Enclosure: Report for the quarter and nine months ended 30 September 2006

Quarter 3 2006

Report

for the quarter and nine months ended 30 September 2006

- · Gold production level with previous quarter at 1.4Moz
- · Further reduction of hedge delta achieved, with price received 6% below spot in line with both previous quarter and market guidance
- · Total cash costs of \$311/oz, 2% higher due to lower grades, higher power costs in South Africa and Ghana and the annual wage increase in South Africa
- · Adjusted headline earnings steady at \$141m, an 131% increase to \$367m in adjusted headline earnings for first nine months of 2006

Financial and operating review

OPERATIONAL OVERVIEW FOR THE QUARTER

Steady production, slightly higher total cash costs, a received price of \$584/oz and the sale of uranium to the newly-listed Nufcor Uranium Limited resulted in a financial performance in line with that of the previous quarter. Adjusted headline earnings, at \$141m, contributed to year-to-date adjusted headline earnings of \$367m, a 131% increase over that of the first nine months of 2005. Operationally, production of 1.4Moz was in line with guidance and level with that of the previous quarter. Total cash costs, however, rose 2% quarter-on-quarter to \$311/oz, due primarily to annual South African wage increases and higher power costs in both South Africa and Ghana.

Despite the higher impact of increased wages and power rates, which pushed the region's total cash costs 6% higher to R62,837/kg, the South African assets nevertheless posted generally solid results, with production better or maintained quarter-on-quarter at four of the seven operations. TauTona had a particularly strong quarter, with production up 8% to 4,000kg (129,000oz), offsetting the effects of the annual wage increase and resulting in total cash costs of R55,777/kg, in line with those of the previous quarter. Tau Lekoa and Savuka, which have this quarter emerged from transition periods, reported production increases of 5% and 24%, respectively, while production was marginally down at Great Noligwa and 3% lower at Kopanang due to grade declines.

On 23 October 2006, subsequent to the third quarter-end, two seismic events took place at TauTona within 25 minutes. Five employees lost their lives. Management is dismayed and saddened by this tragic accident and offers its deepest condolences to the workers' families and friends. The company also salutes the efforts of the rescue and recovery team, which worked tirelessly in the most extreme conditions. The AngloGold Ashanti management team has committed itself to taking every action to return the company to the improving safety trend of recent years.

Of the other African assets, two of the three Ghanaian operations reported strong results, with total cash costs 17% lower at Iduapriem and 4% lower at Obuasi, despite the cost implications of the country-wide power shortage reported in August. Navachab, in Namibia, also had a good quarter, posting a 5% production improvement and a 9% decrease in total cash costs, while all three of the Malian operations reported grade-related production declines and associated total cash cost increases. In Tanzania, Geita reported production of 73,000oz, a 3%

improvement quarter-on-quarter, along with a 7% increase in total cash costs related to the anticipated lower grades forecasted last quarter.

Regarding the international assets, the Brazilian operations posted generally strong results, with production up 18% at AngloGold Ashanti Brasil Mineração and steady quarter-on-quarter at Serra Grande. At Cerro Vanguardia in Argentina and Sunrise Dam in Australia, lower grades resulted in production decreases of 14% and 4% and total cash cost increases of 13% and 25%, respectively. At Cripple Creek & Victor, in the United States, production was 6% better in the third quarter due to improved solution flows on the leach pad and consequently, increased recoverable ounces. Total cash costs were in line with those of the previous quarter at \$243/oz.

Greenfields exploration activities were undertaken in Australia, Colombia, the DRC, China, Laos, the Philippines and Russia during the third quarter, with 35,252m of diamond and reverse circulation drilling completed on four of the company's priority greenfields targets: Tropicana in Australia, Quinchia and Gramalote in Colombia, and Adidi/Kanga in the DRC. Year-to-date global greenfields exploration drilling has now reached 75,722m. In September, AngloGold Ashanti announced the signing of a strategic alliance with Polymetal to explore, acquire, and develop gold mining opportunities within the Russian Federation. This alliance will initially focus on four projects located in the Chita and Krasnoyarsk regions of eastern Russia.

Looking ahead, production for the fourth quarter is estimated to be around 1.48Moz at an average total cash cost of \$308/oz, assuming the following exchange rates: R7.50/\$, A\$/\$0.75, BRL2.20/\$ and Argentinean peso 3.08/\$. Capital expenditure is estimated at \$334m and will be managed in line with profitability and cash flow.

Earnings for the fourth quarter are expected to be significantly distorted due to certain accounting adjustments, which are likely to include, amongst others, increases in the company's current and deferred tax provisions due to higher gold prices and changes to effective tax rates, the proposed Employee Share Ownership Plan, and the potential vesting of certain share-based awards.

NON-OPERATIONAL OVERVIEW FOR THE QUARTER

In early October, AngloGold Ashanti announced the proposed launch of an employee share ownership plan (ESOP) and a black economic empowerment (BEE) transaction, both of which are subject to an AngloGold Ashanti shareholder vote, to be held on 11 December 2006. The proposed plan will issue 960,000 ordinary shares to nearly 31,000 South African employees or 30 shares per individual worker. In addition, each worker will be allotted 90 "loan shares" issued at a 10% discount to market value calculated using a 30-day average share price. These shares will vest in five equal tranches over the next eight years. The BEE scheme will allow Izingwe Holdings, a private South African investment company, to acquire approximately 1.4m "loan shares" under similar terms as the ESOP.

In South Africa, the recent Treasury announcement of a revised draft royalty bill proposed a rate on refined gold of 1.5%. This represents a considerably lower royalty than was proposed in the initial draft, and the company welcomes the less severe impact it will have on AngloGold Ashanti and the South African gold industry. After serving more than 40 years for AngloGold and, prior to that, for Anglo American, company secretary Chris Bull will retire at the end of November 2006. He is succeeded by Lynda Eatwell, who has been the assistant company secretary for AngloGold Ashanti for the last six years.

OPERATING RESULTS FOR THE QUARTER SOUTH AFRICA

At **Great Noligwa**, volume mined was 2% higher this quarter due to improved face advance, although yield decreased 5% as a result of continued maintenance work requiring waste development to be passed through the reef ore system, resulting in dilution. Production consequently declined 1% to 4,699kg (151,000oz). Total cash costs increased 9% to R62,145/kg (\$271/oz) given the lower production, annual wage increases and the seasonally higher power costs. Gross profit adjusted for the effect of unrealised non-hedge derivatives decreased 5% to R281m (\$39m), primarily as a result of the higher total cash costs.

The Lost-Time Injury Frequency Rate (LTIFR) was 12.83 lost-time injuries per million hours worked (9.48 for the previous quarter). Regrettably, two people died during the quarter, one after being inundated by mud during an ore transport process and the other in an equipment accident. At **Kopanang**, yield declined 8% due to a combination of increased waste-to-reef tramming, which is being addressed and should improve by year-end, and a higher percentage of off-reef mining due to geological structural problems. Production consequently decreased 3% to

3,448kg (111,000oz) and total cash costs increased 7% to R65,114/kg (\$284/oz), also due in part to annual wage increases and higher winter power costs. Gross profit adjusted for the effect of unrealised non-hedge derivatives, at R204m (\$29m), declined 8% quarter-on-quarter as a result of lower production and higher costs.

The LTIFR was 11.92 (11.59). One person regrettably died in a fall of ground accident. Production at **Moab Khotsong** was 3% lower this quarter, at 329kg (11,000oz), due to the lack of mining flexibility inherent in the operation's build-up phase. While this also affected total cash costs, which increased 12% to R153,993/kg (\$669/oz), mining flexibility is expected to increase next year, and production should consequently improve by approximately 90%. Gross loss adjusted for the effect of unrealised non-hedge derivatives increased 24% to R36m (\$5m).

The LTIFR was 17.13 (16.02).

At **Tau Lekoa**, volume mined increased 9% this quarter, as the mine has begun to stabilise at revised planning levels. Consequently, gold production increased 5% to 1,358kg (44,000oz). Total cash costs were 3% higher at R95,702/kg (\$417/oz), a combination of annual wage increases and higher power costs. Gross profit adjusted for the effect of unrealised non-hedge derivatives increased to R19m (\$3m), mainly due to the higher production. The LTIFR was 28.26 (26.32).

At **Mponeng**, the beneficial effect of a higher volume mined was mitigated by a decrease in grade, resulting in production of 4,832kg (155,000oz), level with that of the previous quarter. Total cash costs, at R49,800/kg (\$217/oz), were 5% higher due to the annual wage increases. Gross profit adjusted for the effect of unrealised non-hedge derivatives was 2% lower at R318m (\$44m), as a result of increased total cash costs.

The LTIFR was 12.83 (7.32). Regrettably, two people died in separate fall of ground accidents. Production at **Savuka**, at 808kg (26,000oz), improved 24% quarter-on-quarter after higher face values and increased reef area mining together led to an 18% improvement in yield. Total cash costs consequently improved 9% to R67,618/kg (\$294/oz), in spite of the annual wage increases and higher winter power costs that affected all of the South African operations. As a result, gross profit adjusted for the effect of unrealised non-hedge derivatives increased 44% to R49m (\$7m).

The LTIFR was 20.51 (20.58). The mine has operated 20 months without a fatality.

At **TauTona**, production increased 8% to 4,000kg (129,000oz) following higher volume mined and better yield. Total cash costs were maintained quarter-on-quarter at R55,777/kg (\$243/oz). Gross profit adjusted for the effect of unrealised non-hedge derivatives improved 5% to R224m (\$31m) as a consequence of better production.

The LTIFR was 13.66 (14.71). Regrettably, four people died during the quarter, two in fall of ground accidents, one by electrocution and one in a transport accident.

ARGENTINA

At

Cerro Vanguardia (92.5% attributable), gold production decreased 14% to 55,000oz, primarily due to lower feed grade. Total cash costs rose 13% to \$213/oz as a result of the grade decline and a lower silver byproduct credit. Gross profit adjusted for the effect of unrealised non-hedge derivatives, at \$10m, was 44% lower than that of the previous quarter, mainly due to the decreased production and a lower price received. The LTIFR was 8.51 (2.04).

AUSTRALIA

Production at **Sunrise Dam**, at 108,000oz, decreased 4% this quarter as a result of fewer tonnes treated and a return to more normal grade levels, after last quarter's unexpectedly high yield. Total cash costs increased by 25% to A\$458/oz (\$346/oz) due to the decreases in both grade and tonnes treated, which also resulted in an 8% decline in gross profit adjusted for the effect of unrealised non-hedge derivatives to A\$46m (\$35m), despite a higher price received.

The underground project, where mining is currently accessing high-grade Western Shear ore, continues to supplement production. During the quarter, 756m of underground capital development and 1,697m of operational development were completed.

The LTIFR was 4.71 (2.37).

BRAZIL

At AngloGold Ashanti Brasil Mineração, production increased 18% to 67,000oz, reflecting better results from heap leaching activities in addition to higher production from the Cuiabá mine following the completion of the operation's shaft and crusher upgrade. In spite of the production increase and a higher sulphuric acid byproduct credit, total cash costs nevertheless rose 9% to \$207/oz due to lower grades and a labour bonus paid out in August as part of a collective agreement. Gross profit adjusted for the effect of unrealised non-hedge derivatives increased 10% to \$23m, primarily as a

consequence of the higher production.

The LTIFR was 2.70 (2.30).

At **Serra Grande** (50% attributable), gold production remained at 24,000oz. Total cash costs improved 6% to \$194/oz, due in part to better grades. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined 17% to \$7m as a result of a lower amount of gold sold, although this was partially mitigated by a higher price received.

The LTIFR was 0.00 (2.40).

GHANA

At **Bibiani**, production declined 11% to 8,000oz, in line with the operation's continued downscale. Combined with lower grades and a contractor settlement, the downscale and associated retrenchment provision contributed to a 71% increase in total cash costs to \$704/oz. Gross loss adjusted for the effect of unrealised non-hedge derivatives was \$2m versus last quarter's profit of \$1m. This was a consequence of both the contractor settlement and a lower price received.

In August, AngloGold Ashanti agreed to sell **Bibiani** to Central African Gold plc for a cash consideration of \$40m. The deal is subject to both parties obtaining certain regulatory consents and is expected to be completed by the end of the year.

The LTIFR was 4.45 (0.00).

At

Iduapriem (85% attributable), production improved 7% to 44,000oz, mainly as a result of a 10% increase in tonnage throughput, after the mill problems reported last quarter were resolved. Total cash costs consequently declined 17% to \$338/oz and gross profit adjusted for the effect of unrealised non-hedge derivatives was \$3m versus the breakeven position of the previous quarter, as a result of the improvements in both production and total cash costs.

The LTIFR was 0.00 (1.14).

Production at **Obuasi** decreased 3% to 94,000oz, following a 6% yield decline resulting from the treatment of more tailings ore. Once-off labour costs reported in the second quarter were not repeated in the third, which, combined with savings achieved through the tailings treatment, resulted in a 4% improvement in total cash costs to \$388/oz. Gross loss adjusted for the effect of unrealised non-hedge

derivatives increased to \$12m, compared with \$9m in the previous quarter, mainly due to lower grades.

The LTIFR was 2.05 (2.46).

REPUBLIC OF GUINEA

At **Siguiri** (85% attributable), production increased 5% to 62,000oz as a consequence of a 16% improvement in throughput resulting from fewer plant maintenance shutdowns quarter-on-quarter. Total cash costs, however, rose 8% to \$435/oz due in part to increased royalty payments and lower grades, which also resulted in a gross loss adjusted for the effect of unrealised non-hedge derivatives of \$3m, compared with a profit of \$2m in the prior quarter.

LTIFR was 0.00 (0.59).

MALI

At **Morila** (40% attributable), production decreased 7% to 50,000oz due to a 9% decline in recovered grade. Total cash costs increased 12% to \$278/oz as a result. Gross profit adjusted for the effect of unrealised non-hedge derivatives, at \$14m, was 7% lower due to both decreased production and a decline in the price received. The LTIFR was 2.22 (1.11).

At **Sadiola** (38% attributable), production declined 12% to 46,000oz due to a 19% decrease in recovered grade, a function of the exclusive treatment of oxide ore during the quarter, as opposed to a mix of sulphide and oxide ore in the previous quarter. A 9% increase in tonnage throughput partially offset the effect of the grade decline. Total cash costs were 9% higher at \$278/oz, with the impact of lower recovered grade partially mitigated by the lower operating costs associated with the treatment of oxide ore. Gross profit adjusted for the effect of unrealised non-hedge derivatives, at \$14m, was consistent with that of the previous quarter, as the relatively lower cost oxide treatment helped compensate for the negative effect of reduced production. The LTIFR was 0.00 (1.01).

At **Yatela** (40% attributable), production decreased 15% to 34,000oz as a result of lower tonnage stacked during the rainy season. Despite the production decline, however, total cash costs were only slightly higher, at \$234/oz. Gross profit adjusted for the effect of unrealised non-hedge derivatives decreased 33% to \$8m, due to declines in both production and the price received. The LTIFR was 0.00 (0.00).

NAMIBIA

Gold production at **Navachab**, at 23,000oz, was 5% higher than that of the previous quarter due to increased tonnage throughput. Total cash costs were favourably affected by the stronger US dollar and consequently improved 9% to \$255/oz. Gross profit

adjusted for the effect of unrealised non-hedge derivatives was consistent with that of the previous quarter, at \$6m, with a lower price received offsetting the benefit of higher production.

The LTIFR was 8.46 (7.90).

TANZANIA

Production at **Geita** improved 3% to 73,000oz, primarily as a consequence of a 5% increase in tonnage throughput. Total cash costs, however, increased 7% to \$540/oz due in part to lower grades. The gross loss adjusted for the effect of unrealised non-hedge derivatives was \$7m, versus a profit of \$3m in the previous quarter, as a result of declines in both grade and the price received.

The LTIFR was 0.68 (1.10).

USA

At Cripple Creek & Victor (67% ownership with 100% interest in production until initial loans are repaid), production increased 6% to 69,000oz due to marginally improved solution flows on the leach pad. Total cash costs were maintained at \$243/oz. Gross profit adjusted for the effect of unrealised non-hedge derivatives was \$3m, compared with a loss of \$5m in the previous quarter. This improvement was due to the better production and a higher price received. The LTIFR was 0.00 (0.00). In September, CC&V achieved 34 months without a lost-time accident. Notes:

- All references to price received includes realised nonhedge derivatives.
- In the case of joint venture and operations with minority holdings, all production and financial results are attributable to AngloGold Ashanti.
- Adjusted headline earnings is headline earnings before unrealised non-hedge derivatives, fair value adjustments on convertible bond and interest rate swaps and deferred tax thereon.
- · Rounding of figures may result in computational discrepancies.

Exploration

Total exploration expenditure amounted to \$26m (\$16m expensed, \$10m capitalised) during the third quarter, compared with \$27m (\$18m expensed, \$9m capitalised) in the second quarter of 2006.

BROWNFIELDS EXPLORATION

In **Australia**, at the Boddington mine, five diamond drill rigs have been employed on drill programmes to convert Inferred Resource to Indicated Resource, mostly in the Wandoo South pit where, historically, broad zones of mineralisation were intersected. At Siguiri, in **Guinea**, drilling focused on following up known mineralisation at Kintinian, Eureka North, Kozan North and Sintroko West. Reverse circulation (RC) drilling of selected portions of the spent heap leach also commenced with the intention of defining a Mineral Resource.

At Geita, in **Tanzania**, results from 19 RC and 14 diamond holes indicate significant mineralisation in the Ridge 8 – Star & Comet gap. A Mineral Resource is expected to be generated. At Area 3 South, follow-up drilling on a geochemical anomaly returned good results in a zone extending from 12m to 98m below surface.

At Morila in **Mali**, after a two month hiatus to interpret drill results, the wide-spaced drill programme has recommenced and has defined sub-economic mineralisation in the vicinity of the openpit.

At the Tamabli South anomaly at Sadiola, infill drilling confirmed low grade, but potentially economic mineralisation.

At Navachab in **Namibia**, 1,000m of follow-up RC drilling at the Gecko central and north prospects has returned positive results.

Surface drilling continued at Obuasi, in **Ghana**, with UDSDD

2 reaching a depth of 1,080m and UDSDD 3 intersecting reef between 1,697m and 1,766m.

In **Argentina**, at Cerro Vanguardia, two new veins have been confirmed by resource reconnaissance drilling. At Córrego do Sítio, in **Brazil**, a new deposit (Paiol) is being delineated after an initial three intersections returned encouraging results. At Cripple Creek & Victor in the **United States**, drill results in the Life of Mine Extension Project have been encouraging and additional modelling will be completed early in the fourth quarter. Development drilling continues in the South Cresson Deposit to define final pit depths

and high wall designs.

GREENFIELDS EXPLORATION

Greenfields exploration activities continued during the third quarter in Australia, Colombia, the DRC, China, the Philippines, Laos and Russia.

In Australia, drilling continued at the Tropicana joint venture on both the Tropicana and Havana zones. Significant new intercepts obtained from drilling at the Tropicana zone, which is currently focused on identifying extensions to the known mineralisation and to better-defining the orientation and extent of the high grade shoots, included 39m at 3.0g/t (including 15m at 6g/t), 36m at 3.5g/t (including 12m at 8.7g/t) and 41m at 3.7g/t (including 11m at 11.5g/t). Mineralisation at Havana has now been identified over a strike length of 2.1km and is still open to the north, south, and down-dip. Drilling focused on completing the 200m x 100m programme and on infilling to 100m x 100m has resulted in the following encouraging intercepts: 10m at 5.3g/t and 25m at 2.5g/t (including 13m at 3.5g/t).

Regional exploration programmes continued in **Colombia**. First phase drilling at the bulktonnage Quinchia and Gramalote targets in central Colombia was completed with promising initial results. At Quinchia, a total of 19 holes have been drilled, targeting both porphyry gold/copper and Breccia gold systems. Best drill results include 265m at 0.8g/t and 242m at 0.85g/t. At Gramalote, a granite-hosted gold system, a total of seven holes have been drilled. Best drill results include 255m at 1.16g/t and 275m at 1.2g/t. Further metallurgical test work on mineralisation at Quinchia is scheduled for the fourth quarter, as is second phase drill-testing at Gramalote.

dedicated diamond drill rigs focusing on infill drilling in the Adidi/D7 Kanga block. Significant new intercepts include 0.63m at 240g/t, 5.48m at 2.46g/t, and 10.07m at 1.54g/t. A third RC drill rig is expected to arrive on site by the beginning of November and Resource delineation drilling will continue throughout the rest of the year. In **China**, a co-operative joint venture with local partners was signed during the third quarter at the Yili-Yunlong prospect in Xinjiang, which has potential for both epithermal gold and porphyry gold and copper systems. Exploration of this project is intended to form part of the AngloGold Ashanti 2007 greenfields programme. The 2006 drill programme at Dynasty Gold's Red Valley project in Qinghai was completed in September. Results are pending. In the **Philippines**, AngloGold Ashanti elected to exercise its right to proceed to a joint venture with Red 5 Limited on the Outer Siana area, which surrounds but does not include Red 5's proposed Siana pit. AngloGold Ashanti and Red 5 have also entered into a joint venture to explore Mapawa, located 20km north of Siana. Commencement of detailed exploration at Mapawa will begin once approval from the Mines and Geosciences Bureau has been obtained.

In the **DRC**, exploration at Mongbwalu relied on two

In Laos, regional reconnaissance stream sampling and mapping programmes in several areas under the joint venture with Oxiana Limited were undertaken before activities were restricted by the wet season. Anomalous stream sediment gold has been outlined in two of these areas and promising geology, alteration and trace element geochemistry has been defined in another area. A technical review has identified a number of priority intrusive related gold targets to be advanced in the fourth quarter.

In late September, the company announced the signing of a strategic alliance with Polymetal to explore, acquire, and develop gold mining opportunities within the **Russian Federation**. The alliance will initially focus on two projects contributed by Polymetal and located in the Chita region, as well as two assets in Krasnoyarsk that are being acquired by AngloGold Ashanti from Trans-Siberian Gold (in which AngloGold Ashanti retains a 29.8% stake and to which it continues to provide technical services).

Review of the gold market

Over the third quarter of 2006, spot gold traded in a range of \$90, from a low of \$574/oz to a high of \$664/oz. Although the gold price has since declined, the third quarter range was encouraging, as it represents lower volatility than was experienced in the first half of the year when spot prices surged from around \$550/oz to a 25-year high of \$732/oz.

The average price for the quarter of \$621/oz represents a decline of just over \$7/oz or 1.17% from that of the second quarter, resulting in a year-to-date average of \$601/oz. In spite of the lower dollar gold price, the rand gold price strengthened nearly 10% quarter-on-quarter to an average price of R142,472/kg due to an 11% weakening of the rand against the dollar. The year-to-date rand gold price average stands at R127,687/kg.

While gold price volatility has continued to

PHYSICAL MARKET

generally dampen demand in the more price sensitive regions such as the Middle East and India, the retracing of the price back to the \$600/oz level and below in the second half of the third quarter did encourage physical buying in these markets during the period. In India, this was reflected in buyer concern that the market could have reached at least a temporary low, leading merchants to secure gold supplies in advance of Diwali, the Indian festival of lights and the accompanying wedding season. Middle Eastern consumption also improved, notwithstanding depressed confidence in the region following the Israel-Lebanon conflict earlier in the quarter. In Turkey, which fabricates gold jewellery for both developed and emerging markets, this was evidenced by significantly higher gold imports in September, which represented a 47% increase on imports for the previous month.

In spite of the region's increased demand in the second half of the quarter and the associated potential for a year-end recovery, Indian and Middle Eastern 2006 consumption figures are expected to be lower than those of last year. In China, physical gold demand continues to show resilience to price volatility and remained solid through the third quarter. Consumption patterns in this country appear impervious to the price shocks that have stifled other developing markets,

and the China Gold Association has forecast that gold consumption is likely to grow by around 5% year-on-year.

In the USA, the retail trade appears to have become more accepting of a higher raw material price and is accordingly making adjustments on quotations of finished products. This marks a departure from behaviour seen earlier in the year, when retailers shifted to lighter jewellery pieces in an effort to maintain consumer price levels. The new acceptance of a higher gold price, coupled with US consumers' record spend on gold jewellery purchases, should result in inventory restocking in anticipation of the Christmas season.

INVESTMENT MARKET

September also saw the end of the second year of the second Central Bank Gold Agreement (CBGA). By late August, central bank sales were approximately 107t less than the 500t per annum quota, suggesting that gold's recent weakness is driven by fundamentals.

While central bank disclosure for the period has not yet been released, the potential CBGA shortfall can be interpreted as a bullish statement for gold; indeed, the expectation amongst most market analysts is that the CBGA signatories are unlikely to fulfil their full quota for the remaining three years of the second agreement.

Exchange traded gold holdings held up well during the third quarter. According to the Commodities Future Trading Commission, hedge and managed future funds cut their net long futures and options positions by some 3Moz in September, where, by contrast, stocks held by funds in the exchange traded franchise fell by only 200,000oz from an August peak of 15.6Moz.

CURRENCIES

The US dollar enjoyed a relatively quiet quarter, trading in a range of \$/€1.24 to \$/€1.30. In contrast, the rand continued the weakening pattern against most currencies, which began in the second quarter. Despite a 50 basis point interest rate increase by the South African Reserve Bank and expectations of further rate hikes, the rand continued to weaken on continued concern over poor trade account deficits and a widening current account balance, combined with some worry surrounding political developments in the country. From opening levels of R7.15/\$ and R9.15/€, the currency closed the quarter at R7.76/\$ and R9.85/€. Quarter-on-quarter, the average rand dollar rate weakened by 11% from R6.46/\$ to R7.15/\$.

The Brazilian real and the Australian dollar also had relatively quiet quarters, trading in ranges of BRL2.12/\$ to BRL2.24/\$, and A\$/\$0.74 to A\$/\$0.77, respectively. Continued positive investor interest and sentiment is likely to result in the real maintaining most of the gains that it has seen this year. The strength of the Australian dollar, however, is thought to be more dependent on commodity prices, and would therefore be expected to weaken should these fail to maintain the higher levels experienced in the first half of 2006.

HEDGING

As at 30 September, the net delta hedge position of AngloGold Ashanti was 9.50Moz or 296t, valued at the spot gold price at the quarter-end of \$601.50/oz, nearly \$19/oz lower than that of the previous quarter. This net delta position reflects a decrease of some 0.6Moz or 20t quarter-on-quarter, a decline due to the lower third quarter-end gold price combined with decreases related to maturing hedge contracts, buybacks and other delta-reducing strategies as part of a broader hedge reduction strategy.

The marked-to-market value of the hedge position as at 30 September 2006 was a negative \$2.78bn

(at 30

June 2006: negative \$3.17bn). The decrease in the marked-to-market position was primarily due to the lower gold price of \$601.50/oz and the lower prevailing exchange rates, interest rates and volatilities prevailing at quarter-end, combined with the impacts of the changed hedge position quarter-on-quarter. Had the spot price of gold at the end of June remained unchanged from the price of \$620/oz at the end of the previous quarter, the hedge would have reduced to 9.878Moz or 307t, with a marked-to-market value of negative \$2.96bn.

The price received by the company for the quarter was \$584/oz, compared to an average spot price for the period of \$621/oz.

The company continues to actively manage its hedge position in a value accretive manner. As a result of this strategy there is currently a net long dollar gold position of 26,558kg at an average of \$650/oz for 2006. Continuing this practice, these long positions will be integrated into the hedge book and used to reduce hedging commitments in future periods.

Hedge position

As at 30 September 2006, the group had outstanding the following forward-pricing commitments against future production. The total net delta tonnage of the hedge of the company on this date was 9.50Moz or 296t (at 30 June 2006: 10.14Moz or 315t).

The marked-to-market value of all hedge transactions making up the hedge positions was a negative \$2.777bn (negative R21.56bn) as at 30 September 2006 (as at 30 June 2006: negative \$3.167bn or R22.45bn). This value at 30 September 2006 was based on a gold price of \$601.50/oz, exchange rates of R7.76/\$ and A\$/\$0.7440 and the prevailing market interest rates and volatilities at that date.

As at 27 October 2006, the marked-to-market value of the hedge book was a negative \$2.644bn (negative R19.88bn), based on a gold price of \$593.40/oz and exchange rates of R7.52/\$ and A\$/\$0.7630 and the prevailing market interest rates and volatilities at the time. These marked-to-market valuations are not predictive of the future value of the hedge position, nor of future impact on the revenue of the company. The valuation represents the cost of buying all hedge contracts at the time of valuation, at market prices and rates available at the time.

The Delta of the hedge position indicated above is the equivalent gold position that would have the same marked-to-market sensitivity for a

small change in the gold price. This is calculated using the Black-Scholes option formula with the ruling market prices, interest rates and

volatilities as at 30 September 2006.

Rounding of figures may result in computational discrepancies.

Notes

for the quarter and nine months ended 30 September 2006

1.

Basis of preparation

The financial statements in this quarterly report have been prepared in accordance with the historic cost convention except for certain financial instruments which are stated at fair value. The group's accounting policies used in the preparation of these financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2005 and revised International Financial Reporting Standards (IFRS) which are effective 1 January 2006, where applicable.

The financial statements of AngloGold Ashanti Limited have been prepared in compliance with IAS34, JSE Listings Requirements and in the manner required by the South African Companies Act, 1973 for the preparation of financial information of the group for the quarter and nine months ended 30 September 2006.

Where the preparation or classification of an item has been amended, comparative information has been reclassified to ensure comparability with the current period as disclosed in the previous annual report. Such amendments have been made to provide the users of the financial statements with additional information.

Liquidity and capital resources:

To service the above capital commitments and other operational requirements, the group is dependant upon cash generated from the

South African operations, borrowing facilities and cash distributions from offshore operations.

Cash generated from the South African operations fund to a large extent the capital expenditure to maintain and expand those operations

in South Africa. Consequently other funding requirements are serviced from borrowing facilities and offshore distributions which are

subject to market and other risks. The credit facilities and other financing arrangements contain financial covenants and other similar

undertakings.

The distributions from offshore operations are subject to foreign investment and exchange control laws and regulations and the quantity

of foreign exchange available in offshore countries. In addition offshore distributions from joint venture partners are subject to consent

and co-operation from those joint venture partners.

The group's current covenant performance, cash and liquidity funds from the various resources available are within the required limits

which will meet its obligations and capital commitments.

Rounding of figures may result in computational discrepancies.

15.

Contingent liabilities

AngloGold Ashanti's contingent liabilities at 30 September 2006 are detailed below:

Water pumping cost – South Africa – Representatives of the three mining companies, along with their respective legal teams, have been finalising settlement and other related agreements over the last few months. The three mining companies are Simmer and Jack Mines Limited, Harmony Gold Mining Company Limited and AngloGold Ashanti Limited.

Following on the government's request that the New Water Company be a section 21 company, AngloGold Ashanti is in the process of replacing the signed Settlement and Shareholders' Agreements with a new Settlement Agreement, Members' Agreement, and Loan Agreement and is attending to fulfil the conditions precedent included in these new agreements, namely:

- The unconditional conclusion of a Purchase Agreement between the New Water Company and the provisional liquidators of Stilfontein Gold Mining Company for the purchase of the Margaret and Scott Shafts;
- The Department of Water Affairs and Forestry (DWAF) must issue all licences necessary for the New Water Company to conduct its business; and
- The DWAF confirms in writing that in respect of the dewatering of Margaret Shaft only the Water Resource Management charge will be applicable to the abstraction of such water and that no other water tariff will be imposed unless it is established that the abstraction of water has an effect on the yield of the Vaal River, a Vaal River Tariff may also come into effect.

The agreements will not be binding on the mining companies unless all of the above conditions precedent are met by the due date, which may be extended by agreement between the parties.

Similarly to the signed Settlement Agreement, the new draft Settlement Agreement describes the formation of a "New Water Company", which will take over the running of the Margaret and Scott Shafts from the Stilfontein Gold Mining Company. The new company will be responsible for the operation of the shafts and the operation of all pumping equipment at the Margaret Shaft in order to transfer all fissure water to surface on a daily basis. The Scott Shaft is required for ventilation purposes. The funding required from each of the mining companies will be set out in the Loan Agreement, which is currently being drafted. Each of the three companies has in principle agreed to provide one-third of the start up capital required on loan account to the New Water Company. Each mining company will contribute a maximum of R18m capital in the aggregate over a three-year period. Any additional working or other capital costs required by the New Water Company will be borrowed or otherwise obtained from outside sources.

Stilfontein has been placed in provisional liquidation on the application of a creditor, Mining Reclamation Services (Pty) Limited. The Master of the High Court has appointed four liquidators. The State (DWAF, Department of Minerals and Energy (DME) and Department of Environmental Affairs and Tourism (DEAT)) has indicated that it regards the environmental legislation as paramount and that the liquidators must comply with all directives. The Purchase Agreement, if signed, will allow the mining companies to purchase the Margaret and Scott Shafts from Stilfontein. A Court Order may be necessary in due course – the liquidators have indicated, in any event, that given the uncertainty of the position in regard to the conflict between Environmental Law and Insolvency Law, they may require a court sanction whatever arrangement is concluded. AngloGold Ashanti is in the process of attempting to have the costs of the Margaret and Scott Shafts set off against the amount that Stilfontein owes the three mining companies for contributing Stilfontein's portion of the pumping costs in terms of the 1 November 2005 directive. These costs could be considered administrative costs in the liquidation. Groundwater pollution – South Africa – AngloGold Ashanti has identified a number of groundwater pollution sites at its current operations in South Africa, and has investigated a number of different technologies and methodologies that could possibly be used to remediate the pollution plumes. The viability of the suggested remediation techniques in the local geological formation in South Africa is however unknown. No sites have been remediated and present research and development work is focused on several pilot projects to find a solution that will in fact yield satisfactory results in South African conditions. Subject to the technology being developed as a remediation technique, no reliable estimate can be made for the obligation.

Retrenchment costs – South Africa – Following the decision to discontinue operations at Ergo in 2005, employees surplus to requirements have had their service contracts terminated and retrenchment packages settled. Ergo continues to retain various staff members to complete the discontinuance and the attendant environmental obligations which are expected to be completed by 2012. The retained employees may resign, be transferred within the Group, attain retirement age or be retrenched as their current position is made redundant. AngloGold Ashanti is currently unable to determine the effect, if any, of any potential retrenchment costs.

Provision of surety – South Africa – AngloGold Ashanti has provided sureties in favour of a lender on a Gold loan facility with its affiliate Oro Africa (Pty) Ltd and one of its subsidiaries to a maximum value of R100m (\$13m). The suretyship agreements have a termination notice period of 90 days.

Sales tax on gold deliveries – Brazil – Mineração Serra Grande S.A., the operator of the Crixas mine in Brazil, has received assessments from the State of Goias Tax Inspection related to payments of sales taxes on gold deliveries for export. The Serra Grande operation is co-owned with Kinross Gold Corporation. The company manages the operation and its attributable share of the assessment is approximately \$29m. The company believes the assessments are in violation of Federal legislation on sales taxes and that there is a remote chance of success for the State of Goias. The assessment has been appealed.

Litigation with mining contractor – Ghana – A group of employees of Mining and Building Contractors (MBC), the Obuasi underground developer, are claiming to be employees of the group. If successful, there is a risk of some employees claiming rights to share options.

Capital cost of water pipelines – Namibia – A potential liability of approximately \$1m exists at Navachab in Namibia to pay the outstanding capital cost of the water pipeline in the event of mine closure prior to 2019.

16

Concentration of risk

There is a concentration of risk in respect of reimbursable value added tax and fuel duties from the Malian government:

- Reimbursable value added tax due from the Malian government for the company, amounts to an attributable \$35m at 30 September 2006 (30 June 2006: attributable \$30m). The last audited value added tax return was for the period ended 31 March 2006 and at that date an attributable \$25m was still outstanding and an attributable \$10m is still subject to audit. The accounting processes for the unaudited amount are in accordance with the processes advised by the Malian government in terms of the previous audits.
- Reimbursable fuel duties from the Malian government for the company, amount to an attributable \$12m at 30 September 2006 (30 June 2006: attributable \$14m). Fuel duties refund claims are required to be submitted before 31 January of the following year and are subject to authorisation by firstly the Department of Mining and secondly the Custom and Excise authorities. The Customs and Excise authorities have approved an attributable \$7m which is still outstanding, whilst an attributable \$5m is still subject to authorisation. The accounting processes for the unauthorised amount are in accordance with the processes advised by the Malian government in terms of the previous authorisations.

The government of Mali is a shareholder in all the Malian entities and has provided a repayment plan for the amounts due.

There is a concentration of risk in respect of reimbursable value added tax and fuel duties from the Tanzanian government:

- Reimbursable value added tax due from the Tanzanian government, for the company amounts to \$14m at 30 September 2006 (30 June 2006: \$12m). The last audited value added tax return was for the period ended 31 March 2006 and at that date \$10m was still outstanding and \$4m is still subject to audit. The accounting processes for the unaudited amount are in accordance with the processes advised by the Tanzanian government in terms of the previous audits.
- Reimbursable fuel duties from the Tanzanian government, for the company amount to \$11m at 30 September 2006 (30 June 2006: \$11m). Fuel duty claims are required to be submitted after consumption of the related fuel and are subject to authorisation by the Customs and Excise authorities. Claims for refund of fuel duties amounting to \$8m have been lodged with the Customs and Excise authorities, which is still outstanding, whilst

claims for refund of \$3m have not yet been submitted. The accounting processes for the unauthorised amount are in accordance with the processes advised by the Tanzanian government in terms of the previous authorisations.

17. Attributable interest

Although AngloGold Ashanti holds a 66.7% interest in Cripple Creek & Victor Gold Mining Company Limited, it is currently entitled to receive 100% of the cash flows from the operation until the loan, extended to the joint venture by AngloGold Ashanti USA Inc., is repaid.

18. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

19. Announcements

On 14 July 2006, AngloGold Ashanti announced the signing of a Heads of Agreement with Antofagasta PLC to jointly explore a highly prospective belt in Southern Colombia for new gold and copper deposits. AngloGold Ashanti will include all of its mineral applications, contracts and third party contracts within the area of interest in the new joint venture, while Antofagasta will commit to fund a minimum of \$1m of exploration within 12 months of the signing of the agreement, with an option to invest an additional \$7m within four years in order to earn-in to 50% of the joint venture. Both AngloGold Ashanti and Antofagasta will have the right to increase their interests by 20% in copper-dominant and gold-dominant properties subject to certain conditions.

On 4 August 2006, AngloGold Ashanti announced the appointment to its board or Mr J H Mensah, a member of the Ghanaian Parliament with extensive experience in international and local economic management and Prof. L W Nkuhlu, a respected South African academic, professional and business leader. Messrs P L Zim and his alternate, Mr D D Barber announced their resignation from the board. The above appointments and resignations were effective from 4 August 2006.

On 23 August 2006, AngloGold Ashanti announced that it had entered into an agreement with Central African Gold plc (CAG) to sell its entire business undertaking, related to the Bibiani mine and Bibiani North prospecting permit and to transfer all assets, including all of Bibiani's employees, fixed mining and non-mining assets, inventory, trade debtors and intellectual property as well as the Bibiani lease and the Bibiani North prospecting licence, and procure the cessation and delegation of all contracts related to Bibiani to CAG for a cash consideration of \$40m.

On 30 August 2006, AngloGold Ashanti announced that it had granted the right to executive directors to acquire AngloGold Ashanti ordinary shares in terms of the AngloGold Share Incentive Scheme's Long-term Incentive Plan (LTIP), pursuant to which, a total of 57,150 awards were granted to four executive directors. All awards granted in terms of the LTIP vest three years from date of grant, subject to the achievement of the performance conditions under which the awards were made.

On 30 August 2006, AngloGold Ashanti announced that it had been advised by the Volta River Authority (VRA) of potential power shortage at its Ghanaian operations due to water shortages impacting the VRA's power generating facilities. This announcement was followed by an update on 6 September 2006 in which AngloGold Ashanti advised that the company was in discussions with the VRA, the Chamber of Mines in Ghana and the government of Ghana on activities designed to minimise the impact of the power shortages on the economy and the mining industry and to provide for a sustainable solution in the future. At the same time, AngloGold Ashanti provided guidance to investors as to the impact on production which the power shortages had at its Ghanaian operations.

On 21 September 2006, AngloGold Ashanti announced that it had entered into a 50:50 strategic alliance with Russian gold and silver producer, OAO Inter-Regional Research and Production Association Polymetal (Polymetal) in terms of which, Polymetal and AngloGold Ashanti would cooperate in exploration, acquisition and development of gold mining opportunities within the Russian Federation.

On 2 October 2006, AngloGold Ashanti announced the imminent finalisation of an employee share ownership plan with the National Union of Mineworkers, Solidarity, United Association and Izingwe Holdings (Proprietary) Limited ("empowerment transaction"). The empowerment transaction is subject to, amongst other things, shareholders approval and a circular giving notice of a general meeting of shareholders to be held on 11 December 2006 will be posted to shareholders on or about 13 November 2006.

20. Recent developments

On 11 October 2006, a revised draft Mineral and Petroleum Royalty Bill was released by the South African Treasury Department. The draft Mineral and Petroleum Royalty Bill originally released in March 2003, proposed a royalty payment of 3% of gross revenue per year, payable quarterly, in the case of gold. The revised draft imposes a royalty on the extraction and transfers of South Africa's mineral resources at a proposed rate of 1.5% on refined gold (produced to at least 99.5% purity), payable twice a year on a six-monthly basis. Royalties paid will be tax deductible. The revised draft Mineral and Petroleum Royalty Bill is open for comment until 31 January 2007. If passed by Parliament, the Act would be in effect for all mineral resources extracted and transferred on or after 1 May 2009.

21. Dividend

Interim dividend No. 100 of 210 South African cents or 16.32 UK pence or 2,845.50 cedis per share was paid to registered shareholders on 25 August 2006, while a dividend of 8.0766 Australian cents per CHESS Depositary Interest (CDI) was paid on the same day. On 28 August 2006, a dividend of 28.455 cedis per Ghanaian Depositary Share (GhDS) was paid to holders thereof. Each CDI represents one-fifth of an ordinary share, and 100 GhDSs represent one ordinary share. A dividend was paid to holders of American Depositary Receipts (ADRs) on 5 September 2006 at a rate of 29.407 US cents per American Depositary Share (ADS). Each ADS represents one ordinary share.

Rounding of figures may results in computational discrepancies.

Based on risks and returns the directors consider that the primary reporting format is by business segment. The directors consider that there is only one business

segment being mining, extraction and production of gold. Therefore the disclosures for the primary segment have already been given in the abbreviated financial

statements. The secondary reporting format is by geographical analysis by origin.

1

221 1,219 686

Gross profit (loss) adjusted for the effect of unrealised non-hedge derivatives plus amortisation of tangible and intangible assets, less non-cash revenues. Refer to note F of "Non-GAAP disclosure" for the definition.

Headline earnings adjusted for the effect of unrealised non-hedge derivatives, fair value adjustments on convertible bond and interest rate swaps, is intended to illustrate

earnings after adjusting for:

- The unrealised fair value change in contracts that are still open at the reporting date, as well as, the unwinding of the historic marked-to-market value of the

position settled in the period; and

- Investment in hedge restructure transaction: During the hedge restructure in the quarters ended 31 December 2004 and 31 March, 2005, \$83m and \$69m in cash

was injected into the hedge book to increase the value of long-dated contracts. This investment in long-dated derivatives (all of which have not yet matured), for the

purposes of the adjustment to earnings, will only be taken into account when the long-dated contracts are settled.

- The unrealised fair value change on the option component of the convertible bond.

Gross profit adjusted for the effect of unrealised non-hedge derivatives

Calculated on the basic weighted average number of ordinary shares.

Non-hedge derivatives in the income statement comprise the change in fair value of all non-hedge derivatives as follows:

- Open positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the current reporting date; and
- Settled positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the date of settlement.

From time to time AngloGold Ashanti may publicly disclose certain "non-GAAP" financial measures in the course of our financial presentations, earnings releases, earnings conference calls and otherwise.

The group utilises certain non-GAAP performance measures and ratios in managing our business and may provide users of this financial information with additional meaningful

comparisons between current results and results in prior operating periods. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the

reported operating results or cash flow from operations or any other measure of performance prepared in accordance with GAAP. In addition, the presentation of these measures

may not be comparable to similarly titled measures other companies use.

Yatela and Cripple Creek & Victor Joint Venture operations yield
reflects gold placed/tonnes placed.
5
The yield of Bibiani represents surface and dump reclamation.
Rounding of figures may results in computational discrepancies.
The yield of Sunrise Dam, Iduapriem and Siguiri represents open-pit operations.
Yield - g/t
Gold produced - kg
The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad.
The yield of TauTona, AngloGold Ashanti Brasil Mineração and Obuasi represents underground operations.
```

Yatela and Cripple Creek & Victor Joint Venture operations yield
reflects gold placed/tonnes placed.
5
The yield of Bibiani represents surface and dump reclamation.
Rounding of figures may results in computational discrepancies.
The yield of Sunrise Dam, Iduapriem and Siguiri represents open-pit operations.
Yield - oz/t
Gold produced - oz (000)
The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad.
The yield of TauTona, AngloGold Ashanti Brasil Mineração and Obuasi represents underground operations.
```

Certain statements contained in this document, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations

regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold Ashanti's exploration and production

projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold Ashanti's operations, economic

performance and financial condition. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no

assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking

statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory

environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management. AngloGold Ashanti

undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of the annual

report on Form 20-F or to reflect the occurrence of unanticipated events. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or

any person acting on its behalf are qualified by the cautionary statements herein. For a discussion on such risk factors, refer to AngloGold Ashanti's annual report on

Form 20-F for the year ended 31 December 2005 dated 17 March 2006, which was filed with the Securities and Exchange Commission (SEC) on 20 March 2006.
