forward foreign exchange contracts and futures. The Group uses derivatives as a risk management tool for hedging interest rate and foreign exchange rate risk.

The Group's activity in derivatives is controlled within risk management limits set by the Board and overseen by the relevant Group Risk Committees. Details of derivative contracts outstanding at the year-end are included in Note 17.

Liquidity risk

The risk that the Group does not have sufficient financial resources to meet its obligations when they are due or will have to do so at excessive cost.

Liquidity Risk is governed by the Group Liquidity Policy Statement (GLPS) which is approved by the Board and defines the core principles for identifying, measuring, managing and monitoring liquidity risk across the Group. Detailed liquidity risk framework documents and limit structures are in place for the Group's operations, where liquidity is managed on a group basis, and for overseas banking units subject to specific regulatory requirements. The responsibility for oversight and management of Liquidity Risk is delegated to the Group Capital Committee (GCC).

Policy is reviewed at least annually to ensure its continued relevance to the Group's current and planned operations. Operational liquidity management is delegated to Treasury. The authority to set specific limits and guidelines and responsibility for monitoring and controlling liquidity is delegated by the GCC to the GFLC.

Notes to the Financial Statements
continued

57 Risk Management continued

The Group's banking operations in the UK should comply with the FSA's Sterling Stock Liquidity approach for sterling liquidity management and regulatory reporting. A key element of the FSA's Sterling Stock Liquidity Policy is that a bank should hold a stock of high quality liquid assets that can be sold or used via repo, quickly and discreetly in order to replace funding that has been withdrawn due to an actual or perceived problem with the bank. The objective is that this stock should enable the bank to continue business, whilst providing an opportunity to arrange more permanent funding solutions. Limits on the five day sterling net wholesale outflow and the minimum level of stock liquidity have been agreed with the FSA. HBOS should also adhere to the requirements of other regulatory authorities including the Australian Prudential Regulatory Authority, the Irish Financial Regulator and the Office of the Controller of the Currency in the United States, in whose jurisdictions the Group has branches or subsidiaries.

The internal approach to liquidity management has been in place for several years, operating within regulatory requirements. The approach looks at our forecast cash flows across all currencies and at longer timeframes than the regulatory norms. At 31 December 2008, the Group's liquidity portfolio of marketable assets was £77.3bn (2007 £67.0bn), of which £39.5bn (2007 £13.4bn) has been used for repo. The liquidity portfolio is recorded in Treasury and predominantly comprises Treasury debt securities, excluding Grampian and Landale.

The assets in the liquidity portfolio are treated in two forms. Firstly, assets which we know to be eligible under normal arrangements with the Bank of England, the European Central Bank and the Federal Reserve. Secondly, a substantial pool of high quality assets that allow us to manage through periods of stress taking into account the likely behaviours of depositors and wholesale markets. These approaches are supported by a liquidity framework that includes:

funding diversity criteria focusing on retail, other customer and wholesale sources;

sight to one week and sight to one month mismatch limits as a percentage of total wholesale funding for all major currencies and for all currencies in aggregate;

targets on the appropriate balance of short to medium term wholesale funding; and

criteria and limits on marketable assets, by asset class for Sterling, US Dollars, Euros, other currencies, and for all currencies in aggregate.

Daily monitoring and control processes are in place to address both statutory and prudential liquidity requirements. In addition the framework has two other important components:

Firstly, HBOS stress tests its potential cash flow mismatch position under various scenarios on an ongoing basis. The cash flow mismatch position considers on balance sheet cash flows, commitments received and granted, and material derivative cash flows. Specifically, commitments granted include the pipeline of new business awaiting completion as well as other standby or revolving credit facilities. Behavioural adjustments are developed, evaluating how the cash flow position might change under each stress scenario to derive a stressed cash flow position. Scenarios cover both HBOS name specific and systemic difficulties. The scenarios and the assumptions are reviewed at least annually to gain assurance they continue to be relevant to the nature of the business.

Secondly, the Group has a Liquidity Contingency Plan embedded within the Group Liquidity Policy Statement which has been designed to identify emerging liquidity concerns at an early stage, so that action can be taken to avoid a more serious crisis developing. This is achieved through the use of Early Warning Indicators (EWIs). Clear guidelines are set out for the management escalation process in the event of EWIs triggering and the actions to be taken (short and medium term), should such an event take place.

In response to the market dislocation that started in the second half of 2007 and intensified in September 2008, the Group has increased vigilance by operating under full contingency arrangements including daily monitoring of funding and liquidity positions with GCC meeting on a weekly basis to monitor and manage the Group balance sheet.

Funding

The wholesale funding capacity of the Group is dependant upon factors such as the strength of the balance sheet, earnings, asset quality, ratings and market position, as well as market sentiment and perception, most evident in share and debt price volatility.

	As at 31.12.2008	As at 31.12.2007
	£bn	£bn
Loans and advances to customers	435.2	430.0
Customer accounts	222.3	243.2
Customer lending less customer accounts	212.9	186.8
Customer accounts as a % of loans and advances to customers	51.0%	56.6%

It has been the Group's policy to manage its balance sheet profile to ensure customer deposits sourced outside Treasury represent a significant component of overall funding, and GFLC directs and coordinates the activities of the Divisions in raising liabilities from a range of sources.

Notes to the Financial Statements
continued

57 Risk Management continued

In order to strengthen the Group's funding position, HBOS has over the last few years diversified its funding sources, and also lengthened the maturity profile of market sensitive funding. This has been achieved through: widening the wholesale investor base and product set; building and maintaining a term issuance programme - securitisation, covered bonds, Medium Term Note programmes; and utilising the geographic diversity of New York and Sydney as funding hubs for the Group.

The ability of the HBOS Group to access wholesale funding sources and raise retail deposits on favourable economic terms is dependent on a variety of factors, including a number outside of its control, such as general market conditions, including the state of UK and global finance markets, an increase in competitive behaviour, and confidence in the UK banking system in general or the HBOS Group in particular.

Following speculation on HBOS's future in mid-September, the HBOS Group suffered deposit outflows, further increasing the Group's reliance on the wholesale funding market. The majority of these deposit outflows were non-bank financial institutions and large corporates, rather than personal account customers. In recent months this position has stabilised with net inflows evident following the announcement of the proposed transaction with Lloyds TSB.

In wholesale markets, the HBOS Group has previously looked to achieve a geographically diverse investor base and product set of an appropriate maturity profile to ensure it is not overly exposed to short-term market dislocation.

As a result of the increasingly turbulent conditions in the global financial markets in the second half of 2008, there has been a significant deterioration in the inter-bank and term funding markets and a consequent material reduction in the availability of longer-term funding. As a result, HBOS has had to source more shorter-term and overnight funding, with a consequent increase of refinancing risk.

In recent months, the strain in the financial systems has increased substantially, leading to a significant tightening in market liquidity and the threat of a more marked deterioration in the global economic outlook, with a consequent increase in recourse to liquidity schemes provided by central banks. While various governments including the UK Government have taken substantial measures to ease the current crisis in liquidity, such as the measures announced in the UK on 8 October 2008 and 13 October 2008, there can be no assurance that these global measures will succeed in improving the funding and liquidity of the markets in which the major banks, including HBOS, operate.

HBOS, as a wholly owned subsidiary, will be dependent on Lloyds Banking Group for funding and expects reliance for the foreseeable future on the continued availability of central bank liquidity facilities (particularly those with the Bank of England) as well as HM Treasury's guarantee scheme for short- and medium-term debt issuance.

The Group's wholesale funding sources are shown in the tables below. Tables are prepared on the basis that "retail" is defined using the current statutory definition, i.e. administered rate products. Wholesale funding, when issued in a foreign currency but swapped into Sterling, is included at the swap exchanged amount. Wholesale funding is shown excluding any Repo activity and the funding raised in the names of the conduits.

Conduits

HBOS sponsors two conduits, Grampian and Landale, which are special purpose vehicles that invest in highly rated assets and funds via the Asset Backed Commercial Paper (ABCP) market. At 31 December 2008, investments held by Grampian totalled £21.7bn and £0.7bn of assets held by Landale were consolidated. Grampian is a long established, high grade credit investment vehicle that invests in diversified asset backed securities of which over 75.9% are rated AAA by S&P and Aaa by Moody's. Grampian has a liquidity line in place with HBOS which covers all of the assets and programme wide credit enhancement is also provided by HBOS. Grampian has been fully consolidated into the balance sheet. Landale holds both assets originated from the Group balance sheet and third party transactions. Landale has liquidity lines from HBOS and from third party banks, and therefore the former, but not the latter, are consolidated into the balance sheet.

In 2008, there have been occasions when Grampian and Landale (in respect of assets backed by HBOS liquidity lines) have declined to issue ABCP. At these times the conduits were funded through the available liquidity lines rather than

through the ABCP market. At 31 December 2008 HBOS had provided funding to the Grampian and Landale conduits of £20.4bn.

General insurance & long term assurance business risks

The general insurance and long term assurance business contracts underwritten by the Group expose HBOS to both investment and insurance risk.

Insurance risk is the potential for loss, arising out of adverse claims from both life and general insurance contracts.

Investment risk is the potential for financial loss arising from the risks associated with the investment management activities of the Group. Investment risk includes market, credit and liquidity risks. The loss can be as a result of:

Direct risks relating to changes in the value of Group assets in support of the general insurance and long term insurance contracts;

Indirect risks arising from policyholder funds where the assets and policyholder liabilities are matched; and

Indirect risks associated with the management of assets held on behalf of third parties.

The Group Insurance Risk Committee, one of the Executive Risk Committees, considers regular reports on specified aggregate insurance risks across all of the Group's insurance and investment businesses. It oversees the development, implementation and maintenance of the overall insurance risk management framework, covering insurance risk in each business individually, as well as in aggregate. As part of the overall Group risk management framework, the Group Insurance & Investment Risk team provides regular support to the GMRC and to the GCRC on the inter-relationship between insurance risk and investment risks (market, credit and liquidity risks respectively) arising within these businesses, and the development of appropriate policies and standards for the management of those risks.

Notes to the Financial Statements
continued

57 Risk Management continued

The majority of the Group's long term insurance and investment contract liabilities are managed within the HBOS Insurance & Investment Division and Insight Investment with approximately 8% (2007 3%) operated by the life businesses outside the UK. Day to day management of insurance and investment risk is undertaken by management supported by specialist risk functions. Use is made of the statutory actuarial roles, both to help ensure regulatory compliance in respect of the authorised insurance companies in the Group and to help meet Group risk management standards.

Long term assurance

The insurance and investment business that is transacted by the life insurance companies within the Group comprises unit linked business, fixed benefit business (also known as non-profit business) and with-profits business (described as insurance contracts and investment contracts with discretionary participating features (DPF) written within the with-profits fund).

Several companies within the insurance and investment business transact either unit linked and/or other non profit business, but all with-profits business is underwritten by Clerical Medical Investment Group Limited (Clerical Medical), a subsidiary of HBOS Financial Services Limited.

The key characteristics of long term assurance that give rise to insurance and investment risk are its long term nature, the guarantees provided to policyholders, the dependency on the performance of investment markets and the extent to which assets backing the contractual liabilities are matched.

The quality, mix and volume of business have a significant influence on the extent of insurance and investment risk assumed by the Group and resulting profits. The quality of business written is influenced by variations in product terms as well as the average premium size, age and term profile within the particular products. Accordingly, the mix in products written may impact profitability, depending on the nature, extent and profitability of new business in addition to existing business. This risk is managed through the application of clear pricing policies that require full financial assessment for each new product, incorporating consideration of expected hurdle rates of return.

Additionally, variations in administration and development costs may impact the available profit margin within the product charges. To manage this risk, there is a regular process of expense budgeting and reporting with appropriate targets set for new insurance and investment products that are developed.

The risks associated with particular sections of the long term assurance business are set out below.

Unit linked funds

For unit linked funds, including consolidated collective investment schemes, which comprise 79% (2007 77%) of the Group's long term insurance and investment contract liabilities, investors bear the investment risk, with changes in the underlying investments being matched by changes in the underlying contract liabilities. Similarly, the Group manages a number of collective investment schemes where the investors bear the investment risks. The investor selects from a range of investment opportunities available from the Group in accordance with their personal risk appetite and circumstances.

On a day to day basis, cash outflows which are necessitated by investors withdrawing their funds are generally met by cash inflows from new investors. In circumstances where funds are contracting, or to meet unusually high levels of withdrawals, the Group sells assets in the fund in order to meet the cash demands with any dealing costs charged to the underlying unit linked fund and consequently the policyholders. The underlying assets in the unit linked funds are subject to credit and market risks in the form of interest rate, equity prices, foreign exchange and other market risks depending on the fund, including movement in property values. These changes are matched by changes in the unit linked liabilities. Accordingly, the Group is not directly exposed to significant liquidity, credit or market risks, although the investors' benefits will vary as a consequence. Decreases in the capital value of unit linked funds (as a result of falls in market values of equities, property or fixed interest assets) will however reduce the future annual investment management charges that will be earned from unit linked business. The Group estimates that if the capital value of the unit linked funds, excluding consolidated collective investment schemes, classified as investment contracts had been reduced, on average by 10% for the year, the profit before tax for the year would have decreased by £20m (2007 £22m). For unit linked contracts with DPF the Group has considered the sensitivities to a number of risks in Note 28 to the Financial Statements.

Unit linked products provide some discretion for variation in annual administration charges, and therefore management of variations in expenses may be achieved through variation in charges.

An additional risk the Group faces in respect of unit linked business is the risk that increases to surrender rates for both insurance and investment contracts reduces the value of future investment management charges. Actions to control and monitor this risk include charges applicable on some products where the investor surrenders early, regular experience monitoring, consideration of the sensitivity of product profitability to levels of lapse rates at the product development stage; and initiatives within the relevant businesses to encourage customer retention.

Non-profit business

The Group has a diversified portfolio of life insurance and annuity policies within its portfolio of non-profit insurance contracts, which includes the insurance risk component of unit linked policies classified as insurance contracts. The principal investment risk in respect of the non-profit business is interest rate risk which arises because assets and liabilities may exhibit differing changes in value as a result of changes in interest rates. This may potentially impact on the results and the capital position.

Notes to the Financial Statements
continued

57 Risk Management continued

The investment risk also includes the risk of increases in corporate bond yield spreads over government risk free yields or the ratings downgrade of certain securities, both of which reduce the capital value of the bonds. These risks are controlled by processes carried out to help ensure an appropriate level of matching is maintained in the funds so that changes in fixed interest assets backing the non-profit business are substantially mitigated by offsetting changes in liabilities (as the discount rate used in valuing the liabilities is linked to that of the matching assets). These processes include the use of and monitoring against fund mandates.

The ultimate amounts payable under these policies are sensitive to general trends in mortality rates. For annuitants comprising 3% (2007 3%) of the Group's long term insurance and investment contract liabilities, there is a risk that increases to life expectancy through medical advances will prove greater than that anticipated. For protection business, the risk is that an unforeseen event such as a natural disaster will cause a material increase in death rates. The extent of the Group's exposure to insurance risks is set out in Note 30 to the Financial Statements.

With-profits fund

The insurance and investment business includes the Clerical Medical With-Profits Fund which comprises 17% (2007 17%) of the Group's long term insurance and investment contract liabilities. The with-profits fund takes some investment risks with the aim of enhancing policyholder returns but aims to limit payouts to policyholders to that supportable by the with-profits fund's assets.

For 'unitised' with-profits contracts the Group receives an annual management charge. For 'traditional' with-profits contracts, which form the minority of the with-profits fund business, the Group receives one ninth of bonuses declared to policyholders as long as there is a distributable surplus within the fund.

Ordinarily, variations in the capital value of the fund's assets would result in variations in the level of benefits available to the with-profits contract holders and accordingly a variation in the insurance and investment contracts with DPF liabilities. Included in the with-profits fund are certain contracts with minimum payment guarantees at certain policy durations and on death. Of these with-profits contracts issued between 1997 and 2001, a significant proportion have guaranteed benefits which are in the money at the balance sheet date.

The costs of meeting these guarantees, up to a certain level, are met by charges to the benefits for all with-profits contract policyholders. The amount of these guaranteed benefits, net of charges to be levied on policyholder funds, was less than 2% (2007 1%) of the Group's long term insurance and investment contract liabilities at the balance sheet date. Above this level the costs are met by the free assets of the fund (the assets maintained in the fund which are not held to meet contractual liabilities). There remains a risk that Clerical Medical may suffer an additional charge in exceptional circumstances where even after management action, the fund is unable to meet the costs of guarantees within the fund. This is set out in the Principles and Practices of the With-Profits Fund, available from the Clerical Medical Investment Group website (www.clericalmedical.co.uk).

As well as pooling of risks, the other important measures in controlling the investment risk within the with-profits fund include having agreed management actions to adjust the nature and extent of investment exposure in response to certain investment conditions; by recognising and holding appropriate levels of risk capital; by restricting holdings to assets which meet admissibility criteria; and by using derivative strategies to reduce downside risk.

Accordingly, the insurance and other investment risks (credit, liquidity and market risks) within the with-profits fund are generally expected to be borne by the with-profits insurance and investment contracts with DPF policyholders except in extreme scenarios. The sensitivity of the Group result to certain changes in key variables relating to insurance and investment contracts with DPF within the with-profits fund have been included in Note 30 to the Financial Statements.

Additionally, in order to demonstrate the sensitivity of the with-profits fund to certain key market variables, and consequently the ability of the with-profits fund to meet its policyholders' expectations, the Group has set out a sensitivity analysis of unallocated divisible surplus in Note 32 to the Financial Statements.

General insurance

For general insurance household contracts the most significant risks to claims experience arise from weather events. For repayment insurance contracts the most significant risks arise from changes in economic conditions.

The Group manages its exposure to insurance risk through a strategy which includes limitation of the nature of the risks underwritten and allowance within the price charged for the underlying risks. This allowance for risks is based on both external information and HBOS's own experience data. For all classes of insurance there are pricing models that are regularly adjusted for actual claims experience. For household insurance the Group limits its exposure to large weather events through the use of reinsurance. Any reinsurance purchased must have a minimum credit rating, and if that rating is breached no further business is placed with that provider.

The majority of claims are reported and settled within 12 months and generally there is limited reserving uncertainty for events before the balance sheet date.

For some renewable contracts (household, travel and some repayment insurance), the longer term exposure to risk is managed in conjunction with the ability to re-price contracts to take account of changes in the level of risk within those contracts.

Set out in Note 30 to the Financial Statements are the Group's general insurance claim provisions by policy type.

58 Post balance sheet events

a) Lloyds Banking Group

On 18 September 2008, with the support of the UK Government, the boards of HBOS plc (HBOS) and Lloyds TSB Group plc (Lloyds TSB) announced that they had reached agreement on the terms of the recommended acquisition of HBOS by Lloyds TSB. The terms of the acquisition were subsequently amended, as announced on 13 October 2008, at the same time as the announcement of the participation by HBOS and Lloyds TSB in the Government's action plan to recapitalise some of the major UK banks. The acquisition was to be implemented by means of a scheme of arrangement with a separate scheme of arrangement in relation to preference shares, under sections 895 to 899 of the Companies Act 2006.

On 12 January 2009 the Court of Session in Edinburgh, Scotland made an order sanctioning the scheme of arrangement for the acquisition and the preference share scheme of arrangement. The last day of trading in HBOS ordinary and preference shares was 14 January 2009.

On 15 January 2009 HBOS raised £11.5bn of capital (before costs and expenses) through the issue of £8.5bn of new ordinary shares under a placing with HM Treasury subject to clawback by existing shareholders, and an issue to HM Treasury of £3bn of new preference shares. Lloyds TSB raised £4.5bn (before costs and expenses) through an issue of £3.5bn of new ordinary shares under a placing with HM Treasury subject to clawback by existing shareholders, and an issue to HM Treasury of £1bn of new preference shares.

On 16 January 2009 the Lloyds TSB acquisition of HBOS completed following final court approval and Lloyds TSB was renamed Lloyds Banking Group plc. The exchange of HBOS shares for Lloyds Banking Group shares took place at an exchange ratio of 0.605 of a new Lloyds Banking Group share for every one HBOS share held. As a result, the UK Government through HM Treasury owned approximately 43.4% of the enlarged ordinary share capital of Lloyds Banking Group. In addition, each class of preference share issued by HBOS, including the preference shares issued to HM Treasury in the capital raising was replaced with an equal number of new Lloyds Banking Group preference shares.

HBOS ordinary and preference shares were de-listed from the Official List of UK Listing Authority and admission to trading on the London Stock Exchange was cancelled on 19 January 2009 when trading in the new Lloyds Banking Group shares commenced.

b) Other

As a result of the acquisition of the Group by Lloyds TSB, some of the share schemes vested in the period between 12 January 2009, being the date when the acquisition was approved by the Court of Session, and 16 January 2009, the completion of the acquisition itself. The remainder of the share schemes will roll over into new Lloyds Banking Group shares. These will continue until their original maturity date. As a non adjusting post balance sheet event there is no accounting impact on the primary statements as at 31 December 2008.

59 Ultimate Parent Undertaking
