## Report

#### for the six months ended 30 June 2016

- Free cash flow (FCF) more than trebled to \$108m
- · Net debt at 30 June 2016 was \$2.098bn, reflecting a Net Debt to Adjusted EBITDA ratio of 1.44 times
- · High yield bond fully redeemed on 1 August 2016, further improving future free cash flows
- Gold production of 1.745Moz, in line with full year guidance range of 3.6Moz 3.8Moz
- Total cash costs at \$706/oz, a 3% improvement on the same period last year of \$726/oz
- · All-in sustaining costs (AISC) were \$911/oz, a \$13/oz improvement year-on-year
- · Adjusted headline earnings (AHE) of \$159m, more than double compared to the same period last year

Financial and Operating Report

#### FINANCIAL AND CORPORATE REVIEW

AngloGold Ashanti delivered a solid operating and financial performance for the first half of 2016, continuing to execute on its strategy

to improve cash flows and returns on a sustainable basis and to develop optionality within the business. The results show improved

earnings and free cash flow given strong ongoing focus on cost and capital discipline, and the rising gold price.

"We will continue to push hard to improve operational and cost performance, as well as our overall balance sheet flexibility,

regardless of the gold price environment," Chief Executive Officer Srinivasan Venkatakrishnan said. "Our focus remains to improve

margins and grow cash flow and returns on a sustainable basis."

Production was 1.745Moz at a total cash cost of \$706/oz for the six months to 30 June 2016, compared to 1.878Moz at \$726/oz in the

first six months of 2015, from continuing operations. The decrease in production from continuing operations was led by weaker

production from Kibali and a planned decrease in head grades at Tropicana, as noted earlier in the year. AISC improved by \$13/oz

over the first half of last year, decreasing from \$924/oz to \$911/oz. The improvement in AISC reflects continued cost discipline

throughout the group, weaker currencies and lower capital expenditure. Our portfolio of assets continued to deliver strong and

consistent performance as a whole.

Free cash flow of \$108m was recorded for the half year, more than triple the \$31m for the first half of 2015, resulting in 3

consecutive quarters of free cash flow generation. Free cash flow was affected by negative working capital movements which will

unwind in the second half of the year, specifically \$28m from the sale of metal from Argentina which was delayed until the week

immediately following half year.

This overall improvement in free cash flow, however, was driven by continued efforts to contain costs and improve efficiencies, weaker

currencies in key operating jurisdictions, \$33m in interest savings, and a 1% higher gold price received.

Cash inflow from operating activities decreased by \$37m, or 7%, from \$513m in the six months ended 30 June 2015 to \$476m in the

six months ended 30 June 2016, reflecting a 7% drop in production from continuing operations and negative working capital

movements, which included timing of gold shipments from Argentina, and movements in VAT receivables in South Africa.

AHE were \$159m, or 39 cents per share, compared with \$61m, or 15 cents, in the first half of 2015. Net profit attributable to equity

shareholders during the first half of 2016 was \$52m compared with a net loss from continuing operations of \$23m a year earlier. During

the six months ended 30 June 2016, AngloGold Ashanti settled foreign denominated debt resulting in a recycling of historic foreign

exchange losses of \$60m from the Foreign Currency Translation Reserve to the Income Statement. This was added back for headline

earnings. In addition, the effective tax rate reduced from 113% to 46% as the tax charges decreased from \$115m in the

six months

ended 30 June 2015 to \$51m in the six months ended 30 June 2016. This was largely due to the currency impact on the translation of

the deferred tax balance in South America.

Adjusted earnings before interest, tax, depreciation and amortisation (adjusted EBITDA) decreased by 12m, or 2% from \$793m in the

six month period ended 30 June 2015 to \$781m in the six months ended 30 June 2016. The lower production year-on-year was largely

offset by cost improvements over the same period. The ratio of net debt to adjusted EBITDA at the end of June 2016 was 1.44 times,

compared with the 1.47 times recorded at the end March 2016, and 1.95 times at the end of June 2015, highlighting the success of

AngloGold Ashanti's continued efforts to deleverage and sustain improvements in cash flow.

Net debt fell by 32% to \$2.098bn, from \$3.076bn at the end of June 2015, mainly as a result of the proceeds received on the sale

of Cripple Creek & Victor (CC&V) for \$819m which was concluded last year, as well as continued strong cost management, which

saw improvements across most cost areas.

The balance sheet remains robust, with strong liquidity comprising \$1.0bn available on the US dollar revolving credit facility (RCF) at

the end of June 2016, A\$190m undrawn on the A\$500m Australian dollar RCF, approximately R3.2bn available from the South African

RCF and other facilities and cash and cash equivalents of \$470m as at the end of June 2016.

This strong liquidity position allowed AngloGold Ashanti to draw down \$330m from the US dollar RCF at the end of July to partially fund

the redemption of the \$503m outstanding in 8.5% bonds due in 2020. The remainder was funded by cash on hand. The redemption

was executed on 1 August 2016 at a predetermined price of 106.375 cents on the dollar, thereby eliminating the company's highest-

cost debt, and reducing both interest payments and the concentration of debt maturities in 2020, improving free cash flow and

introducing additional balance-sheet flexibility by reducing the company's hardened debt levels. This will reduce interest charges by

\$40m on an annualised basis.

The South African operations reported a 3% drop in production year-on-year to 486,000oz, alongside a 13% improvement in

AISC which declined to \$958/oz, from \$1,098/oz in the same period last year. Mponeng delivered the standout performance in the

region, with a 25% increase in production and a 28% decrease in AISC year-on-year. However, whilst the weaker rand benefitted

costs, production continued to be hampered by increased safety-related stoppages which have become a feature of the country's

underground mining industry. The frequent and unpredictable nature of Section 54 stoppages and mass compliance audits by the

Department of Mineral Resources has created an element of risk to production levels from the region, given the resultant downtime and

production ramp-up periods.

The International operations delivered production of 1.259Moz at an AISC of \$873/oz, compared with 1.378Moz at an AISC of

\$840/oz in the same period last year. These mines, all outside South Africa, accounted for 72% of AngloGold

Ashanti's total

production, and benefited from weaker currencies in Argentina, Australia and Brazil. There were especially strong cost performances

from Sunrise Dam and Cerro Vanguardia, which posted significant efficiency gains during the first half of 2016. As indicated at the

beginning of the year, production was lower in accordance with the plans at Geita and Tropicana, whilst Kibali continued to face

challenges encountered in mining and processing different ore types, and the first attempt during the first quarter to test the transition to

a sulphide processing circuit.

3

Capital expenditure (including equity accounted entities) was \$318m for the six months ended 30 June 2016 compared to \$426m

(including discontinued operations) in the same period last year. This reduction was partially due to favourable exchange rate

movements, impediments in reaching investment targets caused by ongoing safety stoppages in South Africa, and the cessation of

work on the underground decline access at Obuasi in Ghana. It is expected that capital expenditure will increase in the second half of

the year in line with past trends.

#### SAFETY UPDATE

The all injury frequency rate (AIFR), the broadest measure of workplace safety, was 8.03 per million hours worked in the first half,

from 7.51 in the same period last year, a 7% regression mainly due to the South Africa region, while the International operations

recorded AIFR at 2.19, a 31% improvement from 3.17 reported last year. Regrettably, there were three fatalities in this period, a fall of

ground fatal in TauTona and two fatalities which occurred in seismic events at the Savuka section of TauTona, with the largest

measuring 3.5 on the Richter scale.

In South Africa, work on the execution of the Safe Production Strategy which focuses on improving skills, behaviour and

attitude, planning work and protecting workers from risk continues. As a result, Moab Khotsong managed to achieve one million fatality

free shifts on 10 May 2016, Mponeng achieved one million fatality free shifts during the first quarter of the year, whilst Kopanang

achieved one million fatality free shifts on 14 June 2016 as well as one-year fatality-free on 1 July 2016.

The safe management of mobile equipment remains a key focus area across the International operations, especially in the Continental

Africa region. Training programmes aimed at improving competence of equipment operators and supervisors are being implemented to

reduce the risks associated with mobile equipment. High potential incident audits are conducted regularly to mitigate safety challenges

across the group, which include fall of ground and heavy mobile equipment incidents.

#### **OPERATING HIGHLIGHTS**

The **South African** operations produced 486,000oz at a total cash cost of \$809/oz for the six months ended 30 June 2016 compared

to 500,000oz at a total cash cost of \$894/oz in the same period last year. Safety stoppages resulted in approximately 44,085oz of lost

production, given the downtime and resultant ramp-up period. Costs benefitted from the weaker exchange rate despite these lower

production volumes, inflationary pressures on labour and power, and the court-ordered re-instatement of the 542 employees dismissed

in 2013.

At West Wits, production was 214,000oz at a total cash cost of \$786/oz for the six months ended 30 June 2016 compared to

207,000oz at a total cash cost of \$910/oz in the same period last year. Production was affected by the fall-of-ground incident in

January at TauTona, and a seismic-related fatal accident at the Savuka section of the same mine in April. Both incidents led to

prolonged stoppages, impacting negatively on production and development. Work is underway to revise the production plan to further

improve access to working areas. This was more than offset by the strong production performance from Mponeng, which showed

recovery from the safety- related production interruptions encountered in the six months ended 30 June 2015. Mponeng was one of

the lowest cost producers for the South African region in the first half of 2016 at a total cash cost of \$692/oz reflecting an

improvement of 25% year-on-year.

Vaal River production was 173,000oz at a total cash cost of \$843/oz for the six months ended June 2016, compared to 191,000oz at a

total cash cost of \$861/oz in the same period last year. Production was negatively impacted by safety-related stoppages, with Moab

Khotsong most affected.

4

Production at Surface Operations was 93,000oz at a total cash cost of \$797/oz for the six months ended 30 June 2016, compared to

97,000oz at a total cash cost of \$925/oz in the same period last year. The most significant impact on production was a decline in

yield from the reclamation of the lower grade Tailings Storage Facilities at the West Wits section. The Vaal River section saw

improved grades from the success of the screening initiative to upgrade the Kopanang marginal ore dumps. Production at Mine

Waste Solutions improved as a result of an improved reclamation strategy and from the commissioning of the East Pump Station in

the third quarter of 2015. The flotation plant was recommissioned in June and it is expected that the Uranium plant will be fully

operational during the third quarter of this year, which is expected to result in improved gold and uranium recovery. In the **Continental Africa** region, production was 620,000oz at a total cash cost of \$690/oz for the six months ended 30 June 2016

compared to 719,000oz at a total cash cost of \$675/oz in the same period last year. Costs were impacted by overall low production

volumes, despite strong ongoing cost control. Production was affected by the planned lower production from Geita, a disappointing performance from Kibali, and the cessation of tailings retreatment at Obuasi.

In the **Democratic Republic of the Congo**, Kibali's production was 114,000oz at a total cash cost of \$802/oz for the six months

ended 30 June 2016 compared to 148,000oz at a total cash cost of \$588/oz in the same period last year. The lower production was

due to lower throughput, recovery and grade while the operation manages the complexity of several different surface and

underground ore types. Ahead of commissioning of the shaft in the second half of 2017 and an increase in the proportion of sulphide

ore, a plant trial was undertaken on 100% sulphide. The trial highlighted a number of areas where improvements will be

needed including fine grinding and sulphide concentrate leaching. To provide improved flexibility two high -grade satellite pits are

being developed in the current year and in 2017. Development of the underground mine is progressing on schedule with shaft

equipping completed, and off- shaft development and integration with the decline system in progress.

In **Ghana**, Iduapriem's production increased 13% to 99,000oz at a total cash cost of \$931/oz for the six months ended 30 June 2016,

compared to 88,000oz at a total cash cost of \$1,037/oz in the same period last year. The production improvement was driven by a 6%

higher recovered grade as well as a 6% increase in tonnage treated as a result of improved plant utilisation compared to the

same period last year when throughput was impacted by an extensive plant shutdown. Total cash costs consequently decreased

mainly as a result of higher production together with the once-off benefit of a reversal of contractor mining costs for the settlement of

historical claims with the previous mining contractor.

At Obuasi, the first half of 2016 has been dominated by the incursion of illegal miners onto the operating area. Despite extensive

engagements with the authorities at all levels to re-establish law and order, illegal miners continue to occupy the lease area. The mine

has been placed on care and maintenance, with only essential dewatering, ventilation and water treatment activities being underta

ken. Meanwhile, future options for recommencing operations continue to be evaluated.

At Siguiri in **Guinea**, production was 126,000oz at a total cash cost of \$706/oz for the six months ended 30 June 2016 compared

to 132,000oz at a total cash cost of \$837/oz in the same period last year. Production was lower due to a planned 7% decrease

in recovered grade, partly compensated by a 2% increase in tonnage throughput given the increased plant availability. Total cash costs

were lower as a result of weaker currency exchange rates, lower fuel prices, a once-off benefit of a reversal of the contractor

mining costs for the settlement of historical claims with the previous mining contractor, and favourable ore stockpile movements.

In **Mali**, Morila's production was 13,000oz at a total cash cost of \$965/oz for the six months ended 30 June 2016 compared to

35,000oz at a total cash cost of \$569/oz in the same period last year. Production decreased as the operation transitions to end -of-

life, treating marginal and tailings grade.

At Sadiola, production was 36,000oz at a total cash cost of \$826/oz for the six months ended 30 June 2016 compared to 36,000oz at

a total cash cost of \$840/oz in the same period last year. Production was maintained, while total cash cost decreased due to lower

fuel prices and good cost management.

In **Tanzania**, Geita produced 229,000oz at a total cash cost of \$496/oz for the six months ended 30 June 2016 compared to

250,000oz at a total cash cost of \$487/oz in the same period last year. Production decreased as a result of a planned 11%

reduction in recovered grade from mining lower grade ore in the Nyankanga pit compared to the same period last year. This was

partly compensated for by a 3% increase in plant throughput as a result of consistent plant operations. The focus for Geita over the

next few quarters will be toward improving mining efficiencies in the new underground development and step-up productivity to planned

levels.

In the **Americas**, production was 388,000oz at a total cash cost of \$549/oz for the six months ended 30 June 2016 compared

to 377,000oz at a total cash cost of \$632/oz in the same period last year. The AISC at \$816/oz compared to \$849/oz this period last

year, were due to good cost controls, weaker exchange rates, and higher by-product sales in Argentina, partially tempered by high

inflation, particularly in Brazil.

In **Argentina**, Cerro Vanguardia produced 136,000oz at a total cash cost of \$543/oz for the six months ended 30 June 2016

compared to 135,000oz at a total cash cost of \$641/oz in the same period last year. Total cash costs were 15% lower than in the same

period last year, helped by the local currency devaluation and a 35% increase in by-product sales of silver. These were partially offset

by inflationary pressures which included initial salary increases following a wage settlement reached in February. It is expected

that a second round of negotiations will take place early in the second half of the year. Unfavourable stockpile movements resulted

from lower tonnes mined during a short, unprocedural strike in January. Free cash flow for the six months ended 30 June 2016 was

negatively impacted due to a delay in the receipt of cash from gold and silver sales of \$28m.

In **Brazil**, production was 252,000oz at a total cash cost of \$545/oz for the six months ended 30 June 2016 compared to 242,000oz a

total cash cost of \$627/oz in the same period last year. AISC were \$857/oz compared to \$816/oz for same period last year. The lower

costs reflect higher capital expenditure partially offset by higher gold sold, lower operating expenditure and favourable exchange rates

in the current period.

At AngloGold Ashanti Mineração, production was 188,000oz at a total cash cost of \$531/oz for the six months ended 30 June 2016

compared to 181,000oz at a total cash cost of \$598/oz in the same period last year. Production increased due to higher tonnage at

both the Cuiabá and Córrego do Sítio complexes together with higher grades from the latter. The improvement was due to increased

developed reserves at the beginning of the year at Cuiabá, in addition to better operational performance at both the mine and plant

in the Córrego do Sítio complex. Production at the Cuiabá complex was slightly affected, where access to higher grade areas -

5

some as high as 20g/t - was delayed due to geotechnical issues. However, changes in the mining plan have already been made and it

is expected that production will improve in the second half of the year. Total cash costs were 11% lower compared to same period last

year mainly due to higher production, continued cost saving initiatives and the weaker currency, partially offset by higher inflation.

At Serra Grande production was 64,000oz at a total cash cost at \$584/oz

for the six months ended 30 June 2016 compared to

61,000oz at a total cash cost of \$714/oz in the same period last year. Production increased as a

result of higher recovered grade and

tonnage treated, reflecting operational improvements in the plant. Total cash costs were 18% lower due to higher gold produced, cost

saving initiatives from labour

and primary development credits

, and local currency devaluation, partially impacted by higher inflationary

impacts including power costs. Drilling ahead of our retreat mining development has revealed areas in the Minas III ore body where

mineralised material extends significantly further than anticipated. This will result in a longer-than-anticipated development period,

compensated for with additional ounces in the production profile. We are working on improving this outcome in future by looking at

augmenting existing exploration budgets.

In **Australia**, production was 251,000oz at a total cash cost of \$806/oz for the six months ended 30 June 2016 compared to

282,000oz at a total cash cost of \$703/oz in the same period last year. Production was down despite better mill throughput due to

lower grades at both operations. A plant optimisation and upgrade project at Tropicana to lift throughput to 7.5 Mtpa is expected to be

completed by the end of September.

Production at Sunrise Dam was 113,000oz at a total cash cost of \$858/oz for the six months ended 30 June 2016 compared

to 115,000oz at a total cash cost of \$958/oz in the same period last year. Production was impacted by lower grades and marginally

lower metallurgical recovery, despite a 6% increase in mill throughput. Total cash costs decreased with the impact of lower grades

more than offset by favourable ore stockpile movements together with good cost controls. The efficiencies were derived from

reduced mining, processing and maintenance costs and reduced underground mining costs, whereby the cost per tonne mined was

11% lower than in the same period last year when there was a higher ore stock drawdown. Ore production at Sunrise Dam has now

increased to an annualised rate of 2.8 Mt, almost doubling underground volumes since 2012, and continuing to displace mill-feed

from low-grade stockpiles with higher-grade underground material.

At Tropicana, production was 137,000oz at a total cash cost of \$704/oz for the six months ended 30 June 2016, compared to

167,000oz at a total cash cost of \$476/oz in the same period last year. Production was lower due to the planned end to grade

streaming in December 2015, which meant the head grade was 27% lower in the first half of 2016 compared to the corresponding

period in 2015. Total cash costs increased compared to the same period last year, primarily due to lower production and inventory

movement, with 19% more ore mined. The plant optimisation project remains on schedule for completion in September and the plant

achieved a record throughput rate of 7.28 Mtpa in May and June. The Long Island Study, which has been considering innovative, low

cost approaches to mining the depth extensions of the Tropicana mineralised system, has advanced, supported by extensive

drilling. An updated Ore Reserve and Mineral Resource estimate is expected at the end of the year and the study is expected to be

completed in the first half of 2017.

#### **PERSONNEL**

A number of key personnel changes have been made across our operations. These changes highlight the strength and depth of our

internal talent pool, an area on which we have spent considerable time, expertise and resources over the past several years. These

changes are also consistent with our commitment to timeous succession planning in all roles across the business.

Ludwig Eybers, who has been with the company for five years, and has led the remarkable turnaround of our Continental Africa

portfolio since 2013, has been appointed Deputy Chief Operating Officer: International. Ludwig, who has had extensive experience

working across a number of international jurisdictions over a 20-year career, has overseen an increase in productivity for the

Continental Africa region, along with an improvement in safety. He will work closely with Ron Largent on budgeting and business

planning, as well as on the execution of Operational Excellence initiatives.

Ludwig replaces Helcio Guerra, who has decided, for personal reasons, to take early retirement at the end of December, after a

distinguished mining career of almost four decades, the past eight years of which were spent with AngloGold Ashanti. Helcio was

most recently the Deputy COO: International following his position as Senior Vice President: Americas. Helcio has been a key

member of our operational management team and contributed to the transformation of the International Portfolio over the past three

years in particular. He has mentored a world-class team in Argentina and Brazil, and leaves behind a suite of assets with an exciting

range of future options for AngloGold Ashanti. We wish him all the best in his well-deserved retirement.

Sicelo Ntuli, who has for the past three years led the turnaround of the Iduapriem mine in Ghana, where costs have decreased, will

replace Ludwig as Senior Vice President: Continental Africa. Sicelo, a mining engineer, has extensive operating experience across

the group's open pit and deep underground assets, as well as in business planning and strategy roles over his career for more than

20 years spent with AngloGold Ashanti. He will work closely with Ludwig as he transitions into his new role. (Sicelo will be replaced

at Iduapriem by Jasper Musadaidzwa, currently the operations manager at Siguiri Mine).

Lowe Billingsley, Vice President of Planning and Strategy, in the International business unit, will assume the role of

Senior Vice

President: Americas. In his most recent post he had oversight of strategy implementation and long-range planning for the Americas

portfolio. Lowe is a trained geologist who has also held several important posts during his 26 years with the company, including

General Manager of the Cripple Creek & Victor Mine during its successful mine-life extension project. He will work closely with Helcio

as he transitions into his new role.

Moses Madondo, general manager of the Moab Khotsong mine, will assume a broader suite of responsibilities as he assumes his

new role of Senior Vice President of the Vaal River Region in South Africa. Moses, a mining engineer who has extensive experience

spanning strategy, planning and operations, will continue to work closely with Chris Sheppard, COO: South Africa, and his executive

management team in South Africa, as they continue their work to safely improve productivity in the region.

## **UPDATE ON CAPITAL PROJECTS**

At Mponeng, in Phase 1: 126 level, the implementation of the secondary support strategy continued to produce positive results

during the second quarter. The ore handling infrastructure at 126 level, which includes the sinking of reef and waste silos, remains

ahead of schedule. This project is scheduled for completion in July 2018.

6

In Phase 2, critical execution activities continued, including the construction of the surface substation which was completed during

the second quarter, which is now awaiting commissioning from Eskom, along with the continuation of equipping the ice pipe and

other associated activities. The balance of Phase 2 is scheduled to commence in January 2018 and a pre-feasibility is being

conducted on the Carbon Leader ore body extension.

At Kibali, remedial work on the Ambarau hydro power station was completed, following the river flood event in November 2015.

Construction is back on track, and commissioning is scheduled for the end of 2016. Early works have commenced on the third hydro-

power station at Azambi.

At Siguiri, AngloGold Ashanti plans to invest about \$115m over a little over two years to add a hard-rock plant to the current

processing infrastructure, providing the ability to develop the significant sulphide-ore potential that exists on the current concession.

during the first half of the year the company reached an agreement with the Government of Guinea on the Convention de Base, a

legal and fiscal framework covering the life of the project. The accord will now progress through the mandatory legal and

parliamentary ratification processes.

At Sadiola, AngloGold Ashanti and joint-venture partner IAMGOLD Corporation are completing a final optimisation of the Sadiola

Sulphides Project, ahead of an investment decision later this year. The project, to add sulphide-ore processing capability to the plant,

was suspended in 2013 after the precipitous decline in the gold price that year. Whilst the technical and financial aspects of the

optimised project look promising, it is important that the Government of Mali – itself an owner of a 18% stake in the mine – provide

assurances around the renewal of the construction and operating permits, power agreement and fiscal terms relating to the project,

as previously negotiated, before an investment commitment can be made. The early timing of these assurances and renewals from

the Government are especially important in order for the upgraded plant to be fully operational before all existing sources of oxide ore

are depleted. The project aims to significantly extend the life of the project, with increased production and lower operating costs from

the current levels.

Colombia remains an area of long-term focus for us, particularly given its attractive and under-explored geological potential, AngloGold

Ashanti's first-mover advantage in the country and its significant exploration success to date. Whilst bearing in mind that we remain in

an environment in which financial resources are constrained, we have committed to completing the update of the pre-feasibility studies

for the Gramalote and La Colosa projects by the end of next year. We anticipate that the successful completion of these studies will

enable the declaration of reserves to take place.

#### **Technology and Innovation update**

# 1. Reef Boring

#### 1.1 Small range:

Commisioning of the Sandvik/Cubex machine commenced at Savuka Mine earlier in the quarter with operational readiness having

been the key focus during this period. Training of operators will continue during the third quarter with the first cycle of operational test

results expected soon thereafter.

## 1.2 Medium Range:

With a blue print cycle time of 72 hours/hole, the 3 MK III machines in the Carbon Leader site at TauTona mine have drilled a total of

16 holes during the quarter. Overall performace for the quarter has improved to just over 82 hours/hole as opposed to the previous

quarters performance of 96 hours/hole. As is the case with the MK IV machine, machine availability/reliability is an issue, but is

receiving attention. As planned, an additional MK III machine was successfully commissioned in the VCR site during the quarter.

The MK IV machine has for the second consecutive quarter performed at just above the 92 hour/hole mark. Key issues affecting the

performance remain rock handling and more importantly machine availability where dedicated resources have been deployed to

assist in resolving these issues.

All sites were affected by mine wide safety stoppages as well as a geotechnical incidence resulting in the total number of holes

completed being lower than planned for the quarter.

## 2. Ore body Knowledge and Exploration

The first prototype drill rig was delivered to TauTona mine during the quarter and after a number of surface commisioning challenges

were resolved, was moved into position at the drill site late in the second quarter. Underground commissioning will commence early

in the third quarter, upon which our first prototype machine tests will commence focussing on deflection optimisation trials.

#### 3. Ultra High Strength Backfill (UHSB)

Construction of the surface solution plant at TauTona mine is still ongoing and on schedule.

Site development for the permanent UHSB plant at Savuka mine has been delayed due to safety stoppages. However, in the interim

period, the temporary plant has been used to fill all the drilled holes allowing testing of the small range reef boring machine to

continue.

Designs for the TauTona Below 120 (B120) plant has been finalised. The tendering process will commence in quarter three and

construction is planned to commence in the fourth quarter.

#### **GREENFIELDS**

During the first half of the year, Greenfields exploration activities were undertaken in Australia, Colombia, Brazil, Argentina,

USA, Guinea and Tanzania. The Greenfields exploration team completed 1,219m of diamond drilling in Colombia and 14,016m of

aircore drilling in Australia. Total expenditure for the six months ended 30 June 2016 was \$10m.

In **Australia**, at the Tropicana Mine there was a formal hand-over to the mine-based team of the accountability for all tenements within

60kms of the mine. Further to the south in the Tropicana joint-venture on the Oak Dam tenement, the Greenfields team continued

to work with the traditional owners to determine where access for exploration would be allowed. In the Laverton District, aircore

drilling was completed over priority targets with 91 holes drilled for a total of 5,742m. At the Strawbridge Project (100% AngloGold

Ashanti) the field work comprised geological mapping, surface soil geochemical sampling and first pass aircore drilling. A total of

778 soil samples and 197 aircore holes for 8,274m were completed over priority target areas.

In **Colombia**, drilling was completed at the Guintar project (100% AngloGold Ashanti) situated 40km west of Medellin. Three holes

for 1,219m were completed in the first half of the year. Final compilation and review recommended that no further work is required.

Work has now shifted to the Margaritas project area 2kms to the south where mapping, rock and soil geochemistry has been

completed. Reconnaissance work was conducted in other locations within Antioquia province in the mid-Cauca belt. Generative exploration occurred in **Brazil**, **Argentina**, **USA**, **Guinea** and **Tanzania**. In a significant development, the Greenfields

exploration team signed a new farm-in and joint-venture agreement with Luna Gold to explore approximately 2,000km

2

tenement

package located in the Maranhão state of Brazil. In Tanzania the Meia license applications ( $850\,\mathrm{km}$ 

2

) in the Lake Victoria

Greenstone Belt of Tanzania are pending and should be granted in the third quarter. The first phase of exploration was completed at

the Niandan license in Guinea (100km

2

, 90km from Siguiri) and 491 surface samples were collected. Early stage work is progressing in Argentina and the USA.

# **BROWNFIELDS**

During the first half of the year, Brownfields exploration activities were undertaken across the globe. Brownfields exploration,

including equity accounted joint-ventures, completed 285,877m of diamond drilling at a total expenditure for the six months ended

30 June 2016 of which \$27m was capitalised and \$33m was expensed.

**South Africa:** The mother hole of borehole UD59 successfully intersected a 1.82m thick VCR reef at 3,888m below surface on

11 April. Borehole UD60 reached 3,345m (284m drilled during the half) and continued to experience in-hole complications.

Borehole UD58A completed piloting to a depth of 3,027m. The final establishment of the ultra-deep derrick has been completed and

drilling commenced.

**Tanzania**: At Geita, drilling activities included infill drilling at Nyankanga Cut 9 (Block 5 UG), Nyankanga Cut 8, Star & Comet Cut

3, Geita Hill East Cut 2, and Mineral Resource delineation drilling at Star & Comet UG and Geita Hill East UG. A total of 10,372m

was drilled, comprising 4,392m reverse circulation (RC) and 5,980m diamond drilling (DD).

**Guinea:** At Siguri, a total of 29,415m was drilled. Exploration drilling included infill and reconnaissance drilling at Bidini North,

Bidini South, Soloni, Kalamagna PB2, Seguelen PB2, Seguelen satellite pit, Silakoro, Kami 'starter pit', Balato NE and sterilisation

drilling at Boukaria. Additionally, exploration supported the drilling of 12,893m allocated to Advance Grade Control within the Kami

starter pit.

**Ghana:** At Iduapriem, on the Bankyem/Block 1E target, the remaining trenches from 2015 exploration were sampled early in the first

quarter. A total of 1,597m drilling was completed over the target, comprising 421m RC and 1,176m DD. At Block 4S, 2,456m drilling

was completed, including 501m RC and 1,955m DD, with some encouraging assay results returned. Within the southern area at Block

7&8, a total of 796m were drilled during the quarter with some encouraging results. The programme is ongoing. **Democratic Republic of the Congo:** At Kibali, exploration focused on Kombokolo, the Agbarabo-Rhino-Pakaka corridor, Tete

Bakangwe, Sessenge SW and the KCD super pit. The forecast production shortfall has resulted in an emphasis on projects

with potential to deliver oxide ounces to the plant in the relatively short term. Regional targets explored include Aindi Watsa,

Memekazi Ridge and Zambula. A total of 7,953m was drilled near mine and 3,519m was drilled on regional targets. **Republic of Mali** – At Sadiola and Yatela, RC drilling totaling 11,716m was completed during the first half of the year. Drilling

focused on Sadiola North/FN (4,624m), FE2S (5,454m) and FE1W (1,638m).

In **Argentina**, drilling commenced at Cerro Vanguardia during Q2 after a delayed start with most of the drilling meters completed at the

nearby Claudia joint-venture. During the second quarter 4,174m were drilled in total, including 3,618m at the Claudia joint-venture.

In **Brazil**, exploration continued at the Cuiabá, Lamego and Córrego di Sítio production centers for AGABM with 61,221m drilled during

the quarter from the combined surface and underground drilling programmes.

At Serra Grande, 36,295m were drilled as part of the exploration and Mineral Resource conversion programmes. Surface exploration

continued as preparation to establish drilling targets.

In **Colombia**, the Gramalote joint-venture completed 1,279m of drilling to support site and infrastructure investigations as well as infill

drilling to better define the saprolite horizon. At La Colosa, 1,453m were drilled as the site investigation geotechnical drilling continued.

The Quebradona JV programme did not complete drilling during the half year and was focused on study work.

In **Australia**, at Sunrise Dam drilling targeted Vogue South, Vogue Deeps, north extensions to Cosmo and Cosmo East, Carey Shear,

Below Carey high grade zone and Ulu Steeps for a total of 28,758m.

At Tropicana, a 100m x 100m exploration drilling programme continues to test the along-strike and down dip extensions of the

Tropicana gold system to provide data for the Long Island Mining Study. Infill drilling was also carried out on the Havana South high

grade zone identified during the June quarter. A total of 16,670m of RC and 34,695m of DD drilling was completed in the first half of

2016. A Mineral Resource model update is in progress.

A new regional exploration group was set-up based at Tropicana to manage the TJV exploration tenements (excluding the mine

lease). In the first half of the year, regional exploration consisted of drilling and a ground-based geophysical survey. Aircore, RC and

DD totalled 13,360m.

The regional dataset review and a large amount of regional structural re-interpretation work to aid targeting has been completed with a

number of areas identified as being potentially prospective. A large number of these will be systematically targeted. 8

For more details on both Brownfields and Greenfields exploration programmes conducted during six months ended 30 June 2016

please see the Exploration Update document on the company website: www.anglogoldashanti.com.

#### **OBUASI UPDATE**

In early February 2016, following the incursion of hundreds of illegal miners inside the fenced area of the Obuasi mine site, AngloGold

Ashanti Ghana was forced to declare force majeure and, in the interests of safety, withdrew all employees performing non-essential

functions. Until then, work had been underway to investigate the viability of investing in the redevelopment of the mine as a modern,

productive and long-life mining operation.

Since then, the remaining employees have been performing critical services related to the operation of underground water pumping,

environmental and potable water treatment, provision of medical services, and maintenance of facilities that provide power and water

to employees' homes and surrounding communities.

In its declaration of force majeure, AngloGold Ashanti Ghana explained that the current situation is precluding it from fulfilling certain

conditions of its Amended Programme of Mining Operations, which was agreed with the government in November 2014. In particular,

the presence of illegal miners on the mine's operational footprint, in its underground tunnels and in areas which host key infrastructure

at the mine is impacting directly on the company's ability to continue to perform even the most essential services.

Given inaction by the authorities with respect to bringing an end to the invasion and illegal occupation of the site, illegal mining has

continued to grow since the initial invasion and the miners are now estimated to number several thousand who work on the site on any

given day. Whilst there has been no impact on AngloGold Ashanti's production and all-in sustaining costs as the site was not forecast

to be in production for at least this year, the damage to the site infrastructure and ore body will have a direct impact on the mine's

future viability.

AngloGold Ashanti Ghana filed a Request for Arbitration against the Government of Ghana with the International Centre for Settlement

of Investment Disputes (ICSID) on 8 April 2016. The case was registered on 2 May 2016. ICSID is an international arbitration

institution, headquartered in Washington, D.C., which facilitates dispute resolution between international investors and host states. The

relevant authorities' in Ghana, including the Attorney General, have been duly notified of the commencement of proceedings.

On 3 June 2016, the company also asked ICSID to make an urgent order compelling the Government of Ghana to use its authority to,

among other things, reinstate military security and restore law and order to the Obuasi Mine for the protection of AngloGold Ashanti

Ghana's personnel and the preservation of AngloGold Ashanti Ghana's assets.

Discussions are ongoing with Ghanaian authorities in respect of their request to our local subsidiary, made after the end of the second

quarter, to post an additional bond of \$150m by 31 August 2016 in respect of its environmental obligations at Obuasi Mine. The present

value of these obligations has already been provided for in the financial statements.

# MINERAL RESERVES AND RESOURCES STATEMENT

There have been no material changes to the Mineral Resource and Ore Reserve estimates as disclosed in the 2015 Ore Reserve

and Mineral Resource report.

#### **OUTLOOK**

The production guidance provided to the market for the 2016 full year remains unchanged. Gold production for the year is estimated

to be between 3.6Moz to 3.8Moz. Estimated total cash costs are expected to remain between \$680/oz and \$720/oz whilst AISC are

expected to remain between \$900/oz and \$960/oz at average exchange rates of ZAR14.97/\$, BRL3.51/\$, \$0.74/A\$ and AP15.10/\$,

and Brent Crude Oil at \$42/bl average for the year. Capital expenditure for the full year is still expected to be between \$790m and \$850m.

Both production and cost estimates assume neither labour interruptions, power disruptions or changes to asset portfolio and/or

operating mines. Other unknown or unpredictable factors could also have material adverse effects on our future results. Outlook data

is forward-looking information which is further discussed on the front cover of this document.

# Independent auditor's review report on the Condensed Consolidated Financial Statements for the six months ended

## 30 June 2016 to the Shareholders of AngloGold Ashanti Limited

We have reviewed the condensed consolidated financial statements of AngloGold Ashanti Limited (the company) contained in

the accompanying interim report on pages 11 to 24, which comprise the accompanying condensed consolidated statement of

financial position as at 30 June 2016, the condensed consolidated income statement, statement of comprehensive income.

statement of changes in equity and statement of cash flows for the six months then ended, and selected explanatory notes

Directors' Responsibility for the Condensed Consolidated Financial Statements

The directors are responsible for the preparation and presentation of these condensed consolidated financial statements in

accordance with the International Financial Reporting Standard, IAS 34 Interim Financial Reporting as issued by the International Accounting Standards Board (IASB), the SAICA Financial Reporting Guides, as issued by the Accounting

Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, and

the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to

enable the preparation of condensed consolidated financial statements that are free from material misstatement, whether due

to fraud or error.

Auditor's Responsibility

Our responsibility is to express a conclusion on these interim financial statements based on our review. We conducted our

review in accordance with International Standard on Review Engagements (ISRE) 2410, Review of Interim Financial Information Performed by the Independent Auditor of the Entity. This standard requires us to conclude whether anything has

come to our attention that causes us to believe that the interim financial statements are not prepared in all material respects in

accordance with the applicable financial reporting framework. This standard also requires us to comply with relevant ethical

requirements.

A review of interim financial statements in accordance with ISRE 2410 is a limited assurance engagement. We perform

procedures, primarily consisting of making enquiries of management and others within the entity, as appropriate, and applying

analytical procedures and evaluating the evidence obtained.

The procedures performed in a review are substantially less than and differ in nature from those performed in an audit conducted in accordance with International Standards on Auditing. Accordingly, we do not express an audit opinion on these

financial statements.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the accompanying condensed consolidated financial statements of the company for the six months ended 30 June 2016 are not prepared, in all material

respects, in accordance with International Financial Reporting Standard, IAS 34 Interim Financial Reporting as issued by the

IASB, the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Reporting

Pronouncements as issued by the Financial Reporting Standards Council and the requirements of the Companies Act of South

Africa.

July 2016 Interim report - www.AngloGoldAshanti.com

#### **Notes**

#### for the six months ended 30 June 2016

#### 1.

#### **Basis of preparation**

The financial statements in this interim report have been prepared in accordance with the historic cost convention except for

certain financial instruments which are stated at fair value. The group's accounting policies used in the preparation of these

financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2015

except for the adoption of new standards and interpretations effective for the year beginning 1 January 2016.

The financial statements of AngloGold Ashanti have been prepared in compliance with IAS 34, IFRS as issued by the International Accounting Standards Board, the South African Institute of Chartered Accountants Financial Reporting Guides as

issued by the Accounting Practices Committee, Financial Reporting Pronouncements as issued by the Financial Reporting

Standards Council, JSE Listings Requirements and in the manner required by the South African Companies Act, 2008 (as

amended) for the preparation of financial information of the group for the six months ended 30 June 2016. These interim financial

statements should be read in conjunction with the company's audited consolidated financial statements and the notes thereto as

at and for the year ended 31 December 2015.

Based on materiality, certain comparatives have been aggregated.

(1)

145

161

61

(1)

Includes the group's attributable share of capital commitments relating to associates and joint ventures.

### Liquidity and capital resources

To service the above capital commitments and other operational requirements, the group is dependent on existing cash resources, cash generated from operations and borrowing facilities.

Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to

foreign investment, exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In

addition, distributions from joint ventures are subject to the relevant board approval.

The credit facilities and other finance arrangements contain financial covenants and other similar undertakings. To the extent that

external borrowings are required, the group's covenant performance indicates that existing financing facilities will be available to

meet the above commitments. To the extent that any of the financing facilities mature in the near future, the group believes that

sufficient measures are in place to ensure that these facilities can be refinanced.

14.

### Financial risk management activities

#### **Borrowings**

The \$1.25bn bonds are carried at fair value. The rated bonds are carried at amortised cost and their fair values are their closing

market values at the reporting date which results in the difference noted in the table below. The interest rate on the remaining

borrowings is reset on a short-term floating rate basis and accordingly the carrying amount is considered to approximate the fair

value.

20

#### **Derivatives**

The fair value of derivatives is estimated based on ruling market prices, volatilities, interest rates and credit risk and includes all

derivatives carried in the statement of financial position.

Embedded derivatives are included as derivatives on the statement of financial position.

The group uses the following hierarchy for determining and disclosing the fair value of financial instruments:

Level 1:

quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2:

inputs other than quoted prices included in level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

Level 3:

inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following tables set out the group's financial assets and liabilities measured at fair value by level within the fair value

hierarchy:

On 28 June 2016, AngloGold Ashanti ("AGA") announced that its wholly owned subsidiary, AngloGold Ashanti Holdings plc

("AGAH"), is compelling the surrender following the notice to buy back the remaining principal amount of its outstanding 8.5%

high-yield bonds that mature in May 2020, as part of its strategy to reduce debt and lower finance charges. On 1 August 2016,

the remaining portion of the notes were settled for a total consideration of \$503m consisting of a \$471m principal payment, a

surrender premium of \$30m and interest of \$2m.

On 24 August 2015, AngloGold Ashanti announced that its wholly owned subsidiary, AngloGold Ashanti Holdings plc, was offering

to buy back up to \$810m in aggregate principal amount of its outstanding 8.5% high-yield bonds that mature in 2020, as part of its

strategy to reduce debt and lower interest payment. On 25 September 2015, 62.34% of the notes were settled for a total

consideration of \$850m consisting of a \$779m principal payment, a tender premium, being the difference between the par value of

the bond and the redemption price of \$58m and interest of US\$13m. Included in the tender premium on the \$1.25bn bond (note

5) was a realised fair value loss of \$11.5m being the difference between the fair value on redemption date and the redemption

price.

#### **Environmental obligations**

Pursuant to environmental regulations in the countries in which we operate, we are obligated to close our operations and

rehabilitate the lands which we mine in accordance with these regulations. As a consequence AngloGold Ashanti is required in

some circumstances to provide either reclamations bonds issued by third party entities, establish independent trust funds or

provide guarantees issued by the operation, to the respective environmental protection agency or such other government

department with responsibility for environmental oversight in the respective country to cover the potential environmental

rehabilitation obligation in specified amounts.

In most cases, the environmental obligations will expire on completion of the rehabilitation although in some cases we are

required to potentially post bonds for events unknown that may arise after the rehabilitation has been completed. In South Africa we have established a trust fund which has assets of ZAR 1.33bn and guarantees of ZAR 1.37bn issued by

various banks, for a current carrying value of the liability of ZAR 1.4bn. In Australia, since 2014, we have paid into a Mine

Rehabilitation Fund an amount of AUD \$1m for a current carrying value of the liability of AUD \$95.3m. At Iduapriem we have

provided a bond comprising of a cash component of \$9.7m with a further bond guarantee amounting to \$33.9m issued by

Ecobank Ghana Limited (expired on 31

st

May 2016 but renewal process is underway) for a current carrying value of the liability of \$43.8m. At Obuasi we have provided a bond comprising of a cash component of \$20.1m with a further bank guarantee amounting

to \$30m issued by Nedbank Limited for a current carrying value of the liability of \$218.1m. In some circumstances we may be

required to post further bonds in due course which will have a consequential income statement charge for the fees charged by the

providers of the reclamation bonds.

## Litigation claims

(1)

Occupational Diseases in Mines and Works Act (ODMWA) litigation - On 3 March 2011, in Mankayi vs. AngloGold Ashanti.

the Constitutional Court of South Africa held that section 35(1) of the Compensation for Occupational Injuries and Diseases

Act, 1993 does not cover an "employee" who qualifies for compensation in respect of "compensable diseases" under the Occupational Diseases in Mines and Works Act, 1973 (ODMWA). This judgement allows such qualifying employee to pursue

a civil claim for damages against the employer. Following the Constitutional Court decision, AngloGold Ashanti has been

subject to numerous claims relating to silicosis and other Occupational Lung Diseases (OLD), including several potential

class actions and individual claims.

In November 2014, Anglo American South Africa, AngloGold Ashanti, Gold Fields Limited, Harmony Gold Mining Company

Limited and Sibanye Gold Limited formed an industry working group on OLD to address issues relating to compensation and

medical care for occupational lung disease in the gold mining industry in South Africa. The working group now also includes

African Rainbow Minerals (ARM). The companies believe that fairness and sustainability are crucial elements of any solution

and have embarked on an extensive engagement process with all stakeholders to work together to design and implement a

comprehensive solution that is both fair to past, present and future gold mining employees, and also sustainable for the sector.

The companies are among respondent companies in a number of lawsuits related to OLD. The companies do not believe

that they are liable in respect of the claims brought, and they are defending these. They do, however, believe that they should work together to seek a solution to this South African mining industry legacy issue.

The companies active in gold mining have been working for many years to try to eliminate the incidence of OLD. These

efforts continue.

These legal proceedings are being defended, and the status of the proceedings are set forth below

AngloGold Ashanti, along with other mining companies including Anglo American South Africa, ARM, Gold Fields Limited,

Harmony Gold Mining Company Limited, DRDGold Limited, Randgold and Exploration Company Limited, and Sibanye Gold

Limited, were served with a consolidated class action application on 21 August 2013. On 13 May, 2016, the South Gauteng

High Court of South Africa ruled in favour of the applicants and found that there were sufficient common issues to certify two

industry-wide classes: a Silicosis Class and a Tuberculosis Class, each of which cover current and former underground mineworkers who worked in South African mines from 12 March, 1965 and who have contracted the respective diseases (or

the dependents of mineworkers who died of those diseases). The High Court ordered a two-stage process in the class action. The first stage is to resolve common issues and allow the individuals to opt out. The second stage will allow the

individuals to opt in to the class to make their claims against the respondent mining companies. The High Court also decided

that claims for general damages (i.e., pain and suffering and loss of amenities of life) will be transferable to the estate or

executor of any deceased mineworker who dies after the date of filing of the certification application. On 3 June 2016, AngloGold Ashanti, together with certain of the other mining companies, filed an application with the High Court for leave to

appeal to the Supreme Court of Appeal. Arguments in the application for leave to appeal were heard on 23 June 2016. On 24

June 2016, leave to appeal was (i) granted in respect of the issue of the transferability of deceased mineworkers' claims for

general damages but (ii) denied in respect of all other orders of the High Court. On 15 July 2016 AngloGold Ashanti, along

with several other respondent companies, filed a petition with the Supreme Court of Appeal for leave to appeal such other

orders of the High Court.

It is possible that additional class actions and/or individual claims relating to silicosis and/or other OLD will be filed against

AngloGold Ashanti in the future. AngloGold Ashanti will defend all current and subsequently filed claims on their merits.

Should AngloGold Ashanti be unsuccessful in defending any such claims, or in otherwise favourably resolving perceived

deficiencies in the national occupational disease compensation framework that were identified in the earlier decision by the

Constitutional Court, such matters would have an adverse effect on its financial position, which could be material. Given the

inherent legal and factual uncertainties with respect to the pending claims and other claims not yet filed against the company,

no reliable estimate can be made for the obligation.

(2)

Litigation -

On 11 October 2011, AngloGold Ashanti (Ghana) Limited (AGAG) terminated Mining and Building Contractors Limited's (MBC) underground development agreement, construction on bulkheads agreement and diamond drilling agreement at Obuasi mine. The parties reached agreement on the terms of the separation and concluded a separation agreement on 8 November 2012. On 20 February 2014, AGAG was served with a writ issued by MBC claiming a total of

\$97m. In December 2015, the proceedings were stayed in the High Court pending arbitration. In February 2016, MBC submitted the matter to arbitration.

22

(3)

Litigation - AGAG received a summons on 2 April 2013 from Abdul Waliyu and 152 others in which the plaintiffs allege that

they were or are residents of the Obuasi municipality or its suburbs and that their health has been adversely affected by

emission and/or other environmental impacts arising in connection with the current and/or historical operations of the Pompora Treatment Plant (PTP), which was decommissioned in 2000. The plaintiffs' alleged injuries include respiratory

infections, skin diseases and certain cancers. The plaintiffs subsequently did not timely file their application for directions,

but AGAG intends to allow some time to pass prior to applying to have the matter struck out for want of prosecution. On

24 February 2014, executive members of the PTP (AGAG) Smoke Effect Association (PASEA), sued AGAG by themselves

and on behalf of their members (undisclosed number) on grounds similar to those discussed above, as well as economic

hardships as a result of constant failure of their crops. This matter is set for hearing in October 2016. In view of the limitation

of current information for the accurate estimation of a liability, no reliable estimate can be made for AGAG's obligation in

either matter.

(4)

Mill contractor claims - On 3 August 2015, AngloGold Ashanti and Newmont concluded the sale of the Cripple Creek & Victor

mine in Colorado to Newmont. As part of the negotiated transaction, the parties agreed to a cost/recovery sharing arrangement relative to cost claims asserted for or against CC&V based on work performed by contractors during the design

and manufacture of the High Grade Mill. Under the agreement, AngloGold Ashanti has the right to manage any negotiation.

settlement, or legal proceedings associated with each cost claim. The total value of the cost claims asserted against CC&V,

by two contractors, is \$20m. On 1 April 2016, CC&V was added as a defendant to a lawsuit in the U.S. District Court (Colorado) between one of the contractors and a subcontractor, and the cost claims are being litigated there. Separately,

CC&V has cost claims against the mill design contractor. These claims are proceeding in arbitration.

With reference to items (1) - (4) above, provisions have been raised where the amount of the potential claim or settlement

can be reasonably estimated.

### Tax claims

(5)

Other tax disputes - In November 2007, the Departamento Nacional de Produção Mineral (DNPM), a Brazilian federal mining

authority, issued a tax assessment against AngloGold Ashanti Brazil Mineração Ltda (AABM) in the amount of \$14m

(2015: \$11m) relating to the calculation and payment by AABM of the financial contribution on mining exploitation (CFEM) in

the period from 1991 to 2006. The matter has been dormant since 2007. AngloGold Ashanti Limited's subsidiaries in Brazil

are involved in various other disputes with tax authorities. These disputes involve federal tax assessments including income

tax, royalties, social contributions and annual property tax. The amount involved is approximately \$14m (2015:

\$11m).

Management is of the opinion that these taxes are not payable.

(6) VAT disputes - Mineração Serra Grande S.A. (MSG) received a tax assessment in October 2003 from the State of Minas

Gerais related to VAT on gold bullion transfers. The tax administrators rejected the company's appeals against the assessment. The company is now appealing the dismissal of the case to the State of Minas Gerais. The assessment is approximately \$13m (2015: \$11m).

- (7) Tax dispute In January 2013, AngloGold Ashanti Colombia S.A. (AGAC) received notice from the Colombian Tax Office
- (DIAN) that it disagreed with the company's tax treatment of certain items in the 2010 and 2011 income tax returns. On
- 23 October 2013, AGAC received the official assessments from the DIAN which established that an estimated additional tax
- of \$22m (2015: \$20m) will be payable if the tax returns are amended. Penalties and interest for the additional taxes are expected to be \$119m (2015: \$108m). The company believes that the DIAN has applied the tax legislation incorrectly. AGAC

subsequently challenged the DIAN's ruling by filing lawsuits in March 2015 and April 2015 before the Administrative Tribunal

of Cundinamarca (trial court for tax litigation). On 8 July 2016, the tribunal held an initial procedural hearing on the 2010 tax

dispute.

- (8) Tax dispute On 12 July 2013, Cerro Vanguardia S.A. (CVSA) received a notification from the Argentina Tax Authority
- (AFIP) requesting corrections to the 2007, 2008 and 2009 income tax returns of about \$7m (2015: \$8m) relating to the non-

deduction of tax losses previously claimed on hedge contracts. The AFIP is of the view that the financial derivatives could not

be considered as hedge contracts, as hedge contract losses could only be offset against gains derived from the same kind of

hedging contracts. Penalties and interest on the disputed amounts are estimated at a further \$22m (2015: \$24m). CVSA and

AFIP have corresponded on this issue over the past several years and while management is of the opinion that the taxes are

not payable, the government continues to assert its position regarding the use of the financial derivatives. CVSA filed an

appeal with the Tax Court on 19 June 2015.

### Other

- (9) Groundwater pollution AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations,
- which have occurred primarily as a result of seepage from mine residue stockpiles. Numerous scientific, technical and legal

studies have been undertaken to assist in determining the magnitude of the contamination and to find sustainable remediation solutions. The group has instituted processes to reduce future potential seepage and it has been demonstrated

that Monitored Natural Attenuation (MNA) by the existing environment will contribute to improvements in some instances.

Furthermore, literature reviews, field trials and base line modelling techniques suggest, but have not yet proven, that the use

of phyto-technologies can address the soil and groundwater contamination. Subject to the completion of trials and the technology being a proven remediation technique, no reliable estimate can be made for the obligation.

(10) Deep groundwater pollution -

The group has identified potential water ingress and future pollution risk posed by deep groundwater in certain underground mines in Africa. Various studies have been undertaken by AngloGold Ashanti since 1999

to understand this potential risk. In South Africa, due to the interconnected nature of mining operations, any proposed solution needs to be a combined one supported by all the mines located in these gold fields. As a result, the Mineral and

Petroleum Resources Development Act (MPRDA) requires that the affected mining companies develop a Regional Mine

Closure Strategy to be approved by the Department of Mineral Resources. In view of the limitation of current information for

the accurate estimation of a liability, no reliable estimate can be made for the obligation.

### **Contingent asset**

(11) Indemnity - As part of the acquisition by AngloGold Ashanti of the remaining 50% interest in MSG during June 2012, Kinross

Gold Corporation (Kinross) has provided an indemnity to a maximum amount of BRL255m against the specific exposures

23

discussed in item 6 above. At 30 June 2016, the company has estimated that the maximum contingent asset is \$8m (2015:

\$7m).

### 16. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

### 17. Announcements

**AngloGold Ashanti and Anglo American South Africa settle stand-alone silicosis claims** – On 4 March 2016 AngloGold

Ashanti announced that together with Anglo American South Africa, the companies have concluded an agreement which resolves

fully and finally stand-alone silicosis claims. The settlement relates to the approximately 4,400 separate claims which were

instituted against Anglo American South Africa and included in this figure are the roughly 1,200 separate claims against

AngloGold Ashanti.

The settlement has been reached without admission of liability by AngloGold Ashanti and Anglo American South Africa and the

terms of the agreement remain confidential. Both companies will contribute, in stages, up to \$30 million.

**AngloGold Ashanti noted publication of draft Mining Charter** – On 18 April 2016 AngloGold Ashanti noted the publication by

South Africa's department of Mineral Resources of the draft reviewed Broad-Based Black Economic Empowerment charter for the

South African mining and minerals industry 2016.

AngloGold Ashanti rating action by Standard and Poor's rating agency (S&P) – On 26 April 2016 AngloGold Ashanti

confirmed that Standard & Poor's rating agency (S&P) had affirmed AngloGold Ashanti's BB+ long-term corporate credit

rating and revised the outlook to stable from negative.

S&P cited the reduction in debt and increasing local currency gold prices as reasons for the increase in earnings, cash flows, liquidity and credit metrics for AngloGold Ashanti. The stable outlook reflects S&P's expectation that AngloGold

Ashanti can maintain core credit metrics at the higher end of their intermediate category.

AngloGold Ashanti Holdings plc announces issuance of a notice for the conditional redemption of all of its outstanding 8.5% notes due 2020 – On 28 June 2016 AngloGold Ashanti Holdings plc (the "Company") announced that it had issued a notice for the conditional redemption (subject to the satisfaction or waiver of the condition described below)

of all of its outstanding 8.5% Notes due 2020 (the "Notes").

Under the notice, the redemption of the Notes was conditioned upon the receipt by the Company of borrowings under the

Company's \$1,000,000,000 revolving credit facility in a sufficient amount, together with available cash in an amount determined by the Company, to pay the redemption price for the Notes, including any applicable premium, and accrued

and unpaid interest in full and pay all related expenses on or before the redemption date. The redemption date was 1 August 2016.

The notes were redeemed at a redemption price equal to 106.375% of the principal amount of the Notes to be

redeemed,

plus additional amounts, plus accrued and unpaid interest to the date of the redemption. The Notes were redeemed in full.

### Forward-looking

statements

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry,

expectations regarding gold prices, production, total cash costs, all-in sustaining costs, all-in costs, cost savings and other operating results, return on equity, productivity improvements,

growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of

commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions, dispositions or joint venture transactions, AngloGold

Ashanti's liquidity and capital resources and capital expenditures and the outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental health

and safety issues, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. These forward-looking statements or forecasts

involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated

results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking

statements are reasonable, no assurance can be given that such expectations will prove to have been correct.

Accordingly, results could differ materially from those set out in the forward-

looking statements as a result of, among other factors, changes in economic, social and political and market

conditions, the success of business and operating initiatives, changes in the

regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation

proceedings, and business and operational risk management. For a discussion of such risk factors, refer to AngloGold Ashanti's annual reports on Form 20-F filed with the United States

Securities and Exchange Commission. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those

expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to

place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect

events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-

looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

### Non-GAAP financial measures

This communication may contain certain "Non-GAAP" financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-

GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance

prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use. AngloGold Ashanti posts

information that is important to investors on the main page of its website at www.anglogoldashanti.com and under the "Investors" tab on the main page. This information is updated

regularly. Investors should visit this website to obtain important information about AngloGold Ashanti. 28
