PRESS RELEASE

January 16, 2004

Nokia signs IT Helpdesk and Desktop support deal with IBM

Agreement enables Nokia to focus on core IT activities while benefiting from latest IBM service technologies

Nokia, the world's leader in mobile communications, and IBM have signed an IT services agreement under which IBM will globally run IT Helpdesk operations as well as manage and develop Nokia's desktop IT environment towards a more resilient model embracing advanced technologies and ongoing innovations.

The IT services agreement is valued at approximately 200 million Euros over a 5-year period. As part of this agreement around 430 people will join IBM from Nokia in 36 countries. The services under the agreement will be delivered in 57 countries.

We have chosen to outsource the management of our desktop IT environment as part of an initiative to focus on core Business Infrastructure and IT activities and to improve service flexibility and cost efficiency, enabling a higher level of business agility. This agreement ensures that we benefit from IBM's latest technologies for our businesses through on-demand services, said Gordon Jack, Vice President, Business Infrastructure, Nokia.

IBM sees this agreement with Nokia as a significant extension of our relationship with a valued customer, said Peter Holland, General Manager, Service delivery, IBM EMEA. IBM's Workplace on demand solutions will enable us to further develop the desktop infrastructure technologies together with Nokia to benefit its transformation to a variable desktop services model. These services offer a way in which business customers can maintain equipment from desktops to mobile devices with consumption based pricing.

The agreement is subject to competition authorities' approval.

About Nokia

Nokia is the world leader in mobile communications, driving the growth and sustainability of the broader mobility industry. Nokia is dedicated to enhancing people's lives and productivity by providing easy-to-use and secure products like mobile phones, and solutions for imaging, games, media, mobile network operators and businesses. Nokia is a broadly held company with listings on five major exchanges.

About IBM Global Services

Nokia's Home Communications unit within the Multimedia Business Group streamlines its activities

Nokia plans to streamline its digital TV receiver business due to slow market uptake. The global digital TV market has developed substantially slower than expected, especially in major markets. Furthermore, the market is affected by technology fragmentation and heavy price competition, resulting in an unprofitable business model.

Therefore, Nokia is adjusting its digital TV activities to match the current market situation and future expectations. The company will start co-operation negotiations with the aim of reducing the workforce by approximately 140 employees in the Home Communications unit, which is part of the Multimedia Business Group. Up to 90 of the planned personnel reductions will be in Finland and approximately 50 in other countries. The planned reductions concern all functions in the Home Communications unit. The negotiation process will aim to find, together with employees, alternative solutions and assignments for as many employees as possible within Nokia.

Despite this adjustment, the sales, marketing and customer support of Nokia digital TV receivers will continue as before.
